Naturally the recently published statistics regarding the decrease in church-membership have given rise to much thought and deep and earnest questionings. The reasons advanced for this lamentable state of affairs have naturally enough been varied and numerous. One, however, has been suggested which contains more than a modicum of truth. No one pretends, of course, that this reason is the only one, or even the paramount one, but it raises a very vital issue, affecting not merely the church attendance of today, but also that of tomorrow and future years. "In the decline of home life, with its spiritual, formative, and enlightening influences," writes one correspondent, "I think we may trace at least one cause materially contributing to the decrease in church-membership, and accounting in some measure for non-attendance at public worship." We are prepared to think that our correspondent is right. How many homes do we know that exhibit to any large extent the ideal qualities one would have in them? How many show that domestic harmony, community of possibly differing interests, filial affection, even husbandly and wifely affection—things which go to make the entity that is and should be covered by the word "home"? Most of us know few homes which come up to the most moderate standard in these particulars. We know far more that are uncomfortable places by reason of warring interests, the presence of ungoverned and undisciplined characters, selfishness, and a desire for things which pass rather than for things that are eternal. There are still fewer homes, nowadays, where the higher ideals have sway, and the nobler standards are inculcated in the children by parents who believe in the infinite mercy and goodness of God.

[Rev. T. Rhondda Williams in *Christian World.*]

The "third heaven" and "paradise" are symbolic expressions denoting a rich and rare spiritual rapture which the apostle had experienced. It was no miracle that happened

Digitized by Google

to him which is impossible to us. Whether it was a miracle at all depends upon how we define miracle. If a miracle is something which our present physical science cannot explain, then certainly it was a miracle. By that definition, however, miracles happen every day; indeed, there is a miraculous element in the meanest flower that blows. From the point of view that this is a spiritual universe, such an experience as Paul had is not miraculous, though it is not common. Communion of the spirit of man with the universal Spirit is a fact of the religious consciousness, and the intensification of that consciousness at certain rare moments constitutes the extraordinary experience here referred to. There is more in it than mere mental concentration, more than poetic rapture.

[Dr. John Clifford as quoted in *Standard*.]

"Institutional Christianity is everywhere waiting on tiptoe for new organic forms. The present forms and creeds are not fitted to express Christianity. They give a false appearance of vitality. They galvanize the dead past. They deprive the churches of power. The Church of England is tied hand and foot; it frets and chafes in its bonds, and sighs for freedom and self-investment; it wants to deal with the Athanasian creed and its clauses; and it cannot. Nor are the Free Churches entirely happy. They know that their formulated doctrines are no longer a bond of cohesion; that social forces are stronger than dogmas and rites; and that on powerful religious personalities and continuously wise, tactful, and loving service of man, they must depend for their future success." This last note shows how universal has become the social emphasis of modern Christianity.

[*Continent.*]

Ambition is dangerous except in one form. The only virtuous and wise ambition is ambition to do some service to one's fellow men just as well and effectively as it can possibly be done. Contrariwise, the willingness to receive good from God and the world without rendering in return the utmost measure of helpfulness within one's power, is always shame, degradation, sin. And these broad principles apply to all work and all workers, to men of few talents and men of many. They also apply equally to men of wealth and men of poverty. Observed, they will glorify any occupation, even scavenging from the streets. Ignored, they will condemn to disgrace any personality, however favored.

[*Congregationalist and Christian World.*]

Afterthoughts demand radical treatment. To brood over one's neglects is to lose nervous force that ought to be expended in retrieving them. My afterthought of sympathy cannot avail as respects the one upon whom I bestow it, but it can by a wondrous alchemy be transmuted into a loving deed for some one still within my reach. But if we could only avoid them altogether! Perhaps we can, to a large extent, if we will only plan our days more carefully, take time enough to think in advance of others and their welfare and happiness. Just one little forethought each day directed toward some one else may save us at least one bitter afterthought.

[*Christian Work and Evangelist.*]

The church is seeing that magnitude does not change wrong into right and that numbers do not turn paganism into Christianity. What is right for a Christian man is right for a Christian nation—or any nation, for that matter. What is wrong in a man—stealing, slaughtering his brother, fighting, living for revenges—is wrong for a nation. Thus in all these ways and in many others the church will link her new opportunity of social service to her passion for evangelism, and one shall react upon the other. Saved men help create a saved world, but a redeemed order also helps sustain redeemed souls.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

"Christian Science: A Religion of Progress," a lecture by William D. McCrackan, M.A., has been translated into French (Christian Science: Une Religion de Progrès), and is now ready for distribution in pamphlet form.

"Christian Science: Demonstrable Religion," a lecture by Frank H. Leonard, has been translated into Norwegian (Christian Science: Bevislig Religion), and is now ready for distribution in pamphlet form.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles.

"Birthright and Dominion," containing four articles and two poems.

"The Father's Business," containing five articles.

"The Law of Kindness," containing four articles and a poem.

"Confidence and Supply," containing five articles.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency. Money orders should be made payable at the Boston post-office.

One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

The Supreme Court's modification of the Sherman antitrust law to invoke "the rule of reason" in decisions upon restraints of trade, is attacked in a report presented to the Senate by the interstate commerce committee. The committee recommends new laws to define exactly what combinations are unlawful. It recommends a federal interstate corporation commission, with power to supervise corporations, pass on and approve combinations and agreements, and take over the work of dissolving illegal corporations.

Seven bills drafted by Governor Sulzer of New York and embodying his recommendations in reforms in the New York stock exchange, have been introduced in both branches of the state Legislature. They amend the general business law relative to interest on call loans and fixing the maximum, and the penal laws relative to bucket shops, trading against customers' orders, manipulation, trading after known insolvency, publication of fictitious transactions, and false representation.

Secretary Knox and Ambassador Jusserand have signed a convention to extend for another period of five years the arbitration treaty between the United States and France, which will expire March 12. This is similar to the British arbitration convention, which expires by limitation June 4, and which it was proposed to replace by the general arbitration treaty now awaiting exchange of ratification.

"Guilty as charged in all three counts of the indictment," was the verdict rendered at Cincinnati by the jury trying the case of twenty-nine officials or former officials of the National Cash Register Company, who were charged by the government with violating the criminal section of the Sherman antitrust act.

The House of Representatives has passed the naval appropriation bill, carrying approximately one hundred and thirty-eight million dollars and authorizing the construction of one battleship, six torpedo-boat destroyers, and four submarines. An agreement to provide for one battleship instead of two, as recommended by the committee, was adopted by a vote of 174 to 156.

More than two million cubic yards of earth and rock are in motion along the Panama canal. In addition to the slides, which will involve additional work before the water is turned into the canal, there still remains about four million yards of excavation before the work is completed. On or about Oct. 1, the water will be turned into the canal bed.

It is believed that the House will agree to the La Follette substitute for the House bill for physical valuation of all railroads, to determine the basis for rates, and thus grant federal authorities the power to reveal all the stock manipulations in railroad securities.

Two Chicago local unions of the International Brotherhood of Electrical Workers have been sued by the federal government, under the Sherman antitrust law, for alleged interference with messages of the Postal Telegraph-Cable Company in interstate commerce.

It was urged at a legislative hearing that the directors of the port of Boston have placed at their disposal from twenty-five to fifty million dollars to work out a comprehensive plan for the development of the harbor and the perfection of rail and water terminals.

Plans for the improvement of the harbor and the disposal of sewage that will call for one million one hundred and sixty thousand dollars are recommended in the report of the Lynn, Mass., harbor commissioners made to the municipal council.

Secretary Knox has issued a formal announcement to the public that the income tax amendment is now a part of the constitution, having been ratified by more than three fourths of the states.

Senator Lodge has introduced in Congress a bill creating a tariff commission of five members, to be appointed by the President with the consent of the Senate.

Yale University announces a course that is designed to give preparation for the consular service, and it will require sixteen hours a week for two years.

The government contemplates arranging to sell during the coming season six billion feet of lumber from the national forests, principally white pine.

Legislation intended to put a stop to interstate shipments of liquor to points where state laws prohibit its sale has been passed by Congress.

A budget system of relating proposed expenditures to expected revenues was recommended to Congress by President Taft last week.

President Wilson announces that the extra session of Congress will be convened on Tuesday, April 1.

International.

At the Indian Social Congress just held at Bankipore, India, the views expressed by some of the delegates showed an advance in ideas of social progress. One of the speakers, who claims to be orthodox and has a reputation for Sanskrit scholarship, referred to the "accursed purdah" system, and declared that it is condemned by the Hindu shastras. This system, which keeps women in strict seclusion, was introduced at a time when the security of life and property had to be very carefully insured, and consequently its continuation nowadays, when both are safe, is an anachronism from which no good is derived, but which, on the other hand, has a detrimental effect on the whole population, for it not only prevents the mental development of the women, but deprives men of the moral responsibility for the guardianship of women.

Persia's urgent financial needs will shortly be met by a Russian loan. In return, Russia secures the concession for the Djulfa-Tabriz-Urumia railway for a period of seventy-five years. The coal mines and oil fields on either side of the line within a six-mile zone will be worked by Russia, the proceeds being divided in the ratio of 80 per cent to Russia and 20 per cent to Persia.

By a large majority in both chambers, the Victorian Parliament of Australia has decided in favor of the electrification of the metropolitan railway system of Melbourne, and steps have already been taken for the acceptance of tenders for plant and material, the supply of which will take up the greater part of 1913 and will cost at least three hundred thousand pounds.

A presidential decree, just issued in Ecuador, establishes a directorate of fine arts, the object being to unify instruction in the fine arts in the national institutes, and to provide for the proper conservation of the archeological and artistic treasures of the republic in a national museum and in art galleries.

The total production in the shipyards of Great Britain the past year, including warships built in the royal dockyards, amounted to 2,108,230 tons. About one fourth of the total were for foreign and colonial owners.

Turkey has once more signified her readiness to negotiate for peace with Bulgaria, this time on the basis of including the cession of Adrianople. The Turkish government has solicited the good offices of Russia.

Industrial and Commercial.

Western hemlock, says the department of agriculture, deserves a better reputation and more general use than it now obtains. Intrinsically it is among the most important of western woods. The wood of western hemlock has generally been considered an inferior one, chiefly because of the prejudice created by eastern hemlock. Tests, however, show it to have 88 per cent the strength of Douglas fir, one of the country's chief construction timbers. In fact, it is often mixed with Douglas fir and used for the same purposes. The wood is practically free from pitch, has a handsome grain, works smoothly, and takes paint or stain well.

A total of twenty-seven hundred miles of new trackage, involving an expenditure of about forty-one million dollars, has been undertaken by the three Canadian railroad systems, according to the programs of construction announced. This will establish a new record, the totals for 1912 being new mileage, 1,075, and expenditures thirty million dollars. A major part of the new mileage will be in the prairie provinces, although a larger proportion of the expenditures will be on the expensive main line extensions which the Canadian Northern and Grand Trunk Pacific are making through the mountains.

President Lowell of Harvard University advocates cooperation with the Massachusetts Institute of Technology. He says: "To maintain two distinct plants, fully staffed and equipped, for the teaching of an insufficient number of students in the most expensive of all kinds of education, is not only a waste of educational resources, but entails a loss of efficiency. The momentum obtained by a combined effort would be far greater than that of two separate schools. No plan of cooperation has been devised, but the difficulties ought not to be insuperable if approached with mutual good will."

The House committee on expenditures in the treasury department finds that interest amounting to $36,600,923 has been lost by the United States treasury in the last twenty-six years; that the handling by the treasury of the general surplus fund is crude, unbusinesslike, unprofitable, and discriminatory; that a working balance of twenty-five million dollars in the treasury is sufficient; and that the government can increase its revenues two million dollars a year by charging interest on funds in government depositories.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

CREATIVE PRINCIPLE.

HON. CLARENCE A. BUSKIRK.

LONG ago Dryden sang:—

> From harmony, from heavenly harmony,
> This universal frame began:
> From harmony to harmony
> Through all the compass of the notes it ran,
> The diapason closing full in man.

Whether they deem themselves to be theists or deists or atheists, there are some points concerning this matter which all persons are likely to agree upon. One is, that whether what is termed discord be regarded as a real law or fact, or, on the other hand, as a negation, it cannot be creative; indeed, that if it be treated as an existing something, it is as a something which is destructive, as well as non-creative, even anticreative, in all its influences, tendencies, and effects. This must be universally true, whatever is looked upon as the cause of creation. To the Christian, however, there need never be any uncertainty as to what is real, for the apostle John assures us that through the Son of God (the ever-present divine idea as revealed in Christian Science) we can understand and know "him that is true, and we are in him that is true."

If all that is discordant is thus eliminated from all possible systems of true creation, it must follow that discord cannot be a part of any real creation; that is, it cannot possibly be more than a part of some supposed creation which has no substantive existence, and whose supposed existence must be called a falsehood, like all other negations. Indeed, the term negation is a synonym of falsehood, or non-existence, and it follows that if discord be an integral part of any supposed creation, such as matter, for example, then such supposed creation is non-existent, and must be classed as a mistaken concept,—the term "matter" meaning not an existing something but an untrue notion derived from false testimony of so-called physical sense. The concept that the sun rises and sets was such a false notion, though accepted as true during many centuries.

Further, to speak of non-existence is to affirm existence; to speak of untruth, or declare that anything supposed to be true is really untrue, is to affirm the existence of truth as the test by which the untruth is recognized. Thus, to speak of discord is to affirm the real existence of harmony, because in no other way could the thought of discord be conveyed. To speak of anything as true is to affirm that what would be its antipode is untrue or non-existent. Furthermore, to affirm that anything is harmonious is equivalent to saying that it is good; and to be harmonious and good, anything must be absolutely so. Nothing can have real existence which is not absolutely harmonious and good. As declared in the Bible, "God saw every thing that he had made, and, behold, it was very good;" that is, absolutely so, not partly so and partly not so. No correct reasoning can possibly fail to justify the Scriptural statement.

To affirm that the human concept which is termed "matter" excludes the notion of discord, would be manifestly untrue; therefore, this human concept is untrue. The supposed "matter" includes very much that is discordant; therefore, such supposed "matter" is untrue. No discordant "matter" could have been created by itself, for it implies the absence of truth, and therefore could not be creative; nor could such "matter" be the creation of any creator unless such creator were at least in part inharmonious or not wholly good, and this would mean that such creator was partly existent and partly non-existent. The Principle which is reflected throughout all that really exists is absolutely harmonious, and any supposed creation which would reflect any disharmony at all must be non-existent. This Principle must be divine, because infinite, omnipresent, eternal, omniscient, omnipotent. Such Principle must possess all these characteristics or else be wholly non-creative, and nothing could continue to be or to exist for a single instant in the absence of such divine Principle. To assume a Principle of being at all,—and this must be assumed in order to explain any phase of being,—is to assume that this Principle is capable of creation, that it expresses infinite intelligence, and infinite intelligence is therefore divine Principle. Infinite intelligence, Mind, cannot be finite; that is, limited by the so-called dimensions of a physical body. Christ Jesus declared that God is Spirit, hence all that really exists is the manifestation of infinite Mind. "All is infinite Mind and its infinite manifestation, for God is All-in-all," as we read in Science and Health (p. 468).

The Bible declares that man is in the image and likeness of God, and this must be the true man, the man who is harmonious or good. There could be no man at all, there could be no one to reason about these questions, were there no real man as the reflection of divine Mind. That which is harmonious is an eternal truth, and all that is true is imperishable; for to be truth at all, imperishability must be predicated of it, just as surely, for example, as we must declare that one and one are two is an eternal or imperishable truth in order to be able to declare that there is any such rule at all. In the Glossary to Science and Health Mrs. Eddy defines heaven as "harmony; the reign of Spirit; government by divine Principle" (p. 587).

CHRISTIAN SCIENCE VERSUS PHILOSOPHY.

M. LOUISE BAUM.

INQUIRERS into Christian Science sometimes wonder why careful teachers of the subject do not apply the term philosophy to it as well as the term Science. Mrs. Eddy rarely uses the word philosophy as applied to Christianity, though in the Christian Science text-book there occurs a reference to "the philosophy, Science, and proof of Christianity" (p. 271). This distinction in the use of terms is, however, clear to those who know anything of the endless speculation which has been set forth under the name philosophy. The word itself means a love of knowledge, but a love of knowledge does not always mean that true knowledge has been attained. The term Science, however, sharply differentiates between mere theorizing and definite knowledge, or understanding which is capable of proof.

There has been too much speculation in religion, and too long has humanity divided what it has considered truth into

different fields, the sacred and the secular, the physical and the metaphysical, etc. Jesus was the most practical of men, for he bade his disciples pay the tribute money, he cured disease on every side, he changed water into wine for the use of the wedding guests, he fed the multitude, he calmed the storm. If there had been any essential gain to humanity in the research of the worldly-wise, Jesus would not have discouraged our devotion to such research by describing spiritual understanding as the "pearl of great price" for which men should gladly exchange all lesser pearls of human knowledge. Yet many a man today who acknowledges Jesus as Lord and Master is still at work among the phenomena of matter and of the human mentality as earnestly as if the great demonstrator of Life and Truth had not plainly declared the futility of such study of mortal mind and its material phenomena.

Idealistic philosophy, past and present, is sometimes supposed either to be the source of Mrs. Eddy's ideas or to coincide with them; yet it stands absolutely apart from Christian Science in the fact that it does not acknowledge Christ Jesus as the great metaphysician. Mrs. Eddy drew her whole system of teaching from the Bible. She looked to the demonstrable statements of the Master for her authority. She embodied in the title of the text-book of Christian Science the words, "Key to the Scriptures," and she proved that Science and Health is indeed that Key, by the signs which follow even a slight understanding of its teaching.

What idealistic philosopher, though groping about for the half-truth of the unsubstantiality of matter (a half-truth because it admits the verity of mortal mind), has ever attempted to establish his vague transcendentalism by proof? Christ Jesus alone could prove the nothingness of matter and of all its laws. He did the things that are the logical evidence of this fact, for he broke every asserted law of material substance and force. Christian Science alone, in the midst of the religious and philosophical and psychological teachings of this day, is proving its statements as the Master proved his. It does not claim originality for itself in the sense of being a new discovery; it consistently harks back to the Scriptures and to the sayings and works of Christ Jesus for authority, for its grasp of divine Principle.

Here, then, is the explanation why Christian Science has nothing in common with mortal mind philosophy. If such philosophy were Science, it would have the signs following; it would acknowledge its obligations to the Scriptures, and in so far be at-one with the teachings of Christian Science. The unaided human mind, without gleams of spiritual light, cannot attain to a knowledge of its own nothingness. It may indeed claim matter as merely one of its own phenomena, but it cannot reach reality save through revelation; and here we may rejoice in knowing that, as Paul reminded the people at Lystra, God has never left Himself "without witness." It is, however, true that the truth of being must be understood as resting upon a demonstrable basis.

Mrs. Eddy has plainly stated the case when she says: "Truth is revealed. It needs only to be practised" (Science and Health, p. 174). Truth is one and undivided. Christ Jesus proved himself the great metaphysician of all the ages, the great physician, the great master of all the forms and conditions of human belief and experience. No other savant has approached his supremacy of wisdom, his power over environment, such as was seen in his marvelous demonstration of the oneness of being when he rose from the tomb. He taught, first, last, and always, that Life is one, undivided. He knew that no man could approach that which is true by any other path than the understanding of God as Spirit, perfect Mind, and of man as God's image or idea. Christ Jesus proved these things. He demonstrated God as divine Principle. Why, then, should human speculation drift about in the shadows of error, the limitations of human belief, when the great secret of all being is plainly declared, with practise and proof for the guidance of all?

AS A MAN THINKETH.

W. B. CONNOR.

No army in camp is safe without the ever-watchful pickets whose "Halt! who goes there?" is heard by every one who seeks to pass. None may enter the lines but the real friends, who bring with them no harm, and not even these may enter until they are tested and proved. The deadliest enemy may come, wearing the uniform of a friend; hence it becomes the duty of the picket to disregard what may seem to be, and demand full proof. Each comer must speak the word which alone proves his trustworthiness, and failing to do this, he suffers arrest and possible execution. A member of a company of scouts who participated in the civil war, and a man who was noted among these picked men for bravery and deeds of daring, related to the writer the circumstances under which he felt that he stood for a moment in his greatest danger. He said:—

"From the nature of my service, I went out from and came into the lines as I pleased, and was, to a certain extent, known to every one. Once, after having been out under orders from our commander, I was returning, when I was challenged by a frail blue-eyed boy on picket duty and commanded to advance and give the countersign. I was so big a man physically, and so well known, that it was with a feeling of mingled pity and contempt that I regarded this boy. I felt that he should then be at home with his mother rather than where he was, a mere child engaging in the game of war. My statement to him that I had been out on scout duty and was returning to camp, I thought sufficient. To my surprise this only brought the reply: 'I know you, sir, but my orders are explicit. You cannot pass without giving the countersign.' Angered, I tightened my bridle, settled myself in my saddle, and prepared to ride by and over him if necessary. Just then his gun came to his shoulder with a click, and looking down the barrel of that gun, I saw a wonderful change come over the boy. I saw the blue eyes change into a steady, steel gray, and I read there the stern resolve of a man determined to obey orders and to discharge his duty, cost what it would. I knew that if I advanced an inch, he would shoot. I acknowledged his authority, congratulated him as a brave and faithful man, and left, firm in the belief that never had I stood in more imminent danger than at that moment."

Charged with the responsibility of proving every man who sought to pass, regardless of whom he appeared to be or what his station, dignified by the nobility of honorable service, inspired by the solemnity of his trust, this stripling, who was one moment the object of withering pity, the next moment stood in the majesty of law and order as the representative of his commander-in-chief, displaying a courage so sublime as to challenge the admiration of the bravest.

This story is impressive and very much in point when it is applied to the circumstances surrounding the greatest warfare ever waged, that of the flesh, or carnal mind, against Spirit. The man or woman who is trying to be a Christian Scientist, and who has heard Jesus' command, "What I say unto you I say unto all, Watch," and has further read that Scripture which affirms of a man "as he thinketh in his heart, so is he," will often be reminded that he has a duty to discharge if he would enter into that harmony, even in a degree, which is the reward of right thinking. No picket on duty, in advance of a sleeping army, was ever charged with a greater responsibility or required to display a higher order of courage than he who, seeking to discharge his duty, plants himself as a sentry and commands "Halt! who goes there?" to every thought which seeks an entrance into his consciousness. In order that he may discharge his trust and execute his orders, he must be fully equipped and armed, else he will neither command respect nor enforce obedience. As a challenge to all intruders, he must be prepared to withstand not only the wiles but also the barbed darts of the enemy, carnal mind.

Digitized by Google

What is the strength of the equipment of one who enlists in this honorable and noble service on the side of Spirit in the warfare of extermination and expulsion of error, materiality, wrong thinking? Mrs. Eddy tells us on page 358 of "Miscellaneous Writings" that "self-knowledge, humility, and love are divine strength." Now, since God is Spirit, and divine strength comes only from God, this must be spiritual strength, pure and simple, and must belong to and must be manifested by every one who has heard, in the spirit of obedience, Jesus' command—"Watch." To the obedient one, endowed with this spiritual strength, "self-knowledge" becomes spiritual recognition of our relation to God, "our Father," the only cause, creator, Principle, and man as His reflection and manifestation. "Humility" becomes the "Thy will be done" which realizes God's absolute supremacy, and man radiant with gratitude yet powerful in the execution of the will of the infinite Father-Mother God. "Love" becomes that Love which "is reflected in love" (Science and Health, p. 17), uncovering evil, casting out fear, and crowning all with that sweet sense of harmony which exists when good is recognized to be all, and all to be good.

Correlative to the "Watch" command of Jesus, Mrs. Eddy says: "Stand porter at the door of thought. Admitting only such conclusions as you wish realized in bodily results, you will control yourself harmoniously" (Science and Health, p. 392). Accepting these statements to be true, the enlisted man is now under orders and armed with divine strength with which to execute them. His orders are to admit only the good and the true, and they carry with them the imperative command to shut out the bad, the false, the untrue, the unreal, and to strip off all disguise so effectually that they may never for a moment even appear to be other than what they are,—a self-consuming reproach. But who shall say what is real? Science answers, "Reality is spiritual, harmonious, immutable, immortal, divine, eternal" (Science and Health, p. 335). Jesus said, "It is the spirit that quickeneth; the flesh profiteth nothing."

With orders from Christ Jesus, with equipment supplied by Spirit, God, and with a test which is absolute, nothing more is required for the detection and expulsion of wrong thinking and wrong acting and for the establishment of harmony and health. But does this reveal any new truth? These orders have always been orders; they always will be. Why are they not obeyed by all? This equipment has always been complete; it always will be. Why is it not used more generally? "As he thinketh in his heart, so is he," has always been true of men; it always will be true. They are no better, no worse, than their thoughts; but who of us is what he should be, and who of us is constantly striving to elevate his thinking to a point where he is willing to see his thoughts externalized, or to have them externalized as sickness, pain, or sin, who of us complains not of the toll they exact? Who of us harbors envy, jealousy, malice, lust? Who of us loves his neighbor as himself and is free from ingratitude, criticism, and gossip? Who of us regards heaven as a far-away place, obscured by mystery and doubt, and harmony as unattainable in this life? These are questions which must be answered by each one at some time.

May the story of the frail blue-eyed boy picket, made irresistible by the might of that for which he stood, arouse us to a more perfect realization of the necessity we are under to obey, and awaken us to the further realization of our privilege to occupy a position, each moment, of no less importance than he occupied, as we subject each thought to the test of Christian Science before admitting its conclusions. When we have once accepted service, donned the armor, and fearlessly applied the test, no such man, woman, or child can ever again think of himself as poorly equipped or lacking in authority and strength. He is a coworker with God. Again, no enemy of peace, harmony, or health; no thought of envy, jealousy, or lust; no error claiming any name or nature, however subtle, however disguised, will be able to meet the test requirement. All such will recognize behind what, to sense testimony, seems a frail mortal, a man who knows his strength to be in Spirit and who is fearless in the discharge of his trust; and recognizing in this man of God-given dominion his master, they will vanish into nothingness, be self-destroyed. No thought of love, peace, good will to men, or gratitude to God will fail to stand the test, or, finding sweet welcome, will fail to establish abiding peace and health.

UNDERSTANDING VERSUS BELIEF.

WALTER SHAW.

THE entire trend of the teaching in Christian Science is toward the acquirement of definite understanding in contradistinction to mere belief upon any given topic. Every moderately educated individual desires to further his knowledge, and should welcome a system of thoughtful reasoning which will accomplish this end. Especially should this be the case in regard to the most important subject, namely, the truth relating to God and man. Christ Jesus, the greatest teacher and demonstrator of Truth that the world has ever seen, said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." A knowledge of God implies knowledge relating to the source, cause, and origin of all that truly exists. A knowledge of man, in the light of Christian Science, means acquaintance with man as created in the likeness of God, as related in the first chapter of Genesis, in contrast to the dust man or Adam race generally accepted as of divine creation.

Our work as students of Christian Science consists in the acquirement of a clear and definite understanding upon the essential basis of Christian Science teaching, in order that dominant beliefs—religious, philosophic, or general—may in no wise affect us, because our grasp of the truth of being is clearly assured. It is obvious that an understanding of Truth being greater than any mere belief, must eventually govern such belief, and ultimately annihilate it. Proofs rather than assertion should be our constant aim; and if we are loyally striving to overcome all that seems to contradict this view in the varied problems of life, "we shall reap, if we faint not."

Human will-power is no part of Christian Science; but this does not mean that we should be satisfied with a merely acquiescent acceptance of its teaching, and not make a firm, determined effort to prove what our highest reason tells us is essentially real and true. When Christ Jesus said, "Strive to enter in at the strait gate: for many, I say unto you, will seek to enter in, and shall not be able," it seems to imply that he knew a mighty human struggle was requisite in order to acquire a clear, positive sense of the reality of the truth he taught. If seeking had been sufficient, so many of his disciples would not have dropped off; therefore in our study of Truth we should rest content with nothing short of progressive demonstration.

The practical value of knowledge gained is illustrated when by a clear realization of the true creation, *i.e.*, the spiritual, the painful beliefs of a fleshly existence are removed. An understanding of our true spiritual identity controls and subordinates the errors of belief in human selfhood, when we truly realize our relationship to the divine. To say with the apostle, "Now are we the sons of God," and then assert, for instance, that we are suffering from disease, would be to dishonor God, or to remain in dire ignorance about Him. How could the image of divine Mind suffer? Must it not be spiritual, and as spiritual possess dominion or control over matter? When our appeal to this true selfhood is made understandingly, it is never void of good effect; it must dominate and prove the Christ-knowledge to be power.

"THAT HE MAY RUN."

MARY JAMES ARNOLD.

MANY of the popular phrases in general use today may be found in the Bible. Some have retained their original meaning; others have become so changed in their journey through time, that the lesson which is clear in the Scriptural statement now brings us only a shadow of its original significance. To cite an example: It is well that all of good shall be writ so large that "he that runs may read," but how much more strength and power pertains to the original command of God as voiced by Habakkuk: "Write the vision, and make it plain upon tables, that he may run that readeth it."

It is told how the Samaritan woman at the well, being convinced in her own thought that Jesus was the long-expected Messiah, went at once into the city to bear the good news to her brethren. Again, we read that the two Marys, on learning from the angel messenger of the Master's resurrection, "did run to bring his disciples word." What was the vision, the revelation, glimpsed by the Samaritan woman, and further unfolded to the women at the tomb of Jesus, which was of such importance that all who read (received) it hastened so joyously to share it? Habakkuk describes it in these words: "The earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea." Today, as never before since the early Christian era, the vision of the healing power of Truth is being writ large upon the tables of thought. In all lines of human activity men are seeking for that which uplifts and purifies, with love for God and man as watchwords in their progress. "He that runs may read" the result of these efforts for reform in the improved mental, moral, and physical conditions which we see about us; and conversely, it is well that "he may run that readeth it,"—run and bear swiftly to heart-sick humanity the joyful message that "God, the divine Principle of harmony, is ever with men, and they are His people" (Science and Health, p. 573).

This is the message (vision) which Christian Science has brought to the world: that God, good, is indeed all-power, as the Bible teaches; that man, as God's reflection, has full power and authority from his Maker to be honest, pure, and true, to express only those qualities which are godlike; that the evils—sin, disease, death—which burden mankind are the results of a wrong concept of God and man; hence, as men learn to know God as Truth and Life, these evils will lessen until they finally disappear. Of what practical import is the message? In the home, the assurance that harmony is real and discord unreal begins at once to eliminate selfishness and worry, replacing these with peace and joy. In the office, the knowledge that divine Mind governs, disarms criticism, establishes order, and assures friendly relations between workers. In the workshop, the reliance upon God as the only activity, lessens friction and fear of accident, and brings in promptness, steadfastness, and reliability.

This message of man's freedom is for each and all; it is in the consciousness of the individual that the understanding of God and His law is being written today. Christian Science teaches us how to claim and to make use of that which is man's rightful heritage. Those who experience its benefits become in their turn messengers; they "read" and "run," thus helping to speed the day when all mankind shall know the power of God.

THE REAL AND THE COUNTERFEIT.

OLIVE A. RAINEY.

IN passing one of our national banks the other day, my attention was arrested by the display in the window of what appeared to be two one-dollar bills. On closer inspection, I found that one of these bills was a counterfeit, the other being authorized legal tender, and the bank officials had taken pains to indicate very definitely the points of difference between the two. At first glance they seemed to me to be exactly alike in every detail, except the number, but as I compared them point by point I began to wonder how it could be that I had not at once seen the marked difference between the two. I turned away from the window feeling sure that I should not be caught by the counterfeits, for by acquainting myself with the detail of the true bill I had learned to distinguish the marks of the counterfeit. I had learned that however much these counterfeits might appear to be like the true, they were not money; therefore their claim to be money was absolutely worthless.

Continuing my way along the street, there came to my thought the lesson that we as Christian Scientists are every day brought face to face with the real and the counterfeit, in one form or another, and it is for us to be so alert that we may clearly discern between the true and the false. When a belief of sickness asserts itself, its reality seems unquestionable so long as thought is permitted to flow in that channel; but as soon as thought is turned away from materiality to man's spiritual selfhood, the falsity of the claim becomes at once apparent, as in the case of the counterfeit bill. It follows that the light of truth dispels the darkness of error and reveals its nothingness.

A poor counterfeit is more readily distinguished than one which is more cleverly executed, and it is therefore less dangerous. So in Christian Science the more glaring errors of sickness and gross sin may be readily discerned and oftentimes immediately destroyed; but even as it is the better disguised counterfeits which find their way into circulation and are overlooked, so it is that the more subtle forms of error are permitted to circulate, unless we are ever vigilant that our standard may fall nothing short of the high demands of Truth.

Those who are accustomed to handle much money, and who have been trained to know absolutely the authorized "coin of the realm," are not the ones who suffer from the circulation of spurious currency. The bank clerks pass a counterfeit back to the would-be depositor almost immediately. In case of the coin, they oftentimes perceive its worthlessness by the sense of touch alone. The only explanation of this is that they know the true coin; and any deviation in a coin from that standard proves it to be a counterfeit. We thus see that the more conscientiously we obey the injunction to "acquaint now thyself with him [God]" the less will we be liable to accept as real any of the counterfeits which error is ever presenting for our acceptance. The danger of any counterfeit lies solely in the fact that it is not recognized for what it is. When, however, its lack of identity is established, it ceases to inspire fear. Mrs. Eddy says (Science and Health, p. 297), "Erroneous belief is destroyed by truth. Change the evidence, and that disappears which before seemed real to this false belief." A scientific understanding of Truth is the only safeguard against error of any sort.

[Written for the *Sentinel*.]

SECURITY.

GERTRUDE GOODING MC CLOUD.

WE turn not back
When paths look dim
And skies seem gray;
No good we lack
When trusting Him—
Love lights the way.

No dream of sense
Can make us fear;
We watch and pray.
This our defense:
Heaven is here,
Love leads the way.

SELECTED ARTICLES.

[Frederick Dixon in *Letchworth Citizen*, Letchworth, England.]

Mr. Merry must excuse me if I dissent from the position taken up in his last letter. He says now that all he originally said was that there were certain things in Christian Science which were common to Christian Science and theosophy, and he proceeds to give three instances of what he means. The original report, however, of his lecture stated quite definitely that he represented Christian Science as a counterpart of the Vedantic doctrine of Maya. This, I showed quite clearly in my last letter, is not the case. The Vedantic doctrine of Maya differs fundamentally from the Christian Science teaching of the unreality of matter, inasmuch as theosophy, on this gentleman's own showing, teaches that matter is an illusion, and this illusion "is produced by the divine nature." Christian Science denies absolutely and unequivocally that there is any connection between this illusion and divine Mind. When two teachings differ, root and branch, as to causation, to say that one is the counterpart of the other is—I wish to use the term without any offensiveness at all—playing with the facts.

Now, let me take the critic's three points, which he uses to argue that Christian Science teaching is the counterpart of the doctrine of Maya. First, he says both teach that all material phenomena are unreal and illusory. Now, all idealistic philosophy, from the time of Plato onward, has taught this. You might just as well say that Platonism, Conceptualism, and Berkeleianism, as well as the whole body of modern idealism, were counterparts of the doctrine of Maya, as that Christian Science is.

Secondly, he says that both teach that matter is due to ignorance. The Stoics taught that evil was the result of ignorance, Socrates and Epictetus taught something of the same sort; but it would hardly be contended that the teaching of Socrates, of Epictetus, or the Stoics was therefore the counterpart of Maya. As a matter of fact, on the critic's own showing, the ignorance of truth implied in the Christian Science teaching of unreality and that implied in theosophical teaching on the same subject, is fundamentally different. The illusion of matter is produced, according to theosophy, on the gentleman's own showing, by the divine nature, and must therefore be part of the consciousness of divine Mind, and, unless this Mind can rid itself of something which it possesses, must be also eternal. Christian Science, on the other hand, teaches that the divine Mind, being perfect, is conscious of nothing but perfection, and is unconscious of the illusion or lie which, in the very nature of illusion, does not exist.

Thirdly, he says that Christian Science and theosophy agree, inasmuch as they teach that reality and truth are only united by self-identification with the divine nature. That, of course, is what theosophy teaches, but it happens to be the very reverse of what Christian Science teaches. Christian Science teaches that reality and truth are the same thing, and for that very reason do not need to be united, for they are one, and that one is God and the spiritual kingdom. It would have been difficult to make the position clearer than this critic has in showing how Christian Science and theosophy differ fundamentally from one another. Christian Science teaches that man in the image and likeness of God is simply a divine idea, which has always existed in divine Mind and has always been perfect. It denies absolutely that this divine Mind has any cognizance of any other mind.

It is perfectly true that Christian Science teaches the unreality of matter, and so does theosophy; but that no more makes theosophy and Christian Science counterparts than it makes Christian Science, Stoicism, Platonism, Conceptualism, Berkeleianism, and modern idealism counterparts of one another. Take a single example from orthodox theology. Primitive Christianity, the theology of the early fathers, the theology of Anselm, the theology of the Roman hierarchy, the theology of Luther, of Calvin, of Knox, of Laud, and of Wesley, all teach, as does Mrs. Eddy, that God is the creator of all that exists. Therefore, according to the critic, all these systems are counterparts of one another. As a matter of fact, the world knows that their teaching is so diametrically opposite that the great mass of them persecuted each other, with remarkable impartiality, for accepting what the critic would ask us to believe is the same teaching.

This teaching, he says, is the teaching of the New Testament, which might be accepted by the Vedantists, and which he sums up in the first and third verses of the first chapter of the gospel of St. John: "In the beginning was the Word, and the Word was with God, and the Word was God," and "All things were made by him; and without him was not any thing made that was made." What is called orthodox theology contends that this means that God created the physical universe, and that He made the flesh, which Jesus said "profiteth nothing," and of which Paul said that it could not please Him; that He made the storm, which Jesus quelled; the leprosy, which Jesus healed; and ordained death, out of which Jesus raised people, and which Paul says entered the world through sin. To sum up, that He made sin itself, that He is the author of heaven and hell. Vedantism may agree with this teaching, because it makes the illusion of evil a product of the divine nature. You might therefore argue that because the Vedantas and orthodox theology agree in this, there is no difference between orthodox Christianity and theosophy or Hinduism.

Christian Science, however, declares that the second of the verses quoted by the critic is the key to the situation; that it is precisely because none of these things are known to the divine Mind or created by an omniscient creator, of whom the apostle declares, that "without him was not any thing made that was made." "That which is born of the Spirit," as Jesus said to Nicodemus, is the spiritual universe, the ideas of the divine Mind, but "that which is born of the flesh is flesh," the illusion of mortal mind, with the whole range of its phenomena of sin, disease, and death, none of which could be known to divine Mind, or omniscience would cease to be intelligence; none of which could be contained in spiritual infinity, or that spirituality would cease to be infinite; and none of which could exist in divine omnipotence, or that omnipotence would have ceased to be the omnipotence of Spirit and become instead the dualism typified in the fruit "of the tree of the knowledge of good and evil," the eating of which, in the words of the Jehovistic writer, ultimates in death.

[Frank C. Barrett in *Reporter-Journal*, Gardiner, Me.]

In a recent issue there appeared references to Christian Science and Mrs. Eddy which, while evidently intended to be fair and kind, nevertheless contained several statements which conveyed an erroneous impression. For the benefit of the readers of your valuable paper I would like to state that Mrs. Eddy never claimed that she was the source of healing in Christian Science. Jesus said, "Ye shall know the truth, and the truth shall make you free." Thus, by gaining a spiritual sense of God, and of man in His image and likeness, one may so put off materiality as to become a transparency for Truth. Mrs. Eddy discovered this fact: that God will manifest Himself through man whenever man is spiritually-minded enough, but she never taught that she or any other human being is or was the source of healing, which is God. Even Jesus disclaimed the ability to do the healing work of himself, for he said: "I speak not of myself: but the Father that dwelleth in me, he doeth the works." Then he said, "He that believeth on me, the works that I do shall he do also; . . . because I go unto my Father." It is evident from this that he expected his works to be perpetuated by his followers throughout all time, for

Digitized by Google

he was going away; but he left his example and revealed the source of his power to heal and save.

Mrs. Eddy discovered that "the prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love" (Science and Health, p. 1). Christian Science teaches that those who would follow the Master in his works, must have that Mind in them "which was also in Christ Jesus." "For to be carnally minded," Paul tells us, "is death; but to be spiritually minded is life and peace." Mrs. Eddy's whole work has been to help mankind to be "spiritually minded," which is essentially and necessarily a religious work. No mere philosophy can accomplish it, because it lacks the vitality of a religion, and psychology cannot explain the works of Jesus, much less approximate them. The phenomenon of physical healing in Christian Science is not a phase of the action of the human mind, as intimated in the article under discussion, nor is it in any way related to psychotherapy.

Mrs. Eddy stands as the Discoverer, teacher, and Leader of the Christian Science movement, and it is in this light that Christian Scientists have always regarded her. She has merited the Father's high commendation, "Well done, thou good and faithful servant;" and Christian Scientists are grateful for all that she has done, but they never could worship her or any other human being. She says of herself, "Today, though rejoicing in some progress, she still finds herself a willing disciple at the heavenly gate, waiting for the Mind of Christ" (Science and Health, Pref., p. ix).

Mrs. Eddy taught four thousand students during a period of seven years in her college, not in "one year," as stated. Her students never complained of the rate of tuition, but they have rejoiced because of their privilege. It should be remembered that Jesus required his disciples to leave all and follow him,—leave their only means of getting a living, except by their ministry. So we see the seventy sent out without supplies, yet they returned rejoicing. The Master had told them not to tarry where they were not well received, for, he said, "the laborer is worthy of his hire." Paul says, "If we have sown unto you spiritual things, is it a great thing if we shall reap your carnal things?" All Christians seem to be agreed that this is proper. Christian Science practise is not a profession or a business, but a ministry, and those who are beneficiaries are generally glad to support it as such.

["One Healed by Christian Science," in *Columbus* (Ohio) *Dispatch*.]

The evangelist has had many harsh things to say of Christian Science in his sermons, and I would be glad if you would give me space in your columns to say a few words in behalf of this new Christian teaching. If the things that the critic condemns were really taught in Christian Science, it would be right that they should be condemned, but it happens that these things are not taught, and if they were they would be repudiated by the followers of Christian Science just as quickly as the critic would repudiate them. Although maligned, I am sure those who have accepted this faith will harbor no sense of rancor toward him, no matter what he has said or may say in the future. In ninety-nine cases out of a hundred they stood just where he now stands on this subject before they had investigated Christian Science and were ready to accept as true its revolutionary teachings.

The real test of any doctrine is its results. The good fruits of Christian Science are certainly apparent to the most casual observer; and the fact that new Christian Science churches are being organized at the rate of one every four days speaks volumes for the prosperity and success of this mighty movement. Probably its real strength is in the healthier, happier, and spiritually-awakened living it has brought to thousands of its followers, in homes brightened, in health and harmony restored.

Jesus said, "Ye shall know the truth, and the truth shall make you free." That Christian Science has brought this new birth of freedom and the more abundant life the Master also promised, unnumbered thousands are ready to testify. Critics may condemn what they think Christian Science is, but those who have accepted its teachings and are applying them, look up to Christian Science with blessings. In the midst of censure these followers will be comforted with the thought that, in the words of the Founder of the movement, "Truth will not be forever hidden by unjust parody from the quickened sense of the people" (Science and Health, p. 343).

[H. Cornell Wilson in *Wayne Democratic Press*, Lyons, N. Y.]

Our clerical critic tells in his sermon what *he thinks of* Christian Science. Instead of telling what *Christian Science* teaches, a duty no one would really expect him to be able to fulfil, and for which task he proves by every word on the subject he has uttered that he is totally unfit, he, from some mistaken motive or other, undertakes to lay before his hearers what amounts to a complete misrepresentation of Christian Science. The gentleman, by reason of his position, is entitled to be thought sincere. This alone frees him from a charge of malicious intent.

When he says Christian Science "has no Christ," he probably does not know that the subject of Christ is referred to in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, upward of two hundred and fifty times. He must have overlooked one of the tenets, or important points of Christian Science, on page 497, which reads: "We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness." By saying that Christian Science "denies the inspiration of the Bible," he shows his need of reading the first tenet subscribed to by members of the Christian Science church, "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497).

With respect to other charges made in the same sermon, all equally far from the facts, I need only point out that each individual may satisfy himself as to what the teaching of Christian Science is by reading its text-book. This is usually available at any public library, or may always be read, along with other Christian Science literature, by applying to any Christian Scientist; and there are a number in Lyons. In assuming to elucidate what Christian Science teaches on the subject of Mind, our critic has entirely missed the spiritual thought which Christian Science conveys. It is recorded that Jesus, in talking to a none too courageous though prominent ruler, once said, "Verily, verily, I say unto thee, Except a man be born again, he cannot see the kingdom of God." Then is put down the very material conclusion, which seemed inevitable to Nicodemus, namely, "How can a man be born when he is old?" to which Jesus replied, "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit." This particular Scripture reference is cited to show how prone men have ever been to jump to conclusions formed from very material premises, in the face of an obvious intent to convey a spiritual meaning. The "mind of Christ" is that Mind which was in Christ Jesus. This, Paul advises that we have, and this is the Mind which Christian Science says is God, than which there is no other. This has no relationship to the "carnal mind," which "is death," but it is the spiritual Mind which we are admonished to have, and which Jesus said "is life." Just as Jesus, and some of his followers, including Paul, used the words Life, Spirit, Soul, Mind, and Love as synonyms for God, so Mrs. Eddy has used the term Mind to indicate God, which gives man an enlarged and incorporeal sense of "Him whom to know aright is Life eternal" (Science and Health, Pref., p. vii).

Like our critic's own religious teaching, Christian Science must stand or fall, judged by its works. Christian Science

Digitized by Google

has so far been known, and has prospered through being known, by its works. During the fifty years its work has been going on, millions of cases of sin, sickness, sorrow, want, and misery of every kind have been mastered and destroyed, with the result that today Christian Science has become a world movement. It contains men who once served other churches, as the critic says (but perhaps these would not answer to his charge, "backslidden ministers"), men from the medical profession, members of the legislatures of the world, soldiers and sailors, well-known business men, lawyers, writers and scholars, men of science, besides a host of workers in shops, factories, and the country generally. The inference is not safe that these people are deceivers or self-deceived, for whereas they were blind, or sick, or under the yoke of sin, or without hope of God in the world, now they see, and are, according to their own telling, the better for it.

[W. C. Williams in *Baltimore* (Md.) *Sun.*]

As wit is generally merciless, we can understand why the *Free Lance* uses ridicule for sharpening its points; but as every one is not familiar with the reason for it, and as ridicule often deters those interested in learning the truth from investigation, I ask the privilege of straightening out a few of the statements regarding Christian Science in a recent article in the *Evening Sun.*

Although in deference to Mr. Mencken we do not like to bring religion into the argument, yet it is inevitable, as we claim Christian Science is simply the exemplification of the law of God. As its basis is the spiritual, its followers do not "go vivisecting patients and gaping into microscopes," but they do not ridicule the earnest believers in those methods, nor belittle their "endless effort" to help mankind. Christian Scientists have not declared that they know anything about such methods or their results, except when specially brought to their attention, and Christian Scientists would not see the benefit of working from a material basis, since they deal, as stated before, essentially with the spiritual and the mental.

The doctrine of Christian Science is not that the laws of nature can be changed by human volition; on the contrary, it states that as God is Spirit, the only natural laws are spiritual laws, and that these are immutable. These laws do not cause sickness, but overcome it. We should assuredly retrograde rather than progress, if man's physical expression controlled him; if the mortal dominated, immortality would be a myth.

[Algernon Hervey Bathurst in *Derby Telegraph*, Derby, England.]

My attention has been drawn to a reference to Christian Science which appeared in a recent issue under the heading of "Talks for a Quiet Hour." I have read the paragraphs with considerable interest, and agree most heartily with the statement of the writer that there is a truth in Christian Science. In view, however, of what is said in the preceding paragraphs, in the article to which I refer, some misconception might arise as to the actual teaching of Christian Science, and I will ask you to allow me to point out that the one thing Christian Science does not teach is auto-suggestion. I do not say that your contributor definitely states that auto-suggestion is in any way connected with Christian Science, but such an impression is liable to be gained by those who read what he has written. The great and rapid growth of Christian Science is due to the fact that it is revealing absolute truth to mankind. Christian Science is daily giving practical proof of the fact that man's rightful heritage is dominion over sin, sickness, and all discord. Christian Science teaches and proves that the law of God, the law of good, is available today just as it was nineteen hundred years ago. Jesus the Christ came to fulfil and not to destroy, as he himself declared, the law of God, and in so doing he healed the sick, reformed the sinner, raised the dead, and healed many other conditions of discord and limitation.

Now there is only one way by which these works, which Jesus declared so emphatically must follow a correct understanding of his teaching, can be accomplished, namely, through a spiritual or scientific understanding of God and His perfect creation, including man. This understanding can never be attained through mere intellectual effort, and the works which result from a scientific understanding of his teaching can never be accomplished by the manipulation of the human or carnal mind. "I and my Father are one," Jesus said, and it is through the earnest desire and effort to let that Mind be in them which was also in Christ Jesus that the healing of sickness and the destruction of sin is accomplished by Christian Scientists today. The human or mortal mind is obviously a house divided against itself; that is to say, the human or material mind alone believes in both good and evil, believes that the two are at war, and that evil is frequently the victor. There is perhaps no more startling statement in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, than that found on page 192, "Evil is not power." Nevertheless, Mrs. Eddy explains on page after page of Science and Health how this truth can be demonstrated, and it is just because the statement is true that an understanding of it results in the improved condition of the student of Christian Science. It will be seen, therefore, that Christian Science is not engaged in a mighty battle with evil as a fierce opponent, but it is proving that today, just as when Jesus taught his disciples in Palestine, a correct understanding of God must inevitably result in the destruction of the belief in the power of evil, whether manifested physically or in any other form. This, it is clear, cannot be accomplished by any manipulation of the human mind.

[Jesse Pickard in *Herald Dispatch*, Utica, N. Y.]

Under the caption, "Rid of Mental Rubbish," your valued paper reported the sermon of a prominent clergyman in Utica, in which he condemned what he considered to be the teaching of Christian Science. Among other things he is reported to have said that Christian Science teaches the pantheistic and unchristian belief that all material phenomena manifest God, and that because of this teaching mankind is robbed of the true essence and benefit of prayer. In justice to all concerned, I desire to say that Christian Science is in no way responsible for such conclusions as the worthy gentleman has seen fit to credit to it. The study of its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, would without possibility of doubt inform the inquirer that it teaches exactly the opposite. Christian Science accepts the premise that God is infinite, omnipotent, omnipresent, and omniscient, that He is the only cause or creator, and that He is wholly good. From this premise it concludes that all which is opposed to this God, all that is unlike good, all that is unlovely, impure, evil, or limited, classified generally as sin and disease, is unnatural and without actual law or power. Those who are consistent with this conclusion find their existence enlightened by a quickened sense of the omnipresence and power of good, and are enabled to abandon or overcome evil as an imposition.

The proofs given by Christ Jesus in overcoming evil with good were illustrations of divine law, through which Truth triumphs over error, good over evil, and Love over fear. These proofs are as possible today as then, because God and His spiritual law are unchangeable. The peace bestowed through the demonstration of Christ Jesus, which seems somewhat problematical to our reverend friend, is the legitimate result of the consciousness and proof of good. This good is attained only by spiritual thinking, based not upon the phenomena of matter, but upon the substance and healing power of Truth and Love.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"HEAL THE SICK."

THE healing of the sick through spiritual means is ever the most astonishing thing to those who regard disease as a reality. This has been the almost universal experience of the beneficiaries of Christian Science, even as it was the experience of those who were healed by Christ Jesus and his immediate followers. The man who was born blind and the man who was healed at the gate Beautiful had no more reason for surprise than had the father and mother in Louisville, Ky., whose daughter was healed through Christian Science treatment. The young lady in question is the daughter of Mr. and Mrs. John P. Stack, and Mr. Stack, in writing of her previous condition, says:—

"She [the daughter] has been lame all her life, and when she left here in June, 1911, her left limb was four inches shorter than the other and the hip had formed an entire new socket. We had her examined by several doctors, but none of them seemed to agree as to what could be done for her, and we were advised by all but one to let her alone, as they did not believe anything could be done for her. This doctor wanted us to have weights tied to her foot and keep her in bed for several weeks and then let her walk on crutches. As at that time she was only three years old, we followed the advice of the majority and did nothing except to have an instrument made to wear inside of her shoe, which cost us twenty-five dollars and did no good. For the past year (upon the advice of my brother-in-law in Los Angeles, who is a physician), she has walked in an ordinary shoe and upon her toes. Her spine was curving and she was getting to be very badly crippled. Imagine our surprise and delight when the news contained below was received:

"'Los Angeles, Cal., Jan. 30, 1913.

"'Dearest Dada: I reckon I'm just about the happiest girl in the world tonight. I do not know whether you will believe me or not when I tell you why, but it is nevertheless true. Your little daughter, who has been lame all her life, this day has had her hip put back into place and her limb lengthened through the power of God as demonstrated in Christian Science. I went for the first time last Tuesday, and I had a great big fight with myself to put aside my pride, for I knew that I could not pay the practitioner, and, while you would be willing to make most any sacrifice to secure material help for me, I knew you would not be willing to pay one cent to a practitioner. I went down to the Hellman building and went up to the reading-room and opened Science and Health. The first thing I read was something about "healing the lame." I went down-stairs and went to the first practitioner's office I saw. It happened to be that of . . . I went in and talked to her, told her I couldn't pay her, etc., and she closed her eyes and treated me for a few minutes—about ten. After that she told me she would like to see me again on Thursday. She gave me another ten-minute treatment and told me she didn't think I would have to return to her. As soon as I left her office I realized that my hip was in place and I was no longer lame. I came home and walked up and down in front of the mirror many times to be sure before I went in and spoke to the folks. They will all tell you that I have been completely healed. I am indeed more than grateful to God, to Christian Science, and to Mrs. Eddy tonight. We have all been studying "Science" for the past month, and Ethel and I have been attending the church since the beginning of the year. I expect to enter the Sunday school Sunday morning. Dada, I wish you would go to the Science reading-room in Louisville some day and spend an hour or so reading Science and Health, for it is by far the most beautiful thing I have ever studied, and is God through and through. Dada, I wish you would go to a practitioner and get well, instead of spending money on material medicine.'"

A few days later, in a letter to her mother, she wrote: "I think I am the happiest woman alive today; my faith in God is supreme and Christian Science has smoothed away and lightened every shade and shadow in my life." Jesus bade his followers heal the sick, and when such indubitable proof of the present-day efficacy of the "prayer of a righteous man" as is given above is vouchsafed, he is a skeptic indeed who can doubt that, as Mrs. Eddy declares on page 495 of Science and Health, "Truth casts out error now as surely as it did nineteen centuries ago." When we as Christian Scientists have attained in a measure that apprehension of Truth which the Master possessed,—have in us the Mind "which was also in Christ Jesus,"—in that degree are we able to free those that are bound from the fetters of sickness and sin.

ARCHIBALD MCLELLAN.

THE NINTH COMMANDMENT.

THE ninth commandment, which reads, "Thou shalt not bear false witness against thy neighbor," makes a strong demand for truth between a man and his neighbor. Without truth there can be no real sense of love, and *vice versa*. The stern prohibitions of the Decalogue would be unnecessary if all men rose to the spiritual height of loving their neighbors as themselves, but there are few who think this possible; yet none could seriously claim to ignore the obligation to respect the reputations of others, at least to the extent of not falsifying about them. Human law provides against offenses of this sort, but the fact that this law is seldom invoked in courts of justice, as compared with the one which says "Thou shalt not steal," shows the material tendency of mankind. The wise man, however, tells us that "a good name is rather to be chosen than great riches;" and in the same vein Shakespeare makes one of his characters say:—

> Who steals my purse steals trash; 'tis something, nothing;
> 'Twas mine, 'tis his, and has been slave to thousands;
> But he that filches from me my good name
> Robs me of that which not enriches him
> And makes me poor indeed.

Obedience to the ninth commandment requires of us no mere exercise of a negative virtue, but instead a sense which "rejoiceth in the truth," whether it relates to friend or foe, and which is never willing to admit an evil report of any one. In Christian Science we come to look at this question broadly as we ponder the Master's pronouncement, "Ye shall know the truth, and the truth shall make you free." This does not mean only the truth about ourselves, but rather the all-inclusive truth of God and man which is of universal application. It enthrones "judgment and justice" in our consciousness, so that we can never believe ourselves to be the helpless victims of wrong of any sort; but this blessed consummation cannot be realized if we heedlessly or wilfully admit the false witnesses of mortal belief, which, to use the psalmist's words, "breathe out cruelty." The one who fails to obey the law of justice in all its righteous demands injures himself most of all, and misses the joy which comes from living in the sunshine of Truth and Love.

Mrs. Eddy's interpretation of this commandment is brief but forceful. She says: "'Thou shalt not bear false witness;' that is, thou shalt not utter a lie, either mentally or audibly, nor cause it to be thought" (Miscellaneous Writings, p. 67). This is followed by the statement: "Obedience to these commandments is indispensable to health, happiness, and length of days." It goes without saying that consistent Christian Scientists do not talk about disease or sin, nor listen to recitals of error except as these come from the

Digitized by Google

afflicted who are thus seeking to unburden themselves; and even then the Scientist holds silently, if not audibly, to the truth of being and refuses to let the intruding false witness enter his mental habitation. As he advances in the understanding of infinite Truth, he sees that he must think truthfully if not tenderly of alien races and peoples as well as of those at home, and refrain from speaking ill of them whatever the evidence offered by material sense may be.

For this attitude we have the authority of Christ Jesus' words. Did he not in a parable make a "Samaritan" the neighbor to the one who had fallen among thieves? In this parable we find encouragement to be just and true in all we say and think, whether of men or nations, and this is surely needed. In Science and Health (p. 238) we read: "Society is a foolish juror, listening only to one side of the case. . . . To reconstruct timid justice and place the fact above the falsehood, is the work of time." In placing "the fact above the falsehood" we can never justify wrong or be deluded by error, for an alert sense of Truth's demands is the surest defense against evil. The Bible tells us that "a false witness shall not be unpunished," so we have but to protect ourselves and others by thinking upon and speaking only of the things that are true, just, pure, lovely, and "of good report."

ANNIE M. KNOTT.

"TOGETHER WITH GOD."

THAT effective response to all the demands upon us, as parents, practitioners, and public citizens, constitutes a heavy load, is a proposition to which some of us may often be tempted to concede; and that the dominion of this sense does not represent the freedom which Christ Jesus declared was to be gained through a knowledge of Truth, goes without saying. The "I can't, I have so much to do," which is not infrequently heard upon the lips of Christian workers, often expresses that wholesome recognition of human limitations which authorizes one to decline to accept a further responsibility. It is usually better not to undertake at all, than to make an unsatisfactory trial. Sometimes, however, this excuse expresses our forgetfulness of the stupendous fact that we are coworkers with God, that in Christ human weakness finds its full compensation in divine strength; and if we have lost our hold on this saving realization of the presence and power of Truth in our work, then we do well to know it, and to pause right there until we have scientifically regained our bearings.

The traveler in Egypt or Palestine will sometimes see a native plowman following a team which is made up of a very large camel and a very little donkey. If harnessed so that the two pull against each other, it is apparent that their combined efficiency is only double that of the weaker member. One is sure to find, however, that the simple husbandman has been wise enough to hitch each animal directly to his crude plow, so that the tremendous pull of the stronger is in no way handicapped. This order of things serves to illustrate the vastly significant truth respecting the divine relation to the achievement of all our worthy undertakings, a truth which, if rejoicingly realized moment by moment, will give us strength as well as inspiration, when otherwise we are likely to be utterly mesmerized by the sense of inadequacy.

The sufficient reason for St. Paul's wondrous assurance and power to overcome, was fully expressed when he said, "I can do all things through Christ which strengtheneth me." The facing of the world's fierce antagonism, the care of all the churches he had founded, the support of the drooping and weak-kneed among his helpers, and the endurance of unnumbered punishments and afflictions,—all this was not only possible to him, but it was so light a load that he could rejoice unceasingly, because of his abiding realization of the mightiness and reliability of the coworker upon whom he leaned. "I know," he said, "whom I have believed." Paul was a great Christian Scientist, and in so far as we gain his sense of God's relation to all right human endeavor, we too can find escape from that feeling of weakness and incompetency which has so often fettered our hands and rendered us a prey to enervating discouragement.

A student of Mrs. Eddy once said to her that she never seemed so great to him as when he thought of her in the midst of the years, standing alone, not only misunderstood and misjudged, but cruelly condemned and cast out by practically all who— With a quick up-pointing of her finger she interrupted just here, and said, "But I wasn't alone!" This is the explanation of a bravery, an ability to withstand opposition and patiently await the issue of faith, which is being universally recognized and honored, and this for us also is the secret both of efficiency and of peace.

Christian Science brings to its every honest and faithful student an ever-increasing degree of that patience and poise and gladdening assurance which characterizes the workman who understands his job and who knows he can fulfil his contract in due time. Said the psalmist, "The Lord is the strength of my life; of whom shall I be afraid?" Frank and full recognition of human weakness is not only congruous with but in one sense essential to this efficient faith in the all-conquering power of Truth, a reliance upon God which displaces confidence in human ability, and more and more determines for each the larger range of his sanctified service.

JOHN B. WILLIS.

BICKNELL YOUNG TO RETURN.

Three and a half years ago the Board of Directors of The Mother Church requested Bicknell Young, as a member of the board of lectureship, to make his headquarters in Europe. The Board now feels that this residence is no longer necessary, and has therefore released him from his obligation to remain there permanently. Mr. Young expects to return to America this year.

AMONG THE CHURCHES.

CURRENT NOTES.

JANESVILLE, WIS.—Perseverance and faithfulness on the part of the members of First Church of Christ, Scientist, of this city accounts for the steady growth which has been made in the past twenty years, and the outward expression of this endeavor is now seen in the beautiful new building at the corner of High and Pleasant streets which was formally dedicated Sunday, Feb. 2. The first reader in an account of the history of the church said: "It was as long ago as the year 1886 that the light of Christian Science first dawned upon Janesville. First one and then another perceived this light, felt its beneficent influence, and was healed. This was the real beginning of the church of which this edifice is the outward expression, for without the healing there would be no Christian Science church and no need of one. Services were first held in a little room on South Jackson street. Later, a hall was rented in one of the business blocks, and since that time services have been held continuously. In 1895 a Sunday school was formed, and in April, 1897, a church was organized under the state laws. Twenty-two persons signed their names as charter members. During this same year a building fund was started. The first authorized Christian Science lecture, of which this church has given twenty-two, was delivered in 1899.

"In June, 1902, word came from Boston of the proposed plan to build The Mother Church extension, and as this branch wished to give its support to the undertaking, contributions were sent periodically, to which was added the amount on hand in the building fund. On the completion of that structure in 1906, the church again took up monthly contributions for its own building. Once again these were discontinued in order to share in the construction of the

Digitized by Google

Christian Science Publishing House in Boston. In 1907 the present site was purchased. In January, 1912, feeling that the time had come to make preparations for building a permanent home, a committee was appointed who employed an architect, and work began. Ground was broken the fifth day of August, and the laying of the corner-stone took place the 17th of September, after which work progressed rapidly. The building fund was closed the first week in January, when it was announced that the contributions exceeded the amount required. This made it possible to dedicate the church on its completion, in conformity with the custom of all Christian Science churches to dedicate only when free from debt."—*Janesville Gazette.*

HORNSEA, YORKSHIRE, ENGLAND.—Some months ago it was decided to change the reading-room, which had been outgrown; but failing to find a suitable one in a good locality, it was decided to buy a piece of land and build. A most favorable site was procured and the building was started. Much love, good-will, and interest in our forward move has been shown and expressed by many of the townspeople of all denominations and professions. The new rooms were opened on Jan. 9, and include a large sunny reading-room, a librarian's room, and a committee room. The building stands well back from the road at the corner of two important thoroughfares, in its own garden, and is most attractive, yet simple and dignified. Many members of the church gave their time and work and helped in various ways to furnish the rooms, and friends from other fields contributed generously to the furnishing fund.

Correspondence.

CHATTANOOGA, TENN.—Second Church of Christ, Scientist, held their first service in their new home at 312 McCallie avenue, Feb. 2. The new church was formerly the home of Herman Estes, and it was recently purchased by the Scientists, to be remodeled into a chapel. The main auditorium has a seating capacity of about two hundred. Second Church of Christ, Scientist, was formed only a little over a year ago, and up to today the members have held their services in the Unitarian church on Houston street. It has been their hope from the beginning to have a home that they could call their own, but it was not until the last of 1912 that this little band, together with those who have been added since, felt themselves strong enough to accept the obligation that such a step would entail.

Chattanooga Times.

CHICO, CAL.—The Christian Science Society of Chico was disbanded last night, Jan. 28, at the annual meeting of the members of the local church, and reorganized as First Church of Christ, Scientist. Services will be held in the Knights of Pythias hall for the present, but the church is increasing in membership at such a rapid rate that new quarters will be necessary in the near future.

Chico Enterprise.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 30, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 14, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 1, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

THE LECTURES.

STERLING, ILL.

Prof. Hermann S. Hering, who delivered a lecture on Christian Science in the Academy of Music, was introduced by Henry Beucus, first reader, who said:—

Nineteen hundred years ago Jesus of Nazareth brought to a sick and sin-burdened humanity a message of "on earth peace, good will toward men." The acceptance of his message made men free from the bondage of sickness and sin, and gave them a true understanding of God, whom to know aright is life everlasting. Jesus said: "Behold, I stand at the door, and knock: if any man hear my voice, and open the door, I will come in to him, and will sup with him, and he with me." On page 224 of the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy says: "A higher and more practical Christianity, demonstrating justice and meeting the needs of mortals in sickness and in health, stands at the door of this age, knocking for admission. Will you open or close the door upon this angel visitant, who cometh in the quiet of meekness, as he came of old to the patriarch at noonday?" We have one with us this evening who will tell us something about this higher Christianity.—*Sterling Gazette.*

OAKLAND, CAL.

An audience which taxed the capacity of Idora Park theater listened to a lecture on Christian Science by Virgil O. Strickler. The lecturer was introduced by Mrs. Lillian G. Winter, first reader of Second Church of Christ, Scientist, under whose auspices the lecture was given. Mrs. Winter said:—

Christian Science invites investigation. Many of us have investigated this new-old religion, and have found the answer to the question Pilate asked centuries ago: "What is truth?" Some may ask how we know we have found the answer to this question. Jesus said, "Ye shall know the truth, and the truth shall make you free." Unnumbered thousands have gained freedom from sin and disease of every nature through the understanding of the divine Principle revealed through Christ Jesus, as pointed out by our beloved Leader, Mrs. Eddy, in our text-book, "Science and Health with Key to the Scriptures." Jesus also said: "Ye shall know them by their fruits."

As students of Christian Science we do not claim that we have reached a state of perfection, but we do claim that since learning to apply the great facts of being in daily living, we have become happier and healthier men and women.—*Oakland Tribune.*

BROMLEY, ENGLAND.

There was a large gathering of Christian Scientists and those interested in the movement, at the Drill hall, when Bliss Knapp gave an interesting and instructive lecture on Christian Science. The chair was taken by J. S. Braithwaite, London, who in the course of his remarks said that in a large audience, such as that, the motives which had drawn them together were no doubt widely divergent. But surely they had one motive in common, which was that they had come to hear what the lecturer had to tell them, and they hoped to go away wiser for having listened to what he had said. Continuing, the chairman said that for all time the symbol of wisdom had been the serpent, and the medical profession had adopted that emblem. The Master had said they should be as wise as serpents and as harmless as doves, but could it be said of a system in which there was the possibility of making a man a slave to drugs, that it was harmless? Surely not. In the study of the Christian Science text-book by Mrs. Eddy they found both wisdom and harm-

Digitized by Google

lessness. In conclusion the chairman said that each one of them must necessarily either accept or reject the truths of Christian Science when he heard them, and the important thing was that he should have a clear statement of them in order to make his decision.—*Bromley Chronicle.*

WASHINGTON, D. C.

The remarks of Senator Moses E. Clapp in introducing William R. Rathvon, who lectured on Christian Science, in the Columbia theater, were in part as follows:—

It may not be amiss to say that as Christian Scientists we found our faith upon the inspired Word of God, and therefore look to God as omnipotent, omniscient, and omnipresent. We not only recognize that declaration of Scripture which affirms that God made all that was made, and pronounced it good, but we emphasize this declaration of Scripture in our concept of God. We also do not only recognize but emphasize that other statement of the Scripture which declares God to be too pure to see evil. Recognizing God, then, as the author of all that is created, recognizing the allness and the goodness and perfection of His creation, recognizing His nature, we plant ourselves upon the proposition that whatever manifestation there may be to mortal mind, whatever concept there may be in mortal mind, in the eternal verities of God's creation there is no such thing as evil; that all that there is or can be of evil is the mortal concept, and the mortal manifestation.

Recognizing this by our logic at least,—and we submit that logic to mankind for consideration,—evil disappears as our concept of God takes hold of our consciousness; and as the consciousness of God, the allness of His work, the perfection of His work, takes possession of us, the mortal concept of error disappears, and applying this to the form of error which we recognize as sickness, we deal with sickness from this standpoint: that as our concept of God takes possession of our consciousness, the mortal concept, the mortal manifestation of sickness, must and does disappear. A great many people look upon the treatment of sickness as the basic thought of Christian Science, but this is not correct. We regard the treatment of sickness as the demonstration of the truth to which we hold.

Correspondence.

WESTMOUNT, PROVINCE OF QUEBEC.

A lecture was given by William D. McCrackan, M.A., in Victoria hall which was filled with an appreciative audience. Mr. McCrackan was introduced by A. E. Norris, first reader of First Church of Christ, Scientist, Montreal, who said in part,—

On behalf of First Church of Christ, Scientist, Westmount, I extend a hearty welcome to you all. Before a business man goes into any important transaction, he takes good care to investigate from all points and inquires from reliable sources whether or not it is wise to enter into it; so it is with Christian Science. You can go through the same process of investigation, inquire whether it does really heal. Christian Science heals quickly and wholly. Why? Because it follows the teaching of our Lord Jesus Christ, in both preaching the gospel and healing the sick. Will it stop worry? Our Saviour in the sermon on the mount says: "Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on. Is not the life more than meat, and the body than raiment?" If we honestly follow this command, do you not think that many worries would go out of our lives? Now this is the function of Christian Science, to instruct us how to apply this teaching of the Master, and we have here with us tonight one who is eminently fitted to tell you something of the real meaning of Christian Science.—*Correspondence.*

WINCHESTER, MASS.

The largest attendance that has ever gathered to listen to a lecture on Christian Science in Winchester was that which assembled in the Town hall. The body of the main hall was entirely filled, and the balconies were nearly filled with principally non-Scientists of Winchester, which fact was most gratifying to the Christian Scientists. Harris M. Richmond, Esq., introduced the lecturer, Frank H. Leonard, and said in part,—

The subject concerning which we have come this evening to hear, is Christian Science. Much has already been said and written about it; sometimes truthfully, often untruthfully. Of the untruthful things spoken and written about it, some may possibly be charged to malice, but by far the larger part ought properly to be attributed to ignorance about Christian Science. Ignorance begets misapprehension, and that in turn leads to misstatements. Ignorance, misapprehension, and misstatements about Christian Science, even though unintentional, are none the less damaging. They are, however, all overcome by truth. The purpose of the lecture this evening is to dispel ignorance, to correct misapprehensions, and to disprove misstatements about Christian Science, by showing what it is in truth.

Winchester Star.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Albuquerque, N. Mex.—Elks opera house, 3 p.m., March 16.
Flint, Mich.—Masonic temple, 8 p.m., March 13.
Franklin, Mass.—Odd Fellows hall, Depot street, 3 p.m., March 16.
Grand Island, Neb.—Bartenbach opera house, 8 p.m., March 20.
Jackson, Mich.—Athenæum theater, 8 p.m., March 21.
La Fayette, Ind.—Victoria theater, 8 p.m., March 17.
Lewiston, Idaho.—Temple theater, 8 p.m., March 13.
Long Beach, Cal.—Long Beach auditorium, 8 p.m., March 20.
Medford, Ore.—Natatorium, 8 p.m., March 18.
Mill Valley, Cal.—Out Door Art Club building, 8 p.m., March 18.
New Britain, Conn.—Ruswin lyceum, 3 p.m., March 9.
New York, N. Y. (Fourth Church).—Wadsworth theater, 181st street and Wadsworth avenue, 3:30 p.m., March 9.
New York, N. Y. (Fifth Church).—Church, corner Madison avenue and 38th street, 8 p.m., March 21.
Oakland, Cal. (First Church).—Macdonough theater, 8 p.m., March 20.
Oregon City, Ore.—Shively's opera house, 8 p.m., March 17.
Plymouth, Ind.—Orpheum theater, 8 p.m., March 18.
Port Arthur and Fort William, Ontario.—Lyceum theater, Port Arthur, 3 p.m.; Orpheum theater, Fort William, 8:30 p.m., March 16.
Puyallup, Wash.—Puyallup opera house, 8 p.m., March 15.
Riverside, Cal.—Loring opera house, 8 p.m., March 21.
San Francisco, Cal. (First Church).—Dreamland Rink, Steiner street near Sutter, 3 p.m., March 16.
Shelbyville, Ind.—City opera house, 3 p.m., March 16.
Sherman, Texas.—Church edifice, 8 p.m., March 18.
Tacoma, Wash.—Tacoma theater, 3 p.m., March 16.
Tomah, Wis.—Unique theater, 8 p.m., March 10.
Toronto, Ontario (Third Church).—Church building, corner College and Elizabeth streets, 8:15 p.m., March 18.
Valparaiso, Ind.—Memorial opera house, 3 p.m., March 16.
Walla Walla, Wash.—Keylor Grand theater, 3:30 p.m., March 9.
Wilkes-Barre, Pa.—Irem temple, 3 p.m., March 16.
York, Neb.—March 21.

TESTIMONIES OF HEALING.

When I first became interested in Christian Science, I was many times greatly encouraged and strengthened by reading the testimonies of others, and because of this I give mine, hoping it may help some one. From early childhood I had been delicate in various ways, neuralgic conditions finally culminating in sciatica, which held me under bondage for nearly seven years. At times it so greatly troubled me that I was forced to use crutches, and was often confined to bed for weeks. Different physicians of the "regular" school treated me for this trouble for four years, but I received no relief; then I took other treatment, and for a time was greatly benefited; but after eighteen months, and while still under this treatment, a form of the same trouble came in my right arm, and in a few more weeks it was in the other arm also. Very soon I was unable to wait on myself, and had to be fed and cared for like a baby; the joints in my arms and hands stiffened, and I suffered intensely.

After five months of this condition, during the temporary absence of the one who had been giving me treatment, I determined to try Christian Science. I had previously applied to a practitioner in Chicago, but on learning that material remedies must be relinquished I had decided not to comply with this requirement. I now had a practitioner come to my home; but I found that I was not yet ready for Christian Science, so gave it up, though the three treatments I had already taken had helped me. After two more months of increasing misery, I felt that I could no longer depend upon material treatment, and if there was help in Christian Science for me, I was indeed ready; so I asked a member of my family to procure from the public library a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy.

At the time I began reading I had been unable to use my hands for seven months, and for more than a month had been unable to step, except from my bed to a chair. I was even obliged to have some one turn the pages as I read; but I had scarcely begun to read when I felt that I was going to be healed. On the third day I rose from my bed and walked down-stairs. I was filled with great joy and happiness. My recovery was slow, but with a daily gain. There were times when I felt I ought to improve faster, and on some of these occasions I sent for a practitioner, who always helped and encouraged me; but he soon persuaded me to continue my work alone. It was, however, many months before all pain and stiffness disappeared. It is now nearly five years since my healing began. I have not been confined to my bed for a day since, and am constantly growing stronger.

Since studying Christian Science, life has taken on a new aspect, for my spiritual sense has been enlarged and I have learned to love more. I am deeply grateful both for the spiritual enlightenment and for the physical healing.

MRS. CATHARINE L. MILES CLARK, Rochester, N. Y.

It is with great joy that I, as mother and nurse of the above writer, confirm her testimony, and attest the tenderness and patience of divine Love, which from the time we first called a Christian Science practitioner for a few days, caused us to read and study the Scriptures daily, both morning and evening, a thing which had been thought impossible by the sick one, owing to her weakened mental and nervous condition, prior to her healing in Christian Science.

CORA B. MILES, Rochester, N. Y.

That Truth heals through Christian Science was beautifully and graciously demonstrated to me while en route to Los Angeles, Cal., when my two-year-old boy was badly burned from the explosion of an electric light in the berth of our car. This occurred just as the berths were being made up for the night and the car was very crowded.

I was called to the child by his screams, and immediately saw that his hand had been much injured and that he was suffering intensely. There was a Christian Science practitioner in our party, and I at once called for her and asked for help. I was in great fear, but she quietly told me to repeat "the scientific statement of being" (Science and Health, p. 468) to myself, and then she began lovingly and kindly to help the child. In a few minutes all fear had entirely vanished from my thought, and soon the hand was free from pain and both of us were quietly sleeping. When the child awoke in the morning he was bright and happy and used his hand as freely and easily as if nothing had happened. The hand was healed completely and is without a scar. At the time of the explosion the conductor, after seeing the extent of the injury, hunted up a physician on the train and wished him to look at it, which he did. The next morning the physician wished to see the hand again, and expressed much surprise that he could find no soreness.

Not only for this healing am I grateful, but I wish I could tell to other mothers the many proofs I have had, through Christian Science, of the banishing of fear in every-day life with children.—MRS. B. E. WARD, Los Angeles, Cal.

[Translated from the German.]

In August of last year I was taken ill with an acute affection of the lungs. I had attended the Christian Science meetings several times prior to this experience, and what I heard had inspired me with great confidence. I did not go to a physician, but at once applied to a practitioner, who gave me treatment. Within two weeks I was completely healed of the disease, without medical attendance and without taking medicine. Above all things, I thank God, and am grateful to Mrs. Eddy. May all mankind attain to the recognition of the truth.

H. DÖSSELMANN, Papenrode b. Bahrdorf, Germany.

We learn in the Manual of The Mother Church (Art. VIII, Sect. 24) that "testimony in regard to the healing of the sick is highly important." My blessings through Christian Science have been and still are so numerous that I hardly know where to begin. Through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have been able to overcome the suffering of childbirth, colds, headaches which had troubled me for years, a bowel disorder of long standing, and a general sense of lack. I am indeed grateful for the understanding of Truth, for Mrs. Eddy has shown us that we may know these mortal beliefs have power only so far as we allow them to enter our thought, and when we keep our consciousness filled with Truth, error has no room to enter. I am the only Scientist in this town at present, so I miss the companionship of loyal workers, but I feel that divine Love is near me at all times and under all circumstances. My prayer is that I may be able to do some good to others daily.

MRS. HELEN KNIGHT, Malvern, Iowa.

I wish to make public acknowledgment of the great benefits I have received through Christian Science. In January, 1911, I was quite ill and suffered a great deal. I knew a little about Christian Science through others, and I asked my daughter with whom I was living if she would telephone for a Christian Science practitioner, who might be able to relieve me from the suffering, as I could not expect to live but a few days longer (I was eighty-three years old and only hoped for relief). My daughter did as I wished, and the practitioner came just before noon. As I told him of my condition and age, he only smiled, and said that time was nothing, but eternity is all. He added, "God knows no age, and you can be healed. Jesus said, 'With men this is impossible; but with God all things are possible.'" He talked for a few minutes about the allness and

Digitized by Google

the goodness of God, and the unreality and nothingness of evil, such as sin, sickness, suffering, and death, and gave me a silent treatment, then said that I would not have to remain in bed long. I was up that very evening, and was practically well.

When he came back the next day, I was up and about. I then told him of a very annoying and discordant condition which I had had for fifty-five years; but he only said it was no part of man's true being and that I need not have it. When he came the next day, the discordant condition had all disappeared, and when I mentioned a goiter on my throat, he said that I should not think of it, look at it, or feel for it, and I really did forget it for several days; then when I came to think of it, it was all gone.

I walk ten blocks to the Christian Science church and back with no inconvenience. While visiting in Kansas since my healing, I walked three miles one day. I give all the praise to God for my healing, and cannot express my gratitude to dear Mrs. Eddy for her goodness in bringing Christian Science to the world.

MRS. LAVINA PIERCE, Stillwater, Okla.

My heart sings with the psalmist, "O give thanks unto the Lord, for he is good: for his mercy endureth forever. Let the redeemed of the Lord say so. . . . He brought them out of darkness and the shadow of death, and brake their bands in sunder." When I turned to Christian Science for physical healing, I had long ceased to find the theological concept of God at all reasonable, as the thought of a God who would cruelly punish His children was revolting to me, and I could not pray to such a one in my great need. I was at that time pitifully in need of the physical healing, and I quickly received it through Christian Science, for which I am deeply grateful; but for the practical, demonstrable, and soul-satisfying understanding of God as good, and All-in-all, I can never cease to be thankful,—thankful to our good God, and grateful to our revered Leader, Mrs. Eddy, for her loving faithfulness in giving her great discovery of Christian Science to the world.

The physicians had named my illness kidney trouble and hemorrhoids, and I had besides a great fear of paralysis. I had tried every remedy of which I knew for over three years, but had steadily grown worse. At the end of one week of Christian Science treatment, however, I had strength to go about my daily duties, was able to lay off the dark glasses I had been wearing, and more than all, I had an abiding confidence that there was complete healing for me in Christian Science, for I had found the God who forgiveth all our iniquities and healeth all our diseases. In the eight years since that time, Truth as revealed in Christian Science has met my every need, physically, mentally, and financially. I rejoice in my own good health and happiness, and in knowing that there is health and happiness for all who truly seek it.

MRS. ELEANOR L. AUSTIN, Chicago, Ill.

[Translated from the German.]

I would like to give my testimony, for the sake of encouraging others to investigate Christian Science. Toward the end of January, 1912, I was taken with a severe nervous trouble, accompanied by great weakness and a feeling of anxiety; I had fever constantly, and for six weeks was unable to sleep at night. Yet other troubles had set in, and for three weeks I expected the end to come any day or night, two physicians having given little or no hope of my recovery. I had been reading *Der Herold der Christian Science* for over three years, and we now decided to apply to a Christian Science practitioner in Basel for help, the result being that after five weeks' treatment I had improved sufficiently to be able to attend to the household duties myself.

I would like to mention that I never saw the practitioner, absent treatment having been given. I had many a mental struggle to go through, but the assurance contained in the Word of God upheld me; as, for instance, the passage in Job: "He shall deliver thee in six troubles: yea, in seven there shall no evil touch thee." And Truth did remain the victor. Truly we have a God who helpeth us, a God who delivereth us from death, and to Him alone be praise!

FRAU MARIE STALDER, Olten (Kanton Solothurn), Switzerland.

Being unable to attend the Wednesday evening meetings, except on rare occasions, I desire to express my gratitude for Christian Science through the medium of our *Sentinel*. There is perhaps no more practical test of the value of Christian Science than in the case of a family of small children. In the last five years no doctor has been in our house, and no material remedy of any kind has been resorted to. There are five children, and they have at various times manifested the ailments to which children are believed to be subject; but all these have been healed through Science, in many cases without the aid of a practitioner. The list includes what is called ivy poisoning, overcome in one treatment, and measles in three hours, without a practitioner. One of our little girls was stricken with illness at the same time, and with the same symptoms as her little friend. The doctor diagnosed it as a serious throat affection. Our little one was quite well in one day under Christian Science treatment. Her friend, under the care of a doctor, died in an hour after the injection of antitoxin.

One more experience occurs to me. Our eldest girl had a bad attack of skin disease. The doctor at the school sent her home with instructions as to the treatment. I called on him and claimed the right to make use of whatever system of healing I thought best. He made all kinds of threats, but at the intervention of the school principal gave me two weeks to find a cure, or go before the board of health. The case was handed over to a Christian Science practitioner, and in the time stipulated the child was sent back to school healed. All these things are the "signs following" which Christian Science promised, and they are, as our Leader has said, "but the bugle-call to thought and action" (Rudimental Divine Science, p. 2).

We are grateful beyond measure to God, to our Leader, and also to those noble men and women who are devoting their lives to the practical uplift of humanity.

W. F. WILLIAMS, New York, N. Y.

I owe so much to Christian Science that I feel it my duty to send my testimony. I went to the Wednesday evening meetings at The Mother Church with a friend who was seeking help, little thinking that I, too, needed the truth; but in three weeks I was instantly healed of a chronic bowel disorder, as the doctors called it. In the seven succeeding years there has been no return of the ailment. Besides this, my husband had a stomach trouble for four or five years, and several doctors tried to cure him, but without his receiving any help unless an opiate were administered. No two of them diagnosed his case the same way, so he tried Christian Science, and he was better in twenty-four hours. By the third day he was completely healed.

I am certainly grateful for the help we have received; grateful to God for giving us in Mrs. Eddy one who was able through divine help to translate the Bible into a spiritual language which we can all understand.

MRS. LEONARD MARSHALL, Malden, Mass.

When Christian Science first came into my home, I was held in the belief of being a delicate child, always under a physician's care, taking various kinds of medicine, unable to attend school during the severe winter months, and easily subject to the contagious diseases which material law assigns

Digitized by Google

to childhood. As my mother became acquainted with the higher law of Spirit, God, she overcame her fears about me and I soon gained a normal state of health and could engage in the activities of other children. It is now nineteen years since I have required any material remedy or medical treatment. During this period the power of Christian Science as the truth to prevail over sickness and sorrow, has been proven to me times innumerable. The happiness, the peace of mind, the freedom from fear and worry which faithful study of this Science brings, would make it invaluable aside from its well-known healing power.

At the birth of each of my two children, every law laid down by *materia medica* was broken; the events were entirely without pain or suffering, and in a few days I was taking care of my babies besides attending to regular household duties. As I see the little ones growing up, I am deeply thankful for the promise that divine Love always cares for them, and I have no cause for fear. But even greater than any of the blessings which come to my own family, do I count the ability to assist in the relief of suffering humanity, which is given me through the understanding of the Master's teaching as explained in the priceless writings of our Leader, Mrs. Eddy. Her wisdom, also, in giving to us the periodicals for constant help and reminder, cannot be too deeply appreciated, when we consider their broad fields of usefulness.—Mrs. Lena M. Farley, Albion, Mich.

My sister, Amande Anderson, living in Sweden, has been treated by a Christian Science practitioner and healed of a terrible sickness, a stomach trouble from which she had been suffering for twenty years without relief. The doctors could do nothing for her, so she had to take to her bed; she was in great agony, and I went to see a Christian Scientist here on her behalf. This good lady prayed for my poor sister, according to the teachings of Christian Science, on the 14th day of February, 1911, and the next day my sister left her bed and ate, worked, and slept. She is now enjoying good health, through the power of divine Love. I can also say that myself and my wife have been cured of a similar trouble through Christian Science.

A. H. Klint, San Francisco, Cal.

[Translated from the German.]

After having met with great reverses for many years, I became afflicted with a serious abdominal trouble, and according to medical opinion it was absolutely necessary for me to submit to an operation. The very thought seemed terrible to me, however, and in my great anguish I heard of Christian Science, turned to a practitioner, told her all my troubles, and asked for help. I herewith testify that through the help afforded me I was restored to health without having to resort to an operation. Besides this, my general condition has greatly improved, and I feel happy and contented, as do both my sons, for the many blessings which have come into our home through firm faith that God is our helper. I wish to express my sincerest gratitude to God, and also to our beloved Leader, Mrs. Eddy, for all the love and goodness which has come to me as a result of her work.

Frau Marie Liechti, Aegerten bei Biel, Switzerland.

It is with deep gratitude that I give this testimony of the many blessings received through the teachings of Christian Science. I came into Science after trying medicine and doctors for a long time without avail, for I seemed to get worse instead of better; so at last, after seeing many wonderful cures through Science among my friends, I decided to try it. I will say, however, that I felt very skeptical, and doubted if I could really be helped; but I sent for a practitioner and began treatment. The results were indeed wonderful from the very start. Complaints with which I had been troubled for over a year, rapidly disappeared, and I then realized that I was being helped, not only physically, but also spiritually. My entire view of life has in fact been changed, and all for the better, brighter, and happier things of life.

I am therefore most grateful to God, and to our dear Leader, Mrs. Eddy, for the blessings and happiness which I have received through the understanding I have gained of Christian Science. I sincerely hope that I may learn more of its beautiful teachings and practical truths.

Margaret Finnerty, Cheyenne, Wyo.

Feelings of profound gratitude inspire me to tell of a remarkable healing experienced during the month of April, 1911, hoping that thereby others may be led to know the truth and turn from the material to the spiritual for healing of the body as well as of the mind. Suddenly, and without any previous warning, I was stricken with what is known as inflammatory rheumatism. According to the physical senses, I was absolutely helpless, and I suffered untold agony whenever it became necessary for the nurse to move me in the bed or change my position in the least degree. My feet and hands were terribly swollen, and my body was racked with fever.

To sense I cut a sorry figure indeed; but I rejoice to think, as my mind reverts to those unhappy experiences, that the precious truth which I had previously learned from the Bible, as interpreted and illumined by Mrs. Eddy's inspired text-book, "Science and Health with Key to the Scriptures," is pregnant with power to heal our infirmities and emancipate us from the false belief in sin, disease, and death. With this spiritual knowledge sustaining me, even in my physical distress, I invoked the aid of a Christian Science practitioner. After three weeks' treatment I was able to leave my bed and walk around the room unassisted, and three weeks later I visited the practitioner at her office. This is all the more remarkable in view of the fact that I was able to step on and off the street-car without help. My healing was complete, and I rejoice to say that none of the ill effects which in the old belief so often follow this disease, have remained.

To me this healing has been a perfect and conclusive demonstration of the marvelous works that can be and daily are being accomplished by Christian Science. But independent of the physical healing there is the absolute conviction that Christian Science is the great and only ark of safety for all mankind. When spiritually understood, it lifts us above all the petty and distracting cares and troubles of material existence; it reveals to us the nothingness of matter and the allness of Spirit, Life, Truth, Love. The unreality of sin, disease, and death is made clear to us through its wonderful teachings. It conquers fear, the arch-enemy of mankind; it inculcates right thinking and right living; it fills our lives with the sunshine of optimism; it enables us to "stand porter at the door of thought" (Science and Health, p. 392), to shut out the suggestions of evil, and to see with clearer vision the good that abounds in everything about us.

Mrs. Minnie A. Hosford, Portland, Ore.

I wish to tell others of the help which I have had from treatment in Christian Science. My teeth were always so sensitive that whenever I had any dentistry done it was all I could endure, and often I suffered for days and nights thereafter. The last time I went to a dentist I dreaded the ordeal ahead of me, as there was much filling to be done; but I called on a Christian Science practitioner for treatment that day, and I can truly say that it did not hurt me through all that long forenoon, excepting two or three times when for an instant I allowed myself to fear. I might have thought my teeth had no nerves. Once the dentist said, "You will suffer some now;" but I felt no sensation what-

Digitized by Google

ever. What seemed most wonderful to me was, that when I arose from the chair there was no feeling of soreness. I should not have known that any work had been done, so far as feeling it was concerned, and the fillings have never been sensitive since.

I had another demonstration of the power of Truth on my way home. I slipped on some ice, and in falling struck on my spine and elbow. For a while I could not move; then a gentleman helped me to rise, and although it seemed impossible, I walked along, at first suffering severely, though this almost instantly left me. I declared the truth, after which I walked about two miles, and never since have I felt any ill effects from the fall. Later, through a period of extreme heat I felt well and strong, and the sun did not "smite" me. The best of it all, however, is the spiritual uplift. I have no more dread, or worry, or fear, for I realize that God is and always will be with me.

ALICE LORING, North Yarmouth, Maine.

I am glad to give a testimony of my healing through Christian Science treatment from tubercular disease of the bones, after four physicians had diagnosed the case and said that an operation was necessary. I then turned to Christian Science, and was completely healed in three months' time. It is now seven years since my healing, and I have had no return of the trouble. I am eighty-four years of age.—GEORGE STEELE, River Falls, Wis.

I received treatment in Christian Science for over a month, and would have had to undergo an operation but for the help thus received. I am now a well woman, and with the Bible and Science and Health, which I study every day, I hope to grow stronger and stronger in the truth.

G. L. KLINEFELTER, Jonestown, Pa.

[Written for the *Sentinel.*]

FAITH.

CHARLES C. SANDELIN.

No faith is living faith indeed
That from earth's fetters is not freed;
A faith that builds on moving sand,
Thereon Truth's temple cannot stand!
Faith in the things the senses know,
Faith in this world's deceitful show,
Such faith no mountains can remove,
And never may Truth's power prove.

But faith that scorns what eye doth see,
That ear or touch declare to be,
And knows the hidden things of God,
That hidden are by error's clod,
Such faith is knowledge. Like the sun,
Whose beams the shadows quickly shun,
When on each falsehood it is shed,
The darkness fades, 'tis light instead.
Such faith ascends to heaven's height
And bringeth day for darkest night;
Reveals the beams of Love divine
That tenderly o'er all doth shine,
And comforteth each living thing,
In sorrow makes the heart to sing.

Such faith is constant, ne'er deceived
By mortal concepts long believed,
And in the wide creation knows
All God hath made with goodness glows.
Aye, 'tis a ladder,—Jacob's dream,—
And to thy heart heaven's tender beam
Descends to strengthen and to heal,
And through it thou Truth's touch may feel.

FROM OUR EXCHANGES.

[*Continent.*]

In times past in Christian experience, the main reason why men were strong to do what they understood to be right was their feeling that God would mark their failures if they fell short. Doubtless it was fear in the first stages of Christian living,—in the more seasoned of God's servants it was loyalty,—but whichever it was, the pleasing of an eternal Master was a compulsion which forbade men to shirk or cower or retreat, and prevented their sneaking away to indulge the languors and appetites of the flesh. Under that compulsion stout hearts went to the stake and welcomed slaughter rather than violate the least item of their opinion of truth and right. Under that compulsion men attempted enterprises of incredible hardship and apparently certain failure, just because they felt God expected it of them. But now all this background of "God and I" has grown to be so unaccustomed that the average layman thinks it almost freakish for one to say that God expects of him anything at all. The sense of God standing by and giving instructions for a man's life, even of God standing near to approve when he does right and condemn when he does wrong, is hardly to be found at all in the modern man's store of rational, down-to-the-fact ideas. But has the modern man anything to put in place thereof which will give him equal steadiness in stalwart morality?

Ingrained respect for the eternal and immutable laws of right, beautiful sentiment about what a human being owes of fairness and sympathy to his fellow humans, and prudence which cannily sanctions the wisdom of the golden rule, are the safeguards on which the twentieth century imagines it can depend for ordered morality among men and for individual character fit to bear stress. But these will not do for the long strain; they will not supply permanent moral motive power. Loss of God-sense means eventually the breakdown of right doing wherever right doing is difficult or against immediate apparent interest. Back to God's presence—that is the watchword of safe morality and enduring religion. Think yourself back to it; better, pray yourself back. It is only when you feel God searching you that you are sure to stand fast in His ways. And the church—let it bestir itself to proclaim the reality of the onlooking eyes—the eyes of infinite knowledge and infinite justice and infinite love that look in every place of human life, "beholding the evil and the good." If the church neglects that, it will see the awful result at the end in a society where neither evil nor good is known in distinction from the ways of an aimless and reckless human vagrancy. "Thou God seest me!" There is the encyclopedia of right.

[Rev. Frank N. Riale, Ph.D., D.D., in *Christian Work and Evangelist.*]

When every man and woman longs for the practical fruitage of Pentecost as much as we hunger and thirst for the ecstatic baptism of the Spirit and pray for its outpouring at our every devotional service, the day will be hastened when this great change will be brought about. Where there is a good will for this, there will most certainly be found a God-way by which it shall be brought about. We are to get together not so much to see how we can promote a universal revival of the olden type, which has been sought for and prayed for through all the centuries and we have found it not, but we are to get together to see how we can so be baptized of the Spirit of God that we will find our hearts ready in the day of His power to bring in the great social and economic change which came with such wisdom and power at the first great Pentecost. For this we are to "get together" and "get busy" and "get ready;" for the day of the great deliverance is at hand. A new Pentecost is coming fast. It will not be confined to the old church lines, but will be as astonishing to this age as the first Pentecost was to

Digitized by Google

those who beheld that wonderful glory of the Lord. All conditions of society will hear God speaking to them then in the tongue in which they were born. Out of the great melting-pot of the nations will be brought about the universal social and economic brotherhood, so that none will say that anything he possesses is his own, but will have all in the common larder of the common Father, and each will give according to his ability, and each will take therefrom according to his absolute need.

[Rev. Elbert W. Whitney in *Universalist Leader.*]

The spirituality of Jesus was a constant and unfailing force. From childhood he had a clear vision and deep interest in spiritual truths; he saw the providence and love of God in all the affairs of life; he felt that God was ever near, ever ready to help His children. By meditation and prayer his spiritual faculties were cultivated, and in the busiest eras of his ministry, when weary from much contact with the weak and erring, he went apart to some solitary place and by communion with God gained new strength and purpose for his work. In all his teachings this note of spirituality is manifest. He told the woman of Samaria, who came to draw water from the well, of that spiritual water of divine truth, whereof if she drank she would never thirst. When his followers were talking of physical bread to nourish the body, he spoke to them of that spiritual bread which nurtures the life of the soul. He showed the disciples that the fair and graceful lilies of Palestine taught the lesson of God's unfailing care and providence. His deeply religious life gave great force and meaning to his words. His hearers rightly said, "Never man spake like this man." "He taught them as one having authority, and not as the scribes." His was the supreme authority of deep personal experience and knowledge, which is instantly felt and known by all who have an attentive mind and a receptive heart.

[*Congregationalist and Christian World.*]

The Spirit of God, who takes of the things of Christ and shows them unto us, is not in the earthquake, or the fire, or the wind that breaks the rocks. His voice will not be heard by us unless we give ourselves to hear. It rests with us whether we shall listen or not listen to the voice of God. This attention which God claims and wonderfully rewards needs to be planned for and guarded from interruption. How few deliberately provide opportunities of listening to their heavenly Father! How careless we are of the secured and sacred intervals when we refuse attention to the world that we may give ourselves wholly to our God!

[Charles Edward Stowe in *Christian Register.*]

Human nature has thrown up its mountain-peaks along the pathway of history, and none vaster, grander than that of Jesus the Christ, towering to the clouds. To make it an article of faith, however, that nothing higher may ever come, is to dogmatize undesirably. Personally, I know of nothing higher, nothing holier, than Jesus. He is my Lord and Master. All that is highest and best in the religious thought of our age is to my mind but the germination of seeds he planted and watered with his blood and tears. I yield to Jesus everything, except that which it would be moral suicide to yield,—the sanctity of my personal conviction.

[Rev. T. Rhondda Williams in *British Congregationalist.*]

I am quite sure that the main reason for the alienation of the working classes from the churches is the idea that churches are on the side of the *status quo* in economics. I could quote many facts, but my only object is to get religious people to feel that religion will never be the great spiritual reality it should to the struggling masses of this country until the latter feel that it has become in the lives of those who profess it a dynamic of righteousness.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, C.S.B., has been printed in regular pamphlet form and is now ready for distribution. Thirty-two pages and cover.

Some of the lectures recently translated into foreign languages and printed in pamphlet form are listed as follows:—

"Christian Science: Its Results," by William R. Rathvon, printed in German (Die Christliche Wissenschaft: Ihre Resultate).

"Christian Science: A Religion of Progress," by William D. McCrackan, M.A., printed in French (Christian Science: Une Religion de Progrès).

"Christian Science: Demonstrable Religion," by Frank H. Leonard, printed in Norwegian (Christian Science: Bevislig Religion).

These pamphlets are all for sale at the prices as shown on the opposite page under the list of Pamphlets and Reprints.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency. Money orders should be made payable at the Boston post-office.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents. each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

MENTAL DEFICIT.

CLARENCE W. CHADWICK.

THE red ink item of the trial balance testifies to a financial shortage. It is something that the business man never likes to see, and he at once busies himself to discover and to correct the cause. He works diligently and persistently to turn the scales in the opposite direction, so as to show a balance on the side of profit instead of loss; and when this has been accomplished he is looked upon as successful.

So he may be from the material point of view, but what of mental conditions? Has this sober-headed business man stopped to consider his obligations to the Giver of all good? to balance his account with God, the infinite all-inclusive Mind of the universe? Has he stopped long enough to ascertain that there is a red ink item opposite his name just so long as he fails to acquaint himself with God? that there is, in other words, a mental deficit for which he alone is responsible and which he alone can liquidate? This mental deficit is chargeable to all mortals until they turn away from matter to Spirit or Mind as the sum and substance of being. Their belief in matter, whether as good or bad, indicates a mental lack, "for to be carnally [materially] minded is death." The psalmist must have realized this when he said, "If I regard iniquity in my heart, the Lord will not hear me."

Our revered Leader says: "Material and temporal thoughts are human, involving error, and since God, Spirit, is the only cause, they lack a divine cause" (Science and Health, p. 286). The mentality of a mortal is not fully equipped for usefulness until it has been corrected by the understanding of divine Truth and, rejecting the evidence of the physical senses, is in harmonious accord with spiritual sense, which always judges righteous judgment. God's correction does not rob a mortal of his mind, rather does it acquaint him with the great metaphysical fact that God is the one infinite Mind or intelligence of the universe, and that for him to lay claim to any other mind, a so-called mind that can be conscious of both good and evil, is to present a woeful mental lack, a lack which all the wisdom of the world is powerless to supply. What the world calls mind is little else than a counterfeit, a mortal or carnal mentality which knows not what Mind really is. Truth's correction of this material mentality infuses into consciousness a degree of spiritual activity which is soon found to be the savior from all that is unlike God. Were it not for this influx of spirituality, even their improved mentality could never save men from belief in sin, disease, and death, for the mortal or carnal mentality is incapable of knowing anything that is spiritually true. It always shows a balance on the wrong side. Paradoxical as it may seem, it is an "unbalanced mind" with no ability ever to become balanced; hence its need of a savior.

The Christ is the Saviour of men because Christ, Truth, always supplies whatever is lacking in individual consciousness. As the true or scientifically correct idea of God, it does away with every inaccurate or perverted concept of cause and effect, creator and creation. Obviously, this true idea is not born of matter or of a material mentality. It is always "from above," not "from beneath." Until Christ, Truth, comes to the individual there is palpably a mental deficit of which no human being ought to be proud. This mental deficiency may be called by a thousand different names. Science defines it as the uncorrected or unenlightened human or mortal mind, which is identical with the Biblical "carnal mind." If a mortal is envious, hateful, or resentful, he evidences a mental lack. This is proven when through the understanding of infinite Mind he loses his sinful thoughts and begins to express godlike qualities. If he is diseased in mind or body, Truth supplies the deficiency with spiritual understanding.

Material sense never yet balanced one's account with God. It is not an agent of God through which to convey intelligence or power to man. God requires something more substantial than "a vagary of mortal belief" (Miscellaneous Writings, p. 200), by which to communicate Himself to His child. It is not by means of material sense, but by discrediting its testimony, that mortals "draw nigh to God." Jesus said, "No man cometh unto the Father, but by me." These words have a profound meaning to the student of Christian Science. To the extent that he is not forsaking materiality mentally and morally, he knows that his mentality is not being scientifically corrected, and that the only remedy which will enable him to get closer to God is spiritually mental. When he turns with his whole heart to the one Mind, he finds himself identified with that "innumerable company of angels" whose only mission on earth is to reveal the character of God, good; thereby filling every human vacuum, supplying every mental lack. If these pure and holy thoughts cannot be trusted to govern and supply every human activity, what can humanity expect from a blind faith in mindless, non-intelligent matter?

The only normal mentality is the one that trusts and obeys God's law implicitly. Such a mentality at the present hour is an oasis in the desert of mortal existence. Its activity for good is unlimited. It thinks from the standpoint of Principle, contending unceasingly for the reality of good. It takes no chances on the side of error. It always thinks of God first, and never seeks to have its own way. It makes religion practical and available in every-day affairs. It never loses sight of the rights of others, but obeys the golden rule. It is the enemy of sensuality in its varied forms, and the friend of all that is pure and holy. No human being can be or should be truly satisfied until he has acquired a mentality that is dead to the besetments of sin and alive to the activities of righteousness; until he can say with the apostle, "Herein do I exercise myself, to have always a conscience void of offense toward God, and toward men."

The mentality that places good and evil on a par, that believes in two powers, that advocates the reality of both Mind and matter, Life and death, represents a balance on the side of loss, and is the so-called fallen man or "man of sin" that Christian effort is trying in vain to save. When "the Lord our righteousness" is allowed to dominate individual consciousness, this "man of sin" is put off, and the Christ-man is revealed as the only man and forever in at-one-ment with Truth. Then is mentality the reflection of the one Mind, and "complete in him, which is the head of all principality and power."

LANGUAGE OF SPIRIT.

RAYMOND CHURCHILL.

ONE winter's night not long ago, while in the depot of one of our large cities, I was talking to a Christian Scientist over the telephone. Although coming from a considerable distance, the voice sounded so loving and expressed such a spirit of true Christian brotherliness that for the moment I almost forgot I was far from my home and friends, and my heart echoed back the warm, joyous welcome. Not long before this I had had occasion to call up some one whose cold, abrupt tones were recalled as in striking contrast to the Christian Scientist's greeting, for the telephone faithfully conveys all the varied characteristics of the human voice, unconsciously revealing one's warmth or coldness of heart. If we realized the impressions that are being received at the other end of the wire, probably we would always use great care in speaking, as there is perhaps no better index to character than our natural voice modulations, which express our different mental qualities.

In this connection it is well to remember that the meaning of language is not limited to words alone. One dictionary gives this definition: "Style or expression peculiar to an individual." It is the spirit behind the words which makes them beautiful or repellent, since any word can be spoken in such manner as to convey its opposite meaning. The spirit of gladness, for instance, will manifest itself in a joyous tone of voice, regardless of what the words used may be, and is not necessarily dependent upon words for expression. How much can be read in a smile, in a kind look! Henry Drummond once made an address to a band of students, some of whom intended to be missionaries, in which he said, "You can take nothing greater to the heathen world than the impress and reflection of the love of God upon your character. That is the universal language. It will take you years to speak in Chinese, or in the dialects of India. From the day you land, that language of love, understood by all, will be pouring forth its unconscious eloquence. It is the man who is the missionary, it is not his words. His character is his message. In the heart of Africa, among the great lakes, I have come across black men and women who remembered the only white man they ever saw before—David Livingstone; and as you cross his footsteps in that dark continent, men's faces light up as they speak of the kind doctor who passed there years ago. They could not understand him; but they felt the love that beat in his heart."

On page 117 of our text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy writes, "God is Spirit; therefore the language of Spirit must be, and is, spiritual;" also, that "ear hath not heard, nor hath lip spoken, the pure language of Spirit." It would seem sometimes as though people who were the most spiritual talked the least. Emerson remarks in his essay on Friendship: "How many persons we meet in houses, whom we scarcely speak to, whom yet we honor, and who honor us! How many we see in the street, or sit with in church, whom, though silently, we warmly rejoice to be with! Read the language of these wandering eyebeams. The heart knoweth." As man is the expression of Truth, we violate God's law when we voice or express error; and conversation that is not born of goodness and fails to express the divine qualities, love, joy, gentleness, etc., is not only wasted, but is likely to do great harm. Paul says, "Let no corrupt communication proceed out of your mouth, but that which is good to the use of edifying, that it may minister grace unto the hearers."

The Jews were a very religious people, and thoroughly familiar with the Scriptures, having heard them read and expounded Sunday after Sunday; but when the Master commenced to read and explain them, the record states that they all "wondered at the gracious words which proceeded out of his mouth." Had his words been such as they had been accustomed to hear, impelled by a religion that was entirely of the head and not of the heart, and expressing a mere intellectual sense of things, there probably would have been no comment. He who had been anointed "to preach the gospel to the poor; . . . to heal the brokenhearted," to give them "beauty for ashes, the oil of joy for mourning," who was ever patient and gentle, and who felt in so great a measure the spirit of loving compassion that was upon him, could not do otherwise than express those characteristics in his utterance; and it was not surprising that the people agreed, here was a man who spake as never man spake.

On page 367 of Science and Health our revered Leader reminds us that "the tender word and Christian encouragement of an invalid, pitiful patience with his fears and the removal of them, are better than hecatombs of gushing theories, stereotyped borrowed speeches, and the doling of arguments, which are but so many parodies on legitimate Christian Science, aflame with divine Love;" and again on page 201 she adds that "the way to extract error from mortal mind is to pour in truth through flood-tides of Love." It is evident that this was Jesus' method, for in the walk to Emmaus his words were so filled with love, and carried such overwhelming conviction to his disciples, that they said, "Did not our heart burn within us, while he talked with us by the way, and while he opened to us the scriptures?"

At an annual meeting of The Mother Church the retiring president referred to a former meeting which Mrs. Eddy attended in person, saying: "We remember her graciousness and dignity. We recall the harmonious tones of her gentle voice. Our hearts were thrilled by her compassion and the memory abides with us." As Christian Scientists it is ours to acquire the language of Spirit. May our thoughts be so inspired by Truth and Love that when it becomes necessary for us to put them in words we shall emulate her to whom the words of Solomon have been so fittingly applied: "She openeth her mouth with wisdom; and in her tongue is the law of kindness."

DREAMS.

LOUISE KNIGHT WHEATLEY.

Two persons were once discussing a healing which had taken place through the understanding of Christian Science. The type of disease was new to the listener, and as the narrative proceeded, curiosity prompted her to ask numerous questions. Before long the simple recital of the facts in the case had turned into an elaborate description of the symptoms and suffering which had accompanied the very unpleasant trouble from which the patient had finally been permanently relieved. At last, however, the two friends parted, one to go her way rejoicing in her new-found freedom, the other to dwell more or less during the remainder of the day upon the wonderful experience of which she had just heard. "How glad I am that she is well! How glad I am for Christian Science! How I do rejoice!" she thought; but that night she dreamed she had the same disease of which she had heard for the first time that morning. It was only after she had followed every phase of the outline described to her, from start to finish, that she finally woke up.

The first thought which came to her was, of course, unutterable relief that it was only a dream; but as her mental processes gradually regained their normal condition another thought presented itself,—Would there have been any more reality in that disease if it had manifested itself in her waking moments? She recalled a passage in Science and Health (p. 250): "A mortal may be weary or pained, enjoy or suffer, according to the dream he entertains in sleep. When that dream vanishes, the mortal finds himself experiencing none of these dream-sensations. . . . Now I ask, Is there any more reality in the waking dream of mortal existence than in the sleeping dream?" In her sleeping

Digitized by Google

dream she had only to wake up and the dream was gone. What about the waking dream? Let the Christian Science text-book answer: "When we wake to the truth of being, all disease, pain, weakness, weariness, sorrow, sin, death, will be unknown, and the mortal dream will forever cease" (p. 218).

Wherein, then, lies the difference? Is it not largely in this, that we have been educated to think the sleeping dream is unreal and the waking dream real? The world at large will readily admit the unreality of the sleeping dream; that in it disease is but a belief, without fact or foundation except in the frightened sense of the dreamer; but it also says that in our waking moments disease is not merely a belief, but a stubborn reality, to be overcome, in most cases, if overcome at all, by something put on the tongue and swallowed. Do we go to the bedside of a person in the throes of a bad dream and attempt to pacify him by putting something on the tongue to be swallowed? Hardly; we simply wake him up. And when this is done, where is the bad dream?

Following this line of reasoning, another thought occurred to her. After once having waked up, did she go back to dwell upon the misery of which she had just been relieved? To carry out the metaphor, let us say that we are dreaming of being madly pursued for eons of time through limitless realms of space by, for instance, a purple elephant. When we once wake up, do we spend any valuable moments in describing its appearance to our friends and acquaintances? Are we greatly concerned as to just how it acted? Do we find ourselves wondering where it finally went? Or, worst of all, do we sternly demand to know of the one who has waked us up where that elephant ever came from in the first place? Who can say where error comes from? Can the wisest man in all the world explain the origin of that which never was anything at any time? Surely it is enough to know that through God's infinite goodness the dream is gone. "I shall be satisfied," said the psalmist, "when I awake, with thy likeness."

She saw her mistake. She had not been satisfied to know that God's likeness had been made manifest in health and harmony, but had gone back to dwell with morbid curiosity on the unlikeness, a sick and sinning mortal. Instead of going to sleep and forgetting it, she should at once have scientifically destroyed the mental picture by knowing the truth about it, instead of unconsciously letting it assume more and more, as time went on, the semblance of reality.

At this point some sentences were recalled from the Church Manual. They refer to the giving of testimonies, and are contained in Article VIII, Sect. 24: "Testimony in regard to the healing of the sick is highly important. . . . This testimony, however, shall not include a description of symptoms or of suffering." The by-law refers to the testimonials published in the Christian Science magazines and those given at the Wednesday evening meetings; but it occurred to her for the first time that this by-law might profitably be remembered at other times by loyal Christian Scientists. The study of the Manual cannot be confined to the letter only; an earnest perusal of its pages with the divine Mind alone as our guide, will often unfold larger interpretations which the student can but receive in gratitude and amaze.

"Glorify God in your body, and in your spirit, which are God's," says this same by-law, quoting from St. Paul. Are we glorifying God in our bodies when we wish to dwell a moment longer than is necessary upon the dark phantoms of the past? "Forgetting those things which are behind, . . . I press toward the mark," said Paul. We can well afford to forget the days and weeks and years of misery before we experienced the regenerating touch of Christian Science, in rapturous contemplation of the glories which are already "prepared for them that love him [God]."

If we have been healed, let us say so, gladly, gratefully, and as often as seems wise. Let us not be afraid, when necessary, to call the disease by the name the doctors gave it (these "claims" of "error" mean very little to an outsider). Let us be clear, correct, concise, simple, brief; let us state the facts just as they happened, without any elaboration or embellishment; but let us at the same time be careful that we unintentionally paint no pictures for the listener to carry home and innocently to hang upon his wall.

As the one who had learned a much-needed lesson pondered these things, there came over her a sense of gratitude beyond words for the far-sighted discernment of the Leader of the Christian Science movement in so carefully safeguarding its progress by the wise and loving restrictions of the Manual. Then as she thought of all that Christian Science meant to her, of the radiance and joy that had come into her life, and into multitudes of other lives, through its gentle ministrations, a great peace filled her heart, and with its coming the last faint outline of the bad dream faded altogether from her memory. "I am so glad that it was never true," she whispered, "never for one minute true! There is only the man of Thy creating, and there never has been any other. Help me to remember, dear Father-Mother God."

LOVE'S ALLNESS.

M. H. W. CARTER.

THAT God is Love is one of the fundamental postulates of all Christian religions; that He created all things "visible and invisible, whether they be thrones, or dominions, or principalities, or powers," is also a matter of universal belief. Love, then, is the one great cause, infinite, the substance out of which all things spring. Thus Paul says in his epistle to the Ephesians, "That Christ may dwell in your hearts by faith; that ye, being rooted and grounded in love, may be able to comprehend . . . and to know the love of Christ."

Accepting the statement of Love's allness as an indisputable fact, let us consider its implications, what this belief involves. If Love has created all things, then nothing "visible or invisible" could have been created by any other agency; but looking out upon the world of appearances, how are we to account for what we see there? Discord, suffering, injustice, evil rampant in all forms, is the report which the physical senses bring to us. How are we to reconcile these terrible conditions with the fact that Love is the only creator? The fundamental fact remains unchanged and unaffected by the diverse material interpretations thereof.

Here Mrs. Eddy's declaration becomes illuminating. She says, "Undisturbed amid the jarring testimony of the material senses, Science, still enthroned, is unfolding to mortals the immutable, harmonious, divine Principle,—is unfolding Life and the universe" (Science and Health, p. 306). Christian Science is teaching mankind to cling fast to basic truth, regardless of the perverse misconceptions of the human mind; to look beyond the seeming and the temporal, the partial and the limited, to that which is eternal and everlasting. It calls upon us to give up fixed opinions and beliefs, the pride of intellect and love of material possessions. It bids us drop these heavy burdens from our shoulders, and learn the sweet trustfulness and willing obedience of a little child; then we are shown the way to peace and joy.

Love, divine Love, is the only creator! "But I suffer, I am sick," cries a sense-blinded mortal; "I am weighed down by poverty and misfortune," moans another; "Fame and power are mine," exults a third; and ever above the wild, unreasoning din and clamor of human ignorance and wilfulness, Love, compassionate, merciful, just, and wise, speaks in solemn tones: "I am Alpha and Omega, the beginning and the ending, . . . which is, and which was, and which is to come, the Almighty."

In the fulness of time, when spiritual understanding is sufficiently matured, there comes to the earnest seeker the

Digitized by Google

vision of Truth, and he knows, no longer believes, that infinite Love is the only creator, and that all that He made is "very good." Then, too, he realizes something of the constant guidance, the tender sheltering, the sustaining Love which environs him by night and by day, and in deepest humility and gratitude raises anew the psalmist's song of rejoicing: "Bless the Lord, O my soul. . . . who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with loving-kindness and tender mercies."

SEPARATION.

ANNE MAY LILLY.

CHRISTIAN SCIENCE declares that every spiritual fact has its material counterfeit, and nowhere is this more clearly shown than in the thought of separation. Since we as Christian Scientists have already accepted, and proven in some degree, the proposition that all is mental or spiritual, creation being the reflection of God, Spirit, it becomes evident that separation must be a purely mental process, an untangling of the so-called thoughts of mortal mind from the spiritual ideas which are born of God. True, absolutely speaking, the two phases of thought do not and cannot mingle, or rather, spiritual ideas are all that really exist; but to our present imperfect sense of things our consciousness seems a battle-ground between good and evil tendencies, and our daily work is to affirm and hold to all the strong, pure ideas which come from divine Mind, and to cast out by intelligent denial the falsehoods of mortal mind. This means constant watchfulness, unceasing mental work; and it is probable that few of us realize, until we take up this warfare, how purposeless is the common process which is usually dignified by the name, thinking. Mortal mind grasps like a child at the various objects which come before it, pleased, amused, or terrified, as the case may be, but it rarely follows a single train of thought to a logical conclusion.

The true sense of separation consists in watching one's thoughts and casting out all that are weak, purposeless, or vicious. "Come out from among them, and be ye separate, saith the Lord, and touch not the unclean thing." When we fully realize that this purified thought is the one and only channel by which divine Love and power may be brought to human consciousness, this realization arouses in us a new sense of individual responsibility, while it humbles all personal pride and self-assertion and brings us to our knees in gratitude for the privilege of such high service.

Since the true sense of separation brings about such beneficent results, its counterfeit, the material sense of separation, would seem to have an equal power for ill; and perhaps there is today no channel through which error more readily find admission to the consciousness of Christian Scientists than by appealing to the egotistical traits of mortal mind, which would destroy that selfless unity which is the strength of the Christian Science movement. To the branch church it advances the specious argument that it has no real responsibility toward The Mother Church; that it has separate interests which must be looked after first, trying to render the branch church forgetful that The Mother Church is the parent vine of the Christian Science organization. Take the Publishing Society alone,—what agency so powerful for good? The pure flood of its literature pours forth to the farthest corners of the earth, healing and refreshing the "millions of unprejudiced minds . . . athirst in the desert," in obedience to our Leader's injunction to "give them a cup of cold water in Christ's name, and never fear the consequences" (Science and Health, p. 570). So too the board of lectureship,—who can estimate the results of their faithful labors? As we review in thought the varied activities of The Mother Church, we realize, as our Leader has told us, that it does indeed occupy a unique place, and that it should be our privilege and joy to uphold its activities to the uttermost.

Since error cannot be original, it uses the same argument in endeavoring to retard the growth and prosperity of the branch church. It leads some to believe that they can do better work outside of any organization, or, appealing to the same thought within the membership, it brings about a division in the ranks. Again, this false sense would have us divide the world into nations, and nations into classes, perpetually at war with one another, forgetful that we all have one Father, to whom "there is neither Greek nor Jew, . . . Barbarian, Scythian, bond nor free."

In fact, whatever may be the enterprise upon which we embark, it is generally needful first of all to put to silence the aggressive pretensions of mortal mind, which would have us, in some guise, claim place and power for the material self. Our Leader teaches us that it is of no use to ignore error, and it is well for us to analyze our own thought thoroughly, to find out whether we are letting any false sense retard our own growth and that of the cause we profess to serve. If we find that we are cherishing the frailest offshoot of this dangerous plant, let us without delay destroy it with the understanding of the blessed unity of good, the knowledge that "whatever blesses one blesses all" (Science and Health, p. 206). By the destruction of every false sense of separation there is brought about a high and holy fellowship among the workers for the enthronement of good which must eventually compass the downfall of all wrong conditions. A hymn in the Christian Science Hymnal expresses the thought in the words, "The seekers of the Light are one."

[Written for the *Sentinel.*]

EACH DAY IS SPRING.

MARY ADAMS LEMBECK.

I LOOKED across the vale to where
The hills rose gently tier on tier
Against the blue of heaven:
New life hung vibrant in the air,
Breathing its promise: spring is here,
The whole world feels the leaven.

The sun has banished winter's clouds
And snow; has loosed the icy bands
And set the forest free.
The little streams forget their shrouds
Of silence, and with clapping hands
Dance gaily to the sea.

The warm air touched the lowlands with
A marv'lous healing balm,
And bade the buds come forth
Nor ever fear. It was not myth
But truth, this wondrous birth whose psalm
Of joy reached south and north.

O struggling heart, what wintry blast
Hath robbed thee of thine own? Dost know
Winter is but within?
The stormy tempest cannot last
For those who rise and bid it go—
Good is the power, not sin.

For thoughts that open to the light,
Each day is spring to them, each day
Brings new life from above,
And holds them strong in God's own might;
Nor shall aught harm them by the way
Who keep close in His love.

SELECTED ARTICLES.

[Jesse Pickard in *Town Topics*, New York, N. Y.]

Christian Science is absolutely unallied to the occult, but declares the nature and presence of one infinite God who is Truth and Love, and whose benign influence is available and acceptable to clear-minded men and women. Christian Scientists do not attempt to adapt their religion to their business, nor to influence or "treat" others obtrusively so as to influence their personal actions; they endeavor to conform their business to their religion through and by the law of Love, which they understand to be the supreme law of God. Their relation to others is summed up in the endeavor to be just and kind in thought as well as in action. They do not find their business or that of others suffers in the process. Christian Science treatment, as such, is not given unsolicited, and when given is designed solely to draw men closer to God and to heal sickness. It cannot be used for personal design. This Science teaches that "with God all things are possible;" that there is, therefore, no incurable disease. It overcomes death not with a verbal quibble such as our critic has given, but with Truth and Love, through whose efficacy the sick are healed and the sinning reformed. Results are judged not in any absurd or abnormal way, but with the candor and simplicity of the man who when healed by the spiritual power of Jesus the Christ said, "One thing I know, that, whereas I was blind, now I see."

The ideal attitude toward evil is the direct opposite of that stated by your correspondent. Christian Science teaches that there is one power, God, who is the only real Mind or intelligence. Evil thinking is not related to this Mind, and is therefore powerless; it is for this reason neither to be indulged nor feared. The teaching that evil thought is self-destructive is certainly not new. If in place of such evil thought one persists in the consciousness of good and in the expression of love, the very foundation of all evil experiences must be overcome. On page 102 of "Science and Health with Key to the Scriptures" Mrs. Eddy says: "Mankind must learn that evil is not power. Its so-called despotism is but a phase of nothingness. Christian Science despoils the kingdom of evil, and preeminently promotes affection and virtue in families and therefore in the community."

Contrary to our friend's assumption, this Science teaches distinctly that one can approach godlikeness only as he is supremely honest and open-minded, compassionate and helpful to those about him; it further teaches that selfish introspection does not represent actual manhood, and is wholly undesirable. Man reflects God, and the function of his being is to express God's qualities, the highest and purest activity of Love. Blind belief in anything is quite undesirable. Christian Science demands the practical demonstration of good and its power, and points to the example of Christ Jesus as the guide for such demonstration. The supreme idea it represents is the superiority of good over evil in every direction.

[Erza W. Palmer in *Durango* (Col.) *Herald*.]

The mission of Christian Science has been to "reinstate primitive Christianity" (Manual, p. 17), and in doing this it takes sharp issue with those established materialistic customs and observances which have deposited a "layer of idolatry" upon Christianity, and caused Christianity to lose the vital healing power so characteristic of its mission in the first three centuries. It is apparent to any one who is at all familiar with the teachings of Christian Science that our critic is woefully ignorant of what Christian Science really is and what it is accomplishing in the world. For instance, she scouts at the possibility of prayer healing the sick. No fact has been more clearly demonstrated during the past quarter of a century than that Christian Science has healed, and is now healing, all kinds of sickness through prayer; and so well has this been established that the denial of it only convicts the person who makes the denial of ignorance as to what Christian Science is accomplishing.

This critic asserts that the age of healing is past. Evidently this writer has overlooked Jesus' commands to his followers, in every age and clime, to heal the sick, and his further wonderful prophecy that his disciples would do greater works than he had done. With the loss of Christian healing about the beginning of the fourth century, when men could not account for the healing works of the early Christians, the theory of miracles was introduced. According to this theory, the healing work of Jesus and his apostles was miraculous, an intervention of divine Providence in the affairs of men, contravening natural law and setting it aside. The Bible gives no authority for such a theory, an assumption directly contrary to Jesus' teachings. Jesus taught that God is ever present and omnipotent, and that His healing power is ever available to those who call upon Him. To resuscitate this healing power and restore the purity of the primitive church has been the mission of Christian Science—a mission which has proved the correctness of its basis by innumerable healings of diseases in every civilized country of the globe.

[From an editorial in *Picayune*, New Orleans, La.]

If a citizen of Louisiana could be imprisoned for ninety days, or made to pay a fine of one hundred dollars, or subjected to both penalties for making a prayer to God at the bedside of a sick person for the sufferer's recovery and restoration to health, anywhere in Louisiana, one of the most monstrous outrages upon human liberty and on freedom of conscience imaginable would be perpetrated in this highly civilized and enlightened state and city. And yet under an interpretation of a law of Louisiana an attempt to accomplish such an act was made in one of the criminal courts of New Orleans. Fortunately the case came before a highly intelligent and just judge, who refused to permit a statute of the state to revive the dark ages of religious persecution, and, after hearing the case and giving a most enlightened and admirable exposition of the law under which the prosecution was brought, he promptly gave judgment for the acquittal of the accused.

Act 244 of the Legislature of 1908 is a very stringent prohibition under penalties mentioned above of the practise of medicine or of any act of surgery by any person, whether for pay or gratuitously, who has not been duly licensed by the state. The law specifies that any person who prescribes, directs, or applies, for the purpose of treating, curing, or relieving any bodily or mental disease, infirmity, deformity, or of whatever nature, or any other agency or means, whether such drug, instrument, force, or other agency or means is to be applied or used by the patient, or by any other person, and whether such prescribing, directing, or applying be for compensation of any kind or be gratuitous, is practising medicine under the law, and if he or she be not duly authorized, will be subject to the punishment prescribed by the statute.

In the present case, a male citizen or resident who professes the form of religion held by the Christian Scientists, made a prayer for restoration to health over a sick child of parents who held to the same religion, but he administered no medicines, he performed no manipulations, and exhibited no instruments or apparatus of any sort. Some time afterward the child died, but the maker of the prayer, instead of being charged with the death of the little one through the use of some intangible and malevolent magic, was prosecuted upon a criminal charge of practising medicine without a license. It was truly an astonishing case in this republic, where freedom of conscience and of religious belief are guaranteed by the national Constitution, and in this twentieth century, when religion of any sort attracts little attention; but fortunately the case was treated by Judge Fisher

in a manner so luminously complete and conclusive that it is not likely another arrest will be made here for uttering a prayer to God in aid of a sick person.

[Editorial in *Spectator*, Portland, Ore.]

In the past year there has been a remarkable increase in the membership of Christian Science churches. Nearly every city in the Union reports a wider interest in Christian Science; and here in Portland we have a notable evidence of its growth in the organization of a fourth church. Only a few years ago, the few believers in Christian Science found one small hall large enough for their needs; then there began to be overflow meetings, and a larger hall was secured; then a great and beautiful church was erected; and now those who profess the Christian Science faith find it necessary to have four churches.

In discussing some of the reasons for the wonderful growth of Christian Science, the *Spectator* three years ago said it was due, in some measure, to the strange and unfathomable persecutions to which the Founder and some of the prominent members of the movement were subjected. (This suggestion, of course, was quite outside of the inherent merit that could be found in Christian Science.) But today, when preachers of other churches have ceased thundering against the movement, and when the newspapers and magazines that eagerly opened their columns to attacks on it and its Leader have returned to the more profitable purveyance of criminal news for their crime-loving readers, we find that Christian Science grows faster than ever. There must be something to a faith that spreads triumphantly on persecution and which flourishes luxuriantly without the nourishing dew of the blood of its martyrs.

["A Christian Scientist" in *Columbus* (Ohio) *Dispatch*.]

In a recent issue a correspondent asks the question, What is Christian Science? and proceeds to put certain interrogatories. The intent of the article seems to be to sustain a public speaker in his entirely uncalled-for attack upon a denominational teaching which he has never investigated with the "inquiring mind" that is open to new and higher truths of God.

Your correspondent demands to know what Christian Science is and what it teaches. Briefly, it is the scientific knowledge that obedience to God's commandments gives man a surprising dominion over sickness as well as over sin. With Christian Scientists religion is not an emotion or an impulse; it is not a theory or a superstition; it is the joyful knowing that one can avoid sickness and conquer pain by living a Christian life—not believing it, theoretically, but living it actually. When Christian Scientists forget to live that life, they become sick, just as other people do under similar circumstances; but they know what ails them, and if consistent know that a knowledge of God is the remedy, and that correct living is the application of that remedy.

The correspondent asks further: Does Christian Science teach that pain is only a delusion and death a fake? The best possible answer to this question is a quotation from the text-book of Christian Science, "Science and Health with Key to the Scriptures," in which Mrs. Eddy writes (p. 460): "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being." It is the knowledge that disturbed physical conditions can be overcome by the immediate and persistent application of spiritual means which constitutes a Christian Scientist, not the ignoring of those conditions, as many people think.

The last question makes demands as to what Christian Science offers that is not offered by religions already well established, naming them. Space forbids other reply than this: Christian Science teaches men to dominate the body by use of spiritual means, and to "live in the Spirit" in this world, instead of waiting to attempt it beyond the grave. In this statement is intended no disparagement to other religious bodies, or persons not connected with the Christian Science organization or movement. Our inquirer undoubtedly believes with another critic and with us that there is a spiritual life beyond this plane of action; but he defers until that unknown future all attempts to use the law of complete spiritual dominion over sin and sickness, believing that in this world physical laws, so called, are supreme, and prayer for the sick is of doubtful utility. According to our view of it, this is a common error. Christian Science encourages the study of the Bible with a view to its immediate use in combating every ill of life with the inherent spiritual power that is God-given and can be God-directed now. Does any other church teach that we may thus find present immunity from sickness as well as sin?

[Editorial in *Public*, Chicago, Ill.]

Whether or not the Owen bill for a federal medical bureau would result in officializing nation-wide the "regular" medical cult, that impression has at any rate been created by the American association of the cult, or some of its dashing leaders. They have made the impression almost indelible. Their original purpose, manifestly, was to establish a medical department with a "regular" cult seat in the Presidential cabinet. This would have resulted from the original Owen bill almost as a matter of course. While it doubtless was not Senator Owen's intention, it clearly was the intention of the head-centers of that medical cult which for nearly a quarter of a century has been trying to secure this result. Senator Owen has made radical modifications in his original bill. Among other things, he has reduced the proposed department to a bureau. But though this may shatter the medical-trust vase, its odors cling. There is not indeed much of a shattering in so far as the cabinet seat is concerned; for the proposed bureau is to be independent, and from an independent bureau to a department would be the easiest possible parliamentary step, the bureau being once organized. Whether the "regulars" could control either department or bureau would depend upon circumstances over which the politicians of their cult would probably have more influence than anybody else. The opposition of the medical freedom people is therefore worthy of encouragement; and the pronounced vote against the bill last week by the Woman's Club of Chicago, after heroic efforts by masculine "regulars" to secure a contrary vote, is a warning voice of which we may hope to hear many echoes.

Federal sanitary supervision we should certainly have. There are many reasons for it. But we already have an excellent non-partizan and non-culty system, if Judson Welliver in the January *Munsey's* may be trusted. If, however, any new system is to be established, it should not be at the behest of the politicians of one medical cult. That cult has a perfect right to make hard and fast rules for its own adherents; but if it would clothe sanitary science with the authority of federal law, it must broaden its phylacteries. While it may prohibit members from consulting professionally with heterodox practitioners where nothing but a sick man's comfort or life is involved, it must not be allowed to dictate federal laws. If its solicitude for federal legislation is broadly genuine and not of the cult, it will invite conference and cooperation from all who have or claim to have sanitary knowledge.

[From an editorial in *Ottawa* (Can.) *Citizen*.]

It seems to be a fair assumption that the different reasons offered by the political doctors are presented, "not for their intrinsic value," but solely for the purpose of justifying, if they can, their campaign for a federal department of medicine which would enthrone, with autocratic powers, the allopathic (or vaccinating) school of medicine. This school already controls the provincial and municipal health depart-

Digitized by Google

ments of the country. Such is the strength of this control on this province that last session the people were unable to secure the incorporation of a "conscience clause" (as exists in the vaccination act of the United Kingdom) in the revised compulsory vaccination act. Then, too, the revised Ontario health act, also done under the auspices of the allopathic hierarchy, stipulates that the municipal health officers must be "legally qualified medical practitioners" instead of sanitary engineers or doctors of public health, as in British cities. The inadequate and unsatisfactory public health service in Ontario municipalities may fairly be ascribed to the fact that the provincial health department, instead of being under the direction of sanitary engineers, is in the hands of the allopathic school of medicine, which is seeking to establish itself in the Dominion cabinet.

While the *Citizen* has been outspoken in its condemnation of the efforts of the political doctors of the allopathic school to secure control of the public health activities of the Dominion, and while the *Citizen* will continue to speak frankly but fairly in opposition to this campaign, it should be made clear to all that the same outspoken opposition would be offered to any other school of medicine attempting the same thing. At the same time the *Citizen* desires to proclaim its admiration and respect for the conscientious and honorable general practitioners of all schools of medicine or healing whose work as such in contradistinction to public health work is invaluable, courageous, and in many cases noble in the extreme. The *Citizen's* quarrel is with the attempt of the political doctors of one particular school of medicine to secure control of the public health activities of the federal government. As the school which is now aggressively making the attempt includes in its treatment compulsory vaccination, this paper's opposition in defense of the people's liberty in the matter of medical treatment will be persistent.

[John H. Wheeler in *Fayette* (Mo.) *Democrat-Leader.*]

Profound wisdom is the goal of scientists and philosophers. It was Jesus' definite and accurate knowledge of God's law which enabled him to display such a superior knowledge of all earthly things, especially the nature of human life. Thus he was able to teach the wise men in the temple and answer their queries with such profound wisdom and display of intelligence, that all the wise men marveled concerning him. Genuine science, then, deals first of all with divine causation and effects. We should remember that Jesus displayed this knowledge of science or truth without first having been taught by the so-called wise men, whom he afterward greatly enlightened. Solomon prayed for a wise and understanding heart, and being sincere with God, the fountain of knowledge itself, he was ushered into a mental realm of intercourse with God's true law and nature which enabled him to judge righteously, not only between man and man, but concerning everything, so that he was eventually accounted to be the greatest of wise men.

Paul wrote, "We look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal," and must, we contend, be understood from the spiritual evidence or reasonings of truth. And again Paul said: "We are debtors, not to the flesh, to live after the flesh. For if ye live after the flesh, ye shall die," or, in other words, fail in not placing our faith wholly upon God, who will direct our path in dealing with material or earthly things.

Mrs. Eddy is in full accord with John the divine, who taught us not to love "the world, neither the things that are in the world," for, said he, "if any man love the world, the love of the Father is not in him," namely, the proper wisdom does not direct his daily activities. Paul wrote a very earnest letter to Timothy in which he said: "O Timothy, keep that which is committed to thy trust, avoiding profane and vain babblings, and oppositions of science falsely so called." He knew that actual science was alone found in the human exercise of God's laws, and expressed in our daily life through a consistent obedience to God's rule of life in the ten commandments, and positive resistance to the sinful tendencies of sensuous thought; this alone is spiritual wisdom and true science.

To control the human mind with this divine impulse is to know the truth which makes man free from sin and the evil effects of sin; while human wisdom is based wholly upon the testimonies of the senses. Consequently, one's control over the changing, vacillating conditions of material existence and the carnal nature of morality, without this divine wisdom, is wholly that of will-power, and does not express the divine wisdom and judgment essential to gain freedom, health, and holiness. Jesus said, "Not my will, but thine, be done." Thus Paul admonished Timothy to avoid the "oppositions of science falsely so called," for he well knew that all true wisdom points to the fact that we must "put off the old man with his deeds," or evil thoughts and aims, and "put on the new man, which after God is created in righteousness and true holiness."

[Thomas F. Watson in *Santa Cruz* (Cal.) *Sentinel.*]

In a recent issue an article was printed under the heading of "The Little Talk," in which the writer seems to imply that Christian Science and imagination are one and the same thing. Webster defines imagination as "a fanciful or vain notion." In the same dictionary is found this definition of Christian Science: "A system of healing disease of mind and body which teaches that all cause and effect is mental, and that sin, sickness, and death will be destroyed by a full understanding of the divine Principle of Jesus' teaching and healing. The system was founded by Rev. Mary Baker Eddy, of Concord, N. H., in 1866, and bases its teaching on the Scriptures, as understood by its adherents."

Christian Scientists do not claim that they have yet attained to a full understanding of Jesus' teachings, nor do they pretend that in their present state of consciousness they do not need food, raiment, and shelter from the cold. In Science and Health we read: "God requires perfection, but not until the battle between Spirit and flesh is fought and the victory won. To stop eating, drinking, or being clothed materially before the spiritual facts of existence are gained step by step, is not legitimate. When we wait patiently on God and seek Truth righteously, He directs our path" (p. 254). The Bible states that "God is our refuge and strength, a very present help in trouble;" also that "power belongeth unto God."

We have learned, through the study of Christian Science, that this truth is practical, and that the understanding and application of it can save us from the ill effects of heat or cold or any untoward circumstance or condition. The statement from your article that "the human mind alone cannot overcome" these untoward conditions, we heartily agree with; and the Christian Scientist is endeavoring to rely entirely upon the divine Mind for his help and protection from every ill, in accordance with the Bible injunction, "Let this mind be in you, which was also in Christ Jesus."

"Be of good cheer," he said;
Yet well he knew
The way seems hard and weary, too,
And still he says this day to you,
"Be of good cheer!"

"Be of good cheer," he said,
O trembling one!
So much attempted and so little done?
Love will complete the work by you begun,
Be of good cheer!

ROSE HENNIKER HEATON.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

[Republished by request from *The Christian Science Journal*, November, 1899.]

TAKE NOTICE.

MARY BAKER EDDY.

THE following three quotations from "Science and Health with Key to the Scriptures" are submitted for the dear Churches of Christ, Scientist, to select from, and to place one of them only on the walls of the church. Otherwise, as our churches multiply, promiscuous selections would write your text-book on the walls of your churches.

Divine Love always has met and always will meet every human need.—MARY BAKER EDDY.

Christianity is again demonstrating the Life that is Truth, and the Truth that is Life.—MARY BAKER EDDY.

Jesus' three days' work in the sepulcher set the seal of eternity on time. He proved Life to be deathless, and Love to be the master of hate.—MARY BAKER EDDY.

"IF IT BE OF GOD."

IN the early days of the Christian Science movement, the truths so fearlessly set forth in its text-book, "Science and Health with Key to the Scriptures," naturally enough, because so distinct from the accepted orthodox teaching and practise of centuries past, aroused a storm of criticism from the clerical and the medical professions, with the press as a common vehicle; criticisms which, as Mrs. Eddy herself says, "would condemn to oblivion the truth which is raising up thousands from helplessness to strength and elevating them from a theoretical to a practical Christianity" (Science and Health, p. 341). In those days the number of articles attacking Christian Science which found their way into the newspapers throughout the country was very large, and their mode of attack as a rule left much to be desired both in justice and courtesy.

These conditions were mainly responsible for the organization of the force of publication committees which have since done such splendid work in the way of refutation of misstatements in setting forth the correct teachings of Christian Science. That Christian Scientists should protest against the publication of incorrect and unjust statements, and request the privilege of correcting them, was at first surprising to newspaper editors, but the unfailing courtesy of the committees, and the kindly tone of the articles which they offered in refutation of the false statements which had been made through ignorance of what Christian Science really is, have gradually won the day. Editors commenced to see that Christian Scientists in seeking to controvert the statements which had been made about their religion, had no other purpose than to correct misunderstandings which would naturally follow the publication of that which was not true, and that the means by which they expected to correct these misunderstandings was of the simplest, namely, to tell the truth about the particular teaching of Christian Science which had been misunderstood and therefore was misstated by the critic.

When it is remembered that this work of the committees on publication was undertaken in the spirit of the wise man's counsel that "a soft answer turneth away wrath," and their Leader's admonition that "however despitefully used and misrepresented by the churches or the press, in return employ no violent invective, and do good unto your enemies when the opportunity occurs" (Manual, Art. VIII, Sect. 3), in accordance with the teachings of the great Exemplar of Christian living, it is not surprising that with the passing of the years there has been a marked decrease in the number and the virulence of these criticisms. Lovingly and with patience disarming their critics, and availing themselves of the opportunity to place before the public the true standard of Christian Science living, the result could not be otherwise than gradually to overcome the prejudice of those who had mistakenly censured both the teaching and its exponents.

Naturally there came about a certain hesitancy upon the part of editors, when attacks on Christian Science were offered for publication, and finally it dawned on many of them that they were scarcely fair in allowing any one to use their columns to attack the religion of another person, whatever that religion might be. This conclusion is very nicely expressed in a recent issue of the *Journal-Independent* of Bellingham, Wash., which said in an editorial note: "We are in receipt of a lengthy communication embodying, mainly, an attack upon Christian Science. The columns of this newspaper, however, are not open to criticism of any form of religion, and the communication is therefore returned to the writer."

After all is said and done, however, that wise old doctor of the law, Gamaliel, summed up the whole situation in a statement so terse and so true that it has endured for nineteen hundred years: "Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it." If the Christian Science committee on publication has done nothing else than to enforce the caution which Gamaliel so sagely advised, its work has not been in vain.

ARCHIBALD MCLELLAN.

PRACTICAL CHRISTIANITY.

CHRIST JESUS was a reformer in the best sense. He was not only moved by the sympathy which immediately stretches forth a helping hand, but he recognized the cause of human ills and addressed himself intelligently to its removal. His remedy was vital and therefore permanent, and it is our privilege and business to continue to manifest this compassionate and genuinely healing love, to have and exercise that intelligent, all-inclusive, and all availing spirit of philanthropy which shall heal not only every disease, but every situation, correct every wrong in human affairs and conditions, and thus inaugurate the reign of righteousness among men.

So-called Christian philanthropy has proved ineffective for the reason that its ministry has been so superficial, it has not eradicated that which conduces to injustice, the cause of suffering; while on the other hand radical reformers have lacked practical wisdom. They have often been but "inspired visionaries," seeing the ideal, and dying for it, perchance, but quite incapable of leading men, step by step, to its attainment. Christian Scientists are called to follow Christ Jesus in the expression of a brother-love which is both alleviating and corrective. They are to be scientifically sane as well as sympathetic in their ministry to men; and this calls for a knowing of the truth respecting the causes of abnormality, an uncovering of the tap-root of every injustice and iniquity. Indeed, to be a Christian Scientist means to be a constant seeker for cause. (See Science and Health, p. 170.)

In the story of the good Samaritan Jesus illustrated the modus of practical Christianity. The poor man's sufferings were seen and relieved, but this did not content his benefactor; on the contrary, he identified himself with the wounded man's situation, took him up and carried him out of robber-land. Human philanthropy has done much in the way of the hospital and soup-kitchen; it has been thoughtful for the victims of injustice; but it has usually left the wrong-doer and his means of wrong-doing undisturbed, hence, as in all the years, the cry of the afflicted and the wronged is

Digitized by Google

still heard. Christ Jesus and his disciples resisted the evil itself. They went behind the phenomena of human sense and relations and dealt with the explanatory facts, and this it is ours to do. We are to know the secret of error, as well as the law of Truth, so that we may be savingly scientific in dealing with every ill, whether personal or social.

To illustrate: according to a recently published report of a committee of investigators, while the increased pay of the miners has added four million dollars to the cost of the coal output for the past year, this coal has cost the consumers thirteen millions additional. Those who can pay the extra dollar per ton may find it easy to ignore this gigantic wrong, but those who truly love their fellow men will make persistent protest. Here is an assertive error which is to be removed, not by relieving near-by families in their need (though this is eminently Christian), but by knowing the eternal justice of Truth and standing for it, not only in thought but before men.

Today, as of old, men are being robbed and left wounded beside the roadways of the selfishness which would monopolize natural resources and privately appropriate social increments, and he who practically knows the truth which alone can right these wrongs will become a true Christlike reformer by declaring the right in every prayer he offers, in every ballot he casts, and in every opportunity presented to cooperate with the right-minded in doing whatever they are ready to do today toward the administration of justice. Christian Science means practical Christianity. While standing ever for the Christ-ideal, it impels to that utilization of improved beliefs which conduces to the fulfilment of our Leader's prayer, "May Thy Word enrich the affections of all mankind, and govern them!" (Manual, Art. VIII, Sect. 4.) It is ours to love our fellow men as did the Master, not merely in word but in deed.

JOHN B. WILLIS.

REMEMBRANCE.

IN the gospels we find many statements by Christ Jesus which show that he greatly desired his teachings to be remembered. In John's gospel we have his requirement that his followers should do the works which he had been doing, and he did not hesitate to tell them that this would bring upon them the persecutions which he had endured. He also gave the reason for these when he said, "Because ye are not of the world, . . . therefore the world hateth you;" and he added, "These things will they do unto you, because they have not known the Father, nor me." Again he said that when the Comforter, "the Spirit of truth," should come from the Father, he would bring to their remembrance all that he had taught, and so enable his followers to do the works which prove the ever-presence of God and His Christ.

In the Old Testament we find many warnings against forgetting God, the psalmist saying in one place that those who do so "shall be turned into hell," and this certainly expresses the condition of those who fail to remember that God is no less the source of health than of life. No Christian can deny that where God is harmony must prevail, even "fulness of joy;" and if the opposite seems to be true, God has been at least temporarily forgotten, and the condition of suffering described as "hell" is the result. In sharp contrast with the thought thus expressed is the psalmist's joyful outburst of praise: "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction." Glorious words are these, and to think that they should have been forgotten for long centuries, their intent practically lost sight of, even after the truth they express had been fully demonstrated by Christ Jesus! But the awakening had to come in the very nature of things, for humanity at its best had been hungering and thirsting for God, and though the dream of mortal belief had many times been disturbed, it needed the full-orbed revelation of divine Truth, known as Christian Science, to shatter all its illusions and bring to remembrance the words and works of Christ Jesus.

It is true that the interest of the student of Christian Science centers around the healing ministry of the Master, as he obeys the command to "search the scriptures," but our wise Leader expected and encouraged us to ponder deeply the whole manifestation of the Christ-idea expressed through Jesus of Nazareth. In "Miscellaneous Writings" she says: "It is most fitting that Christian Scientists memorize the nativity of Jesus. To him who brought a great light to all ages, and named his burdens light, homage is indeed due.—but is bankrupt" (p. 374). We should therefore remember, as we read the wonderful story of the nativity, how God cared for His own when the malice of mortal mind sought to destroy "the young child," and how "the child grew, and waxed strong in spirit, filled with wisdom: and the grace of God was upon him." As we think upon this we read, almost with awe, the words of the beloved disciple in his first epistle: "Herein is our love made perfect, that we may have boldness in the day of judgment: because as he is, so are we in this world."

How often do we remember this when the demands of spiritual law seem so high and exacting, when we most need to know that to fulfil the word of God we must never lose sight of the truth declared by Paul: "Christ in you, the hope of glory." How vain are the denials of material sense which would tell us that Christ is no longer with us, the spiritual law of healing no longer operative, when the life-giving words of the Master are recalled and their full import seen in Science; above all, when the proofs of divine power to heal come to our mental shores like a fast-rising tide, and we hear as it were the voice of Jesus, saying, as to the disciples of old, "Do ye now believe?"

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

PENNSYLVANIA.—Improvement in the attitude of the newspaper press was never more marked than during the past year. Of four hundred fifty-nine newspaper articles referring to Christian Science, only thirty required correction, and all but seven of the answers offered to editors were courteously accepted and printed. Like conditions are reported from other states. The attention of the committees on publication, once occupied largely with answering published criticism, may now be given more than before to protective and constructive work in other important directions. This office supplies *The Christian Science Monitor* regularly to forty of the more important newspapers throughout the state. Letters to the editors, informing them of the renewal of subscriptions with our compliments, brought a number of interesting replies. The unqualified approval of the *Monitor* by trained newspaper men warrants our friends in recommending it to others strictly on its merits as a newspaper.

During the past year this office sent out thirty-two thousand three hundred and two pieces of literature. Copies of the speech of the Hon. John D. Works in the United States Senate, opposing objectionable "health" legislation, were mailed to ten thousand public-school directors and teachers in Pennsylvania, and two thousand copies were distributed otherwise. The Thanksgiving issue of the *Monitor* was placed in six hundred eighty-nine newspaper offices, and items of interest were called to the attention of two hundred and two daily papers on several occasions.

Direct distribution of literature by the state committee

Digitized by Google

on publication is necessarily along only the broadest lines. Local distribution committees, working under the general supervision of the state publication committee, are best qualified to handle the work in their respective communities, whose people and needs they know. Many churches and societies now have distribution committees, and others are preparing for this important step. One local committee distributed last year fifty-nine thousand seven hundred fifteen pieces of literature, in addition to subscriptions aggregating twenty-two thousand two hundred sixty-four copies, or eighty-one thousand nine hundred seventy-nine in all; another during the latter half of the year distributed twenty-three thousand five hundred seventeen pieces; other committees in proportion.—*Report of Committee on Publication.*

BALTIMORE, MD.—The rapidly rising First Church of Christ, Scientist, is on the north side of University parkway, just across from the Homewood oval, and the building is now about two thirds completed. The main auditorium will have a seating capacity of seven hundred and will be approached by a lobby, while a gallery will afford accommodation for three hundred more worshipers. The lot, which has a frontage on the parkway of 125 feet, by a depth of 150 feet, was bought in November, 1910, and the corner-stone of the new church was laid Oct. 23, 1911, ground having been first broken July 22 of that year. The Sunday school room has been used for church purposes since Dec. 24, 1911, and is about 60 x 70 feet. The church is expected to be completed by June, 1913.

Baltimore News.

LONG BEACH, CAL.—Plans for the beautiful house of worship projected by First Church of Christ, Scientist, have been completed. The church will occupy a site on Elm street between Fourth and Fifth streets, and will cost approximately sixty-five thousand dollars. The edifice will be of the Italian renaissance type and 90 x 140 feet in dimensions. It will be of brick construction, the exterior being faced with cement. The Sunday school room will be situated on the lower floor and will be entirely separated from the main body of the church. It will contain a central assembly room surrounded by class-rooms. The auditorium will have a seating capacity of a little over nine hundred, and will be, for the present at least, without a gallery.

Long Beach Press.

NAPA, CAL.—The present attainment of growth in Christian Science in Napa began in the spring of 1904, when seven persons held the first service in a private residence. An increasing growth in attendance soon necessitated the securing of larger quarters, and in the spring of 1905 the present church property was secured and remodeled. The same year the organization was formed known as "First Church of Christ, Scientist," in Napa. This church has filed articles of incorporation.—*Napa Register.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 30, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 14, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 1, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

THE LECTURES.

SACRAMENTO, CAL.

The Tuesday Club auditorium, which has a seating capacity of one thousand, was taxed to its utmost to accommodate the crowd which assembled to hear Virgil O. Strickler's lecture on Christian Science. The lecturer was introduced by the Rev. B. F. Bonnell, who said in part,—

Humanity through all time has been confronted with two types or conditions of thought: one, of things as they really are; the other, things as they appear to be. In every country and generation there have been a few individuals who have sought to think and live according to reality, but the great mass of humanity has been content to live according to appearances. Christian Science in its philosophy and religion comes as the exponent of pure idealism, and proves its position not by words, categories, and dogmas, but by actual demonstration. Christian Science made its appearance in the most critical period of the world's history, and it would long since have been laughed and ridiculed out of existence but for its ability to demonstrate its claim beyond a cavil or a doubt. But I remind myself just now that I must not speak on Christian Science, for two very good reasons: first, I learned a long time ago that the one chosen to introduce the speaker is not supposed to deliver the lecture; and second, that we have one with us who is fully competent to render this service.—*Correspondence.*

NEW HAVEN, CONN.

In the Hyperion theater a lecture on Christian Science was given by Francis J. Fluno, M.D. The introductory remarks by William Capell, first reader of the local church, were as follows:—

While Christian Scientists do not seek to force their religious convictions upon others, they are always glad to help those who honestly desire to learn the truth about Christian Science. Christians agree that Jesus Christ came to be the Saviour of the world. However, when we examine the teachings of the various Christian denominations, we find not only widely differing opinions relative to the way of obtaining salvation, but we also find different opinions as to what salvation is. Notwithstanding these differences, it is self-evident that complete salvation must include absolute and unending freedom from sin, sickness, and death.

The gospels furnish us with many illustrations of the method by which Jesus met and mastered these enemies of mankind. We also find therein statements of the Master which clearly indicate the possibility of a repetition of his wonderful works on the part of those who understand his teachings. We have met this afternoon to learn something of Christian Science, the Science which Jesus understood and demonstrated so many years ago.—*New Haven Register.*

TROY, N. Y.

Judge Clifford P. Smith, who lectured on Christian Science at Music hall, was introduced by William H. Dodd, first reader, as follows:—

The great need of humanity in all ages is practically the same. The fact that one is blind or halt or lame, that he is suffering from a disease which is considered incurable by the leading schools of healing in his day, that he is sick or dying, bound by sin, in poverty or in pain, or sorrowing by the bier of his beloved dead,—this does not in the slightest degree determine one's place or nation, time or language. In all history, at all times, in all places, from such distress has arisen the common cry of needy humanity. Now, Christian Science declares that Jesus heard this cry and met the sore need from which it sprang. He met it through his sanc-

Digitized by Google

tified knowledge or understanding, and we are Christian Scientists or scientific Christians as we gain something of this understanding that Jesus possessed, and demonstrate it in meeting the world's need in some measure as he did.

Troy Times.

LOUISVILLE, KY.

Prof. Hermann S. Hering delivered a lecture at Macauley's theater on "Christian Science: The Science of Salvation," in which the doctrines of Christian Science were expounded. Professor Hering was greeted by a large audience when he was introduced by Samuel W. Greene of Louisville, who spoke as follows:—

My personal experience has been that a proper understanding of the teaching of Christian Science does not come with a rush, in a day or an hour, but by degrees as one is able to assimilate and demonstrate the practical utility of this wonderful religion. It seems to me to offer an ever-present help for every cry of the suffering one, a solution for every problem. In the light of Christian Science and its manifold demonstrations I can rejoice in the words of Jesus, "Come unto me, all ye that labor and are heavy laden, and I will give you rest. Take my yoke upon you, and learn of me: . . . for my yoke is easy, and my burden is light." For now I find around me a host of happy ones who are constantly demonstrating the fulfilment of those promises of the Son of God.

In its teaching, as I study the text-book, "Science and Health with Key to the Scriptures," I find the loftiest program of thought and action that has been proposed to man since the ministry of Jesus. If one would follow this teaching he must in deed and in truth take up his cross daily and joyfully, and follow after the perfection enjoined in the words of the Son of God: "Be ye therefore perfect, even as your Father which is in heaven is perfect." It means a complete surrender to a higher and a purer thought; it means parting with many cherished traditions and beliefs, but it likewise means the finding of a perfect peace, the "pearl of great price." It means a consciousness of a closer walk with God. It means a more lovable, a more reasonable, more godlike concept of God, because it reveals a God who is omnipotent, omnipresent, omniscient. It has meant no little in personal experience, to become aware that the God of my worship, and my creator, has not created hate, envy, malice, sickness, sin, death, and the like, and that they have no power over us; and in this knowledge I can glory in my freedom from former enslavement to these enemies of mankind.—*Courier-Journal.*

ROCKFORD, ILL.

At a lecture on Christian Science in the edifice of First Church of Christ, Scientist, Nelson Carveth, first reader, introduced the speaker, the Rev. William P. McKenzie, with the following remarks:—

The knowledge of salvation, as taught and demonstrated by our great Exemplar and master Metaphysician, Jesus Christ, has again been brought to light in what is known today as Christian Science. The multitudes throughout the world that are being redeemed from sin, sickness, sorrow, and death through this new-old religion, leads one to ask: May this not be the "greater works" which Jesus said should follow those who believed on him?—*Rockford Republic.*

SALINA, KAN.

A large and attentive audience listened to the lecture on Christian Science given in the Palace theater by the Hon. Clarence A. Buskirk, who was introduced as follows by ex-Senator J. R. Burton:—

Truth is immortal, eternal. It always has been, is now, and will ever continue to be. All of truth is all there is. Christianity is truth. It is love for God and love for man. There are more than one hundred and sixty Christian sects, each founded on the primal truth of the Christian faith. They differ in their interpretation of that truth and as to the best forms and methods of putting it into practise, but they all agree that it is love which saves mankind. They all agree that Christianity heals sin, but only one of them teaches that it will heal sickness and all the inharmony and distress of mankind. It is the latest of these sects, Christian Science, which teaches that divine Love heals sickness and sin in the same way.

This new church was founded in the latter part of the nineteenth century by the most marvelous woman in history. And this new church, claiming to teach the old truth taught by the Galilean Prophet in all its fulness, has in the short space of two decades gathered its votaries from every civilized country on the globe. Its rapid growth is the religious wonder of modern times. I am not here to expound that faith, I am not a member of that church, but we have a man with us this afternoon who is authorized to speak for it.

Correspondence.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Bexhill-on-Sea, Sussex, England.—Victoria hall, 8 p.m., April 8.
Braunschweig, Germany.—Hofjaegar, 7 p.m., April 10. (In German.)
Cedar Rapids, Iowa.—Greene's opera house, 8 p.m., March 28.
Cleveland, Ohio (First Church).—Hippodrome, 2:30 p.m., March 23.
Columbus, Ohio (First Church).—Memorial hall, East Broad street, 3 p.m., March 23.
Dunkirk, N. Y.—Opera house, Central avenue, 8 p.m., March 21.
Fresno, Cal.—Barton opera house, 8:15 p.m., March 24.
Grand Rapids, Wis.—Opera house, 8 p.m., March 25.
Hannover, Germany.—Grosser Saal des Tivoli am Schiffgroben, 8:30 p.m., April 8. (In German.)
Kansas City, Mo. (Second Church).—Second Church edifice, 31st street and Troost avenue, 8 p.m., March 27 and 28.
Limon, Col.—Limon auditorium, 8 p.m., March 18.
Logansport, Ind.—Nelson theater, 8 p.m., March 27.
London, England (First Church).—Hammersmith town hall (London), 8:30 p.m., April 4.
Los Angeles, Cal. (joint lecture).—Shrine auditorium, 3 p.m., March 23; Third Church edifice, 734 South Hope street, 8 p.m., March 24 and 25.
Marshalltown, Iowa.—New Odeon theater, 8:15 p.m., March 25.
Mason City, Iowa.—Cecil theater, 3 p.m., March 23.
Monroe, La.—Opera house, 8 p.m., March 28.
Muscatine, Iowa.—Church edifice, 8 p.m., March 27.
New Orleans, La.—Athenæum, corner St. Charles and Clio streets, 8 p.m., March 24.
Newton, Kan.—Congregational church, 8 p.m., March 25.
New York, N. Y. (First Church).—March 25.
Norfolk, Va.—American theater, 3:30 p.m., March 23.
Palo Alto, Cal.—Varsity theater, 3 p.m., March 23.
Redlands, Cal.—Contemporary Club house, 8 p.m., March 28.
San Diego, Cal.—Church edifice, Second and Laurel streets, 8 p.m., March 28.
Santa Ana, Cal.—Grand opera house, 8 p.m., March 27.
Santa Barbara, Cal.—Potter theater, 8 p.m., March 27.
Superior, Wis.—Grand opera house, 8 p.m., March 24.
Warren, Ohio.—Warren opera house, 3 p.m., March 23.
Wichita Falls, Texas.—Lydia Margaret theater, 3:30 p.m., March 16.
York, Neb.—Opera house, 8:30 p.m., March 21.

TESTIMONIES OF HEALING.

It is with a heart overflowing with love and gratitude to God that I write this testimony. On the 28th of June, 1911, my son, aged seventeen, while riding his bicycle, came in contact with an automobile going in the opposite direction. He was knocked from his wheel and thrown about fifteen feet. Both legs were broken, and an internal injury of a seemingly serious nature was sustained, there being a puncture of the bowels on the right side. The flesh was badly lacerated on different parts of the body, one eye terribly injured, besides many other bad cuts and bruises on the head and other parts of the body.

He was picked up by a gentleman and placed in another automobile, the one that had been the cause of the accident being too badly damaged to be of any service. Though in a semiconscious state, he knew enough to tell the gentleman to take him home; but finding our home to be next door to a hospital, he was carried there, no one knowing that we were Christian Scientists and that I would be opposed to having him placed there. I was sent for, and I found my son still in a semiconscious state, surrounded by nurses; and a physician who had followed the boy to the hospital was examining him as to the extent of the injuries and had assumed charge of the case.

As soon as I could collect my thoughts, I telephoned to a Christian Science practitioner, asking her to begin treatment at once, at the same time explaining how it happened that my son was in the hospital, and assuring her that as soon as possible I would have him taken home. Then when I asked that my son be taken to my home, the physician and nurses protested, saying that it would not be wise to move him, as he was seriously if not fatally injured; and rather than raise any disturbance I submitted.

When I found that I could not take my boy home until after the limbs were set and the wounds dressed, I asked the physician to do this. Several stitches had to be taken on the forehead, but nothing was given the boy while this was being done. I was then told that it would not do to set the bones, as it might cause instant death, for the shock had been great, and the internal injury was of a very serious nature; in fact, it was at that time considered the worst feature of the case. About three hours after he was laid in his bed in the hospital, the physician told me that he was sure an operation would have to be performed at once, as the injury to the bowels was very serious; that my son might not live until morning, his pulse had gone up so alarmingly and the bowels were so badly distended; but I told the doctor that I would not give my consent to an operation. I at once reported this condition to the practitioner, and she told me to stand firm, as "one on God's side is a majority," and that my son's life depended on God alone. Two hours later, when the doctor returned bringing another with him, they found my son so much better that they expressed much surprise, and said that the operation could be postponed until morning. Three doctors came the next morning and made a thorough examination, but they found that all alarming symptoms had disappeared and the bowels were down to normal size, so there was no further need of an operation.

In the mean time the practitioner had come to my house and sent to the hospital for me, for she never entered the hospital during my son's enforced stay there. She advised that I call a physician who was very liberal, one who would take charge of the setting of the bones and not interfere with the Christian Science treatment by giving any medicine or medical opinions of any kind. As soon as he could be found he was called, and instructions were given to the effect that nothing should be done without his being present. The case was turned over to him after a perfect understanding of what was expected of him, namely, the setting of the bones, but no cutting of the flesh, even though the first doctor had said that it would be impossible to hold the bones together in one leg without cutting the flesh to give room to wire them together, and that it would be impossible to hold them in position in any other way. Of course I knew and held fast to the truth that God could heal all our infirmities.

After turning the case over to this doctor, I could not find the other one to tell him that he was no longer in charge, so I left a note with the superintendent of the hospital to this effect. I then felt I had nothing more to fear; but on the Sunday morning following the accident (which happened on Wednesday) I had gone to my home for a short time, when one of the nurses came to tell me that the doctors were there to operate. I at once went back to the hospital, and to my surprise found two young doctors with everything ready to go to work on cutting the flesh preparatory to wiring the bones. I asked by what authority they were going to do this, and added, "This is my son, and if any one has authority in the case it certainly is his mother, and I forbid you to touch him." I soon had the room all to myself and my boy, for even the nurses had disappeared.

A Christian Science nurse was then telephoned for, and she came to take charge of the case, as I could not stand on guard all the time. At first the superintendent refused to let her in, but when they saw that she was the choice of the surgeon whom I had selected, they said she could stay, though one of the hospital nurses would have to be in the room with her; and rather than have any trouble we allowed it to be so. It was ten days before the bones could be set, as the swelling on the limbs had to be reduced before the surgeon could do his work; but Christian Science was the only remedy used. On the morning of the tenth day the bones were set and the limbs placed in plaster casts. The doctor whom I had chosen, with the assistance of another surgeon, began the work at eight o'clock, and for two hours my son lay on the boards and hummed a tune to himself, experiencing no pain whatever. There was no anesthetic given, for Christian Science proved that it is all it promises when rightly applied. When asked why he thought to hum a tune while the work was being done, he said, "I wasn't suffering at all, and I thought that if I just kept still and said nothing, they would think I was trying to hold the pain back, and if I sang, they would know that I wasn't, for I could not sing if I was in pain."

The leg that was most severely injured had to be set three times, but each time the work was done without anesthetics and without pain. In five weeks the casts were taken off and both legs came out perfect. Every wound on the body healed inside of two weeks, and my son walked in six weeks on crutches, in seven weeks he walked without crutches, and in nine weeks he went to Catalina island on a pleasure trip with the gentleman who had picked him up and taken him to the hospital. This gentleman afterward told me that if he had known I was a Christian Scientist he would not have carried my son into the hospital; but he tried to make amends for all the trouble caused through this mistake by being very kind to us.

My son remained in the hospital twelve days, and all in charge knew that Christian Science treatment brought him through, for no other treatment was permitted. In eleven weeks he went back to work just as well as ever, and in perfect health, with perfect limbs; no one could tell he had ever suffered an accident. Soon after he went to work I took him into the hospital to see the superintendent and nurses who had watched the case while he was there, and they were very much surprised to see that he came through so beautifully, and that he was not lame in the least. The superintendent said, "My boy, you have much to be thankful for; we were greatly surprised that you lived through the first night, and surprised that your limbs have come through so perfect." The father of the young man who accidentally ran over my boy did everything he could for my son and myself during our trial, and the mother has

Digitized by Google

taken up the study of Christian Science through seeing the beautiful demonstration made for my boy.

I am truly thankful for these wonderful blessings that come to us when we trust God. For more than twelve years Christian Science has been my only stay, and has brought me through many dark and dismal places, such as poverty and physical ailments, and has proved to be all I needed for myself and three children. If it were not for Christian Science, I would be mourning the loss of my son today, but instead I am giving thanks to God for his life, and that he is in perfect health, and in full possession of his limbs, through the truth given to the world by Mrs. Eddy.

I wish to say that the doctor who set the bones proved himself to be a friend indeed, and kept his word to us in every respect, regardless of opposition. He had a great amount of that to contend with, so much, indeed, that I wrote to the surgeon who assisted him in setting the bones the first time, stating that no one would be held responsible in the case, and that I absolutely refused to allow the cutting of the flesh and the wiring of the bones.

It is often asked, "What do Christian Scientists do in case of broken bones?" I think this testimony answers that question. In some cases we leave the setting of bones to the hands of a surgeon, but all else is taken care of through Christian Science treatment.

MRS. MITTIE M. ANGEL, Los Angeles, Cal.

I have carefully read the above statement concerning the case of Grover Angel and am gratified in being able to say that every word is true.

C. W. SEEBER, M.D., Los Angeles, Cal.

Words fail to tell the readers of the *Sentinel* how very beautiful the healing was in the case of Grover Angel. This healing is only one of many demonstrations of the power of Truth which I have seen in Christian Science. I was the Christian Science nurse employed on the case. Every hour proves that Christian Science is a sure and painless way out of our troubles. It not only cured this boy, but brought peace and harmony to all connected with the case. The healing seemed very wonderful to those who had no knowledge of Christian Science.

EMMA FRENCH, Los Angeles, Cal.

It is now seven years since Christian Science was first brought to my notice. It came to me in my darkest hour of need, when I seemed to stand alone without God, or in fact any one of whom I might ask aid. The God to whom I had looked for deliverance had seemingly failed me. I had gone to Denver, Col., with a dear one, hoping to find help for him; but after three years of toil, and suffering much of many physicians, I was then told there was no help,—that he was beyond earthly aid.

My state of mind may be imagined,—no God, no doctor who could help me, and seemingly no friend to whom I could turn. I was two thousand miles from home; but as I stood watching by the bedside of the sufferer in the lonely hours of the night, praying for help as I had never prayed before (though I believed I had prayed in the past), I asked for light and guidance. God heard my prayer, for with the morning He sent me the truest and best friend I had ever known. She brought the truth with her, the Christ-healing, and was indeed an angel of mercy, for when she came in I seemed to lose all sense of burden. She told us of Christian Science; but we did not have much faith in it, although I had heard of it for many years.

In my ignorance, like others, I had ridiculed what I then thought was Christian Science; but I listened to this lady through politeness. She asked the patient if he would like to have Christian Science treatment; and he, like myself, out of courtesy said "Yes," though he had no faith in it. This friend remained with him for an hour. Soon after that he was asleep, for the first time in twenty-four hours, and he slept peacefully throughout the night. The next morning he was up and out on the porch, with almost all of the dread disease, which was erysipelas, gone from his face. It had covered the entire right side, and the doctor had told me that if it reached his brain, it would mean certain death. This was the cause of my intense fear.

On her next visit, this friend brought "Science and Health with Key to the Scriptures" by Mrs. Eddy, and when she left, I picked up the book and began to read. I became so interested that I often read late into the night, and when I had half finished the book I discovered, to my amazement, that I had been healed of a most distressing case of stomach trouble of years' standing. I did not realize when it left me. I had also been healed of a trouble for which I had visited a doctor twice a week for treatment, but had derived absolutely no relief therefrom. I also had a catarrhal throat trouble, for which I had been treated many years by numerous physicians without relief; indeed, it had grown steadily worse. I had also suffered from severe headaches, for which the doctors were administering heavy doses of an opiate. They said that without this drug I would lose my mind, so severe was the pain. I had many other minor ailments, but they all vanished while I was reading Science and Health. That was seven years ago, and I have had no return of any of them. Since that time, I have had come under my observation many wonderful cases of healing.

When I say that I am thankful to God for Christian Science, and grateful to our dear Leader, I find words inadequate to express my feelings. My daily prayer is that I may so live this truth as to be a living monument to the teachings of Christian Science, that others may see my good works and glorify the one true God. It is love that we need, more love; and when ills befall us, it is often because we are not obedient and loving. May this testimony, humble as it is, help even a little some dear one who is in need to have the perfect peace that comes through the understanding of God in Christian Science, when put into practise.

MARY SPENCE DE MILAN, New York, N. Y.

Because I have received immeasurable good from the testimonies of others, and because I appreciate our Christian Science literature more than anything else in the world, I offer my tribute of thanksgiving. It may be that some one will gather from it a desire for higher and better living and be led into the realm of the real, where the sins of sense and the fears of false foes are being destroyed, and the everlasting joys of Soul are becoming veritable facts in this present day. In 1893, when all other helpers failed to bring relief, I turned to Christian Science, and found physical health and spiritual enlightenment with a joy and satisfaction I had never known before.

All my life I had been subject to rheumatic troubles. These culminated in a serious attack of sciatica, accompanied by paralysis for some days. The good physician attending me said he could do nothing for me except to deaden the pain with an opiate; but I objected to this and began to think of a higher power than drugs. Though I had ridiculed Christian Science for five years, I insisted at this time upon sending a telegram to a Christian Science practitioner in a near-by city (I was at that time in a boarding-school in the state of New York). In less than two hours from the time the telegram left my bedside, I arose from my bed perfectly free from pain and stiffness; in fact, entirely well, and from that day to this, almost nineteen years, I have had no recurrence of rheumatism in any form. Other diseases, including asthma, hay-fever, indigestion, also a violent temper, left me gradually as I continued to study the Christian Science text-book.

Because of my religious training and experiences at home, —my father having been a preacher, also my brother, and

Digitized by Google

a brother-in-law,—I knew there must be a correct interpretation of the Scriptures. I had sought everywhere, and even went so far as to read lectures on infidelity and atheism; but in vain, for I was left stranded upon the sad shores of wonderment, "having no hope, and without God in the world." I yearned for a solution of this life-problem, for I could not reconcile the injustice of mental, physical, and financial suffering in the world with the justice of an infinite, loving God; and no one ever seemed capable of explaining to me the whys and the wherefores that troubled me.

It was in this state of mental worry and physical distress, and on a Sunday morning when church bells were ringing and the whole atmosphere seemed laden with sacred sounds, that I turned to the eighth chapter of Romans. I had always loved the Bible as good literature, and I also believed that it contained the truth about God and man if we could only find it. The second verse of this chapter impressed me greatly: "For the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." I felt after reading this that if there was a God,—I had almost reached the conclusion that there was no God,—He would be able to heal me, and I should be made free; and if I were healed that same day, I would devote my whole life to God and Christian Science.

Thus it was that the telegram was sent. The practitioner gave me absent treatment, and I was healed as I have stated. Though my physical healing was marvelous to me at that time, the healing of my unbelief, or disbelief, was of more value than all else, for through this healing I have found God a present help. With my healing in Christian Science joy and peace filled my thought, and they have remained with me. Through all these years, when tempted to believe that evil had any power at all, I have been comforted, sustained, protected, and so clearly shown the true way, even in the midst of perplexity and dense clouds of doubt and fear, that I have heard the "'still, small voice' of Truth" (Science and Health, p. 323) uttering itself in the words of our blessed Master, "Peace, be still."

My gratitude goes out in fullest measure to our revered Leader, Mrs. Eddy, whose noble life-work has given to us this priceless pearl. I now realize that in proportion as I lay low all selfishness, pride, and worldly ambition, I may learn how to express this gratitude, and join with the ever increasing throng arising daily to call her blessed.

NELLIE VICTORIA FRESHMAN, Hamilton, Ohio.

With the hope that some one who is coming into Christian Science in the midst of seeming opposition may be encouraged by my experience, I offer the following testimony. In 1908 I began to fail in health, so I went to our family physician for help. He treated me about a year for a goiter, which he stated caused heart trouble and nervousness, and also for rheumatism from which I had been suffering for a number of years. I gradually grew worse, however, and at Christmas was confined to my bed with the goiter, rheumatism in every joint, my legs having grown so crooked that they could not be straightened out, and a growth in the intestines. The physician claimed I had tubercular disease. I became so low that I could not speak above a whisper, and had to be handled like a child. I could take only some liquid through a tube, and not even that without great difficulty. My husband then called the physician once more and asked if anything could be done for the growth other than an operation; but he said "no," and added that an operation could not be performed, as I was too weak.

This was in April. Then a neighbor came and told us about Christian Science, of which we had never heard; so we at once sent for a practitioner from Peoria, who took up the case and worked faithfully. After my first treatment the pain all disappeared and I had a night of refreshing sleep, which I had not known for a long time. The next morning I was helped out of bed, and have not been again confined to it, nor have I or my family taken any medicine since that time. All the trouble gradually disappeared, and I am now in good health and flesh, with my limbs again straight.

I am truly grateful to God for Christian Science, and for knowing that there is a way to be cured of all suffering.

MRS. JULIUS MULLER, Danforth, Ill.

Like many others, I was healed by Christian Science after other means had failed. Five years ago, when my mother passed away, I had a severe case of nervous illness and feared that I was losing my mind; but after a few treatments in Christian Science, and by studying the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was perfectly well. More recently a rather stubborn case of stomach trouble was overcome through the help of a dear practitioner, and thus I have been brought to realize anew the ever-presence of God. Christian Science meets every need; and not only for the healing, but for the happiness, peace, and comfort it brings, I am more grateful than I can find words to express.

ADELAIDE M. MORGAN, Los Angeles, Cal.

Words cannot express my gratitude for what Christian Science has done for me and for mine, and is doing every day. As we are now placed quite a distance from other Scientists, we are greatly benefited by the Christian Science periodicals, especially the *Sentinel* and *Journal*, so I feel more and more that it is my duty to give a message for Truth.

Shortly after becoming interested in Christian Science in the summer of 1902, I had a wonderful proof of the power of God through the understanding of this teaching. We were at that time living in Schenectady, N. Y., in an upper flat of a two-story house, when my oldest boy, then a little over three years old, fell from the piazza to the flagstone on the ground. As he must have climbed up on the railing, he fell a considerable distance. The lady down-stairs called to me that the boy had fallen, and I well remember the awful fear that took possession of me. When I reached him, I found him unconscious and bleeding from the mouth. Even then my only thought was, if I could only get a Christian Science practitioner to treat him, God would surely help me. I immediately sent for a practitioner, and in about twenty minutes she arrived. In the mean while I carried the boy up-stairs and laid him on the bed, with his clothes on, he being still unconscious. I was reading from Science and Health until the practitioner came, and after that she worked steadily for four hours, declaring the truth, before the boy became conscious. He then got up from the bed himself, and asked for some water. After he had received it, I undressed him and put him to bed, and he slept peacefully all through the night; but when he awoke in the morning, he wanted to go out to play. He was quite well, and on examination there was not a mark of any kind on his body save a scratch on his cheek. The fall did not result in any ill effects whatever, and he is now a big, strong boy.

My mother had been afflicted with asthma for fifteen years and had been pronounced incurable by some prominent medical doctors in Helsingborg, Sweden; she had also had medical attendance from some doctors in Schenectady, N. Y., without any permanent help; but she was entirely healed in six weeks' treatment by the same Christian Science practitioner who attended the boy. This was ten years ago, and she has had no return of the sickness since. She is now seventy-one years old, is remarkably active for her age, and is a thorough believer in Christian Science.

Two of my boys do not know what medicine is, as we have not had any material remedy in our home for ten years, relying entirely on Christian Science. My husband has been relieved of the tobacco habit, and time and again, during these last ten years, we have all seen the wonderful power of Truth as taught by Mrs. Eddy. The realization of this

Digitized by Google

power gives me comfort and strength in my daily work, and I am trying to demonstrate Christian Science for myself and others.

I wish hereby to express my gratitude to God, and my thankfulness to Mrs. Eddy for the truth which has helped me on this journey from sense to Soul.

MRS. ANNIE JOHNSON, Westeras, Sweden.

[Translated from the German.]

It is with a sense of deep gratitude and a heart filled with joy that I wish to testify to the wonderful healing and other blessings which have come to me through Christian Science. On Dec. 21, 1911, I was seized with severe spasms, said to be due to gall-stones, and as I was suffering intense pain, medical advice was secured immediately. The physician diagnosed the case as above, with serious complications, and said that only an operation could prevent the disease from becoming aggravated. I could not make up my mind, however, to have it performed, and felt very much alarmed, as I had gone through a severe operation twice before.

Having heard quite a little about Christian Science as a curative agent, we sent for an adherent of this teaching, and information being given at once on the subject, we wrote to a Christian Science practitioner, who kindly took up treatment. Immediately after the letter reached its destination, the troubles began to lose their hold upon me, and after a week had elapsed I was able to leave my bed. I was relieved at the same time of severe hernia, with which I had been afflicted for eighteen years, and I have regained health and a sense of contentment, for which, as well as for other blessings, I give sincere thanks to God, and to the woman who has brought to this age the light that shineth in the darkness of this world.

EMMA KÖNNECKE, Bahrdorf, Hzgt. Braunschweig, Germany.

I am truly grateful for the knowledge I have of Christian Science, and I want to give my testimony to the healing of a badly injured ankle. As soon as its condition was known to the members of my family, who are not Scientists, a physician was called in to see if any bones were broken. After a careful examination the doctor said that it was a severe sprain, and would require the same treatment as a broken bone, adding that it would be some time before I could use my foot. As soon as the doctor left, I asked my husband to call a Christian Science practitioner to take charge of the case, which he did, with successful results. The next day I was about the house doing my own work, but it was not until Saturday, while studying the Lesson-Sermon, the subject of which was "Mind," that I realized just what Christian Science is doing for us,—teaching us the Christ-healing Jesus taught. I felt such a sense of gratitude to God and to our dear Leader, Mrs. Eddy, that I could not refrain from saying from the depths of my heart, "Father, I thank thee." From that moment I realized the perfect healing of my ankle, and I proved it by putting it to the test, for I walked some two or three miles without any unpleasant results.—JULIA E. ROBERTS, Denver, Col.

The timid hand stretched forth to aid
A brother in his need,
The kindly word in grief's dark hour,
That proves a friend indeed.
The plea for mercy softly breathed,
When justice threatens high;
The sorrow of a contrite heart,—
These things shall never die.

CHARLES DICKENS.

FROM OUR EXCHANGES.

[*Watchman.*]

Abram was the first great Protestant and Puritan. Religion in Chaldea had become, as religion tends to become under the crystallization of custom, a great system of temples, priests, and images, with all the paraphernalia of worship. Abram must have had a spiritual experience in which he found immediate access to God and entered into personal communion with "God the Father Almighty, Maker of heaven and earth," which lifted him out of dependence upon priests and rites and means of grace. He gained direct access to God and obtained that elevation of spirit in which he became "the Friend of God." He was the first of those great men of God who have the vision and freedom and boldness to stand against "established religion" and become creators of new eras of religious life and power. Such men were Moses, Elijah, Samuel, Paul, Luther, Wesley, and above all the author of our faith himself. They knew God and they had immediate authority of spirit from Him.

Unless Abram had known God intimately and affectionately, he would not have cared to go out from the center of civilization; nor would he have been willing to sacrifice the security of a city house and the comforts of community life to enter upon the inconveniences of a tent in the wilderness with its noontide heat and midnight chills. But the presence of God made every place a home, and His altars made any spot of ground a sanctuary for worship. It is a saying that every Christian is a temple of God and may worship when and where he pleases. Abram's religion was of the free character which finds God at all times. He was never away from God. Whatever deprivations he felt as to his separation from men, he found ample compensation in his nearness to a great friend who said to him, "Fear not, Abram: I am thy shield, and thy exceeding great reward." All who have entered into fellowship with God find in Him their sufficiency, so that they can dispense with human associations if necessary.

[*Standard.*]

People who would resent being thought "countrified" in their dress, or table manners, or notions about the world, are hopelessly provincial in matters of religion. Their world of the spirit is still confined by a Chinese wall of narrow and belated concepts. They never climb out of the valley where they have spent the greater part of their days. They sleep with the windows of their mind shut tight. No fresh air can ever reach their souls—fresh air is too modern.

This is true not only of men's ideas about religion, but of men's methods in the organized expressions of religious life. Intelligent business men who are thoroughly modern in their methods of publicity and office and shop efficiency are often as thoroughly antediluvian when it comes to the conduct of the business end of the church.

[*Universalist Leader.*]

What we are coming to in this matter is the truth that the power and conviction of Paul are just where the power and conviction of Jesus are. Both men felt, lived, understood, knew, certain deep elemental spiritual experiences. They came into personal, conscious relationship with God and with the ultimate facts of spiritual existence. Each spoke out of his experience in language native to himself. Jesus was a village youth, born of a remarkable mother. He grew up unencumbered with the formulas of the schools. He lived with the flowers and birds and the green fields. When he came to himself, he gave expression to his life with God with perfect simplicity. Paul was a city man. He was educated by the schoolmen. When he came to himself, he was hampered with the artificial habits of his intellectual

Digitized by Google

cult. All his life his speech betrayed his bringing up; but in certain splendid moments he broke through the shell of literary and intellectual scholasticism and expressed himself in words and ideas which reveal the real source of his spiritual life. Down there in his soul we find a wonderful kinship with his Master. There is in Paul the same glimpse of God, of eternal truth, of the soul's deep spiritual life, that there is in Jesus, for those who do not stumble over the threshold of his verbal formulas. In the epistles of Paul, as in the gospels, we are face to face with one who knows spiritual things by an experience of them which is neither borrowed nor reflected. The great apostle, like his Master, lived close to the eternal. That he described his impressions differently was the result of his different environment and education.

[Arthur Henderson, M.P., in *Christian Commonwealth.*]

The absence of a true Christian ideal has been a powerful factor in influencing the working-class mind. The masses have looked on and seen the churches make it their business to care for the spiritual and moral wants of the community. They have seen provision made among their members for the cultivation and development of devout feeling and the higher Christian graces. We would not underestimate the importance of these things, but when it results, as far too often it does, in many otherwise good people limiting the application of the principles of Christ to a section of their life, instead of applying it to every department, then it becomes objectionable. If members of the churches use Christianity in this way, presenting a caricature to the world instead of the real Christ, they cannot wonder that the masses of the people get the impression that religion is not adapted to help them in the rough-and-tumble life which they have to live in this workaday world. This gospel of other-worldliness will never satisfy the needs of the people, and it is this want of a true Christian ideal that has led to the alienation of the working classes from the churches and strengthened the ranks of distressing indifferentism, deadly materialism, and doleful pessimism. When Christianity is shown in its real nature, as an aggressive force, destroying the evil of the individual life, transforming the character of the workers' environment, taking cognizance of social defects, seeking to right industrial wrongs, and removing the injustices under which the workers suffer, then it cannot fail to command the sympathies of the common people.

[Rev. A. W. Littlefield in *Christian Register.*]

God is the best: whoever communes with Him attains the heights. Only as one looks up to something higher than himself can he rise higher. The common people heard Jesus gladly, not because he was one of them, but in that he had risen above them in his walk with God: the prophet must be doubted until it is assured that he has surpassed his early association. The people distrusted the carpenter's son, but they adored the Son of God. He had entered into the holy of holies, the sanctities of his own soul, where God reveals Himself most mightily! The people loved, not their former playmate, but their ideal of the best; and Jesus gained this power because he sought and found the best.

[*British Congregationalist.*]

Christian churches do not exist and should not exist for the entertainment of any section of the community. They have a definite purpose to fulfil, which is only served by the uplifting and spiritualizing of those who form the units of the congregations. Desirable as it undoubtedly is from the material as well as the spiritual point of view that our churches should be well filled Sunday by Sunday, there will come no strength to them and no solidity of purpose if the congregations gather for other purposes than those of worship and spiritual refreshment.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, C.S.B., has been printed in regular pamphlet form and is now ready for distribution. Thirty-two pages and cover.

Some of the lectures recently translated into foreign languages and printed in pamphlet form are listed as follows:—

"Christian Science: Its Results," by William R. Rathvon, printed in German (Die Christliche Wissenschaft: Ihre Resultate).

"Christian Science: A Religion of Progress," by William D. McCrackan, M.A., printed in French (Christian Science: Une Religion de Progrès).

"Christian Science: Demonstrable Religion," by Frank H. Leonard, printed in Norwegian (Christian Science: Bevislig Religion).

These pamphlets are all for sale at the prices as shown on the opposite page under the list of Pamphlets and Reprints.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency. Money orders should be made payable at the Boston post-office.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: **Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.**

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: **In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.**

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. **Improved and enlarged in 1910.**

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book); single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage.

For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy	$ .05	$ .06	$ .07
Twenty-five copies	1.00	1.15	1.30
Fifty copies	1.80	2.05	2.40
One hundred copies	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XIII indicate the year 1913; XIII, 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgement of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

	£	s.	d.	Marks	Francs
$1.20 equals	0	5	5	5.50	6.75

Make all remittances payable to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Completion of detailed plans for the Sather Campanile, the beautiful granite tower that is to be erected soon where the University of California flagstaff now stands, has been authorized. Three hundred feet high, it will be one of the greatest bell-towers in the world, the Campanile of Venice exceeding it by only twenty feet in height, and the tower erected by Giotto in Florence falling thirty feet below it. It will be thirty-six feet square at the base and will cost two hundred and twenty-five thousand dollars.

The Massachusetts state board of railroad commissioners has approved the so-called "Parsons plan" for accomplishing the river front development in the city of Springfield. This plan contemplates a transfer of the tracks of the New York, New Haven & Hartford Railroad Company from the east side of the river to the west side, and requires extensive alterations in the existing union station in that city in order that all of the railroads may be accommodated.

Cooperation on the part of the federal states in the construction of interstate highways was the principal subject of discussion at the closing session of the Federal Aid Good Roads convention in Washington. Various suggestions were offered looking toward uniformity in the construction of highways and a more scientific system for the improvement and maintenance of those already building.

The scout cruiser Salem, which has been at Gibraltar making tests of the navy wireless station at Arlington, Va., received continuously by daylight from the Arlington station up to a distance of about twenty-four hundred miles, and was able to transmit to Arlington continuously by daylight up to a distance of about thirteen hundred miles.

Governor Foss of Massachusetts has signed the "hatpin bill," which requires a safety device to be worn over the point of a hatpin which protrudes from the crown of the hat more than one half inch. A fine to the extent of one hundred dollars may be imposed for failure to comply with the law. The bill takes effect in thirty days.

It is probable, says *Engineering News*, that no law ever enacted by Congress, not even excepting the act providing for the construction of the Panama canal, involves a larger amount of engineering work and a greater outlay of money for engineering services than the railway valuation act which became a law recently.

The alleged coaster brake trust must stand trial on charges of violating the Sherman antitrust law, the United States court overruling demurrers to indictments obtained by the United States district attorney a year ago. The indictments charge eighteen individuals and six corporations.

During January the United States lost more people by emigration than it gained by immigration. Outward movement in that month numbered 78,451 persons, and inward movement only 68,948. For seven months ending Jan. 31, arrivals were 838,755, against 582,426 outgoing.

The interstate commerce commission has issued an order in general applying to all railroads and common carriers, supplementing the recent decision prohibiting, after July 1, 1913, any mutual ownership or operating agreement of competing railroads and water lines.

The paint on the Old South meeting house of Boston is being removed in order to show the building as it appeared one hundred and sixty-eight years ago. This same idea was carried out on the Old State House and the Old North church a few years ago.

The commandant of the Key West naval station has received a letter from Cairo, Egypt, saying that the Lloyds wireless operators in that city had copied messages sent from the Key West station. The distance is more than seven thousand statute miles.

Growing out of the Illinois state investigation of the causes of vice and its relations to wages, a movement has spread to eight states which promises to result in a cooperative effort to solve the "white slave" problem.

Promulgation of an income tax to raise at least one hundred million dollars in revenues lost through proposed slashing of the tariff has been under consideration by the House ways and means committee.

The commerce court holds that Congress has no power to make all pipe lines common carriers and that the amendment to the interstate commerce law to this end is invalid.

It has been practically determined by President Wilson that the tariff question shall be the only one to occupy the attention of the extra session.

International.

On March 12 the new capital of the Australian commonwealth was officially named Canberra, when the various foundation-stones were laid by Lord Denman, governor-general; Mr. Fisher, prime minister, and Mr. O'Malley, home minister. The act of christening was performed exactly at noon by Lady Denman. The new capital is situated two hundred miles southwest of Sydney and ninety miles from the sea. When the ceremony was complete, Lord Derman despatched a cable to the King, in which he said, "I desire to convey the greetings from the people of Australia to your majesty and announce that I have today laid the foundation-stone of the Australian capital city."

A petition directed to President Wilson and the Senate of the United States, requesting annexation of the Isle of Pines, will be put in circulation. The petition states that six thousand Americans who reside or have property in the Isle of Pines are anxious to have action taken to make the island permanently a possession of the United States, for it has become a distinctively American colony, citizens of the United States owning over ninety-five per cent of the land and constituting a majority of the population.

Lord Lamington, a recognized authority on mid-eastern affairs, proposes that there should be some sort of financial advisory board for Persia, that the gendarmerie should be largely augmented, and that the Swedish officers should be strengthened by the addition of British officers from India, as the former, however good, have no knowledge of orientals or oriental languages. These measures, Lord Lamington contends, are the more necessary since southern Persia is in a state of chaos.

Some opposition to the immense and hurried increase of the peace footing of the French army has made its appearance. About three hundred and fifty professors of the Sorbonne, many of them among the finest scholars in France, have issued a united address to the people of France not to allow themselves to yield thoughtlessly to the military panic and to forces of reaction which tend toward desperate adventures hostile to the republican government.

During 1912, 166,880 immigrants were admitted to Australia, while the emigrants were 82,420.

Industrial and Commercial.

Experiments with the new Edison storage battery car, which completed a trip from New York to Boston last week, will be made on the Riverside-Newton Lower Falls suburban line of the Boston & Albany. The car left the Grand Central terminal at New York and made the three hundred and ten-mile run to Boston at the fastest rate it has ever run, maintaining a speed of forty miles an hour for long stretches. With a length of fifty feet, the car is divided into a passenger compartment seating forty and a baggage compartment. There are two hundred and twenty-five storage cells in the battery which supplies power for the motors, while five other cells furnish lighting current.

Engineers of the New York, New Haven & Hartford Railroad Company are completing the plans for the new steel bridge over the Thames river at New London, Conn. This bridge is to take the place of the present one, which was first opened twenty-three years ago, having cost more than one million dollars to construct. The height above the bottom of the channel will be 140 feet. There are to be five fixed spans, four of which will be of 195 feet each and one of 245 feet, and also one draw span having a clear channel of 150 feet. It is estimated that, including certain sections of the approaches, the total cost will be about four million dollars.

The big strike of twenty thousand members of the Women and Childrens Garment Workers Union has been settled. All returned to work on a compromise agreement which provides for a fifty-hour working week, the "preferential" union shop, advances in wages averaging about fifteen per cent, a permanent board of arbitration to adjust disputes, and sanitary workshops.

Modern rolling stock has become so heavy that the Pennsylvania Railroad Company has been compelled to discard the present wrecking trains and order new ones. The company has placed an order for twelve one hundred and twenty-ton cranes. They will be of locomotive type and self-propelling. These cranes are for use on the divisions between Pittsburgh and New York.

An immense scheme of reorganization, involving more than a score of light, power, and traction companies in Canada and various parts of the neighboring republic, is involved in the application to the Dominion government for the incorporation of the new International Light & Power Company, with a capital of twenty million dollars.

One hundred and sixty oil-burning locomotives were operating on the Frisco a year ago against twenty-five now, and they will soon be reconverted into the coal-burning type, The change is made necessary by the almost prohibitive price of fuel oil.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"ONLY IN THE THRONE."

M. G. KAINS, M.S.

PERHAPS no story in the Old Testament conveys so many or so important lessons to present-day humanity, and especially to those people who have become interested in Christian Science, as does the story of Joseph. From beginning to end it is not only full of action, incident, and adventure, but at every point it teems with intimations as to the importance of ordering one's life on the basis of divine Principle. Sold into slavery by the envy and jealousy of his brethren, as a servant in the house of Potiphar, he yet found favor in the eyes of his master because, as we are told, "the Lord was with Joseph, and he was a prosperous man." Although seeming to be a victim of hatred and lying, and thrust into prison, "the Lord was with Joseph, and showed him mercy, and gave him favor in the sight of the keeper of the prison," who placed him in charge of the other prisoners and entrusted the management of the prison to him. Here he correctly interpreted the dreams of the chief baker and the chief butler, the latter of whom promised to aid him. As soon as liberated, however, the butler promptly forgot all about his promise until "the end of two full years," when Pharaoh had a double dream which "the magicians of Egypt, and all the wise men" could not interpret. After their failure, the conscience-stricken chief butler told Pharaoh his experience as a dreamer while in prison, whereupon Pharaoh promptly sent for Joseph.

When Pharaoh had told his dream and had asked for the interpretation, Joseph modestly exclaimed: "It is not in me: God shall give Pharaoh an answer of peace." Then he not only showed how the "seven kine, fat-fleshed and well favored," stood for seven years of abundance, and how the "lean and the ill favored kine" which "did eat up the first seven fat kine" represented seven years of famine, but he also outlined a plan whereby advantage could be taken of the seven years of plenty to store up a reserve supply of food for the following seven years of scarcity, and suggested that Pharaoh "look out a man discreet and wise, and set him over the land of Egypt," to carry out the plan, first for the conservation, and second for the judicious distribution of food. Very naturally, "the thing was good in the eyes of Pharaoh," and just as naturally Pharaoh said to his servants, "Can we find such a one as this is, a man in whom the Spirit of God is?" Was it surprising, therefore, that he should then turn to Joseph and say, "Forasmuch as God hath showed thee all this, there is none so discreet and wise as thou art: thou shalt be over my house, and according unto thy word shall all my people be ruled: only in the throne will I be greater than thou."

In this last clause is one of the most striking expressions in the whole Bible. Here was the greatest earthly potentate of his time suddenly elevating a slave prisoner to a position of power practically on a par with his own! Why? Simply because Pharaoh recognized that Joseph was ordering his life on a higher plane of thought and action than he himself understood, and for this reason had become possessed of a wisdom and resourcefulness that could not be matched in the whole land of Egypt. The sequence of human events during the fourteen following years fully justified Pharaoh's course of action; for not only were the Egyptians, but also the children of Israel and other nations, saved from starvation because through Joseph's understanding of God there was corn in Egypt.

For the Christian Scientist this clause has a much deeper significance than appears upon the surface. According to the Biblical record, Joseph at all times strove to order his life upon his conception of divine Principle. Notwithstanding all the strange and distressing vicissitudes through which he was obliged to pass, he appears never to have faltered, for he looked to God for guidance and seems always to have exemplified the thought that "every cloud has a silver lining," even though one apparent catastrophe after another only plunged him into more and more gloomy and restricted surroundings, and though the lowering skies presented no hopeful rift through which the promise of a better day might dawn for him. He ever clung to his highest ideal, refused to accept the testimony of his prison environment, and constantly strove to do his duty in whatever position he found himself placed. Thus, under difficulties enough to crush most men, he presented "an outward and visible sign of an inward and spiritual grace" that naturally and necessarily revealed him as superior to his fellows, and in the eyes of his contemporaries fitted him for his high position as "ruler over all the land of Egypt."

This same ordering of life on the basis of divine Principle, God, is exemplified again and again in the Old Testament by Moses, Joshua, Elijah, Elisha, Isaiah, Jeremiah, Daniel, and other prophets. Because these men, like Joseph, lived up to their highest understanding of divine Principle, they were not only able to predict events and to work wonders, but they were respected and honored by upright kings and by God-loving people at home and abroad. Commenting upon their understanding of this divine Principle, Mrs. Eddy writes in "Science and Health with Key to the Scriptures": "It is a question today, whether the ancient inspired healers understood the Science of Christian healing, or whether they caught its sweet tones, as the natural musician catches the tones of harmony, without being able to explain them. So divinely imbued were they with the spirit of Science, that the lack of the letter could not hinder their work" (p. 144).

Invariably through the olden centuries these healers lived humble lives, took no credit to themselves for any of their works, but always when they exemplified the divine power in any direction, they gave God the glory. From a temporal standpoint, each in his day showed that "only in the throne" was he inferior to the king, even though he did not, like Joseph, "ride in the second chariot," and have heralds cry "Bow the knee" as he approached. In a larger sense both Joseph and the prophets were superior to the rulers of their day, since they voiced and demonstrated God-bestowed power and authority; and because this authority, when understood and demonstrated in the Christ-way, always transcends any mere temporal power, they stood by themselves in a higher class than the kings. Yet in spite of their own recognition of this fact, they often deprecated their personal

Copyright, 1913, by The Christian Science Publishing Society.

Digitized by Google

importance and refused worldly honors. What was thus characteristic of them was even more strikingly typical of Jesus of Nazareth. At one time, when speaking with some of the Jews who were questioning him as to his authority and his mission, the Master said, "I do nothing of myself; but as my Father hath taught me, I speak these things." In other words, The power which you have seen exercised in the healing of the sick does not originate with me; it is of God.

In apparent and even violent contrast with this statement was Jesus' declaration when talking with the Jews upon another occasion: "I and my Father are one." Even a casual study of the gospel according to St. John will show that in no sense did Jesus wish to declare himself to be God, or the equal of God; and yet the gospels, particularly that of St. John, indicate that he knew and maintained his oneness with the Father. Though on the occasion just mentioned "the Jews took up stones again to stone him," and though his disciples in only a limited sense at that time, and for some time later, apprehended what he meant, yet the Christian world has come to comprehend his meaning, at least in some degree, and to accord him the place to which he is rightfully entitled. Our text-book tells us that "perfect and infinite Mind enthroned is heaven" (p. 266).

For us today there is a still more striking significance in the declaration, "only in the throne will I be greater than thou," namely, in its personal, present-hour application to each and every one who will follow the Christ-method of thinking and living, even though this method does "require the disciple to cut off the right hand and pluck out the right eye,—that is, to set aside even the most cherished beliefs and practises, to leave all for Christ" (Science and Health, p. 141). The statement means that in proportion as we exercise this Christ-method of thought will we be able to heal the sick and perform other works which Jesus declared to be characteristic of his ministry and of those who truly follow him.

The fact that he did not intend his declaration to be limited to the few disciples with whom he was personally associated is emphasized by his words when talking with a select few of his followers: "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Had he intended his words to apply only to those with whom he was conversing at the time, or even to his contemporary followers, he would surely have used the word "you." The word "he" makes the statement apply, without respect to time or place, to "all who profess and call themselves Christians," and is in exact harmony with his statement made upon another occasion, "These signs shall follow them that believe;" that is to say, the signs of healing.

From all these instances of the recognition of divine Principle, God, as the power by which men may order their lives and whereby they may present proofs of their understanding of God, we may safely conclude that it is our right to exercise authority to the extent of our understanding, to prove little by little that "now are we the sons of God;" and it rests with us to demonstrate this fact in the way that Christ Jesus commanded. And as to the authenticity of Christian Science by which this spiritual revelation and development is to be attained, every man may for himself apply the test which Jesus gave, namely, "If any man will do his will, he shall know of the doctrine, whether it be of God. . . . He that speaketh of himself seeketh his own glory: but he that seeketh his glory that sent him, the same is true, and no unrighteousness is in him." Thus may the seeker after Truth take the first faltering steps that will lead to the final acquisition of the power which will enable him to speak "as one having authority." The promise reads: "To him that overcometh will I grant to sit with me in my throne, even as I also overcame, and am set down with my Father in his throne."

TRUE WITNESS.

FLORENCE E. B. DONALDSON.

THE light which Christian Science throws on the ten commandments is so illuminating that the limited, material meaning attached to them by the teaching of the schools is changed into what seems an illimitable statement of spiritual law. Meditating upon the ninth, "Thou shalt not bear false witness against thy neighbor," we listen to what, as yet, we do not perfectly hear. The question, "And who is my neighbor?" was answered by the Master both by parable and precept; but not until the letter and the spirit of Christian Science was revealed through our beloved Leader did we perceive that false witness against our brother man includes any word or thought which denies the perfect reflection of the perfect God. Truth has opened our understanding. The desire to separate all error from our thought of our fellow man, to see him only as our Father's image, can, as we know, be truly voiced by those alone who have penetrated within the veil and are communing with Spirit in the holy of holies itself.

The unrighteous judgment of others is not the only form of false witness, however, against which we need daily to guard our thought; we must do so no less whenever self-condemnation claims to find a foothold, for this is plainly a form of false witness, since it is making a reality of the error which seeks to find a channel in our consciousness, whereby to mar the unchangeably perfect reflection of God. To see clearly along these lines, we must subdue all sense of personality; we must realize that the problems of individual experience and environment can only be solved by absolute reliance on God, by striving to perform the tasks allotted to us in the meekness and might of the Christ-idea. To become as a little child is so to cast out error that the tablets of our thought may be as a fair sheet ready to receive the impressions of Truth, and so to transmit them to others. We must strive to gain true humility, looking for guidance to God alone, patiently following in the footsteps marked out for us, dwelling in habitual obedience to the will of God, knowing that His will desires and requires good in every manifestation of His unceasing activities, in the perpetual harmony of His creation.

The record of spiritual man, made in God's image and after His likeness, as given in the first chapter of Genesis, included male and female under the one title "man." Dominion over all the earth, and all that it contained, was given equally to both; the divine blessing, and the charge to replenish and subdue the earth, was also given to both; and this teaches us that the equality of the sexes is an eternal fact in Mind, and it cannot be witnessed against in truth. But neither can there be animosity between men and women, since they are immutably at-one, co-heirs in the realm of Spirit.

If, then, we are to live and abide in the truth, we must not only endeavor to reject the subtle claim of error that would make us false witnesses, but we must be continually active in bearing true witness. This can only be done by greater consecration on our part, in the work of Christian Science; by obeying the command, "Come out from among them, and be ye separate;" by being in the world but not of it, as the Scriptures teach us. The injunction to be "doers of the word, and not hearers only," seems to point especially to the need of great mental activity in this connection. One knows how often false witness in the form of an intimation of scandal, or maligning comment on another's action or character, if received in silence, assumes consent thereto. The true friend, on the other hand, will make vigorous protest, and reverse the intimation of evil with the ardor and warmth of a loving heart. In Christian Science, the same prompt and radical opposition to every attempt of mortal mind to make us see an individual channel for unlikeness to God, should be defeated by a quick turning to the right

Digitized by Google

model, the man of God's creating, and bearing true witness to this. Such witness will generally be mental, not audible. If we thus habitually bear true witness to our neighbor, we shall not fail to be guided to speak the right word when occasion demands. If God is in all our thoughts, He will "keep the door" of our lips, and not fail to govern all our actions aright. And the Father beareth witness in the works He has given us to do.

SINGING WITH THE SPIRIT.

WALTER E. YOUNG.

THROUGH the increasing study and practise of Christian Science, mortal thought is undergoing a gradual change of base in its reasoning with respect to every form of human activity and occupation. As a clearer understanding of God and man's relation to Him is gained, there comes to the individual a purification of sense; he is actuated by better motives and aims, has a keener, more intelligent desire for improvement along all lines of human betterment. Music has always played a very active and prominent part in human affairs, and when we realize what a far-reaching influence it exercises among all the people, we can readily see that a system of thought which inculcates a right apprehension of spiritual truth, which points ever to the one spiritual cause, must sooner or later beneficially affect all who are interested in music, whether as composer, performer, or listener.

While appreciating the work of the great past masters of music, their sincere desire to give to the world a high, fine thought, musically expressed, we cannot ignore the fact that incidentally they have portrayed, and as graphically as possible, all the weaknesses, sorrows, miseries, and even hates of human experience, together with its nobler impulses. Only here and there have they risen above the trammels of mortal sense and given us that which is permanently uplifting, which more nearly approaches to inspiration, which is born of a glimpse of Truth. To this extent their music has been free from mortal limitations and sensual appeal; it is fluent and spontaneous, the true improvisation. Mrs. Eddy has beautifully expressed the freedom and power given us when we listen responsively to the voice of Truth. "Spirit, God," she writes, "is heard when the senses are silent. . . . The influence or action of Soul confers a freedom, which explains the phenomena of improvisation and the fervor of untutored lips" (Science and Health, p. 89).

It is clear that the musical expression of thought must necessarily improve as humanity gains a correct knowledge of what constitutes the harmony of divine Mind and its manifold manifestations. The demand for music which portrays the sordid conditions of human experience will then decrease, be replaced by the activities of desire for spiritual good; men will seek for holiness of thought, normally and ideally expressed. By many it is considered the duty of the interpreter of a musical work to reproduce the effects which the composer sought to secure, and he is thus drawn wittingly or otherwise into a partnership with the composer in so far as this result is achieved. Thus it would appear that a good start in the line of improvement might first of all be made with the composer. In the measure that his concept is spiritual, his compositions will tend to refine and ennoble, as well as delight human sense, to bring hope and cheer, prove a vital, far-reaching benediction to all. The interpreter also, who approximates this same altitude of thought, will find his rendition correspondingly improved, and when this advance is also participated in by the hearer, unity will have been attained, the quality of both supply and demand will have been elevated, and the world will have risen higher in its apprehension and enjoyment of music.

It is an interesting fact that the music which has proved most inspiring and helpful to the world has been the settings to the more spiritual and poetic Scriptural statements of divine Truth. The prophets of the Old Testament "caught glorious glimpses of the Messiah, or Christ" (Science and Health, p. 333), and their words, together with those of Christ Jesus and his apostles, as they appear fitly voiced in hymns, solos, and oratorios, have become an essential part of our church services. What a gladsome, stimulating appreciation one acquires of the life and work of the Master when listening to such a work as Handel's "Messiah," with its final, triumphant "Hallelujah! the Lord God omnipotent reigneth." This music was undoubtedly an inspiration, the author's thought being permeated with the grandeur of the Messianic idea, and his wonderful setting was the outcome. In this great work Handel left to posterity a precious musical heritage. With the coming of spiritual enlightenment, instrumental music will also receive an impetus in the right direction, and we shall have melodies and harmonies of a character that will inspire and bless all who hear them.

Christian Science churches have today a great privilege and opportunity in the matter of musical expression, and much good will be accomplished if those participating in our services will endeavor always to put aside self and hold in thought the truth which is to be expressed, whether in the rendition of the hymn, the solo, or the organ selection. In all the walks of life, the true Christian Scientist is trying to know that as man is the idea of divine Principle, he is necessarily governed by the perfect law of Truth, and that whatever he undertakes, whether it be in music or other branches of human activity, the good to humanity accruing from his work, will be in proportion to the purity and spirituality of his own thought.

AUTHORIZED LITERATURE.

ELIZABETH EARL JONES.

THE American people, for the most part, are expressing gratitude for the recent pure food act, which assures protection to dealers and consumers alike by maintaining in Washington a commission whose duty it is to test and pass upon all foodstuffs offered the market. If so great care is taken to insure the purity of the material things which are but a passing and temporal provision, how much more should we exercise every possible precaution to have our mental food, the literature which we read, wholesome, unadulterated, pure, and elevating. The divorce evil, so widely decried today, is largely traceable, as is also much sickness, sin, and suicide, to the reading of novels and newspapers which instil and cultivate unwholesome and pernicious thoughts. On the other hand, many homes and hearts have been reunited, many bodies have been healed, many minds uplifted and reformed, by a thoughtful reading of the pure literature which Christian Science is giving the world. While there may be much that is beautiful, pure, and good in current mental foods which has not been passed upon and authorized, yet we must all agree that we cannot be too careful in excluding from thought everything concerning which we are in doubt as to its genuineness and purity. A good rule to be followed, both by readers and authors, is to take fiction as fiction, and fact as fact, and to keep them separately classified, since their confusion in our mentality is calculated to injure the fine moral fiber of intuition.

It is interesting, in reading the Acts of the Apostles, to note the great care exercised by the disciples to keep the Master's teachings pure and unadulterated. We read that the apostles "laid hands" upon those whom they considered worthy, and fitted to teach and preach the glad tidings of the ever-present healing Christ; and we are told that only those upon whom hands had been laid were received as loyal exponents by the early church. It is reasonable to believe that the apostles, in establishing the church of Christ, acted upon the instructions of Christ Jesus, and their example is therefore of inestimable value to us. This example was

Digitized by Google

closely followed and applied to present-day needs by our revered Leader, Mrs. Eddy, who discovered for us the new-old ministry of the healing Christ, Truth.

To all who adhere to the straight and narrow way revealed by divine Love, in the activities and triumphs of our great cause, peace, health, and increasing harmony are assured, despite the seductive illusions of material sense. To those who miss the heavenly road and suffer accordingly, the way to recover the right path and to continue the demonstration of life in God, has been made plain in the statement of practical Christian Science as contained in The Mother Church Manual, one of the by-laws of which lovingly and forcefully assures us that "God requires our whole heart, and He supplies within the wide channels of The Mother Church dutiful and sufficient occupations for all its members" (Art. VIII, Sect. 15).

PRINCIPLE VERSUS CHANCE.

REGINALD JAMES CHANDLER.

THERE are a multitude of people unacquainted with the teachings of Christian Science whose daily experiences seem to be a series of uncertain, haphazard events over which they can exercise little or no control. Life to them seems quite inexplicable. All their searchings among material phenomena have failed to reveal the great First Cause or Principle of the universe, who, in the words of Scripture, "doeth according to his will in the army of heaven, and among the inhabitants of the earth." The belief that man is material, possessing a mind of his own, apart from God, the one Mind, and that there are millions of conflicting minds, each having different beliefs, tastes, fears, and hopes, peering apprehensively in all directions, ready to conjure up sickness or catastrophe from the dark abyss of fear,—this belief regards its delusions as the facts of existence.

Another large body of people believe that there is a personal God in some remote place who occasionally interferes in human affairs, sending sickness and sorrow to discipline His children, and that they have to pass through the change called death in order to enter a far-off heaven where all their sufferings will be at an end. Yet others believe themselves entirely at the mercy of chance, helpless victims of the conflicting forces of a material universe, buffeted hither and thither by every wind of adversity.

Moses and the prophets understood and proved man's God-given dominion over these false beliefs, but it was not until the advent of Jesus that the Christ, the perfect idea of God, was fully revealed to human consciousness. The age was so blinded, however, by materialism, and the appearance of the "Messiah" or Christ was so antipodal to the Jews' preconceived opinions and expectations of his coming, that it was utterly rejected save by the few who became Jesus' followers.

As we begin the study of Christian Science and gain some understanding of its teaching, a new and glorious vista, hitherto undreamed of, is revealed. We begin to see that instead of chaos there is perfect order and harmony in God's universe. In Science and Health, Mrs. Eddy says: "We must leave the mortal basis of belief and unite with the one Mind, in order to change the notion of chance to the proper sense of God's unerring direction and thus bring out harmony" (p. 424). As the truth unfolds to our consciousness, we begin to perceive and demonstrate this unity here and now. The words "luck" or "chance" cease to be a part of our vocabulary; we can prove right now that, as God's ideas, we are governed by His unerring and unchanging law, and are to have dominion over environment and lack in our appointed places.

There is no problem too small for us to prove the perfect government of divine Principle. As a matter of fact, no problem is really solved unless we are governed by Principle, and this because Principle is changeless, never influenced by the human will. We must learn in humility that of ourselves we can do nothing, and know, as we read in the prophecy of Isaiah, that "the government shall be upon his shoulder." One unit wrongly placed in a column of figures will sometimes cause no end of trouble, and one wrong thought in consciousness, unless detected and cast out, results in discord. Sometimes our problem does not seem to be met as quickly as we had hoped for, and we may become a little impatient at the delay, error perhaps suggesting some easier way out of the difficulty to be overcome; but if we stand firm, having on "the whole armor of God," if we are constantly alert to the voice of Truth, we will certainly be guided aright.

When we have learned for ourselves that God is Love, tenderly caring for His creatures, knowing and supplying their every need, we are perfectly willing to be guided by Him, and we can prove these words of Scripture: "Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love him." In the degree that we are controlled by divine Principle, all inharmony is destroyed, and the discouraging sense that we are subject either to fate or to chance passes away.

LIGHT.

CHRISTINE J. M. SHULTS.

AFTER spending an afternoon in the country a short time ago, I sat on a rustic seat by the roadside, waiting for the electric car which was to carry me to the city. It had been a warm day, but now there was a delightful coolness and freshness in the quiet air. The mountains, with a soft haze resting upon them, brought to consciousness the beautiful psalm beginning, "I will lift up mine eyes unto the hills, from whence cometh my help." The green verdure, with here and there a clump of trees, was soothing and restful. To one living in a city, nature's charms are especially alluring, and in drinking in the loveliness I kept thinking of those spiritual verities of which the apostle tells us, the things which "eye hath not seen," but which are prepared for them that love God.

After getting on the car, it soon became too dark to distinguish objects, and sitting on the front seat I had an unobstructed view of the track ahead, clear and distinct, as far as it was lighted up by our powerful light. Beyond that, everything was indistinct, and around the bend some distance ahead I could but conjecture what awaited us. A beautiful lesson was thus gained. The track could be compared to one's path through life. When lighted by spiritual understanding, one can clearly see his way, obstacles are revealed, instead of doubt there is security, and one can say with the psalmist, "Thy word is a lamp unto my feet, and a light unto my path."

Furthermore, at the crossings a warning gong was sounded, reminding me of our need of ceaseless prayer and watchfulness, of that warning given by our Master, "Watch and pray, that ye enter not into temptation: the spirit indeed is willing, but the flesh is weak." Mrs. Eddy frequently emphasizes this need. "Watch diligently; never desert the post of spiritual observation and self-examination" (Miscellaneous Writings, p. 154). Once when the gong was sounded, some persons who were standing too close to the track, promptly stepped back out of danger; and thus if discord of any sort be present, the warning is being sounded, and it behooves us at once to be more active in watchfulness and prayer. As we neared the city, the lights from automobiles and cars going in the opposite direction, made the track indistinct and hazy, and again there was the lesson that we must be true to the one guidance, and not allow ourselves to be blinded by materiality.

How wonderful and blessed that through the truth revealed to our beloved Leader the narrow way in Christ, Truth, has been made so clear and practical for us today in Christian Science!

SELECTED ARTICLES.

[George Shaw Cook in *Bloomington* (Ill.) *Bulletin.*]

In a sermon against Christian Science reported in a recent issue the gentleman proves himself to be many years behind the times by standing on ground long abandoned by most critics as untenable. Our critic wisely says, "There are great and important truths in Christian Science, but they were known and practised long before Mrs. Eddy." They were known and practised by Christ Jesus, by his disciples, and, according to the historian Gibbon, by the members of the early Christian church for centuries after the ascension. Mrs. Eddy, who rediscovered in the nineteenth century the Science of Christianity which began to be lost sight of about the beginning of the third century, has, through her discovery and the work subsequently done by her, reestablished primitive Christianity. She never claimed to have added anything to what Jesus knew and practised, but merely to have restored the lost element of Christian healing.

Christian Scientists are neither trying to "fool all the people some of the time," nor "some of the people all the time," but they are trying by their lives to show that they have found a practical, demonstrable Science of being. This Science is not only making them healthier, happier, and better morally, but is teaching them that the truth which Jesus taught is for "all the people all the time," and will uplift and regenerate every individual in proportion as it is understood and demonstrated.

To cite real or alleged failures of Christian Scientists to heal, is not to disprove the truth of Christian Science. This effort is as futile as would be the attempt to discredit the science of mathematics by citing failures of students to apply the rules of arithmetic correctly. Christian Scientists do not claim that they never fail in their application of Christian Science to the various problems encountered in human experience. They are grateful that they are able to succeed in so large a measure as they do, and look forward to the time when the Science of Christianity will be understood and perfectly demonstrated.

[Frederick Dixon in *Devon and Exeter Gazette*, Exeter, England.]

May I be permitted to explain what Christian Science teaches? Christian Science says that pain and disease are states of human consciousness, and "states of consciousness" is the term which Huxley, and the natural scientists who agree with him, have adopted for them. This being so, Christian Science says that if these things are to be overcome, they must be overcome mentally in order to be radically destroyed. So long as the attempt to overcome them is confined to physical means, nothing can be effected beyond a tinkering with results. For this reason, Christian Science has accepted the command of Jesus of Nazareth, in which the healing of the sick was always coupled with the overcoming of sin. Jesus taught that sickness and sin were equally mental conditions, and he summed up this in the famous statement, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" The people, however, to whom he preached seemed incapable of realizing the spiritual science he taught, owing to their intense materiality, and for this reason he told them that if they could not believe "for the word's sake," they must believe "for the very works' sake." As time went on, however, men found it easier to preach the gospel than to heal the sick. Gradually, little by little, they separated the two. They insisted that the work of reforming the sinner was the work of the church, but they equally insisted that the work of healing the body was the work of the doctor, who might be a pagan.

One of the essential things which Mrs. Eddy did for mankind was to point out the mistake of all this; to insist that there was nothing supernatural in the spiritual healing taught by Jesus, and to demonstrate the fact that this healing was a present possibility. When people began to see the healing of the first century repeated, they began, *more suo*, to say that Christian Scientists claimed to do miracles. Christian Scientists do claim to do miracles in the sense of the term miracle in the Bible; they repudiate utterly the claim to do miracles as some supernatural contradiction of law. Law, scientifically, is something in which no variation is possible. The mere fact that a variation has taken place proves that the fact hitherto recorded as law is not a law. The education of the centuries has been directed to the breaking of the laws imposed by the ignorance of previous generations, but each generation has bitterly repelled, in the name of common sense, the declaration that its own beliefs were not facts. The early Fathers, faced with the scientific fact that the earth turned on its axis, with contemptuous common sense produced the argument that in such a case men would periodically be walking with their heads hung down, just as the nineteenth-century doctor dismissed the stethoscope with a sneer as the "introduction of a piece of wood into the sick-room." Christian Science has had to face the type of theological intolerance which insisted that if the earth was round, the Son of man would not be seen at the antipodes when he descended from the clouds on the last day; the type of medical intolerance which dismissed the stethoscope; and the type of common-sense intolerance which insisted, like Dr. Johnson, that paving stones were real because you could stamp upon them, a declaration smilingly dismissed by Huxley as an entirely irrelevant proceeding.

In spite of this, Christian Science is winning its way. Day by day the chain of Christian Science thinkers is being wound round the world, and men are learning that the healing which was scientifically possible in the first century is equally scientifically possible in the twentieth century.

[Frank Bell in *New Castle* (Pa.) *News.*]

Judging from the remarks of a traveling evangelist at Columbus, Ohio, as quoted in a recent issue, the most charitable assumption would be that he does not know what Christian Science is. No one who really understood the subject could honestly entertain the views he expresses. Considerable experience with attacks of this nature has convinced the writer that their vehemence is in proportion to the misapprehension back of them. We are aware that some persons still entertain weird and grotesque notions about Christian Science, and, so believing, are prone to condemn. Their criticism would be unobjectionable were it everywhere understood as not in fact being aimed at Christian Science.

Briefly, the teaching of Christian Science is that God, Spirit, is the real and only Life of man; therefore, he whose daily thought, word, and deed express the most good, the most godlikeness, is manifesting the best manhood, which is only another term for the best Christianity. If one's word and deed are to be right, one's thought must first be right, and Christian Science is contributing immeasurably to the universal upward trend by presenting a reasonable, rational, and scientific method by which otherwise unruly thinking may be directed into right channels. Christian Science gives assurance not only that the human mind may be made subject to the divine, but that purity and goodness in thought will be manifested in health, happiness, and peace. In other words, it offers to prove itself with "signs following," as Christianity was first offered to the world, which then as now was not wholly oblivious to the idea that genuine religion should be capable of demonstration.

The great growth of Christian Science is due to the fact that its promise to make mankind better spiritually, morally, physically, in every way, is being proved true in countless instances the world over. Surely nothing in all this calls for public denunciation.

[W. E. Fell *in Batley* (England) *Reporter.*]

A clergyman in an excellent sermon, in which he expresses admiration for the medical profession, for their devotion and courage, which we all heartily endorse, goes on to speak, perhaps not quite so kindly, of Christian Science as a "one-eyed system." In a sense he is right; we do strive to be single-eyed, for Christ Jesus declared, "If therefore thine eye be single, thy whole body shall be full of light." I take this to mean that if we acknowledge no law but the spiritual law, as did Jesus, who overcame in his mighty works every so-called material law through his understanding of spiritual law, our bodies will manifest nothing but health and holiness or wholeness.

When this critic says that Christian Scientists "have brought themselves to believe that there is no physical," he misrepresents them. Jesus said that the physical (or the flesh) "profiteth nothing," and that we were to "take no thought" for it. But behold the fearful energy with which people lay themselves out to take thought for nothing else. To them the physical is real, that is to the physical senses; for to these nothing else is real. The only reality is, however, that which is immortal and indestructible; in other words, the spiritual.

Our critic tries to extenuate the spiritual barrenness of the Christianity of today by attempting to prove that the Founder of the Christian religion intended us to use material remedies. So far as we can judge from the gospels, he never used them himself, nor did he commend them to his followers, but he did say, "Ye shall know the truth, and the truth shall make you free." There is no mention of oil as curative, but of the truth only. The word "oil" has a much deeper meaning than appears in its context. Throughout the Bible oil stands metaphorically for spiritual consecration. The apostle James did not say that the "oil" would heal the sick, but that "the prayer of faith" did the work. Doubtless as did their Master, so did the apostles heal patients at a distance. Where were the material means in such a case?

[Algernon Hervey-Bathurst in *Saturday Review*, London, England.]

I have read the article entitled "The Doctor Faith-healer" in a recent issue and regret that the writer should have thought fit to include in it statements with regard to Christian Science long since worn threadbare. It is quite true that the feature of Christian Science which appeals most forcibly to the inquirer is this, that by its means disease is healed without the use of drugs. The physical healing is, however, by no means the most important feature. It is equally true that many turn to Christian Science because they have endeavored to find relief from numerous sources but have failed. Mrs. Eddy writes, on page 2 of "Rudimental Divine Science": "Healing physical sickness is the smallest part of Christian Science. It is only the bugle-call to thought and action, in the higher range of infinite goodness. The emphatic purpose of Christian Science is the healing of sin." Christian Science not only heals the sick, but protects from sickness those who practise its teachings, and proves that, as Christ Jesus explained to the scribes, sin and sickness are to be healed in one and the same way.

The healing in Christian Science is brought about, not by exalting the body "to a non-religious and selfish preeminence," but by being "willing rather to be absent from the body, and to be present with the Lord." In other words, Christian Science proves that the creation of God includes no more of evil, disease, sin, or discord than it did when Jesus was teaching in Galilee. He declared that a knowledge of truth would make men free. The truth, as he knew and demonstrated it, clearly was that neither sin nor sickness was real; that is, sustained by the law of God, the law he declared emphatically he had come to fulfil. Whether the remarkable results accomplished in this manner are described as "denying the existence of disease," matters little, especially to the sufferer who has been freed. The fact remains that, as Mrs. Eddy writes, on page 10 of "Rudimental Divine Science," "disease is a thing of thought manifested on the body," and that through right thinking, or the ability to discern between absolute truth and error, students of Christian Science are enabled to afford to themselves and others, in a measure at least, proof of the practical nature of the teachings of Christ Jesus, which are just as available to mankind today as when he first gave them to his disciples. It is true that today, as nineteen hundred years ago, the healing of sickness by purely metaphysical means appears unreasonable in the eyes of the world. Nevertheless, the fact that Christian Science is demonstrable and affords proof of the healing of disease of every nature, is sufficient answer to the lame argument that "the science of it [is] an absurdity."

[Ezra W. Palmer in *Alamosa* (Col.) *Courier.*]

The editor of the *Empire* in one paragraph of his recent attack assures the public that he has no desire to curtail the religious liberty of Christian Scientists, and almost in the same breath announces that Christian Scientists "when going to the extreme of turning down and forbidding all material aids in sickness, should be protected by a statute making this practise misdemeanor if not felony." In other words, the editor advocates the arrest and imprisonment of Christian Scientists because they prefer to trust God for healing disease rather than to depend on drugs, many of them deadly poisons, and all of them admittedly inefficacious. Christian Scientists do not need such "protection" as this gentleman offers. If this is not advocating the curtailing of religious liberty, then there is no such thing as infringement of that sacred right. Furthermore, Christian Scientists do not forbid any person the use of material remedies. If a person is sick and wishes drug treatment, he is at full liberty to have it, and no Christian Scientist would stand in his way.

The chief grievance of the editor of the *Empire* seems to be that Christian Scientists use prayer to heal the sick and do not employ those "practical, material aids which by the use of centuries have proven indispensable." Despite the above assertion it is a well-known fact that material remedies change continually. The nostrum of yesterday is discarded today, and humanity has never found an indispensable material remedy, much less one which has been so proved by centuries of use. The reason for this is not hard to find. A drug sooner or later is proved useless to heal disease, and is therefore discarded. Thus, a well-authenticated medical authority recently declared that in the treatment of pneumonia drugs in general were useless.

Christ Jesus used no drugs, neither did he advocate material aids of any kind. He healed by prayer, and he commanded his followers for all time to do the same. This critic, to be consistent, would advocate the imprisonment of Jesus and his disciples for not using the abominable and filthy "material aids" prescribed by the pharmacopœia of the first century. He assumes that there is greater danger for a patient if he turns to Christian Science, and gives this as a reason for his desire for state regulation against it. As a matter of fact, large numbers of persons turn to Christian Science after all material aids have been tried and have failed and the patient has been given up to die by his medical advisers. The healing of these cases, not only in one instance but in many, is one of the rational explanations of the confidence with which Christian Science has inspired people all over the civilized world.

The critic urges that his proposed law should determine the criminal neglect or failure to use "material, medical, or surgical aid." It would be interesting if this critic, or any one, could determine what "material, medical, or surgical aid" can be sufficiently relied on to constitute criminal neglect in omitting its use, especially when prayer to God, the efficacy of which is beyond dispute with the believer in the

Digitized by Google

Bible, is employed in its stead. The world has been using drugs and material and surgical aids for hundreds of years; nevertheless, diseases have multiplied, until the conviction has forced itself upon some physicians that if the whole drugging system were eliminated there would be less sickness and less mortality. The plea of the critic that such state regulation would do no harm is futile. Any legislation directed against the liberties of the people is harmful; and for the state to attempt to dictate a school of healing for the citizen is just as inimical to his liberty as for the state to dictate his religion.

[Editorial in *Denver* (Col.) *Times*.]

It is well that the litigation has ended over the estate of the late Mrs. Eddy, Founder of the Christian Science religion. There was no ground in law, equity, or justice to sustain the case in court. Those who claimed the bulk of the estate under a feudal prescription had no great claim upon the fortune of the decedent. Accident of birth may determine a kingship and entail a principality, but not in a country of this kind. As an incident to carrying forward her remarkable propaganda Mrs. Eddy accumulated a large fortune, and at her death, after making due provision for those that might have claim or be dependent upon her, the estate reverted to the church which she built and fostered during her long and active life. What more just and ethical? There was a time, perhaps, when the religion that owes so much to her endeavor might have had scant judicial courtesy, but that time passed long since. Mrs. Eddy opened a new world and furnished a broader view of life to many weary souls. Public sentiment all over the land will uphold the court's decree.

[Ora S. Drewry in *Cincinnati* (Ohio) *Enquirer*.]

As a church Christian Scientists take no action in the matter of a so-called national health department. As individuals they are raising their voices in behalf of personal freedom and against all oppressive state and national laws. They believe that the establishment of such a department, advocated so strongly by one school of medicine, violates the fundamental principle of our government, which declares that man is endowed with certain inalienable rights, among which are "life, liberty, and the pursuit of happiness."

It is far from correct to say that the only opposition to the national health department comes from Christian Scientists. The National League for Medical Freedom, for instance, includes representatives of every school of medicine and healing who are opposed to medical tyranny, as well as eminent scholars, statesmen, well-known business and professional men, and even physicians belonging to Dr. Reed's own school of medicine.

[William J. Bonnin in *Weekly Standard*, Blackpool, England.]

It cannot be too widely known that Christian Science has nothing in common with human will-power, and so I ask your permission to correct the statement in a recent issue which would lead the casual reader to imagine that the healing achieved in Christian Science is in some way the outcome of the exercise of such an agency. Christianity was not given to the world to teach men that they were to be saved from sin and suffering by the exercise of human will-power. It was the power of the divine will that Christianity had to reveal, and the work of Christian Science is to develop that spiritual understanding which alone can grasp such a revelation. And when the omnipotence of the divine will is seen, then the falsity of the supposed power of the human will is exposed, and one begins to understand Paul's words, "For it is God which worketh in you both to will and to do of his good pleasure." And so Christian Science is not a matter of blind faith; it is spiritual enlightenment, and it heals the sick through the power of Spirit and spiritual law.

[Editorial in *Chicago* (Ill.) *Inter Ocean*.]

President-elect Wilson, in the course of an address to a gathering of social workers at the private house in Hoboken where he was a week-end guest, is reported to have said of the proposal for national supervision of matters of health and sanitation: "Most of the things you have spoken of are without political embarrassment. One that does have political embarrassment is the health department project. There is a fear in many minds that we are about to set up what has been called a 'medical trust.' It is very desirable to remove that idea." It is very desirable. There is nothing, except his religious convictions, with which the average citizen so deeply resents governmental interference as in matters affecting his health and the health of his family. Any sort of dictation about what measures he shall take to preserve or restore health the average man regards as an unbearable outrage.

Although Mr. Wilson went on to say that he had "never seen any serious proposal to put any particular school of medicine in charge of the national health," precisely such an intention was widely imputed to the measure most earnestly urged in the last Congress. Whether justified or not, these imputations were confirmed in the minds of thousands by the apparent unanimity with which medical societies of a particular school urged the passage of the Owen bill. It is probably true that desirable measures of sanitation and disease prevention could be more effectively administered under national authority; but so long as doctors disagree so widely and violently among themselves, it is impossible to expect the laity to accept any method of treatment of disease as right, to the exclusion of all other methods. Anything that even looked like a "medical trust" would be widely and deeply resented by all sorts and conditions of citizens. The political party that makes itself responsible for any legislation which can be so construed will have only its own folly to blame for its subsequent troubles,—and it will have plenty of troubles.

[Written for the *Sentinel*.]

A GIFT.

CHARLES C. SANDELIN.

A GIFT is given, more precious far
  Than gold may purchase; in the heart
  'Tis softly laid,—the hands depart,
Lest one may know whose hands they are.

'Tis vaunted not, this gift so rare.
  O hands, ye well may humble be!
  Ye did, indeed, the gift but see,
And joyfully did place it there!

But ye are blest, for ye have known
  The workings of a gracious power;
  For 'twas not done in selfhood's hour,
Nor did ye claim it for your own.

A gift from Love, that e'er doth glow
  Forever bright in holy day;
  And blest is he who doth essay
Its blissful warmth fore'er to know.

O blest is he who in his life
  Reflects the eternal Life and Love,
  And turneth thought to realms above,
From pain and sorrow, care and strife,

And brings to earth the wondrous light
  In heavenly heights he doth behold:
  And this the gift bought not with gold
From One who watches day and night.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

TEACHER AND STUDENT.

To the student of Christian Science who is desirous of gaining a thorough understanding of its fundamental truths, the question of class teaching sooner or later presents itself, and it may be helpful to those whose interest in Christian Science is a comparatively recent one, to know that such teaching had Mrs. Eddy's approval. This is established not only by her own course of procedure in teaching, and in the provisions made for its regulation and perpetuation as a factor in the Christian Science movement, as set forth in Article XXVII of the Church Manual, but by the fact that the last sentence of Section 5 distinctly states that no member of The Mother Church shall advise against it. The establishment of a right relationship between teacher and student in Christian Science is, however, of very great importance, not only to the individuals directly concerned, but also to the Christian Science movement as a whole, and it is because this importance should be recognized by every Christian Scientist that we are complying with the request to republish the following editorial, which appeared in the *Sentinel* of Oct. 16, 1909:—

Our great Master humbly said, "Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls;" and it is only in this humble and unassuming spirit of the Master, that "self-abnegation by which we lay down all for Truth, or Christ, in our warfare against error" (Science and Health, p. 568), that Christian Science in its truth and purity is being successfully taught. Mrs. Eddy emphasizes this clearly and unmistakably in "Retrospection and Introspection," where she writes (p. 84): "That teacher does most for his students who divests himself most of pride and self, and by reason thereof is able to empty his students' minds of error, that they may be filled with Truth. Thus doing, posterity will call him blessed, and the tired tongue of history be enriched. The less the teacher personally controls other minds, and the more he trusts them to the divine Truth and Love, the better it will be for both teacher and student."

It is not the purpose of class instruction in Christian Science to establish between teacher and pupil any other than a sane and sensible relationship, that which has its basis in a mutual understanding of divine Principle, and which involves no sense of domination on the part of the teacher and no sense of subserviency on the part of the pupil. The duty of the teacher is to impart to the pupil a correct understanding of Christian Science as set forth in its text-book, Science and Health, and it should be the greatest desire of the pupil to receive this correct understanding, and only this. When this duty is performed and this desire is satisfied, the true purpose of class instruction has been accomplished and a basis for a proper relationship has been established.

The pupil, if he has been properly taught, is then ready to go forth, in fulfilment of the Master's command, to preach the gospel and heal the sick, and thus work out his own salvation. His constant prayer will then be for that Mind to be in him which was also in Christ Jesus, and not the mind of a human teacher. It is for the dominance of this spirit of self-abnegation that our Leader has taught and worked in all the years, both by precept and example. She writes in Science and Health (p. 464): "In founding a pathological system of Christianity, the author has labored to expound divine Principle, and not to exalt personality." In "Miscellaneous Writings" she says (p. 135): "Again I repeat, person is not in the question of Christian Science. Principle, instead of person, is next to our hearts, on our lips, and in our lives;" and she adds: "If you falter, or fail to fulfil this golden rule, though you should build to the heavens, you would build on sand."

The sole object of class teaching is to help the pupil to turn intelligently to divine Mind for all guidance. The true relation of teacher and pupil is established neither upon will-power nor upon personal idolatry. The wise teacher of Christian Science teaches his students to look to God, divine Mind, for all help and direction, and the typical pupil will do nothing else.

ARCHIBALD MCLELLAN.

STEPS TOWARD PERFECTION.

THE tenth chapter of Hebrews presents in a wonderful way the steps taken by mankind in their seemingly slow progress from sense to Soul. The ceremonial law is referred to as "having a shadow of good things to come, and not the very image of the things," so that it could never make any one perfect. While it is true that the sacrifices of the Mosaic ritual may have served as strong reminders of the penalties entailed by violations of the moral law, yet the apostle recalls the words of the psalmist, that God did not require these sacrifices, neither had He pleasure therein, for the reason that they "can never take away sins."

The requirement of Truth is, however, clearly presented in the statement that the divine law is to be written upon the hearts and minds of awakening humanity, the "Holy Ghost" being a witness to this new covenant. Here it may be well for us to ponder the spiritual definition of this divine manifestation, as given on page 588 of Science and Health, viz.: "Divine Science; the development of eternal Life, Truth, and Love." It cannot be denied that the Holy Ghost, or divine Science, is today witnessing to the unfoldment of the new covenant which takes away sin, sickness, and the fear of death, revealing the "new and living way" to the holy place of Truth and Love,—"the secret place of the most High." As we read these promises we have a glimpse of the faith which inspired Whittier to write:

> Gone be the faithlessness of fear,
> And let the pitying heaven's sweet rain
> Wash out the altar's bloody stain;
> The law of hatred disappear,
> The law of Love alone remain.

In pondering this epistle to the Hebrews we should remember that it was written while the great light of Jesus' healing ministry was yet making radiant the pathway of approach to the Father, the "power of an endless life" being so consciously present with the followers of Christ that they did not shrink from the severest tests of their faith or the heaviest losses of their earthly possessions, because they had found "a better and an enduring substance." The apostle, however, offers some plain counsel for their present needs, the outgrowth of wide experience among all the churches which were even then spreading from land to land; and after counseling the brethren to "provoke" one another "unto love and to good works," he says: "Not forsaking the assembling of ourselves together, as the manner of some is; but exhorting one another: and so much the more, as ye see the day approaching."

It is evident that some of the brethren had come to neglect the services of the church because of the argument which may be heard today, namely, that those who know the truth have nothing to gain by assembling with others in a religious way. It is quite true that when we have reached the ultimate of spiritual attainment we may not have anything which corresponds to religious services as we know them, but why should such a question be raised by those whose spiritual education has but begun, so to speak, and this applies to all of us. Even if we have passed the receiving stage, the great privilege of giving awaits us, that

Digitized by Google

of enriching every service with our presence, which should mean to each Christian Scientist the conscious radiation of health, holiness, and happiness.

Our beloved Leader cheerfully paid her tribute of gratitude for what she had gained from the church of her earlier years, and more than this we have, thanks to her inspired Christian labors, a clearer sense of the presence of the healing Christ at every service, a presence as life-giving as that manifested by Christ Jesus when on that memorable Sabbath day he went into the synagogue and read the words which proclaimed universal freedom. Who would not gladly have been at that service? Yet the words he read mean the same now as when he said, "This day is this scripture fulfilled in your ears."

ANNIE M. KNOTT.

JESUS' UNDIVIDED GARMENT.

WE can be Christianly scientific or sane only when we honestly seek to meet every known requirement of the divine order. Nevertheless, it is certainly true that some of the demands of spiritual law, as enunciated by Christ Jesus, are habitually ignored by most of his professed followers today, and it would seem that one of the chief offenses of Christian Science in the eyes of many, is its insistence that this habit is discreditable to Christian profession and debilitating to the spiritual life. Mrs. Eddy has declared that there can be no "emasculation . . . in divine Science" (Science and Health, p. 271), and in this she but rephrases the thought expressed by "the faithful and true witness" when he condemned the Laodiceans for being "neither cold nor hot," thus protesting for all time against that spirit of partial obedience which professes to honor the truth and yet ignores its demands.

Jesus required of his followers that they should do "all things" which he had commanded them, and his most frequently reiterated injunction was that they preach the gospel and heal the sick. These facts being remembered, it is seen that the insistence of Christian Science is simply that men shall not "take away from the words of the book," that to which they have given theoretical consent, but that they shall accept and put on the Master's undivided garment. This gospel of Christian Science is nothing more nor less than the simple thorough-going Christianity once delivered to all followers of God. It is a call to consistency, to the maintenance by all professing Christians of the integrity of the Master's teaching, that the saving efficiency of his gospel may again be demonstrated with rejoicing in all the earth.

Witnessing before a court of inquiry regarding worldly affairs, men are required to state and stand for "the truth, the whole truth, and nothing but the truth," and can Christian ministers be content to do less in witnessing for the truth their Master taught, verified, and committed to their keeping? One answer to this query is found in the recent report, as published, of the dean of a great cathedral, acting as chairman of a committee appointed to consider the spiritual healing of physical ills ("faith-healing," as named) for which Christian Science stands. It says: "Any attempt on the part of the clergy to enter into competition with the medical practitioner by any separate and independent treatment of the sick is to be strongly deprecated, not merely on practical but also on religious grounds."

This is a very remarkable and significant statement, surely, to emanate from a body of Christian ministers, for if the attempt to heal the sick by spiritual means is to be deprecated today, it could not have been commendable in the first century, and we therefore have the astonishing spectacle of a body of Christ Jesus' professed followers passing judgment upon the method of healing the sick which he not only utilized himself, but unequivocally commanded that his disciples should utilize! Human history never recorded a more startling fact than this putting of spiritual healing under the ban by church authorities, nor can a more pertinent explanation be found of the church's loss of influence and efficiency among men, a loss which is being deplored upon well-nigh every page of current religious literature.

The position of the Christian critics of the spiritual healing taught and demonstrated in Christian Science is comparable to that of a mathematician who avers that the equality of the square of the hypotenuse of a right-angled triangle and the sum of the squares of the other two sides has been satisfactorily proven in the past, but should under no circumstances be proven now, and the unchristian world is being impressed more and more with its utter incongruity.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

MUSKOGEE, OKLA.—On the afternoon of April 6, 1905, five or six women met at a private house and formed a temporary organization to provide a reading-room and a place to hold Christian Science services. For a few weeks the Sunday services were held at a private house; then a room was secured, and under a charter for First Church of Christ, Scientist, of Muskogee, Okla., a permanent organization was formed, with about fifteen charter members. From the first meeting the attendance increased, and in a short time larger rooms were taken in the same building; but in a year a still larger place was required. In less than three years from the time of organization a cottage was purchased and remodeled for church use; then on Sept. 15, 1912, a new church building was opened, the cottage having been moved to another lot and used while the new edifice was building.—*Correspondence.*

FORT SCOTT, KAN.—The Christian Scientists of Fort Scott have purchased the old Moody property at the southeast corner of Third and Main streets, and they plan to occupy the present structure as a church home as soon as it can be remodeled and made convenient for them, though the remodeling will be for a temporary structure only. The property was purchased for twenty-two hundred and fifty dollars. The Science congregation has been outgrowing its quarters in the G. A. R. hall for some time, and it has been known that a larger and more commodious place would soon be necessary.—*Fort Scott Tribune.*

SHERIDAN, WYO.—On Jan. 1, 1911, a number of those interested in Christian Science began holding services in different halls in the city. On Jan. 1, 1912, a year later, the society was organized and services were held at Moose hall, where they continued to meet until September of the same year, when the old St. Peter's Episcopal church building was purchased and moved to a lot belonging to the society on the east side of Gould street, opposite the Foster hotel.—*Sheridan Enterprise.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 30, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 14, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 1, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

THE LECTURES.

ALDERSHOT, ENGLAND.

The Alexandra hall was all but filled with an audience of ladies and gentlemen, who assembled to listen to an address on Christian Science teaching by Bliss Knapp. He was introduced by Charles J. Dodds, who said in part,—

I esteem it a great honor to have been invited by the Aldershot Christian Science society to preside over this gathering of earnest men and women whose presence here I take to be indicative of their desire to learn something at first hand—from an authorized lecturer—of the movement which is so profoundly stirring the minds of Christendom throughout the world. "Truth is stranger than fiction," we are told, and surely the reception often accorded to truth is equally strange. We recall the reception, or rather the rejection, of one who, two thousand years ago, revealed the truth of God to man by his words and works, and in doing so we rejoice that in our day there is less of the intolerant spirit of antagonism, but rather the contrast of an eager willingness to welcome new light on the old truth. We are learning in these days that the only enemy we as "God's offspring" should fear, is not light but shadow, not intelligence but ignorance. Truth is becoming more of a passion with us today, and mankind everywhere is struggling to manifest its God-given right to be free from all earth-born bonds, while there is also today, more marked than ever in history before, an earnest longing for the truth which the emancipator of mankind long ago said would make us free.

My interest in Christian Science began about four years ago. I was visiting relatives in this town of Aldershot who had embraced this teaching. Having been an orthodox missionary for many years on the Congo, I of course thought that my relatives had erred from the true path, and one purpose of my visit was to show this to them. But, alas for my prejudice, the evidence of peace, joy, and health, in marked contrast to previous experiences there, combined with an utter absence of fear regarding the future, made me pause lest I should harm instead of help by my unwarranted opposition. I could not deny the prompting of my heart, "Surely these are the fruits of the Spirit," and Jesus said, "By their fruits ye shall know them." Suffice it now briefly to say that I obtained some of the literature of Christian Science and read it with interest. The more I perused it and compared the teaching of Mrs. Eddy with the Bible, the more convinced I became that in Christian Science this age has received the most marvelous illumination upon the ancient Scriptures that has ever appeared, and an interpretation thereof which redeems the words and works of Jesus from the limitations placed upon them by traditional beliefs and which reveals them as practical demonstrations of the power of Truth which Jesus said should follow "them that believe"—and that this is true, really true, for today.

With these convictions but dawning on my consciousness, and not considering them inimical to my work for Christ on the Congo, I went back to Africa feeling better equipped for service than ever before. I did not, of course, attempt to teach Christian Science doctrines, as such, to the natives, but the new light I was receiving on the Bible naturally reflected itself in my life and work. I began to lay greater emphasis on knowing God as eternal Life, rather than on believing (a very loose word in the Congo language), and the result was marvelous in our eyes. The omnipresence of God became more and more a realized fact in our lives, and thus we were saved from the fears of climate, mosquitoes, and sun; while the healings of which we had heard at the testimony meetings or read in the literature inspired us to speak confidently to some sick natives whom the doctors had pronounced incurable, of the healing power of the ever-present Christ, "the same yesterday, and today, and forever," with the result that they received the healing which material remedies had failed to bestow.

These experiences confirmed me in the view that when Jesus said, "Preach the gospel," "Heal the sick," "observing all things that I have commanded you," he meant it should be so for all time, and moreover that the work should be done in the same way and by the same means, the spiritual alone (not a blending of both spiritual and material means) even as the Master himself has given us example. We only continued on the Congo two and one half years, but in these thirty months that we were privileged to let this new light shine in "darkest Africa," we saw more of the real progress of the kingdom of Christ than in all the previous thirteen years of our labor there. Our withdrawal from the Congo was due to the fact that these new views are deemed to be incompatible with those generally held by missionaries, and of course we could not deny the "signs" which followed them that believed.

Since our return we have devoted much study to the text-book of Christian Science, "Science and Health with Key to the Scriptures," and lest we should have been enticed and led astray by false doctrines, we have read much on both sides, but with the Bible as sole authority, and we confess this afternoon that in our opinion the so-called errors of Christian Science are not those of the Science itself, but rather to be attributed to the lack of understanding of the Science by the Scientist. However, these lectures are not held for the purpose of making proselytes or of advancing one's opinions, but rather for the purpose of imparting accurate knowledge of Christian Science, and to bear testimony to the facts regarding the life and work of its Discoverer and Founder, Mary Baker Eddy.

Sheldrake's Aldershot Military Gazette.

SCHENECTADY, N. Y.

In introducing Judge Clifford P. Smith, who lectured on Christian Science at Van Curler opera house, Mayor George R. Lunn said:—

It is a pleasure for me to preside at this lecture tonight. I do not know whether the representative who requested me to preside, desired me to do so as mayor or as pastor of the United Peoples church. I think, however, that I can occupy the position in both capacities. I can and do as mayor welcome the lecturer to our city. I also extend to him the right hand of fellowship as one of the ministers of Schenectady. I, myself, am subjected to a great deal of unjust, consequently unfair, criticism. I can therefore sympathize somewhat with the members of the Christian Science church, who hold to a philosophy much misunderstood and continually misrepresented.

It is difficult for us in our search for truth to realize that truth is infinite. None of us comprehend it all, but because the truth is infinite, our minds should be kept open in order that we may gain help from every sincere exponent of truth. We can gain knowledge, and we can advance, only by having our minds open to every good influence. There is no question whatever in my mind but that you people have conceptions of truth which are vital and hence eternal. If you did not have the truth at all, as some of your opponents contend, it would be impossible for you to advance as you have and to gain constantly new adherents. I am glad to be present with you, as I have never had the pleasure of hearing one of your lecturers before, although I have read much of your literature, including Mrs. Eddy's book, "Science and Health with Key to the Scriptures." To me life is real, life is big, and life is truth, and truth is God. Our greatest need is to know more of the truth and to express that truth in every way possible.

I admire the optimism of your people. We need that spirit in life. We need to bring the cheerful spirit, the kindly spirit, into the homes and keep it there, but not exclusively so. We need to bring that same spirit into our every-day affairs, bring it into industry and into government, bring it everywhere. The kindly spirit, the generous

Digitized by Google

idea, should have uppermost possession of our hearts and minds. It is with pleasure, therefore, that as mayor of the city I welcome the speaker and give him full freedom of our city, and also welcome him, as I do, in the capacity of pastor of the United Peoples church.—*Correspondence.*

REVERE, MASS.

Dr. Richard L. Rice gave the following introduction to the lecture delivered by Frank H. Leonard at the Town hall, Revere, Mass., under the auspices of First Church of Christ, Scientist, Chelsea, Mass.:—

The success of any religion depends on the practicability of that religion, and all who are familiar with Jesus' teachings know that he practised what he taught. He said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Jesus placed absolute reliance on God, with the result that he healed all manner of sickness and sin; and we have Jesus' promise that we can do the works he did if we have faith in God. History teaches that faith in God healed the sick for two or three centuries after Jesus' resurrection, and it is to be our privilege this evening to hear something of this religion of Jesus which is again being taught and practised throughout the world.

Correspondence.

SAN DIEGO, CAL.

The usual large audience was present at First Church of Christ, Scientist, to listen to a lecture on Christian Science by Virgil O. Strickler. The lecturer was introduced by Mrs. Flora Ellis Kirtland, first reader, who said:—

Two thousand years ago the standard of the true Christian was set forth in the life and teachings of the great Master, and embodied in these words: "By their fruits ye *shall* know them." Christian Science stands before the world today, demonstrating its Christianity, its divinity, and its true science, by the standard laid down by Christ Jesus, "By their fruits ye shall know them." The sick are being healed, the sinner reclaimed, and above and beyond the vicissitudes of human experiences it is again demonstrated that God reigns. The lecture about to be delivered has been arranged for the benefit of those desiring to know something of this great and practical truth.—*San Diego Union.*

ORANGE, N. J.

William R. Rathvon delivered a lecture on Christian Science before an audience that more than filled the seating capacity of the church edifice. He was introduced by H. Coulson Fairchild, who said:—

Christian Science does not make its appeal upon the basis of its strength numerically or financially, nor yet because of its many beautiful church structures, although they stand throughout the known world as shining lights in the dark night of materialism; in the beautiful words of the prophet Isaiah, "for a place of refuge, and for a covert from the storm." A church edifice in Christian Science is but a symbol of the unseen church spiritual, the universal structure of Truth and Love. But Christian Science does make its chief appeal to you, upon the abundant evidence which exists in the world today, to the effect that it heals the sick quickly and wholly, turns the sinner from sin to holiness, attracts the world-weary, and gives humanity new hope and enlightened faith in God.

The practise of Christian Science overcomes sin and prevents disease. To the young it says, "'Remember now thy Creator in the days of thy youth, while the evil days come not.'" To those solely occupied with the material, it says, "Remember that God is Spirit, therefore man in His image and likeness is spiritual; and that for this reason nothing can be real or permanent in your experience but that which is spiritual." To the advanced in years, Christian Science says, in the words of Christ, "'Come unto me, all ye that labor and are heavy laden, and I will give you rest,'—here and now. Look up, for your redemption draweth nigh." The Science of being is revealed, it only needs to be practised. If you are conscious of humanity's great need of healing, and of the failure of material means to accomplish such healing, you will, I am sure, welcome the message which you have come to hear tonight.

In these days, any religion must stand upon the good which it does and the practical benefits which it confers upon its adherents and all mankind. You are not asked to accept the statement that Christian Science heals, upon the assertion that a few sick people have been healed or sinners reformed, but you are asked to accept the statement that Christian Science heals and reforms upon the testimony of unnumbered thousands of intelligent people who bear witness to this truth. Unless Christian Science were doing great good and conferring continual benefits upon its adherents and others, it could not stand as it does today, a revival of primitive Christianity, the Science of the Christ-healing. Herein is our proof that Christian Science is just what it claims to be.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Albany, N. Y.—Harmanus Bleecker hall, 3:30 p.m., March 30.

Berlin, Germany.—Philharmonie, Beethoven Saal, Köthenerstrasse 32, 8:15 p.m., April 20 and 21. (In German.)

Braunschweig, Germany.—Im Hofjaeger, Wolfenbütterlerstr., 8 p.m., April 10. (In German.)

Brixton (London), England.—Raleigh hall, Saltoun road, London, S. W., 8:30 p.m., April 3.

Canton, Ohio.—Auditorium, 3:15 p.m., March 30.

Coffeyville, Kan.—Jefferson theater, 8 p.m., April 1.

Del Rio, Texas.—Vendome theater, 8:15 p.m., April 1.

Eastbourne, Sussex, England.—Town hall, 8 p.m., April 7.

Evanston, Ill.—Evanston theater, Sherman avenue, between Davis and Grove streets, 3:30 p.m., March 30.

Exeter, Neb.—Auditorium, 8 p.m., April 3.

Galena, Kan.—Electric theater, 3d and Main streets, 8 p.m., April 4.

Janesville, Wis.—Church edifice, 8:15 p.m., April 4.

Junction City, Kan.—Junction City opera house, 8 p.m., April 4.

Keokuk, Iowa.—Elks hall, 8 p.m., March 31.

London, England (Third Church).—Church edifice, Curzon street, Piccadilly, W., 8:30 p.m., March 31.

McGregor, Iowa.—Sullivan opera house, 8 p.m., April 3.

New Philadelphia, Ohio.—Opera house, 8 p.m., April 1.

New York, N. Y. (Second Church).—Church edifice, Central Park, West, and 68th street, 8 p.m., March 31 and April 1.

Oak Park, Ill.—Warrington opera house, 3:30 p.m., March 30.

Princeton, Ill.—Telephone building, first floor, 8 p.m., April 3.

Rockford, Ill.—Church edifice, 515 North Main street, 8:15 p.m., April 1.

St. Louis, Mo. (joint lecture).—Odeon, Grand and Finney avenues, 3 p.m., March 30.

St. Louis, Mo. (Fourth Church).—Church edifice, 5569 Page boulevard, 8 p.m., April 4.

Springfield, Ill.—Chatterton opera house, 8 p.m., March 31.

Stuttgart, Württemberg, Germany.—Konzertsaal der Liederhalle, 8 p.m., April 17. (In German.)

University of Kansas, Lawrence, Kan.—Chapel, Fraser hall, 4:30 p.m., March 31.

Whittier, Cal.—Women's Club house, Friend avenue and Bailey street, 8 p.m., March 27.

Zurich, Switzerland.—Saal Mühlebachstr. 66, entrance Eisengasse, 8 p.m., April 12; 6 p.m., April 13. (In German.)

TESTIMONIES OF HEALING.

Jesus said to one whom he healed, that he should go and tell his friends the great things that God had done for him, and so I wish to tell others what God has done for me through Christian Science.

From the month of February, 1911, until July of the same year, I was a most miserable woman, sick and helpless, dragging myself from chair to chair, and with great difficulty could reach the hammock on the porch, where I would lie for hours, grateful if I were only left undisturbed. My right arm caused me inexpressible suffering, as though a myriad of fine electric wires were burning my flesh; the agony compelled an almost incessant change from one position of the arm to another until, worn out, I sought relief in tears. My husband is a physician, and when I appealed to him he pityingly advised me to have patience, as my suffering was due to my condition; then when I asked why I had not suffered similarly upon previous occasions, he replied, "Well, you are no longer young."

Two days after the departure of my husband for Europe a severe hemorrhage took place, and I sent for a woman physician in my immediate neighborhood; but alas, she could only advise an operation. I next consulted a professor conceded to be the greatest authority on the diseases of women in the city of New York; it took him only a few minutes to announce an abnormal growth and to urge a hasty operation. I pleaded with him to consider all the symptoms, but of no avail; he insisted that it was positively as he had said. I consulted two other experts, and they likewise advised an operation. Finally, in desperation, I went to a friend of my husband, the head surgeon of a prominent hospital. "Yes, a tumor," was his verdict; "a tumor, and not an ordinary tumor, but a most dangerous one, and one which requires the most difficult operation." He also advised that "an operation be performed at once." That day I made my will, resigned to my fate and ready to die.

All my life I had loved God and Christ, but I had no faith; the ways of God then seemed to me so mysterious, and yet they are marvelously simple. Who would have dared to broach Christian Science to me if I had not been as helpless and hopeless as I then believed myself to be? But our Father sent a messenger to me that day. The day when I received the final blow, a true, loving Christian Scientist came to me, and I said, "Have you any Christian Science literature?" I then mentally interposed, "I would like to read some of that nonsense." "Science and Health with Key to the Scriptures" was handed to me, and although my mood was not a receptive one, yet as I casually glanced through it my heart stood still, and a ray of light and hope shimmered faintly through the lines. "Take me to a practitioner," I asked, and at once arrangements were made. After the first treatment I did some strenuous work with that helpless hand, such as I had never done before, and after three treatments my arm was free from any ailment, as well as ever before.

As I read Science and Health, my awakening sense began to perceive the illuminated pathway. Daily I would repose for hours with the book before me; I comforted my wounded and stained heart with the rays of Love and Truth and gained peace. I threw myself on the altar of spiritual purity and let the truth dispel all darkness. In less than a week I felt as young and strong as a girl of eighteen; I daily attended to neglected duties; two days and nights I watched with an ailing friend, traveling the distance in two hours, with frequent change of cars. I was at that time living in New York city.

On Oct. 10, when I quietly returned home in the evening, the children and the maid were asleep; I hurried up-stairs to my apartment, and there, without pain or ache, I gently assisted into the world a beautiful babe. I wondered at what had happened! Was it possible that the physicians had wanted to operate on a woman under such conditions? And here I had been delivered painlessly, when upon all previous occasions I had been attended by not less than three physicians, with an anesthetic and instruments, and now, now I was alone; no, not alone, for He, the loving Father of all, was with me. I attended to the child properly, and on the second day I went down-stairs and telephoned the news to my friends. I also assisted with all the household duties, such as were necessary in a big family with one maid.

In addition to the healing here mentioned, I had been a miserable sleeper for twenty-eight years, using different drugs and changing climate continually; but still there was no health, and no sleep without drugs. During the week after the birth of my child I awoke one morning with the realization that I had slept three nights in succession without using drugs, and thanks to our Father in heaven, since then I can sleep whenever I want to sleep and can be awake for as many hours as necessary without fatigue.

The child as well as myself has the best of health, for which I never cease to be thankful.

WILHELMINA G. WITTIGSCHLAGER, Clarksburg, W. Va.

I am indeed most grateful for Christian Science. About seven years ago, when I began to learn something of this healing truth, I was suffering from a complication of diseases, among which were a stomach affection, a skin disease, rheumatism, extreme nervousness, also kidney and liver trouble, with the addition of poor eyesight. On account of my many ills I had not been able to sit up more than a few minutes at a time for over a year. I suffered extreme pain all the time, and could eat only the lightest foods. There was no ease or comfort for me, and most of the time I was full of worry and fear. I was a church-member, and so was my mother, but our prayers seemed to fail, as did the efforts of five physicians. I went to two different health resorts, then I tried camping out for seven months, but received no benefit at all; in fact, I was gradually growing worse all the time.

At last my husband lost all hope of my recovery, as did every one else. The family were trying to think what to do next, when my father spoke of Christian Science, more in a joking way than seriously. We nevertheless accepted the hint thus given, and I began to improve after the first treatment, although it took about three years for my complete healing, and required a great effort on my part, as well as on that of my faithful practitioner. Though I had many struggles, I am thankful that I never thought of trying anything else. I stayed away from the world and read the Bible, together with Science and Health, and in this way I grew stronger and more healthy every day, until now I am well and strong. I am thankful to God and grateful to Mrs. Eddy; indeed, words cannot express my gratitude.

MRS. SARAH A. MAURICE, Fort Worth, Texas.

Some time ago I fell on a cement walk, striking violently on my right knee. At first there was not much pain, but later, in moving my knee, the pain was very severe, and this continued for over a week, when I felt it would be wise to ask for help. I had treatment for a week, and during this time I realized that my greatest trouble had been fear, fear of certain conditions which might follow such an accident; but through the faithful work of the practitioner I was freed entirely. I cannot put into words my gratitude for this experience; it has shown me more than I ever realized before how "perfect love casteth out fear," and when the fear is removed, so is the discomfort. Christian Science has also aided me greatly in helping others.

MRS. SUE M. HAMILTON, South Bend, Ind.

Digitized by Google

A beginner in Christian Science often needs the advice not to be troubled when he fails to understand some statement in our text-book, "Science and Health with Key to the Scriptures." The mist which seems to be enveloping that particular sentence will assuredly be swept aside for him as he gains further spiritual understanding. When I first read our Leader's statement, "There are no vacuums" (Science and Health, p. 346), it meant nothing to me; but now, as I review the way by which our loving Father-Mother God led me to the glorious facts of Christian Science, I can humbly and gratefully say that I clearly realize the truth of our dear Leader's words, "This seeming vacuum is already filled with divine Love" (p. 266).

About three and a half years ago, when I knew nothing of Christian Science, I was nursing my mother through what appeared to be a severe illness. Although I had given up all profession of religion, as nothing satisfied me, yet my highest desire was to lead a good life. About twelve o'clock one night my mother became slightly delirious; this filled me with fear, as I had not called in medical aid, and in my extremity I ran in the dark to the end of our garden, and there, with nothing between me and a far-off God, as I then ignorantly thought, I cried aloud for Him to help and bless what I was doing materially for my mother's recovery. On returning to the house the thought came to me that I should open the long-neglected Bible and accept what my eyes might first light upon. I did so, and it was this: "I shall not die, but live, and declare the works of the Lord." I then felt comforted and certain that all would be well. My cry to God had been in the dark, and also in the darkness of material belief; but I learned later that the seemingly great need was already supplied by divine Love, for, unknown to me, a good ship was even then speeding over the waters of the Atlantic, bringing to me by registered post from Boston our priceless text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. In two days from that time it was delivered at our door, and had been sent me by a brother living in Denver who knew nothing of our mother's illness.

Although I did not then realize the value of the book, I was soon reading it over and over again; and without any special effort to gain an understanding my mother was entirely healed without *materia medica*, and has not been sick since. So with the clearer understanding of Christian Science, I know that the realization of its truths can prevent all "plague" and "pestilence." Our home is now the abode of harmony, both moral and physical. How true the promise, "Before they call, I will answer; and while they are yet speaking, I will hear"!

My heart's gratitude lovingly extends to our revered Leader, whose great work for humanity is better understood by me than when I thought of her as living in the United States of America.

CHARLOTTE KENNARD, Upper Walmer, Kent, England.

On the 14th of November, 1911, my daughter and I were engaged in some house-cleaning work, and I went out of doors with a lot of papers to burn, when in some unknown way my skirts caught fire. A great fear seized me and I cried out, but that very instant the "'still, small voice' of Truth" (Science and Health, p. 323) reassured me, and I realized as never before the allness of God. I knew that God was my help, and that I, as His child, could not be hurt. I declared the truth strongly, and with my hands tried to put out the blaze. I had on a pair of heavy kid gloves, but my hands were burned badly, the left hand and arm terribly. At length the flames were extinguished, but the burning on the lower part of the body was distressing. I managed to get up to the house and into the porch, and succeeded with one hand in opening the door. When my daughter saw me, she cried out, but I said to her that God had been with me, and that I thought the fire was all out, though when the clothing fell to the floor it was still burning. Kind friends came in with remedies, but I told them that God had helped me; and how I did praise Him for it! My daughter begged me to put something on my hands and arms, but I said that God is All, and that no error can harm His child.

I paced the room, declaring the all-power of Truth, and Truth did do the work. This was at half-past eleven in the morning, and at half-past one the burning sensation had nearly ceased. I then helped to lay a carpet, and at half-past three our dining-room was settled. The second day the soreness was nearly all gone, and I was able to sew and to attend to household duties. There was not even the least burning sensation on the lower part of my body, which was wonderful. My hands and left arm were badly burned, but they were healed in less than a week, with only a slight discoloration of the flesh and without any scars. I have been a student of Christian Science nearly five years, and this is the greatest demonstration I have ever experienced. My faith in God is greater than ever. I am so thankful to God, and so grateful to our Leader for this truth that saved me from death.—MRS. M. E. VOSSLER, Fonda, N. Y.

Several years ago I became interested in Christian Science. Though I did not study it as much as I wished to, I gleaned enough of its truths to open my eyes to some things in the Bible which I had felt to be truths, but which I now saw in a new light; and this began to change my whole life. I had been a member of a church nearly all my life, and had been taught to pray to God for every want; but I prayed to a manlike God in the skies, and many times daily. Surely no person could plead with God more than I did; but this much pleading came to an end, for in time the thought presented itself, Why do I not get a hearing? Over and over again I asked, Why do I get no assurance that God hears me? As I had no assurance, I had apparently gained nothing. My temper, which I had tried to control, was the same, for if any one offended me, I gave the usual bitter retort; I loved them that loved me, and hated them that hated me. I knew all this was not Christlike, yet I had tried hard to do right. My prayers became few and far between, and I prayed only because I feared to stop. The Bible, which I had read daily for years, and with which I had become so familiar, was seldom read. My friends whispered it around that I was becoming an unbeliever, and came to see me; but I was mute on that subject.

I was and had been gradually growing into a serious condition of ill health, mentally and physically. I was weak, and could not walk over a block at the time when I became acquainted with Christian Science, and a physician had told my husband two years before this, that I had an inward growth which would cause my death unless an operation, to which I would not consent, was performed. When I heard of Christian Science (I was then in Macon, Ga.), I wrote to a Scientist in Atlanta to treat me. In a short time I felt so much better that I could walk any distance, and felt so happy that I began to read more in that remarkable book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I began to sleep sweetly at night, and awoke in the morning feeling bright and happy. The growth disappeared, though I could not tell when; I only knew that it gave me no more trouble, and it has never returned. My worst bondage, however, was the use of an opiate since I was a young woman. It was first taken for relief from neuralgia, from which I had suffered for years, and my husband had paid out hundreds of dollars to doctors to have me cured, but to no avail. I was so humiliated by all this that I was ashamed to tell any one; but when Christian Science became known to me, I felt that more knowledge of it would free me from this drug habit which was making me so unhappy. I saw too that the golden rule, instead of being merely talked about, must be lived; that we must not only love our friends, but also our enemies. The purpose of Jesus' mission to this

Digitized by Google

world was made plain to me, and I saw that the Bible meant that we must have no other gods, but the one God, good, and that what we sow, we reap.

I kept putting off the giving up of the drug, fearing I could not cope with it, when finally, in March, 1911, I determined to take my stand against it. One Wednesday morning I took the drug, threw it in the ash barrel, and then walked to the home of a practitioner, fifteen blocks away, to tell her what I had done. She put me to sewing for several hours, after which I returned home, slept well that night, and walked again to her home next morning to spend the day. With her help I was sustained; but that Thursday night I had to call for help twice, and again on Friday morning. About ten o'clock that Friday, I felt relieved of the desire for the drug, and have not wanted it since. My health has greatly improved from that time.

M. E. COOPER, Atlanta, Ga.

I am very grateful for Christian Science, in view of what it has done and is doing for me. It is only a little over a year since I began to study, but I have been healed of many chronic troubles, having been an invalid for thirty years, though not until everything else failed would I try Christian Science. It was prejudice that prevented me, but when I finally cast prejudice aside, then the truth came to me and set me free from the fetters of invalidism. Recently I had a wonderful demonstration. One morning I awoke to find myself bound to the old belief of rheumatism, for I could not turn my head or lift myself up. I had no means of reaching a practitioner, as I was alone and had no telephone, so I felt I must work hard to enable myself to get up and dress. After an hour's work of declaring the allness of Truth, the power of divine Love, and the utter nothingness of matter, the pain was less, and I found I could raise my head and lift myself up. All the time I was dressing I kept on declaring the truth, and I was enabled to get out to breakfast and take a walk, feeling so much better that I thought I could help myself. Through the day I had intervals of pain and stiffness, and at night felt so much worse again that I made up my mind to go the first thing in the morning to a practitioner; but when I awoke in the morning, there was no need, and I felt deeply thankful that through the power of Truth I had been enabled to help myself.

Another time I was taken very ill with what the doctors had called acute gastric trouble, with fever, headache, and great prostration. I was in too much of a stupor to help myself or to read Science and Health, so I sent for a practitioner, who treated me for three days. I did not even have to go to bed, but kept up and did a few things around the house, knowing that Truth would prevail, and on the fourth day the pain and distress left me, and I was out in the garden working. I have had these attacks for years, but always before this the doctor would order me to remain in bed for a week, and it would be at least a month before I regained my strength.—AMELIA S. BRIGGS, La Jolla, Cal.

It would be difficult to express my gratitude for Christian Science with words or pen. A lady living here was the first one to bring this great truth to my notice, and after a demonstration of healing was made for me, my sister came to Oklahoma for a visit. She had, to mortal sense, a malignant growth, but a Christian Science practitioner treated her, and in three weeks she was perfectly healed; nothing but a white scar was left. This demonstration, for which we are all very grateful, was made about two years ago.

These are but a few of the many blessings we have realized since becoming interested in Christian Science, which means everything to us. Our society is at present small, but the truth is spreading, and we know that before many more years we shall have a church instead of a society.

MRS. ARTHUR ERATH, Sapulpa, Okla.

I feel unworthy to avail myself of any more blessings which Truth bestows until I have given thanks through the pages of our *Sentinel* for the many already received; in fact, it is almost bewildering to try to express one's gratitude through the medium of a short testimony. There is an old saying, "Troubles never come singly," but it is a poor rule that only works one way; so we find when we turn from the troublesome thoughts of mortal mind, that Truth brings us immortal blessings which fill our lives and give us much to share with those in need.

Four years ago a son was born to us, and his growth, both spiritual and physical, has been uninterrupted by error, while my own condition of health and mental harmony has remained undisturbed during the whole period. The application of the truth has healed the members of our family of colds, throat trouble, eruptions, bowel trouble, whooping-cough, measles, thoughts of weakness, fear, and resentment, through the recognition in each case that "Love is the liberator" (Science and Health, p. 225). I am deeply grateful for dear Mrs. Eddy's beautiful life-work, and for her imperishable influence for good.

MRS. ALICE MORRIS, Marshall, Texas.

I was a great sufferer from asthma for about eighteen years, and after all material remedies and changes of climate failed to help me, or only gave me temporary relief, I was healed in Christian Science. The healing was instantaneous, and I had only the one treatment. This was over a year ago, and I have never had any return of the trouble. I am indeed grateful for my healing.

J. W. ALLEN, San Francisco, Cal.

I am glad to give the following testimony of my healing in Christian Science. I was to human belief suffering from an acute attack of an illness accompanied by asthma. Treatment was given for one week, and in that time the physical discord disappeared, after very little suffering. These same attacks under *materia medica* had kept me confined to the house three and four weeks. I am deeply grateful to God for this healing, and for the spiritual uplift which came with it. I am also grateful to the one who was the channel by which this healing truth has come to humanity.

MRS. HATTIE F. GRAFF, Minneapolis, Minn.

I have long desired to tell what the healing influence of Christian Science has done for me. For ten years I was a great sufferer, and was weary and hopeless. During those years I had been treated by nine different physicians and surgeons, all of whom failed to give me any permanent relief. Eleven years ago, when a friend asked me to give Christian Science a trial, I had been very ill for eight months with what was said to be a tubercular affection of the bowels, which had refused to yield to every kind of treatment available, and I was almost in despair.

I had never heard of Christian Science before, but after a little consideration I asked for treatment, and it was given me. I felt relief very soon, and this seemed to give promise of final healing. Then I began to read Science and Health, which gave me confidence and sustained me through a slow though sometimes discouraging struggle with error; but I continued to study, and finally found my way clear as I gained more understanding of Truth and a more practical knowledge of good and its activities. I was healed of the intestinal trouble, also of pleurisy, biliousness, and an imperfect sense of sight, as well as of the effects of a surgical operation from which it was not expected that I could ever fully recover, besides other physical ills.

Mrs. Eddy has said in reference to the healing quality of Christian Science, that "its pharmacy is moral, and its medicine is intellectual and spiritual, though used for physical

Digitized by Google

healing" (Science and Health, p. 460). I am humbly grateful for the degree of moral and spiritual health which is being revealed to me from day to day in proportion as I assimilate and reflect the truth.

MRS. RUTH M. MALICK, New York, N. Y.

I would like to give my testimony as another witness to the physical healing by Christian Science. Two years ago I was an invalid, and had been confined to my couch for six years, unable to sit up, or walk more than a few steps at a time. I heard of Christian Science and sent for a practitioner, who came and gave me one treatment. She then gave me absent treatment five months, and I thank God that I am well and able to do my housework, though I am in my eighty-second year. I also worked in the garden last summer. I have not yet realized that spiritual light which many say they have experienced, but I keep on praying and reading, and try to be patient and wait for God's will to be done. I am grateful to all who have helped me to the enjoyment of good health.—SARAH M. DAVIS, Kylesford, Tenn.

I esteem it a duty as well as a privilege to tell others what Christian Science has done for me. I have been healed of a very bad case of catarrh, and of extremely severe headaches accompanied by nausea, which would last two or three days and which were becoming more and more frequent. I was also threatened with loss of memory, till it seemed as though I should die or become insane, which was what I feared most. I wish to speak of another healing which came to me later. A few years ago it seemed necessary to have all my teeth extracted, and as I always had such extreme fear of dentistry, I called on a Christian Science practitioner for help, with the result that I had nine teeth extracted at one sitting and fourteen at another without either pain or fear. By the study of the Bible and Science and Health, also the Lesson-Sermon, I have been able to overcome colds, burns, etc., and to help others to some extent.

In July, 1910, I had a very severe attack of erysipelas, and felt it wise to ask for help. I began to mend as soon as the practitioner received my letter, and in twenty-four hours all traces of the disease were gone. I had had attacks no more severe than this one, and suffered terribly for weeks. At another time I was healed in two days of acute illness, accompanied by a bad bowel trouble. This was in April, 1911. I know that as I put into practise what I have already learned I shall more and more attain to that Mind "which was also in Christ Jesus." I give thanks to God and am grateful to our beloved Leader for what Christian Science has done for me.

ALICE QUIMBY SOUTH, Weyauwega, Wis.

[Written for the *Sentinel.*]

GLIMPSE OF PEACE.

LUCILLE TINNIN.

AWAKE, sweet lyres of heavenly peace,
The morn of Love is breaking clear;
The fitful, moaning surges cease,
Eternal shores are gleaming near.

The birdlings in their feathery folds
Fast blend their songs from leafy bough;
The joy each little throat outflings
Must reach the heavenly chorus now.

Thy measures sweep my heart-strings o'er,
And tune them to thy heavenly strain;
Thy love-tones echo more and more,
From hill and vale and all the plain.

FROM OUR EXCHANGES.

[*Advance.*]

We have been entirely correct in our interpretation of the principle underlying the words of Jesus, "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me." But we have been sadly wrong in our application. We have assumed that it meant principally that we ought to be good to tramps. This is a mere fraction of its meaning. The principle is easier to apply at a distance, but it is more important that it be applied close at hand.

If you pass your neighbor, who is trying hard to save his business from wreck, and is bearing his burden alone, and you do not say a "Good morning" that makes him feel the warmth of your companionship in his struggle, you place yourself for that day on the left hand of Jesus. If you shout angrily at the telephone girl, or address her in tone or language other than a gentleman should use to a lady sitting across the table from him, you have doomed yourself, for that hour, to outer darkness. If your office boy needed a reproof, but you gave him a berating such as you would not have thought of giving him had he been as tall and as strong as you, you belong, for that day, among the goats. If you scolded at breakfast because the coffee was bad, and if your wife's breakfast was spoiled by your bad temper, then one of the Lord's children was hungry, and you took away not only the food but the appetite. If you have kept the end seat in church, and compelled people to climb over your knees, and you sat there resenting the fact that they rubbed the blacking off your boots or trod on your corns, your sufferings were only a part of that weeping and gnashing of teeth which the Lord promised to people who do such things. If you played a practical joke upon a sensitive man, and left him, trying to smile, but with his soul bleeding from a cruel wound behind the armor of that smile, you departed from Christ into the great gulf where live the inconsiderate and the wanton. If you have so lived, for a single day, that any living man, knowing you to be a Christian, thinks less of religion on your account, provided always that you have given him just cause for his feeling, you have arrayed yourself with those who wound and imprison and starve the Christ. If you have acted in an unbrotherly manner toward any child of God, in your own home or elsewhere, you have instituted a day of judgment, and have pleaded guilty to inflicting humiliation and wrong upon your Saviour.

But if you have acted kindly, gently, and in unselfish love, then you have uttered a creed. You have confessed that the Christ spirit is the spirit in which men ought to live. You have confessed your faith. And you have only to keep on loving and doing good, and in the great day of the Lord you shall not find yourself among those who neglected or misunderstood, but with those who already have the joy of their Lord.

[Rev. W. Charter Piggott in *Christian Work and Evangelist.*]

How is it that our gospel has so little that is revolutionary about it today, that it is so placid, so undisturbing, so safe? Is it (I am only asking questions, I am not answering them) that a great many people in the churches do not want a Christianity that shall ever spell serious revolution in their life, that they want a religion which shall make as little difference as possible, that they do not want a gospel of brotherhood which could ever seriously demand that they should act like brothers to one another, or that should make any question of the economic and industrial reorganization of life a Christian necessity? Is the kingdom of God in the background because we are afraid of the kingdom of God? Is Christ in his fulness still too revolutionary for us?

Well, that is what the industrial worker largely thinks, and it is because he thinks that we have nothing for him which he will recognize as good news. We are not creating

Digitized by Google

the impression that we stand like our Master unhesitatingly the friend of the poor, the champion of the dispossessed, the redeeming agency of all crippled and unrealized life. My brethren, is it true? I have only wanted to propound a question that demands our thought. The times are big with change; the forces are big enough to do infinite harm if they rush into wrong channels. Can the church grapple with the situation and do again today what it has done before? It has been the savior of society more than once in the past. It saved civilization in the fifth century; it turned the Renaissance into a reformation in the sixteenth century. Is it going to turn democracy into the city of God in the twentieth? That depends on whether we can win the heart of democracy, and that depends on whether our own hearts can be lit and transfigured with a new vision of the kingdom of God.

[*Sunday School Times.*]

It is better to make other people thankful for what we are than to condemn them for what they are. It seldom lifts a person up to tell him how far down he is, but he may be lifted up by seeing that we live on a high plane ourselves. Campbell Morgan's counsel to the young convert is, "You won't help the work of the church by criticizing your fellow member. Do your work, do it well, do it faithfully. Your full-orbed service will be far more likely to stimulate the neglectful brother than any criticism you can offer upon his neglect." To do well ourselves, and to assume that others are doing well, is usually the sharpest and most serviceable kind of criticism we can make upon our fellows. Such criticism has no sting, but has unanswerable force.

[*Dallas* (Texas) *News.*]

Just as no man is a really great man unless a good man, so no thoughts are great thoughts unless they are good thoughts. The greatest man who ever trod the globe was the best man, and he was best because he thought only righteous thoughts. George Herbert says, "All worldly thoughts are but thieves met together to cozen thee." We take it that this refers to thoughts that are not calculated to be uplifting and ennobling. Colton tells us that "the greatest genius that ever lived is never so great as when it is chastened and subdued by highest reason," and surely the highest reason is that which is promotive of the brotherhood of man and the fatherhood of God.

[*Congregationalist and Christian World.*]

God's claims to confidence are based upon what He has already done for men. He consents to be tested by His promises and their fulfilment in experience. He will justify Himself at last through each man's own personal acquaintance with Him. The amazing element in the offers He has made and the confidence He seeks, is that He trusts His reputation so unreservedly to those who have cast in their lot with Him. God asks a confidence which includes total self-giving in obedience. He asks it on the evidence of His character as revealed through men.

[*British Congregationalist.*]

There seems to us but one answer to the question, "Should politics be preached from the pulpit?" and it is this: If by politics is meant a grappling with questions which affect the moral and spiritual well-being of the individual and the race, if by politics is meant the sounding of the trumpet-call to action to do away with injustice and initiate better moral and social conditions, then we say "Yes." If preaching in a partizan spirit is meant, then the answer must be "No."

[Rev. Ernest Linwood Staples in *Universalist Leader.*]

In the teachings of Jesus, the emphasis is ever placed on the spiritual. He knew the eternal values. While he ministered to the needs of the body, he never confounded mere physical soundness with that higher life of the spirit which is not limited to things of the flesh.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, C.S.B., has been printed in regular pamphlet form and is now ready for distribution. Thirty-two pages and cover.

Some of the lectures recently translated into foreign languages and printed in pamphlet form are listed as follows:—

"Christian Science: Its Results," by William R. Rathvon, printed in German (Die Christliche Wissenschaft: Ihre Resultate).

"Christian Science: A Religion of Progress," by William D. McCrackan, M.A., printed in French (Christian Science: Une Religion de Progrès).

"Christian Science: Demonstrable Religion," by Frank H. Leonard, printed in Norwegian (Christian Science: Bevislig Religion).

These pamphlets are all for sale at the prices as shown on the opposite page under the list of Pamphlets and Reprints.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency. Money orders should be made payable at the Boston post-office.

Digitized by Google

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: **Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.**

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book); single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

ITEMS OF INTEREST.

National.

What is believed to be the most ambitious expedition to the Amazon river ever undertaken started from Philadelphia last week on the steam yacht Pennsylvania, to be gone three years. The expedition is being sent out by the University of Pennsylvania Museum. It will make accurate charts and maps of the basin of the Amazon, and will study the languages, manners, customs, arts, crafts, and history of the many races of Indians. The Pennsylvania is expected to cover some three thousand miles up the Amazon and along its affluents. When the draft of the steamer is too great, launches will be used to go up to headwaters to chart the watershed. The desirability of this part of the work lies in the fact that there is scarcely an accurate map of the region. At present ocean-going steamers ascend the Amazon two thousand miles in ordinary times and as much as three thousand miles when the waters are at flood.

President Wilson, in a statement approved by his cabinet after two hours of discussion, announced that his administration had declined to request the group of American bankers to continue their negotiations for participation in the one hundred and twenty-five million-dollar loan desired by the Chinese government. He laid stress on the point that the request to American bankers to participate in the international loan might under possible contingencies imply the forcible interference of the government in Chinese financial or even political problems. "Our interests," he says, "are those of the open door—a door of friendship and mutual advantage. This is the only door we dare to enter."

It has been discovered at the Lowell observatory at Flagstaff, Ariz., through spectroscopic observations, that the nebulæ in the Pleiades are illuminated by the reflected light of neighboring stars. This discovery is of importance to the astronomical world because of its direct bearing on the nature of thousands of other nebulæ and on the evolution of the stellar system. The supposition has been that the nebulæ were self-lighting, that is, that they were composed of fiery substances, but this discovery would indicate that they are cold bodies.

The federal government made a profit of nearly $9,500,000 on the coinage of cents, nickels, dimes, quarters, and halves during the fiscal year 1912. Out of one pound of compound of nickel and copper, costing about twenty-three cents, the government coins $4.55 worth of five-cent pieces. The seigniorage on subsidiary silver coins during the year was $4,508,000, while that on pennies and nickels was $1,849,000.

The constitutional amendment for the direct election of United States senators by popular vote, instead of by joint action in the legislatures, has been ratified by thirty-one states, and only five more are needed to make it a law of the land. It is predicted that in the next elections the new plan will be in country-wide operation.

President Wilson's formal proclamation convening Congress in extra session at noon, April 7, was brief, and merely stated that "whereas, public interests require," Congress would be convened in extra session by order of the Executive.

President Wilson is in favor of a budget system for the conduct of the government finances. He has made public a letter written on Jan. 30 from Trenton, N. J., to Senator Tillman, expressing the hope that a budget system might be worked out after he got to Washington.

Dormitory buildings are planned for the Massachusetts Institute of Technology in its new location in Cambridge on the Charles river basin. This will supply a feature it now lacks, and will promote a stronger undergraduate life and spirit.

Appropriations during the last session of Congress aggregated $1,098,647,960.

International.

Direct ocean communication will shortly be established between England and Shanghai by means of the new cable which it is proposed to lay between Land's End and the Chinese port. The steamer Magnet arrived recently at Colombo, Ceylon, for the purpose of taking soundings in connection with the new scheme, after completing the work of sounding the bottom from Acheen Head, the most westerly point of Java, to Ceylon. The vessel found a perfect bottom nearly all the way, the depth being about twenty-three hundred fathoms. The cable is already laid from Land's End to off Alexandria, and it is expected that England will be in direct communication with Colombo in less than six months.

The New South Wales legislative council has passed a bill for the construction of a line from Condoblin to Broken Hill, a distance of three hundred and seventy-two miles. It will thus extend more than half-way across the state from Broken Hill to Sydney, and will form the eastern section of the Federal Transcontinental railway from Sydney to Perth.

The new French army bill, which provides that every able-bodied Frenchman shall serve three years in the active list, eleven in the active reserve, seven in the territorial army, and seven in the territorial reserve, or twenty-eight years between the ages of twenty-one and forty-eight was introduced in the Chamber last week amid an extraordinary tumult.

Plans will soon be submitted to the planters of Louisiana for organizing a sixty million-dollar holding company, to be known as the Louisiana Cane Sugar Company. Instead of operating one hundred and sixty-eight factories in the state, it is proposed to handle the crop with fifty, thereby eliminating an enormous expense.

King George of Greece was assassinated last week. His son Constantine was immediately proclaimed King. King George was placed upon the throne by the European powers at the age of eighteen and has reigned about fifty years.

Homesteading has been begun in Egypt, six hundred and ten acres of drained land being distributed in five-acre lots to the landless peasants. During the first three years the landholder will receive the land practically free, then pay a moderate rental for ten years, after which the holding will become his for life.

A poll of Hobart, Tasmania, ratepayers was taken on the question of whether the Hobart Electric Company's street tramways shall be purchased by the Hobart municipal council, and the result showed a majority—of nearly four to one in favor of the purchase.

At the present moment, the attempt to float the Chinese loan seems to have been brought practically to a standstill, and this is chiefly owing to the demand for a five and one half per cent rate of interest.

It is announced that the necessary permission for the foundation of a university in Frankfort, Germany, having been obtained, and the necessary funds collected, building operations will begin at once.

The Argentine consul at Lima, Peru, is elaborating plans for promoting closer commercial relations between Argentina, Peru, and Bolivia.

Industrial and Commercial.

Successful experiments with a river growth called sudd, on the upper reaches of the Nile, have proved that it can be converted into a pulp that is suitable for making high-class paper. The discovery is expected to have an important effect upon the paper industry and the future of the Sudan. A first attempt to utilize this vegetation consisted in turning it into briquets for fuel. All the experiments satisfactorily proved that sudd pulp fulfilled the necessary requisites, but the product could not be bleached a fair white by any known process. Early in February, however, a hundredweight of sudd was treated with "bleachoid," which is obtained by an electrolytical process from a solution of common salt. By this process the pulp reached a white that could be used for high-class paper making.

The New York, New Haven & Hartford railroad is working on a plan that contemplates electrification of its Shore Line the whole distance between Boston and New York. The work is being done in blocks. The first stretch was from New York to Stamford; the second was the extension of the electric zone to New Haven; the third stretch is from New Haven to Providence, for which the four-tracking has been decided upon, and the fourth section is between Providence and Boston.

Texas again leads Illinois as premier crop-producing state. Iowa remains third, while Ohio has lost to Missouri fourth place. In the second five the states ranked: Kansas, Pennsylvania, Minnesota, Georgia, and North Dakota. In 1912 Texas produced $407,160,000 in the twelve crops reported quantitatively by the government. The total value of these crops produced throughout the country was $4,695,161,000.

More than four and a half million gray squirrels were killed last year in Siberia for their fur. The tails alone weighed over twenty-one tons. The animals figuring next in the fur trade of Asiatic Russia, in point of numbers, was the white hare, which contributed a million and a half skins.

A new factory for cocoanut products to be built on the north side of the Amsterdam harbor will require about eleven acres of ground. The initial capital for the enterprise is one million five hundred thousand florins.

The last stage of the electrification of the New York division of the New Haven railroad between New York and New Haven has been reached.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

HELPING THE CAUSE.

SAMUEL GREENWOOD.

CHRISTIAN SCIENCE is preaching the gospel of the Christ-healing, and is destined by its very nature to bring redemption to all nations. The opportunity to help in this work is a privilege to be not lightly esteemed; nay, more, it is an indispensable part of individual salvation, inasmuch as no one can obey the Master's commands and live for himself alone. The secret of the growth of Christian Science, if it can be said to have a secret, lies in the fact that it presents and demonstrates the truth about God, His absolute sovereignty and allness, and is therefore substantially meeting human need. To support such a movement obviously means, in its true sense, that we shall not participate in so-called evil, nor allow it to operate through us, but that we shall conform our thought and life wholly to the standard of good.

When Mrs. Eddy discovered Christian Science she freely devoted her life to the end that all humanity might share it with her. In turn it rests with each one who discerns and loves this truth to share his light with his neighbor, for to bring the kingdom of heaven to human consciousness is not the work of one man or of one woman, but of all mankind. Without some response in this direction, Mrs. Eddy could not have taken the progressive steps which have brought this movement to its present efficiency and world-wide proportions; but the work is only begun, and it devolves upon Christian Scientists to carry it on to completion. Until humanity wakens from its dream of a life separate from God, and human consciousness reflects only the divine, this work must continue and draw its support from the Master's true followers.

The cause of Christian Science, as has been well said, is the activity of Truth in the consciousness of Christian Scientists; hence the means of helping it are primarily and essentially mental and moral and consist of right states of thought. This cause will be prosperous only as Christian Scientists uplift the Christ-ideal in their own consciousness. So far as humanity is concerned, Christian Science is but a name except as viewed through the lives and conduct of its adherents. As stated in its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, Christian Science is the revelation of Truth, and makes the Christ-power universally available, but it lies with Christian Scientists themselves to make it a living, regenerative force in human consciousness. Only through whole-hearted loyalty to its Principle, divine Love, can we support this cause, and add to its utility through the methods provided by our Leader, under divine guidance; for the establishment of Christian Science, she tells us, "as a permanent dispensation among men" (Science and Health, p. 150).

It is apparent that no one can do another's work, so far as the demands of God are concerned. We cannot for our own sake afford to rest satisfied with being physically healed, and take no part in advancing this cause, no share in bearing the burdens incidental to its progress. Mrs. Eddy gloriously fulfilled her mission as the Discoverer and Founder of Christian Science, and posterity will call her blessed because of it; but she did not and could not do the work of individuals. Before God's kingdom can fully come on earth, each one must do his own work and do it rightly. Just what that work may be, in relation to Christian Science, depends largely upon individual circumstances and opportunities. It may not be required of every one to fill public offices, but the opportunity to be faithful to divine Truth and Love, in our thought and conduct, is ever with us. Although it may be only in the seclusion of our own consciousness, this work is none the less effective, and is the very support the more public workers need that their own efforts may be increasingly fruitful.

What can we do for the cause of Christian Science? We can do everything for it through love, but nothing without it. Unless we are loving one another "with a pure heart fervently," we become hindrances rather than helps. However limited may seem our opportunities to serve, we can at least unite in putting hate and envy and jealousy out of our thoughts. We all can, if we will, allow divine Love to be reflected in us, until we extinguish all resentment over personal differences and rejoice in knowing only the truth. To cherish loving and healing thoughts is possible to every Christian Scientist, and this is the most helpful contribution he can make to the cause. To withhold this support and yet be loyal to divine Principle is impossible. We may give liberally of our means, fill important offices, and meet all outward demands, but without love, as the apostle declared, it avails us nothing.

There is a tradition that the disciples of St. John, in his old age, were accustomed to carry him to the church, where he repeated always the same words, "Little children, love one another." In reply to their question as to this repetition, he said, "It is the Lord's command, and if only this be done it is enough." The Scriptures teach that love fulfils the whole law of God. If we love God truly, we cannot help loving our brother also. No Christian cause, movement, or organization can prosper without this love; therefore love is the one indispensable means of support which Christian Scientists owe their cause. Without love in the heart, we are but "as sounding brass," whatever our outward profession may be. Love alone can antidote the poison of hate, fit us to be Christ's followers, and enable us to heal the sick and reclaim the sinner in his name.

We must all learn that if we do not love we are not Christians. We have no means of knowing that man is the likeness of God, who is Love, except by the testimony of love in our own hearts. A sense of selfishness may tempt us to evade this question, and a sense of material ease may tempt us to forget it, but it is certain that this divine demand must be fulfilled before we can enter the kingdom of heaven. "No person can heal or reform mankind," writes Mrs. Eddy, "unless he is actuated by love and good will toward men. . . . We have no evidence of being Christian Scientists except we possess this inspiration, and its power to heal and to save" (Message, 1902, p. 8). If we are striving honestly for this love to be in us, we shall have it, and shall not be found wanting in those lesser things that are requisite in the carrying on of this work. Time, money, service, will

be forthcoming when the heart is moved only by love for God and man.

After all, it does not seem a great thing to give, this love for one another, and yet, as one has said, it is "the greatest thing in the world," outweighing all other gifts and sacrifices. And it is so easy to give, except when thought is centered on self. If Christian Science means more to us than all else, if we have caught and held a glimpse of the life it makes possible, we shall love one another; not in the sense of hardship or struggle, but joyously and spontaneously, because love expresses man's true nature as God's child. It is idle to declare, mentally or audibly, that we are the children of God, unless we are loving each other, for "he that loveth not knoweth not God." If we support our cause with this "unfeigned love," we shall easily meet the other obligations growing out of our position as Christian Scientists. We shall give what we have to give and do what we have to do, not in the sense of charity, nor as a sentimental duty, but as our highest privilege. To do these things means the kingdom of heaven for us, even the channel through which Love's infinite supply flows into our consciousness.

TRUE KINSHIP.

LUCY HAYS EASTMAN.

THE great Scriptural truth that there is but one Father-Mother of the universe, including man, leads to the logical conclusion that there is but one family; and since this family is the offspring of Spirit, it is composed of spiritual beings, all of whom are under the control of their one common parent. Moreover, the ties which unite this family are wholly spiritual, for God, as Mrs. Eddy has stated, "is man's only real relative on earth and in heaven" (Miscellaneous Writings, p. 151). True kinship, then, has nothing at all to do with flesh and blood, but is dependent solely upon spiritual causation, the correlation of divine ideas. Between spiritual ties and what are termed mortal ties, there is necessarily a sharp line of demarcation, for the latter are based upon matter and are influenced by beliefs of both good and evil. Thus they can never be wholly pure so long as the permanency of a parent's love is mingled with fear, or the loyalty of a child's devotion is enslaved by personal obligation, for purity admits of no mixture of opposites.

All mortal ties spring from the false belief that life, truth, and intelligence are material, and it is this belief which is accountable for the bitter disappointments and woe which are so often connected with human relationship. It breaks the commandments of God and declares man to be the father of man, thus vainly attempting to divide the united family of Spirit into disconnected groups through a classification of unintelligent atoms. The mortal sense of relationship which is built upon this belief, makes for personal possession and selfish absorption, while continually seeking "mine" rather than "thine" under the name of self-respect or self-preservation. It is ignorant of the fact that all real being, including man, springs from and belongs to God. Furthermore, it would sweep away, with its personal sense of loyalty, the law of justice. Disregarding the right of individual dependence upon Principle, it often mistakes imposition for duty when dealing with its own kin, while perhaps proudly rejecting the same assistance if offered by a so-called outsider.

Again, by usurping the office of God's fatherhood, it would fix burdens upon mortals, and keep them ever toiling for those "after their kind," oftentimes to receive in return only ingratitude and blighted hopes. It is this same mistaken sense which is tenderly devoted to the child of "my folks," while perchance cruelly neglecting another whose ancestors are "none of mine;" excusing the faults of one individual because he is "my brother," while sharply condemning those same faults in another if he be a stranger! Cruelly indeed does this mistaken sense partialize, victimize, and illegally domineer; and it is not strange, therefore, that Christ Jesus should have declared that whosoever would follow the true idea, must hate his erroneous concept of father and mother, and wife and children, and brethren and sisters; nor is it surprising that the spiritual idea, in demanding the first place in human affections, should come as a sword to the family of mortals and set it at variance.

In the experience of our Master we find a clear example of how to deal with this error of mortal kinship, when he strongly rebuked the personal sense of filial obligation with which Mary would have overshadowed his rightful obedience to Principle, for he cried, "How is it that ye sought me" (what personal sense of motherhood claimed me as yours)? Nevertheless, this same son who so steadfastly acknowledged no man on earth as his father, and who commanded his followers to do likewise, never ignored or attempted to break away from human ties. Rather did he, with wonderfully constructive method, constantly seek to purify these same ties, to lift them from their frail foundation of flesh and establish them upon the basis of Spirit, where all who do the Father's will are members of one loving family. In the bonds of this relationship the good Samaritan becomes our brother, the faithful Ruth and Naomi are our sisters, the truly loving David and Jonathan our friends, and God our tender, loving Father. Purified with the touch of divine Love, human ties pass from the transitional stage of good and evil beliefs and enter the realm of reality, where all that is human becomes transformed by the divine and existence is found to be wholly spiritual.

In building certain kinds of drawbridges the structure of the span between the abutments is often first made entirely of wood. This framework, however, is but a temporary affair and is no part of the bridge when completed. Though replaced in due time by a structure of steel, this framework is always built with the greatest care and exactness. Even so does the work of Christian Science construct in human consciousness a concept of real relationship by first carefully and patiently enriching human ties through improved belief, until the true idea of the universal family is recognized and the human yields to the divine. Even the gold in human relationship thus becomes purified, and the love which was once based upon perishable sentiment and beclouded with jealous fear of loss or separation, is replaced with the sweet interchange of childlike confidence, charity, and ready forgiveness. Being thus equipped with qualities of enduring love, human relationship will pass through the storms of adversity or rejoice in the peace of prosperity, unchanged save as it becomes more pure.

It can never be said, in presenting these truths of relationship, that Christian Science separates human families or robs them of their rightful affections. Instead, when allowed, it "preeminently promotes affection and virtue in families and therefore in the community" (Science and Health, p. 102). As the student of Christian Science learns that relationship is an idea of Mind, immortal and impersonal, he is sure to experience a quickened and enlarged love for all mankind; but this in no way estranges him from those who were already near and dear to him; rather does it enrich and strengthen all right affections. Therefore, unless a love that is pure and unlimited could produce estrangement, Christian Science cannot be considered as effecting this result.

Nevertheless, it is not unnatural if those who drink from the same fountain of Truth, who are fed with the same love, whose hearts beat with the same vital interests, should find themselves bound together in a kinship that far outweighs that of flesh and blood, which outlives the fleeting forms of personality. Did not Moses refuse to be called the son of Pharaoh's daughter, choosing rather to suffer affliction with the people of God? Nevertheless, how great was that brotherly love which led him to give his life to the freeing of his people from bondage! Kindred obligations rest upon us all today, and they must be heroically and lov-

Digitized by Google

ingly fulfilled. If, however, we are getting away from the personal sense of loved ones, if we are leaving the unreal to bury its own unreality, and are striving to follow after the true idea, then we shall indeed come into the present fulfilment of our Master's promise of life everlasting to those who forsake the false sense of material possessions or relationships.

HABITS OF THOUGHT.

WILLIAM HART SPENCER.

FEW will dispute the assertion that on this plane of experience we are surrounded by unsatisfactory conditions, and none will gainsay that the main efforts of humanity are put forth in the attempt to rise above the handicaps which appear to be specific to the individual consciousness. Furthermore, it will be admitted by the majority that conditions detrimental to well-being lie within the realm of the human mentality, and that enlightened thought will naturally direct corrective effort toward a true mental advance.

The saying, "There is nothing either good or bad, but thinking makes it so," is often used as an excuse for sinfulness by the simple process of "thinking" that some sin is not sinful. While it is true that thinking is the basis of motive, thinking should differentiate between right and wrong. Properly the expression should be: Good (spiritual) thinking makes for right; carnal mind thinking makes for wrong.

Through dread of the consequences, most of us put forth a pretended effort, at least, to escape from the bondage of sin, and having learned that evil things follow evil thoughts, there will naturally be an attempt to cleanse our mentality; but the evil inheres in this "carnal mind," as St. Paul phrases it, and as it knows nothing outside of itself, it will not and cannot correct itself. A foul cistern has no innate power to do its own cleansing. "The natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned."

To observe and criticize the outward manifestations of delinquency in our neighbor as well as in ourselves, is much easier than to delve for the impelling motive. Human thought, following the line of least resistance, halts judgment at the point of secondary cause, rather than undertake to analyze mentality and discover the primary cause. To escape from the dead level of old beliefs requires a struggle. One cannot reach the distant heights by going around in a circle. Bad habits of thought unwittingly acquire regularity, taking the same grooves without effort; but sooner or later there must be an awakening, and nothing outside of our own determination can prevent a beginning. Our text-book says, "The purpose and motive to live aright can be gained now. This point won, you have started as you should" (Science and Health, p. 326).

There is a great difference between working and doing work. In the activities of this life it is not necessarily the one who makes the most motions who is successful, but he who carefully plans with connected thinking. There is thinking, and there is the allowing of thoughts to flit through the mind; but because the brain is believed to be active, it does not follow that what drifts through it has any connection or continuity. We must "stand porter at the door of thought" (Science and Health, p. 392). In a spirit of discrimination, we must strive to scrutinize the character of the thought before rather than after it is really admitted into our mentality. Thus to act rightly we must think rightly, and make sure that we think good thoughts. We have warrant for this in the Scripture: "I know the thoughts that I think toward you, saith the Lord, thoughts of peace, and not of evil."

The plans for a great building first of all provide for a proper foundation, which provision frequently requires the tearing down of a present structure. The attempt to build well mentally, is interfered with when we fail to clear our consciousness, not only of wrong thoughts, but of thoughts which, not of themselves evil, are still obstructive to good character building. Some problem of good upon which we have dwelt may suddenly become clear to us, but this disclosure becomes possible only in consequence of our attempt at right thinking in the past. Much of good is done without definite planning, but such goodness is the outcome of character, and character represents growth.

Evil must be uncovered before it can be destroyed in our own consciousness, but when that is done, it is unwise to indulge in self-recrimination and allow our thought to dwell upon unpleasant things of the past. A noted preacher once said that his concept of hell was best expressed in the words of the parable of the rich man and Lazarus: "Son, remember"! adding that there could be no worse hell than being obliged to remember forever and ever all the evil and corrupt things we had done. King Hezekiah encouraged forgetfulness after hearty repentance for wrong-doing, when he wrote, "Behold, for peace I had great bitterness: but thou hast in love to my soul delivered it from the pit of corruption: for thou hast cast all my sins behind thy back."

It is always safe to follow the command given through Moses: "Speak unto the children of Israel, that they go forward." We have our own work to do. The Scriptures say, "Work out your own salvation," but they add, "It is God which worketh in you both to will and to do of his good pleasure." We are therefore working together with God, and must not forget that the pleasure of God is always good. No matter what his environment, the individual longs for peace; but peace never falls from heaven at once. Divine Love gives peace, but it must not be forgotten that the "peace of God" is peace in God. Faith and peace pertain to spiritual growth, but such growth comes through obedience, and in order to obey we must understand the command. To obey is not always easy; it is even said of the Master that "though he were a Son, yet learned he obedience by the things which he suffered."

All necessary aid and direction can be found in the Scriptures, but how to make the truth operative in the individual consciousness has been largely an enigma in the past. The truth has always been, and here and there spiritually-minded ones down through the ages have not failed to state correctly some phases of it. The inability to apply and prove the statements has been the cause of non-success. It was left for one in these latter days to hear the voice understandingly, and to spread upon the printed page such a comprehensive and clear exposition of the meaning of the Scriptures, that those who are prayerfully inclined to follow the spiritual leading indicated, can mentally grasp what is laid open in the inspired Word. This wonderful unfoldment of Truth through Mrs. Eddy has its fruition in the ability of students to prove the statements by overcoming sin and disease.

EXACTNESS IN STUDY.

GRACE A. WILLIAMS.

THE Concordance to "Science and Health with Key to the Scriptures" by Mrs. Eddy, is a necessity to the student who would be exact in his knowledge of this most important of all studies, since there is no more guesswork or rash conclusion in the study of Christian Science than in the study of mathematics. Hasty or perfunctory reading will bring no more correct results than the same process would in mathematics, like which the Science of Christianity is demonstrable, immutable, and unerring.

It follows, therefore, that we cannot be too careful in our study of the text-book, too careful in reaching conclusions, or too careful of our statements in regard to the subject. We should be able to prove our every dogmatic statement about this Science, just as students of mathematics are required to prove their statements. That which is provable must be unerring, else it cannot be proved; and Christian

Digitized by Google

Science is provable. To illustrate: Let us suppose the case of a student of arithmetic who makes up his mind that twice two equals three and ninety-nine hundredths, instead of four. Either in ignorance or wilfulness, or from the vanity of wishing to be called clever, original, or independent, he proceeds to work out all his sums on this false basis. He finds the error growing more involved all the time, until the great amount of labor his cumbersome mistake is causing him, compels him to stop and inquire why it is that others who are using the simple and correct figures are accomplishing their work so much more swiftly and easily. He who is desirous of being thought superior to others finds himself in an ever-widening sea of difficulty, his trifling difference of opinion, as he chose to call it, not working out as he flattered himself it eventually would.

This little illustration teaches us that we have no right morally, spiritually, or logically to take any statement in Science and Health and twist it to suit ourselves. One slightest error leads to others, until finally we have but a confused sense of divine Science; and one who has a confused sense of the Science of Christianity can no more demonstrate it than the student of mathematics who holds incorrect concepts of that science can solve its problems. This is why the Concordance to Science and Health is so useful. When we hear a student of divine Science make an assertion about it which he believes to be scientific and to be corroborated by the text-book, and we are in doubt about his statement, if we own a Concordance we have only to turn to it, find the statement to which our fellow Scientist referred, then look it up in the text-book, and if we do not find it there, to reject it; or if it is given with a different meaning, discernible on careful reading, we are authorized to be reserved respecting it and to hold steadily to the statements of our text-book.

The student cannot vary from the exact statement of divine metaphysics and still be a Scientist; he may be a good church attendant, but he is not a good Scientist if he go not "precept upon precept; line upon line," as was said so long ago concerning the Science that teaches mankind about God, Life, Truth, Love. To this end it is well worth while to turn ofttimes to this trusty, silent guide in order to ascertain the exact wording and meaning of any given statement bearing upon divine Science. Thus one will not stray from the narrow, because scientific, path.

Moreover, through the Concordance one can study certain words by themselves and glean a great deal of light that way. For instance, the looking up of every reference in the text-book under the words "unfold," "unfolding," "unfoldment," has given the writer more light in that direction than almost anything else in the way of sacred study. Many problems are cleared up by thus taking the chief word and looking up every meaning of it as Mrs. Eddy gives it.

"WHERE IS THY FATHER?"

MARIE LE CLAIR.

IN John's gospel we read that the Pharisees once mockingly asked Jesus, "Where is thy Father?" To this he responded, "Ye neither know me, nor my Father." Our Leader says: "It is our ignorance of God, the divine Principle, which produces apparent discord, and the right understanding of Him restores harmony. Truth will at length compel us all to exchange the pleasures and pains of sense for the joys of Soul" (Science and Health, p. 390).

One evening in the springtime, as I passed a florist's window which was filled with lovely lilac blossoms, my thoughts immediately flew to my western home, and in fancy I saw the dear old place where my parents live and where the happy years of childhood and young girlhood were passed. I could see the yard filled with apple-trees and lilac bushes all in bloom, and a deep desire arose in me to be there, where I knew I could enjoy the flowers to my heart's content. With this came also a great wave of homesickness, which brought with it thoughts of loneliness and lack and separation. I, however, knew the danger of entertaining any such feelings, and as I walked along I resolutely turned my thoughts toward God and tried to realize my relation to Him. Who is my Father? I asked myself, and where is my Father's house? And as the realization of His ever-presence and the varied manifestations of divine Love and goodness, came to me, all feeling of separation, of lack, of homesickness, and of material desire, vanished, and in their place was joy and peace.

The next morning, early, on answering the bell at my office, there stood a woman with her arms full of the lilac blossoms I love so well; and I knew that the love which sent them was reflected from our Father, and that my reaching out for Him had brought them to me.

"REJOICE AND BE GLAD."

ESTHER HIGGS.

WHAT is more refreshing than the sight of a happy face; a countenance so radiant with joy that it brings an answering smile to the one who beholds it! It may be that of a little child, whose trustful innocence beams out in joyful smiles, so that the observer is cheered by the sight and murmurs "God bless you!" as he passes on his way. We have always been taught, as Christians, to rejoice, and yet in looking around us we have seen so much sorrow, sin, suffering, and misery, that one with any kindly feeling at all must often have despaired of ever rejoicing much, and though offering smiles and words of cheer to those in trouble, must have felt how futile all one's efforts were, either to rejoice oneself or to help lighten the load of others. This was the writer's attitude of thought before hearing of Christian Science, and she well remembers the sense of freedom and light-heartedness which came when the glorious truth was revealed to her and she realized for the first time that only Truth and its manifestations are real.

How different this matter of rejoicing gradually becomes! True, it is a growth, and is not attained immediately or without effort, yet working and thinking from an entirely different standpoint how certain we are of ultimate success! What, then, is the basis of our rejoicing in Christian Science? Is it not to be found in our clearer apprehension of God and His creation? God is now seen to be Mind, Spirit, Life, Truth, Love, and all that He has created to be like Himself, spiritual and perfect; so that as we look upon the material world we perceive that it is but a poor counterfeit of the true, spiritual, and perfect creation, and we know that it is our sense of things which is at fault, and not God's world, and that by keeping thought open toward God we shall gradually find reality. In Isaiah we read, "Be ye glad and rejoice forever in that which I create." Here is both our mandate for rejoicing and the subject for our joy. We are to rejoice in the spiritual creation, in that which God made and declared to be "good," "very good;" and joy in this may be endless, for His eternal creation is ever unfolding to our consciousness.

We find, moreover, that this command to express never-ceasing joy is reasonable, for no matter how dark or gloomy the condition of things may be to mortal mind, we can still rejoice in the grand verities of being, and be glad forever in that which is everlasting. The eternal good is here in our midst today, only that our outlook is too material quickly to perceive spiritual good, as did Jesus, our great Exemplar, when he said, even in a time which to his disciples looked dark enough, "Your sorrow shall be turned into joy," adding for their comfort, "Your heart shall rejoice, and your joy no man taketh from you;" for in Jesus' perfect demonstration over sorrow and suffering, malice and hatred, he proved spiritual joy to be unassailable. If therefore our joy has the same foundation, we too can "rejoice evermore," as well as "pray without ceasing."

SELECTED ARTICLES.

[Frederick Dixon in *Leicester Post*, Leicester, England.]

I have read a critic's recent letter in reply to the one I wrote on Christian Science. The position which he takes up is quite clear, though the conclusion it leads to is an absolutely hopeless one for him. Under his definition, a heretic can be a Christian, and a Christian a heretic, which is an anomaly. When you consider that thousands of heretics have been burned precisely because they were not Christians, and that thousands of Christians have been burned because they were heretics, the historical soundness of the definition becomes even more questionable. The critic says that the holding of a certain view of the incarnation constitutes a Christian, historically. That statement would not be agreed to by half the Christian church, and it is unnecessary to go into the further intricacies of the question and its bearing on the various sects of Protestantism. When a definition of Christian is denied by about half the professing Christians of the world, its historical accuracy is scarcely as unimpeachable as it might be.

Now, there is one great authority on the English language, and that is the famous Oxford dictionary. In this dictionary the critic will find the word Christian defined thus: "Of persons and communities: believing, professing, or belonging to the religion of Christ." If, therefore, he is going to insist upon the more particular definition, he will very soon find he has embarked on a course of defining orthodoxy; and when he starts on the course of defining orthodoxy, he will discover what a certain well-known bishop meant when he defined orthodoxy as "my doxy," and heterodoxy as "anybody else's doxy."

There is no particular reason why anybody should mind being called a heretic. The best definition of heresy is, the orthodoxy of tomorrow, just as the best definition of orthodoxy is, the heresy of yesterday. Christian Science teaches a view of the incarnation different from that taught by most of the older churches and one which to the Christian Scientist is far more intelligible.

[Charles K. Skinner in *Manistee* (Mich.) *Daily News*.]

My attention has been called to several letters in your columns in which Christian Science has been dragged into the discussion. Inasmuch as misapprehension of the real position of Christian Scientists with regard to "medical freedom," compulsory inspection of school children, sanitation, hygiene, etc., seems to exist in the minds of the writers, I beg the privilege of explaining the same to your readers.

In the first place, Christian Science stands for common sense. It stands for pure air, pure food, and pure water. It stands for a clean body, and above all for a clean mind, for to the latter belongs the origin of a clean and healthy body and a pure and honest life. Contrary to one critic, Christian Scientists neither teach nor exercise any "suicidal views" toward themselves or others. They cheerfully submit to rigid quarantine in cases of contagion and infection, and they are taught to be obedient to existing statutes governing such diseases. Should an exception occur, it would be simply on a par with the many cases of mistaken medical diagnoses by good physicians which have occurred from time to time, records of which I have on file in my office.

One writer says that "if Dr. Ellis' objections hold good, we should not teach physiology in our schools, because it does not agree with the principles of Christian Science." This in itself is not a good argument, for very many besides Christian Scientists, even well-read physicians, are awake to the deleterious effect of filling a child's mind with thoughts about his body. This is so marked in cases of supersensitive children, that they are constantly watching to see if they cannot detect some symptoms of every prevailing disease. The result is, that the child becomes a bundle of fears, which sooner or later bring about physical disorders. Illustrations of this statement were never more clearly marked than in the effects of the pictorial lectures on tuberculosis given in Grand Rapids last summer, where one young lady fell unconscious and others had to be led from the room. Similar experiences have occurred in other cities, until the loving parent begins to wonder whether he really has any rights in the case, or whether we should go back to the dark ages of which the critic speaks and put our children out as "wards of the state" as soon as they are born. There is a vast difference between cruel, indifferent, filthy treatment, the housing of children by ignorant parents, and the general public whose boys and girls are a part of themselves, and for whom nothing that is right is too good.

As an American citizen, not as a Christian Scientist, I oppose compulsory medical inspection of school children, except in cases of contagion. First, for the reason given above, viz., of educating the child into an element of constant fear of disease; second, the unwarrantable exposure of a child's person to the eyes of a strange physician, even though the inspection is private. More especially is such inspection to be condemned when it occurs as it did in Chicago recently. This was but a repetition of a similar occurrence which took place in Philadelphia last year. Is it any wonder that the citizens are up in arms at such methods? Where is the mother who would stand for such treatment? It has been shown in a number of instances that delicate children of refined parents have gone from such examinations to their homes in a state of nervous collapse, which later developed into an attack of illness.

Another vital objection to such inspection is the uncalled-for expense. Good teachers can readily detect when a child is not clean, when he is sick, has defective eyesight, or is generally unfit for school, and nothing is easier than to give him a note to his parents calling attention to these conditions, and sending him home. If we must be forced to such extremes as compulsory inspection leads up to, let us at least have such a strong proviso that no child who brings a request from its parents or guardian to be excused, except for contagion, shall be denied such exemption.

The history of medicine and medical diagnosis up to the present hour has not developed into a science by any manner of means. It is simply a "cut and dried" process, and while the honest physician is doing a great amount of good for suffering humanity, he knows that it is not the drug which heals. He knows that the serum and antitoxin of today is tabooed on the morrow. Then why should people who have no faith in such remedies be compelled to submit to such experiments?

["Bohemian" in *The Week*, Victoria, British Columbia.]

There is hardly any subject which is at the present moment exciting such wide interest among people who do a little thinking for themselves as the Science of divine healing. The truths affecting this profoundly interesting subject are set forth in the literature of Christian Science. No modern cult has received more criticism of an adverse character, and probably no teaching in any age, since that of the lowly Galilean, has been assailed with greater bitterness. The attack upon Christian Science has been waged mainly by two classes of people,—the medical fraternity, and unscrupulous imitators who through questionable means have professed to attain some of the results achieved by Christian Science.

I am neither competent nor concerned at the moment to enter into a defense of this remarkable school of teaching and thought. Christian Science, as collated and expounded by Mrs. Eddy, is but a modern interpretation of truths as old as the hills. There is nothing new in Christian Science, but there is something decidedly new in the manner in which old truths have been collected, correlated, and combined into a harmonious whole. The basis of Christian Science is healing. Its demonstration is in the physical ills it has

Digitized by Google

cured, but not less in the lives it has reformed. People who have not been brought into close touch with its votaries hardly appreciate that the healing of physical ills is not the end of Christian Science teaching, but only a means to an end. The real object is to bring the human will into harmony with the divine, and it has not finished, but only just begun, its work when it has successfully treated some physical malady.

It is true that most people who join the Christian Science church have first been the subjects of material healing; they have naturally been led to reflect on the principles underlying the cure, which often belies all the predictions of the medical fraternity, and to effect which Christian Science has been evoked only as a *dernier ressort*. But it is equally true that, having realized the benefits of a bodily cure, they have followed the example of the lame man who was healed by Peter and John at the gate of the temple, and have literally leaped up, acknowledging the divine power which healed them, and entered into the temple.

The spread of the Christian Science church is indeed remarkable. It is a church which does no advertising, publishes no statistics, and seeks no publicity. Its work is silent. Yet to such an extent has a little leaven leavened the whole mass of humanity, that a movement initiated less than forty years ago by a sainted woman has already attained dimensions which justify a comparison with the initiation of the great Methodist church founded by a man of similarly devout character and supreme intellect—John Wesley. In all the large cities of England, the United States, and Canada, and in many of the small ones, there are Christian Science churches. If one goes to the public library in any of these cities, he will find it difficult to secure one of their books, so great is the demand.

It is impossible to attribute the success of Christian Science teaching to anything but divine power, as it is impossible to account for the reformation of life which follows conversion to Christian Science teaching by anything but divine power. The adherents of its teaching confidently believe that it is not merely the church of the future, but that it will in due time become the church universal. Whether this be so or not, it must be admitted by the impartial observer that Christian Science is making marvelous headway, that it is slowly but surely revolutionizing the attitude of Christian people in the orthodox churches, and, strangest of all, that these results are entirely through the medium of this one volume, which is based on the Bible, and without any aid from what the greatest of all lights and preachers called "the foolishness of preaching."

[W. T. A. in the *Boston Herald*.]

Christian Science has for over forty years proved the truth of its teachings through demonstration and today, through its efficacy, there are thousands of men and women from all walks of life bearing testimony to Mrs. Eddy's revelation of truth as applied to the moral, mental, and physical. Christian Science is revealed truth. This spiritual enlightenment came to Mrs. Eddy through her research of the Scriptures, as it has also come from the same source that revealed to St. John the new heaven and the new earth.

The teachings of Christian Science do not so much form a basis for worship as the Bible, nor do they eliminate any of the teachings. "Science and Health with Key to the Scriptures," the text-book of Christian Science, is a commentary on the Bible, but it gives the spiritual meaning to many of the parables and the works of our Lord, and Mrs. Eddy's [illegible] of the Bible [illegible]. It is not supposed that [illegible] Christian Science [illegible] the Bible text [illegible] Christian Science [illegible] the Scriptures [illegible] and [illegible].

page 14 we read: "Entirely separate from the belief and dream of material living, is the Life divine, revealing spiritual understanding and the consciousness of man's dominion over the whole earth. This understanding casts out error and heals the sick, and with it you can speak 'as one having authority.'"

Through the revelation of the Christ-truth as taught in Christian Science, the human concept gives place to the divine idea, in evidence of a Principle that can be understood and demonstrated.

[E. M. Ramsay in *Dundee* (Scotland) *Advertiser*.]

In your review of the January magazines you mention Sir Thomas Clouston's article in the *Quarterly Review* on "Mind Cures," in which, among other systems, he discusses and criticizes Christian Science. "We do not deny the existence of these cures," he says; "we only deny that they are due to occult, mystical, or unexplainable causes." To this we reply that Christian Science makes no claim to act through any mysterious or occult agency. As its name implies, it claims to be a scientific system, and science has no partnership with mystery. Christian Science teaches that all disease, as well as every other form of woe, is the direct result of unhealthy, inaccurate thinking, and that in order to get rid of unsound bodily conditions we must first get rid of the unsound thoughts which occasioned these conditions. The question then arises, How shall we acquire better thoughts; what are right thoughts, and whence do they emanate? Christian Science teaches that right thoughts, true ideas, holy aspirations, and pure desires are the progeny, the outcome of that absolute Truth, that divine Mind or intelligence which we have been accustomed to call God. It therefore shows us that in order to live happier, healthier, and more useful lives, it is a matter of paramount necessity to gain a clearer understanding of the nature of Mind and to become more conscious of our own nature—"Now are we the sons of God," as John expresses it.

The false belief that God is a supernatural and incomprehensible being is made to cease, the teaching of the Bible, where we are told that God is our Father, "a very present help in trouble," a source of information, our counsellor, guide, with whom men should be in intimate touch and to whom they should turn in the perplexities of every-day life. There is nothing supernatural about purity, humility, mercy, kindness, joy, or courage, yet these are spoken of as the way by which men are to reach God, as the qualities of which the kingdom of heaven is composed. If this is so, then they must be the qualities of God Himself, the only cause and creator.

The article under [illegible] has the following: "It would be a futile question to ask what mind is in its nature." In science, we must think of mind not as a self-existing, self-acting entity, but as an energy which is dependent on brain and [illegible] for its existence, as electricity, motion, or heat are in matter." To the Christian Scientist such statements as these appear as unscientific as they are [illegible]. If this were true, we could not get at the root of an [illegible], as it is plain that [illegible] material conditions and physical actions must be the primary thought and that nothing can get into a false thought but the person in the [illegible]. Mind manifests itself in ideas, and whether we get the right idea you are in touch with Mind and you get the right effect.

[Rev. H. Palmer in *Good Things*, St. Thomas.]

Readers of a recent issue of the *Spectator* may have [illegible] that an [illegible] minister [illegible] has left the [illegible] Christian Science [illegible] a number [illegible] that has attracted considerable notice not only [illegible]

Digitized by Google

against this religion. Meanwhile Christian Science, as given to the world by Mrs. Eddy, pursues the even tenor of its way, leavening and uplifting the thought of humanity, and bringing the healing power of Christ to the sick, the sorrowful, the wretched, and the poverty-stricken. The denunciations of this critic do not appear to have seriously impeded its progress. A world-wide movement, as Christian Science is, can be adequately judged only by a broad and clear vision. To condemn it for dogmatic or sectarian reasons will avail nothing. It will be remembered that the heads of the ecclesiastical system of Judea failed utterly to understand Jesus or to gain any true concept of his mission. They deemed that his teachings disturbed their supremacy, and this was sufficient to insure his condemnation. While Christian Scientists may be temporarily annoyed by the accusations of this critic, they are well aware that the healing work of Christian Science goes on just the same, and its steady progress is no more impeded than is the mighty Mississippi by a whirling chip in a swirl along the shore.

A few months ago a pamphlet was circulated from this critic's church, announcing that Christian Science was on the wane, and that the Christian Scientists of Denver were unable to go on with the building of one of their churches. Today the church is occupied by a large congregation and its edifice will be completed within a reasonable period. Recently the New York *Morning Telegraph*, commenting on the lack of attendance at orthodox churches, said: "Christian Scientists of this city make no such complaint; there is hardly room enough in some of their churches to accommodate the crowds who wish to attend the week-night meetings and Sunday services." This comment hardly bears out our critic's recent pronunciamento that Christian Science is on the wane.

This clergyman's latest diatribe declares against any revelation of the divine purpose to Mrs. Eddy. It is interesting to note that the newspaper account of his address contains no Scriptural reference in support of this contention. Jesus clearly pointed out that his genuine followers in all ages would grow in understanding and do the mighty works he performed. The prophet Joel foretold the time when the spirit of God would be poured out upon all flesh. Mrs. Eddy's position, therefore, that a scientific knowledge of God came to her through reason, revelation, and the study of the Bible, has ample Scriptural warrant. The gentleman's association of Christian Science with Mormonism, with which it has no common basis, aptly illustrates his reckless use of language when dealing with topics beyond the limits of his theology.

[W. E. Fell in *Scarboro* (England) *Weekly Post.*]

The whole question lies in this: Is Jesus' method of healing through Spirit, Mind, God, the method which he practised and repeatedly commanded his followers to adopt, and in which he himself never failed, a more efficacious treatment than *materia medica*, or not? This is the only method employed by Christian Scientists, and they are successful according to their understanding of its Principle and rule, as in every other science. The reason it has not been practised systematically since some three hundred years after Christ, is because the law which governs spiritual healing was not understood. It is now clearly explained in the book "Science and Health with Key to the Scriptures" by Mrs. Eddy, and all may avail themselves of its healing ministry who care to do so.

Christian Science is not hypnotism, suggestion, or any of its numerous branches. These systems are at the opposite pole to Christian Science. Hypnotism, *et hoc genus*, is the ascendency of one human mind over another, and is fraught with the gravest danger to the community. It must be quite obvious to all that if it is capable of a suppositional good, it is also capable of unqualified evil, as certain recent trials in the law courts of Europe have conclusively proved. The results of letting such a system loose on a defenseless public can only be contemplated with horror.

Christian Science, on the other hand, tampers with no one's mentality, but turns thought away from its fears and false beliefs in evil as a power strong enough to cope with and overcome good, to the contemplation of God, good, as the only power, the only presence, the only Science or knowledge. It is belief in evil as a power that produces evil, and the understanding of good as the only power, that destroys evil, whether called sin, sickness, or disease. This system is safe; it cannot make a patient worse, as is frequently the case with poisonous drugs or the unsuccessful use of the knife, but must uplift him morally, mentally, and physically, as it did in the days when preached and practised by the Galilean Prophet.

[From *The Christian Science Monitor*, Boston, Mass.]

All the recommendations for legislation contained in the annual report of the state board of registration in medicine, so far as they affected those who heal by mental means, were withdrawn when the report came up for a hearing today [March 18] before the public health committee of the Legislature. Dr. Walter P. Bowers, a member of the board, said that he had been authorized by its members to withdraw all the recommendations except that for an amendment in section three of the medicine registration act. This proposed amendment did not apply to any but practitioners of medicine. Its purport, said Dr. Bowers, was to raise the standard of medical practitioners in the commonwealth.

In response to an inquiry from Chairman Clark of the committee, if any one desired to speak in opposition to this recommendation, former Gov. John L. Bates, who was appearing for the Christian Scientists, said his clients were not opposed to the recommendation in question, but had instructed him to speak in opposition to the other recommendations in the report. In view of the fact that the board had withdrawn its other recommendations, Governor Bates told the committee that he had nothing to say.

Announcement was made before the hearing on the report began, that House bills 601 and 602 were withdrawn at the request of the petitioners for these measures.

[Written for the *Sentinel.*]

A PSALM OF GRATITUDE.

LILLIAN BARKER BEEDE.

ALL praise to Thee, all glory to Thy name,
Our Father, God, O Love divine,
For like refreshing summer dew,
That lifts the thirsty flowers anew,
Thy mercy fills this heart of mine.

My thoughts that dwell in secret sing to Thee
A psalm of praise that lifts its voice
(Above discordant mortal tones,
That error sings and sorrow moans),
To bid the heart of man rejoice.

O ever-present Love, Thou All-in-all,
I longed for love and found in Thee
The love that lives and never dies,
The only love that satisfies,
That knows the truth and sets me free.

I walked in dreams, O Love, and found Thee not;
In paths of false belief I sought
Thy princely form, but woke one day,
And learned to God the only way
Was that which Jesus lived and taught.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MEMBERSHIP IN THE MOTHER CHURCH.

On pages 108 and 507 of Vol. XI of *The Christian Science Journal* there are two articles touching upon the significance and importance of all Christian Scientists joining The Mother Church, and as many have not yet awakened to the need for this step, we are taking the liberty of quoting from these articles in order to help those who have more or less uncertain views on this subject.

The first of these articles is an extract from remarks made by the Rev. D. A. Easton, then pastor of The First Church of Christ, Scientist, in Boston, and from it we quote as follows:—

"What does it [membership in The Mother Church] signify to the applicants?

"It signifies to them obedience. Our dear Leader and Teacher has invited the Scientists everywhere to unite with The Mother Church. Standing on the Horeb heights of her clear spiritual vision, she has surveyed the field of Christian Science work, and has seen that the time has come when the growth of each individual Scientist, and the progress of the work at large, will be promoted by joining The Mother Church. Accepting this invitation promptly and cheerfully is, therefore, a proof that we are learning the lesson of obedience. To obey, and obey cheerfully and promptly, every call of Christ, Truth, marks a growth in Science. It lifts us at once to a higher plane of thought, and will be speedily followed by an increase of spiritual power. It puts us more nearly in the attitude in which Spirit can use us to do its blessed work. . . .

"Membership in The Mother Church tends to divest church relations of personality. . . . It is a step toward membership in the church universal, where there is no personality. It enlarges our idea of the scope and purpose of Christian Science church work, by helping us to realize that it is not merely for our circle of personal friends, or our community, but for the world. . . . The fact that The Mother Church has been able, in spite of all of error's attacks, to maintain its position, and hold high the banner of Science in the city of its birth, has made it possible to organize and maintain the numerous branch churches that are now so rapidly spreading . . . over the length and breadth of our land, and even overleaping the limits of our land."

The then editor of the *Journal,* commenting on these remarks of Mr. Easton, wrote (Vol. XI, p. 507): "Surely if she [Mrs. Eddy] did not see the need and wisdom of churches and church-membership, she would not favor the organization and building of churches. We have but to read 'Retrospection and Introspection,' and her articles in the *Journal* relative to The Mother Church, to know clearly what her views are. We all know how deeply concerned she is in its welfare."

Mrs. Eddy writes on page xi of the Preface of Science and Health: "When God called the author to proclaim His Gospel to this age, there came also the charge to plant and water His vineyard," and the marvelous growth of the Christian Science church under her leadership has justified the wisdom of every step taken by her to obey this charge and to establish this church as an institution for the benefit of all mankind. The Mother Church stands for the purity and permanence of Christian Science as taught by Mrs. Eddy, "even the understanding and demonstration of divine Truth, Life, and Love, healing and saving the world from sin and death" (Manual, p. 19). Surely, then, no one who has proved the truth of Christian Science can afford to be careless of the means for perpetuating this truth which its Discoverer and Founder established and nurtured.

ARCHIBALD MCLELLAN.

A QUESTION OF LAW.

To no teaching did Christ Jesus give greater prominence, both in his words and works, than to this, that he who understands spiritual law can overcome and annul thereby the claims of so-called material law. This was the gist of all his preaching and the ground of all his assurance. It was proven true in unnumbered instances of healing, both by the Master and his disciples, and was so wrought into every part of his life-ministry that it would seem impossible for even those who follow him "afar off" to raise any question respecting it.

Nevertheless, in this twentieth Christian century the assertion of this possibility is tabooed by the many, and a good illustration of their attitude of mind is found in Professor Drummond's statement that "physical science has a duty in pointing out that no devotion of enthusiasm can give any man a charmed life, and that those who work for the highest ends will best attain them in humble obedience to common [*i.e.,* material] law." This declaration was prompted by his remembrance of the vast number of missionary graves which he had found in Central Africa, and it voices the prevailing disbelief that the righteous can be made immune from sickness, or be healed when attacked by it, through their understanding of God and of spiritual law. In other words, Jesus' unequivocal statement to his followers, "Behold, I give unto you power to tread on serpents and scorpions, and over all the power of the enemy: and nothing shall by any means hurt you," is calmly passed by as having no practical significance today!

Christian Scientists have no occasion or disposition to boast, but they do rejoice that they have been awakened to the significance of this betrayal of the very heart of the gospel, and they are thankful for the demonstrated truth that "in divine Science, the supposed laws of matter yield to the law of Mind" (Science and Health, p. 484). Their goal is nothing less than the attainment of that spiritual sovereignty over material law which was manifest in Christ Jesus, and they are entirely sure that if all missionaries had had this vision of the ruling Christ there would be fewer graves and more Christianly illumined men and women in all mission lands. They would have gained that larger, practical sense of the Christ-power which would have enabled even the lowliest to apply the truth for themselves, the truth which is for all, whether learned or unlearned, barbarian or Scythian, bond or free.

Drummond's brilliance and optimism could not atone for the handicap under which he essayed the discussion of natural law, a handicap which grew out of his failure to perceive that all real law is spiritual, and that the so-called laws which ultimate in disease and death are not the confederates but the counterfeits of the laws of Truth. This discrimination is essential to any tenable philosophy of human life, and Christ Jesus made it for all thinkers and all time when he declared that the devil, that evil mentality which is the source and explanation of all that is opposed to the rule of Life and Love, is a falsity. The temptation to think that unideal experiences have some divinely appointed place in our lives, prompts the assumption that all laws are good, only some are higher than others. Said a minister recently, "You Christian Scientists seem to ignore the fact that there are gradations in the realm of divine law. When material law was overruled by Christ Jesus it was only a higher law of divine manifestation controlling a lower."

To this it may be answered that if, as assumed, material laws are but the lesser divine ideas, their subjection to greater divine ideas would be in keeping; but this interpretation of right ideas would in no way explain the tragedy,

Digitized by Google

the unspeakable injustice and wrong inflicted in human experience by so-called material law. The carnal mind and all its laws is "enmity against God," the apostle tells us, and all that can await an enemy of Truth is destruction. This is the logic and demonstration of Christian Science, and it is based upon Paul's declaration: "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death."

JOHN B. WILLIS.

CHRIST JESUS GLORIFIED.

IN St. Paul's first epistle to the Corinthians he begins by boldly challenging the vaunted wisdom of the Greeks,—all their learning,—and declares that "God hath chosen the foolish things of the world to confound the wise." Then he goes on: "I determined not to know anything among you, save Jesus Christ, and him crucified," an utterance which has been echoed in much of the world's religious thinking down to the present day. It is well known that the great Nazarene Teacher not only challenged "the wisdom of this world," especially its attempt to explain God and man by material theories, but he also gave proof of his own understanding of divine law throughout his earthly career. For doing this he was opposed by the learned men of his day, and was finally subjected to the torture and ignominy of crucifixion, yet Paul declared that he would make this the central point of his appeal to mankind.

Scholastic theology has made this to mean that because Jesus laid down his life for men, in order to secure their salvation,—because he paid the price due for their sins,—endless gratitude and devotion to him might be expected wherever this was made known. This does not, however, appear to have been Paul's message; indeed, he said, "If Christ be not risen, then is our preaching vain." It was the Christ triumphant over sin, sickness, and death that the great apostle to the Gentiles preached, and this, too, "in demonstration of the Spirit and of power." Seen in this light, we can appreciate the meaning of our revered Leader's words, when she comments thus upon Paul's declaration: "Christian Science says: I am determined not to know anything among you, save Jesus Christ, and him glorified" (Science and Health, p. 200). An explanation of this may be found on page 44 of the text-book, where we read concerning Jesus' victory over death and the grave: "His three days' work in the sepulcher set the seal of eternity on time. He proved Life to be deathless and Love to be the master of hate." We may well ask how many of Jesus' professed followers remember this when they commemorate his crucifixion and resurrection! In that wonderful seventeenth chapter of John we find Jesus declaring that in his work for humanity he had glorified the Father, and he asks that the Father's glory may be reflected by him. Then he prays for his followers and says, "The glory which thou gavest me I have given them; that they may be one, even as we are one: . . . that the world may know that thou hast sent me."

When Christian Science came to the world, the old dogmas were losing their hold upon men because they were not supported either by reason or revelation. The so-called liberal thought in religion conceded to Jesus the place of a great moral teacher, but this was far from being his own estimate of himself. He said substantially: Believe me for the works' sake, or not at all! Without such works there would be no proof of God's presence and power. Without the kind of healing which he wrought, man would not be known as a spiritual being at all. Every attempt to cure by material means is but so much matter to matter, dust to dust.

What Jesus did was to bring "life and immortality to light" with every instance of healing, and Christian Science, following in his footsteps, glorifies him with no smallest reserve by doing the works which he did and which he commanded his followers to do. In the light of Christian Science he stands upon the heights of human consciousness as the glorified representative of sinless, deathless, spiritual being, and Christian Scientists come to understand him and love him more and more as they realize and manifest the Christ purity and love, up to the utter extinction of those twin foes of our peace, lust and hate. By every overcoming of sin and disease, in accordance with spiritual law, Christ Jesus is glorified today, and we can say as did the apostle, "God forbid that I should glory, save in the cross of our Lord Jesus Christ, by whom the world is crucified unto me, and I unto the world."—the belief of a life separate from God given up for the glory of man's true and eternal existence.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

WORCESTER, MASS.—First Church of Christ, Scientist, designed to meet the needs of an increasing number of Christian Scientists in Worcester, in process of construction at Main and Oberlin streets, will be finished during the last part of May. The cost of the edifice will be between thirty-five and forty thousand dollars. The church building will be 54 feet wide by 84 feet in length, and is being constructed of tapestry brick of a golden brown shade, with terra-cotta trimmings to harmonize, the terra-cotta work to be richly ornamented with purely Greek designs. The portico is designed to be of the exact size and detail of the north portico of the Erectheum at Athens, and the auditorium will seat nearly five hundred people.

The church was organized in Worcester about sixteen years ago; but while the growth has been slow at times, it has been steady. In 1910 the land at Main and Oberlin streets was bought with the intention of erecting a building soon after that time, but many thought a larger church would be needed; however, after due consideration it was decided to construct a modest edifice, and when the growth of the church demanded it, to build churches in other quarters of the city.—*Worcester Telegram.*

OAK PARK, ILL.—Second Church of Christ, Scientist, is to improve the northeast corner of Euclid avenue and Pleasant street by the erection of a new church building, which will be 78 x 126 feet. It will be of classic design, with a façade flanked by columns of the Ionic order, the exterior to be carried out in pressed brick and reenforced concrete, and the foyer to be a little less than three thousand feet in floor area. The main auditorium will have a seating capacity of one thousand; the Sunday school rooms will have a floor space of forty-five hundred feet, and the total cost will be fifty-six thousand dollars.—*Chicago Tribune.*

FORTUNA, CAL.—First Church of Christ, Scientist, was organized in 1897. Today, its largely augmented membership and congregation worship in Newell's hall over the Fortuna Merchandizing Company's store. This coming spring the Scientists will erect a church edifice on the two lots they own in the Haight Addition. As planned, the building will have a seating capacity for three hundred people, the main auditorium to be enlarged by throwing back the folding doors which partition off the Sunday school room.—*Fortuna Beacon.*

BOLTON, ENGLAND.—Reverence and devotion were the characteristics that marked the annual Christian Science thanksgiving service held at the Institute, Henry street. There was a crowded congregation, and some remarkable testimonies bore tribute to the healing power of Christian Science during the past year and prior to the last annual thanksgiving service. The meeting was deeply impressive.

Bolton Evening News.

Digitized by Google

CITY OF MEXICO, MEXICO.—The most peaceful place today [Feb. 9] in this big city was doubtless our beautiful auditorium. Our service was held as usual. Just a score of persons were present, half men and half women. The incessant crack of rifles in different streets around our little church kept reminding us that error was trying to destroy error, but we had nothing to do with the funeral obsequies of error. I do not give any details of the politico-military *coup d'état* which broke over this city at two o'clock this morning. The two young ladies who act as second reader and organist could not get to the service, as fighting was going on around their residences, but our newly-elected first reader was equal to the occasion, acting as first and second reader and organist. Our soloist came, though she had to thread her way through streets where fighting was in progress. She sang the thirty-ninth hymn, that poetic version of the 91st Psalm, giving us a sense of II Kings vi:16 which was truly refreshing. The golden text of the day from Haggai ii:5 was singularly significant.

Correspondence.

ATLANTA, GA.—A building permit for a church edifice which when completed and fitted out will cost one hundred and sixteen thousand dollars has been taken out by First Church of Christ, Scientist. This church is to be erected on the site at Peachtree and Fifteenth streets recently purchased. The cost of the building will, it is said, be about eighty-seven thousand dollars and the cost of the equipment will aggregate thirteen thousand dollars. Sixteen thousand dollars was paid for the site, which is 90x100 feet. For three years the members of First Church of Christ, Scientist, have been working with a view to erecting a new church building. The recent bequest of five thousand dollars in the will of the late Mrs. Sue Harper Mims has enabled them to begin the work earlier than was expected. Mrs. Mims left the church an additional thousand dollars for other purposes.

Atlanta Journal.

MINNEAPOLIS, MINN.—Material is being assembled on the site of the new Sixth Church of Christ, Scientist, at Bryant and Summit avenues. The building will be of brick, steel, and terra-cotta, will cost one hundred and twenty-five thousand dollars, and will seat between twelve and fifteen hundred. For two years the church has held services in the basement, but the work of raising the superstructure will not interfere with the use of the basement for church purposes, according to members of the building committee.

Minneapolis Tribune.

MT. VERNON, N. Y.—The site of the Christian Science church on Ninth avenue and Valentine street is not to be changed, and in all probability the building that was so seriously damaged by fire early in the morning of New Year's day will be replaced within a few months by a more suitable edifice. This, however, is not altogether decided, but is believed to be assured.—*Daily Argus.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 30, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 14, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 1, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

THE LECTURES.

LONDON, ENGLAND.

Bliss Knapp delivered a lecture for First Church in the Queen's hall on Christian Science. He was introduced as follows by Col. the Hon. G. Napier:—

It gives me great pleasure to introduce the lecturer this evening. I am glad to be on this platform, though not because I am fond of public speaking—I have always had an extreme aversion to the public eye, so much so that I once had a paper read for me at the Royal Geographical Society. No inducement would have been strong enough to bring me on that platform, but I owe so much to Christian Science that I am not only ready but glad and grateful to be here and to acknowledge a debt which cannot be repaid.

Let me give you a personal reminiscence. In the year 1868 I was presented with a Bible. The date is on the fly-leaf. For twenty-five years after that I had an active and varied career in the government service. The book was never lost, but I never opened it until quite recently, when I began to study Christian Science. Now the Bible is my constant friend and companion. Let me assure you that if you will study the Bible with the aid of the Christian Science text-book, which is a commentary on the Bible, you will find a pathway to health, happiness, and prosperity in this life. Christian Science is a workaday-world religion. In the ordinary affairs of life, in business, in trade or politics, in sickness and sorrow, in every difficulty that confronts the human mind, if honestly and faithfully relied on, it will be found a practical guide and sure remedy. The human mind is in a sense better than itself, and has ideals higher than its own. The spread of Christian Science is without doubt the fullest expression of this higher craving for good. The call that has brought so many hundreds here this dull November evening is the same call that has echoed through the ages, as the Old Testament record shows. It is the call, the message, that drew the multitudes to seek the Christ on the shore of the lake of Galilee two thousand years ago, the call that will cease only when all men know God.

Correspondence.

WAUSEON, OHIO.

Frank H. Leonard delivered a lecture on Christian Science to an audience of about four hundred people, at the Court House. The speaker was introduced by Leroy H. Deyo, first reader, who spoke in part as follows:—

Mankind are today as never before looking outward and upward and beyond, seeking a knowledge of that truth referred to by the great Nazarene nineteen centuries ago, when he said: "Ye shall know the truth, and the truth shall make you free." Men are today more than ever before demanding an intelligent answer to that momentous question of Pilate, "What is truth?" They are asking oftener than ever the all-absorbing question, "What is man? Whence cometh he? Whither his destiny?" And they are also asking, "Were the promises of the Master mere sophistry, to remain forever unfulfilled in human consciousness?"

It cannot be denied that the contemplation of these things acts as a restraining influence over the more worldly activities which might otherwise menace the very foundation of society and government. But this is also a practical age, and man demands proof in answer to his questions. Contemplation is well enough as far as it goes, but mere speculation and conjecture do not satisfy, nor does the unanswered question still the heart's desire. Can the question "What is truth" be answered? Can man know that truth which makes him free? Can man know his relationship to God, his origin and destiny? Can the promises of the Master be fulfilled today in human living?

Digitized by Google

Less than a half century ago a discovery of mighty import to humanity was given to the world, and today Christian Science looms large upon the horizon of mental activities, leading thought to spiritual altitudes and proclaiming anew the glad tidings of "on earth peace, good will toward men." And Christian Science will and does answer your deepest questions.—*Correspondence.*

CARTHAGE, MO.

Judge Clifford P. Smith lectured before a large audience on Christian Science at the High School auditorium. The lecturer was introduced by Judge Halliburton, who said in part,—

Not being a believer in Christian Science as I understand it, I was much surprised to be invited by my Christian Science friends to preside at this meeting. Being here, I must confess that I have never studied the doctrines and theories of the Christian Science church, but I have lived long enough to learn that there is good in all organizations that teach religion, whether it is what is denominated the Christian religion or some other. I have learned that while there are a large number of sects or churches, each teaching Christianity, and some in many things far apart, there is good in all. In fact, a people without a religion of some kind is unknown.

Christian Science, in the few short years of its teaching by the Christian Science church organization, has had a wonderful growth and has attached to its cause hundreds and thousands of the brainiest and best people of our country, and those who have followed its course and its works know that large numbers have been benefited and made happier by their acceptance of its teachings. While the great mass of our people are not believers in or followers of its teachings, we must admit that the Christian Science church is today wielding a powerful influence in this country. The lecture tonight is not for the purpose of converting, but for the purpose of education and enlightenment, to explain to us on the outside just what the church believes and the grounds upon which its beliefs are founded. And, whatever our own beliefs may be, we certainly ought to be willing to give to the teachers of this organization a fair and unbiased hearing. The world is progressing in every line, and we today believe in and advocate many principles of which not many years ago we either knew nothing or scouted as wrong. No religion or principle that its believers are willing and anxious to explain and advocate in public, can be dangerous to the country or its people, for publicity and time will settle the truth or error in it.

Correspondence.

LOWELL, MASS.

Stormy weather apparently did not affect the attendance at the lecture on Christian Science given at the Lowell opera house by William R. Rathvon. The auditorium was well filled, and many seats in the gallery were occupied. The Rev. Marshall B. Lytle, pastor of St. Paul's M. E. church, introduced the speaker, saying in part,—

We are gathered here this afternoon to hear the truth about Christian Science. As some of you know, I am not a member of the Christian Science church. I am not a Christian Scientist. However, I may say that for quite a while, since my coming to New England, I have been very much interested in Christian Science. I have been much impressed with the character of the men and women who make up the Christian Science churches, and I have also been very favorably impressed by the testimonies I have heard from the lips of the members of this faith. I am here this afternoon, as most of you are, to listen. I am here with an open mind. I count myself a seeker of truth, and I hope I shall always have the courage to accept truth, no matter from what source it may come. I believe that there is a great deal of truth in Christian Science. I am not quite ready to accept all that has been claimed in Christian Science, but if I could be convinced of its truth, I think I would follow truth wherever it might lead.

Now, I suppose there are those in this audience who are in precisely the same position in which I am placed. You are here with a mind open to conviction. As Americans, there is one thing of which we are proud, and that is our sense of fair play. And we certainly desire to give this cause a fair hearing.—*Lowell Courier-Citizen.*

DUBUQUE, IOWA.

Clarence C. Eaton lectured on Christian Science to an audience which filled the new edifice of First Church. He was introduced by Jacob B. Fink, first reader, who said:—

We have invited you here tonight to hear the truth about a religion which is bringing health, peace, and prosperity to mankind, wherever it is received with willing hearts; a religion whose foundation is love,—love to God and to our fellow man, as revealed to one woman over forty years ago, since which time it has spread to every country of our globe.

Correspondence.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Albia, Iowa.—Scenic theater, 8 p.m., April 7.
Bartlesville, Okla.—Okla theater, 8:15 p.m., April 10.
Cambridge, Mass.—Scenic temple, Temple street, Central square, 3:30 p.m., April 6.
Charles City, Iowa.—Hildreth opera house, 8:15 p.m., April 10.
Cincinnati, Ohio (Second Church).—Music hall, 8 p.m., April 10.
Danville, Ill.—Fischer theater, 3 p.m., April 6.
Dayton, Ohio (First and Second Churches).—Memorial hall, corner First and St. Clair streets, 3 p.m., April 6.
El Paso, Texas.—El Paso theater, 3 p.m., March 30.
Estherville, Iowa.—8 p.m., April 11.
Eureka, Kan.—Opera house, 8 p.m., April 10.
Fairmont, Minn.—8 p.m., April 8.
Flandreau, S. Dak.—Opera house, 8:15 p.m., April 8.
Huntington, W. Va.—8:15 p.m., April 1.
Kansas City, Mo. (Third Church).—Morton's hall, Fortieth and Main streets, 8 p.m., April 5, and 3 p.m., April 6.
Kansas City, Mo. (First Church).—Church edifice, Ninth street and Forest avenue, 8 p.m., April 10 and 11.
Letchworth, England.—Howard hall, 8 p.m., April 17.
Madison, Minn.—Opera house, 8:15 p.m., April 7.
Mankato, Minn.—Opera house, 8 p.m., April 11.
Montclair, N. J.—Church edifice, South Fullerton avenue, 3:30 p.m. and 8 p.m., April 6.
Omaha, Neb.—Church edifice, St. Marys avenue and 24th street, 8 p.m., April 7 and 8.
Red Wing, Minn.—Sheldon memorial auditorium, 8 p.m., April 7.
Richmond, Surrey, England.—Richmond Hippodrome, 3:30 p.m., April 20.
Rock Valley, Iowa.—Opera house, 8 p.m., April 8.
San Antonio, Texas.—Princess theater, 2:30 p.m., April 6.
St. Louis, Mo. (Second Church).—Church edifice, 4234 Washington boulevard, 8 p.m., April 3.
St. Paul, Minn.—Auditorium, 3:30 p.m., April 6.
Waco, Texas.—Majestic theater building, North 4th street, 8 p.m., April 4.
Watertown, S. Dak.—Church edifice, corner Maple street and First avenue, S. E., 3 p.m., April 6.
Winchester, Ky.—Opera house, 8 p.m., April 8.

TESTIMONIES OF HEALING.

Five years ago I was believed to be a helpless victim of mental and physical suffering. After the family doctor had given me a thorough examination and had pronounced me incurable from an attack of rheumatism, heart trouble, and other internal disorders, he told my mother that I would never get well, though he left me a bountiful supply of medicine. I decided, however, that I would not take the medicine, for if I was going to die I would prefer to die easy. My mother and sister were then members of a Christian church, and I attended the services with them; but when I heard the preacher talk about God sending affliction and death, instead of being a God of love, and when I saw the selfishness of some professed Christians, I could hardly stand it. I would come home almost starved, hungering in a way that I then could not account for.

The concept of divine Love that I should have gained from the Bible and the church, I found not; so, tired and sick of this seeming mortal life, I became an atheist. I longed to die, that I might be relieved from my suffering; but in the darkest hour a white-winged messenger came, when a friend told me about Christian Science, of this wonderful saving truth. He let my mother have a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, to read, but knowing nothing of the book, it was not read for some time. My father believed in hypnotism and studied "New Thought," and my mother supposed that Science and Health was another book on that subject, and did not care to search its pages.

One morning, about three months after I heard of Christian Science, in my great distress I told my mother that if there was any truth in that book, I was going to find it. I was then about sixteen years old, but could scarcely read in the third reader, as I had been unable to attend school, and the first words which I tried to read from Science and Health were on page 18: "Atonement is the exemplification of man's unity with God, whereby man reflects divine Truth, Life, and Love." I got a dictionary and found the meaning of every word I did not know, and in one week's time I fully realized that I was drinking of "the water of life." My father and mother also began to read the book, my father then being a victim of so-called "Bright's disease" and dropsy, while my mother suffered from gall-stone, also kidney and female troubles. All three of us had been pronounced incurable by the doctors.

In one year from this time, after studying Science and Health, going over the Lesson-Sermons almost every day, reading the *Christian Science Sentinel* and *Journal*, we had come to look upon ourselves as God's children, and our family of eight were all studying Christian Science. A great dread of financial limitation had also been removed. Realizing that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468), I was able in one year's time to pass a teacher's examination, and I have followed the work of teaching ever since. I find it glorious to be able to think of the pupils in the right way, and not to see evil as personal or real.

I have had many other wonderful demonstrations in Christian Science, one being the overcoming of a severe attack of acute lung trouble. I was at first unconscious; but as there were no regular practitioners here then, the help of a Christian Science friend was secured, and the illness was overcome in five days. My mother has since taken class instruction, and the knowledge thus gained has been a great blessing to us all. My father has given up all thought of trying to reap any good from hypnotism and is trying to free himself completely from the bonds of hypnotic thought. Beliefs of limitation are being constantly overcome by realizing that God is the giver of all good.

There are now about fifteen families in Camden county who are studying Christian Science. There are eight families in our locality, and we have been holding Christian Science services in a little schoolhouse four miles from our home for the past eighteen months, where the seed of Truth is being sown. I know that if Christian Science can reach such an out-of-the-way place as the foot of the Ozark mountains, and can heal such a sickly mind and body as I thought I had, the truth can and will reach every sufferer. It is glorious to think upon the time when evil shall be no more, and when all shall know God, from the least to the greatest. When thinking over the blessings I have received through Christian Science, a "still small voice" whispers, Be still; stand in the strength and faith of God, and be ready to realize every moment the nothingness of evil. Then what joy, peace, and love can be attained, and how every one of us should give thanks to God for showing us, through Mrs. Eddy, the way to everlasting Life, Truth, and Love!—MABEL MARY HENDERSON, Linn Creek, Mo.

I am thankful for all that Christian Science has done for me. Through the loss of my husband's health, he was long out of work, and consequent financial losses made it necessary for me to help by earning what I could; but I was finally so weakened by worry and a heart trouble of many years' standing, that I could not continue. A friend then advised me to try Christian Science, and after gaining permission from my husband, who at first objected, I secured the address of a practitioner from the Science reading-room and called on her. She gave me a short talk followed by silent treatment, and I felt so much better that I went away feeling assured of strength being given for the work I needed to do. After several treatments I was so much better that I was again able to help in earning money by sewing. I had been wearing glasses for five years, and one day I said to the Scientist that I felt this to be a great bondage. She answered that I should lay them off, that in God is our sight; so I began to leave them off when at home, but still used them when sewing for others. I was then told not to fear if I forgot to take them with me; and when this happened one day, I trusted God and sewed all day without fear or pain, and I have never used glasses since, now two years ago.

For this deliverance I thank God, and I am truly grateful for the kindness shown in helping me to understand Christian Science.—MRS. K. PAULI, Burton, Ohio.

Christian Science has not only healed me of sickness, but I have found it a "very present help in trouble." Some time ago I had to pass through a trial which brought disappointment, financial loss, and surrender of material possessions, and while I tried to hold steadfastly to the truth, there were times when I would become deeply depressed. One morning, when under a heavy cloud and everything seemed dark, I took up the Bible and Science and Health with the assurance that I would find relief. I had been reading only a short time when a neighbor, a Christian Scientist, living in the apartment above me, but who was unconscious of my condition, played on her piano that beautiful hymn from our Hymnal which begins, "In heavenly love abiding;" but it was these words which came to me as a direct message:—

Green pastures are before me,
Which yet I have not seen;
Bright skies will soon be o'er me,
Where darkest clouds have been.
My hope I cannot measure,
My path in life is free;
My Father has my treasure,
And He will walk with me.

This brought the light; and although my problems have not yet been wholly worked out, I have not had the least sense of depression, which proves to me that we can, like Paul, "glory in tribulations;" that right in the midst of seem-

Digitized by Google

ing trials we can rejoice in the omnipotence and the omnipresence of divine Love. Words are inadequate to express my gratitude for this instantaneous healing.

MRS. MARY J. HINDS, Pittsburgh, Pa.

My gratitude for the many blessings that have come to me through the knowledge of God and of Christian Science, can never be expressed in words. This truth came to me through a friend of my wife, whose daughter had been cured of stomach and bowel troubles from which she had suffered a great many years. Before I found Christian Science, I suffered not alone from one disease, but from many,—heart trouble, rheumatism, sleepless nights, nervousness, also pain in my left side, which had given me considerable trouble for fifteen years. Besides all these ills, I drank whisky and chewed tobacco for twenty-five years, being a slave to both. I tried almost everything that one could think of to stop these habits, but could not do so. I consulted with a Christian Science practitioner and took treatment, and in three weeks I was healed—a well man!

I give this testimony in the earnest hope that some one who reads it may be encouraged to seek help from Christian Science, and that he too may be able to say, "Whereas I was blind, now I see." I am thankful to God for the teachings of Mrs. Eddy; they have lifted me out of darkness and have shown me the light.

N. B. HOPKINS, San Francisco, Cal.

Through the ceaseless efforts of a kind friend, who labored for years without reward and without hope of reward, trying to help me grasp Christian Science, I gradually learned to understand the power of divine Truth. Instead of a nail on the third finger of my right hand, I had a horny growth, on which now and then a shell resembling a nail would form part way up. An intense aching and itching would then set in, and this nail, or outside shell, would loosen and drop off.

Last summer I had a demonstration of Truth's power—my first—which rather startled me on account of its suddenness, and made me think that it might also be possible to overcome the growth mentioned above. For about a week I applied the Truth-cure daily, and then dropped the subject and thought no more about it. Some two or three weeks later I was surprised to see that a new nail, a real nail, had started to grow from the root, and the dividing line between the old and the new was as clearly defined as though a line had been drawn. The old nail was a horny excrescence, the new nail was smooth and of a pinkish hue. It took three months from the time it formed in the root until it had grown to the top.

Christian Science is true, though the one ignorant of its Principle may ridicule and sneer. I myself did not believe there was anything in it until I saw with my own eyes, but I am now a living witness thereto, for which fact I wish to express my heartfelt gratitude, as well as for the grand spiritual uplift received therefrom.

HANNAH A. WEGNER, Flasher, N. Dak.

It has long been my desire to express the gratitude for Christian Science which daily wells up in my heart. It is now more than five years since I had my thought turned away from the false sense of life as existent in matter, toward the contemplation of the truth of being as taught in Christian Science. The mental journey which I have traveled, and am still pursuing, has not been one over "flowery beds of ease;" it has more often led along the strait and narrow way. With me it has been "precept upon precept; line upon line;" and the word of God, so beautifully interpreted in "Science and Health with Key to the Scriptures" by Mrs. Eddy, has been a "light unto my path."

I had been a Bible student all my life, but after years of belief in theories, I had become dissatisfied and had about reached the conclusion that "What is truth?" was an unanswerable question. It was in the darkest hour of bereavement and affliction, when humanity, however willing, could offer me no aid, that I was led rather reluctantly to investigate Christian Science, and began the study of its marvelous text-book. My mentality demanded the surest proofs every step of the way; but as a little understanding, gained and applied, was rewarded with "signs following," I was soon willing to accept what Mrs. Eddy tells us, namely, that "a simple statement of Christian Science, if demonstrated by healing, contains the proof of all here said of Christian Science" (Science and Health, p. 547). I strive to be patient with those who do not understand this teaching, and who consequently misrepresent it, because I used to think that many of these things ought to be otherwise stated.

Many have been the physical imperfections overcome for myself and members of our household. I cannot express the joy experienced in being freed from neuralgia, rheumatism, and a chronic bowel disorder. Though some ills of the flesh yet remain to be vanquished, I am indeed grateful for this knowledge which is able to meet every discordant condition when faithfully and persistently applied; for I know that God's grace is sufficient to overcome all discord, and that none seek His face in vain. I send this with loving gratitude to the giver of every good and perfect gift, and to Mrs. Eddy for directing us in the right way and proving to us that "there is a power to make each hour as sweet as heaven designed it."

ALICE WILLIAMS CRADDICK, Orange, Cal.

[Translated from the German.]

I would also count myself among the grateful ones who have experienced help through Christian Science. During a period of thirty years I had gall-stones, which did not cause much suffering in the beginning, but in later years were attended by pain so severe that the physicians advised me to submit to an operation, to which my family, however, was opposed. The physicians in Budapest only gave me an opiate, as this was all they were able to do for me, and the suffering I went through during these years is beyond description. In the mean while my husband had passed on, and four years ago my daughter went with her husband to California, where they heard of Christian Science. They sent me a copy of *Der Herold der Christian Science* and wrote beautifully about the subject, trying to awaken my interest in it; but I derided it and laughed at it, and put *Der Herold* aside. There was no hope in me as to the existence of a God, and this was my mental attitude in bringing up my children.

Acting on my children's advice, I also left for Pasadena, though with the greatest apprehension as to the possibility of standing the journey on account of my terrible suffering. Upon my arrival in New York I became so ill that both the physicians who were summoned for consultation gave no hope of my recovery, though they emphasized the need of an operation in case I should improve. As soon as I did improve sufficiently, I left New York in order to join my children, but with the thought that should they be willing to have me undergo the operation, I would submit to it. My daughter's desire was that I should give Christian Science a trial, but I would not hear to it; though a week later, when the dreadful suffering set in again, I did not cry for the physicians, but for help in Christian Science, which was given immediately. Thanks be to God, the terrible disease left me after the second treatment, and I never felt so well as I do now; also a trouble in the back, of nine years' standing, was dispelled in one treatment. I am unable to express in words my gratitude to God, also to our beloved Leader, Mrs. Eddy, and I am most deeply grateful for having found the way whereby we may be saved.

FRAU ANNA PILLER, Pasadena, Cal.

Digitized by Google

Christian Science has brought light and understanding to me; it has made possible for me things that were impossible to my former life. It has reopened the Bible, and has made it a "sufficient guide to eternal Life" (Science and Health, p. 497); and through the study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have learned how to overcome not only the "ills of the flesh" (Science and Health, p. 191), but the many temptations that have come to me in the past.

For three years I have been enabled to rely upon God for all things, and have in consequence enjoyed greater freedom, better health, and more happiness than ever before. For two years previous to my hearing of Christian Science I had made earnest and prayerful efforts to know God and to pray aright. As a result of these strivings, a very clear conviction came to me that the demands of our Master were made not only to his immediate followers, but also to me, to all mankind. These had, however, been ignored, and after a lapse of more than a year I found a people who were also alive to this fact, and what was more, through the inspired teachings of their Leader, Mrs. Eddy, they were demonstrating the truths which Jesus taught and were realizing the significance of his command, "Go ye into all the world, and preach the gospel to every creature. . . . And these signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover." I have witnessed the healing power of the ever-present Christ, both in myself and in others, and the moral uplift which has accompanied my study and practise of Christian Science is much more than words can express.

My heart goes out in gratitude and love to Mrs. Eddy, the Discoverer and Founder of this Science, for her nobility of character, her purity and perseverance in standing for the truth; and I would express this gratitude not only in words but in my daily life, and in my endeavors to be a loyal follower of the commands of Christ Jesus, the Way-shower. I am often led to think upon these words of Mrs. Eddy: "We all must learn that Life is God. Ask yourself: Am I living the life that approaches the supreme good? Am I demonstrating the healing power of Truth and Love? If so, then the way will grow brighter 'unto the perfect day.' Your fruits will prove what the understanding of God brings to man" (Science and Health, p. 496).

ROBERT W. SAGE, New York, N. Y.

[Translated from the German.]

The wonderful blessings which my family and myself have experienced during the last years impel me to give this testimony. I am filled with gratitude and give praise to our all-loving Father for my healing, both of mind and body. Nine years ago I was declared by several physicians to be suffering with a severe abdominal complaint. I was under medical care continually, and the mental suffering which I endured is indescribable. I became pessimistic, for fear was my constant companion, and the worry about my health increased with every year. I had been brought up in a religious way by my parents, and felt very unhappy in my old belief that God, the supposed sender of joy and suffering, should not be willing to restore me to health. A specialist being recommended to my husband about five years ago, we consulted him, but he shared the opinion of the other physicians and said that I was very ill. For a whole year I had to submit twice a week to a very painful treatment, which made me feel more miserable and almost incapacitated me for any kind of work. We again consulted our family physician, who declared that the hope of my recovery had now dwindled into nothing, as my system had been too seriously affected by the previous course of treatment.

It was in this hopeless condition that I came to Christian Science, doubting greatly whether my life could be spared so that I might care for my husband and our three children. My sister and a dear relative who had been in Science for quite a while both had to use great patience with me in my struggle, and I am greatly indebted to the kind practitioner under whose loving care I stayed and who worked persistently in the endeavor to help me to attain my freedom. I cannot count myself among those whose healing was quick, but this very fact proved to be a blessing in my case. Our revered Leader, Mrs. Eddy, says in Science and Health, "Emerge gently from matter into Spirit," and in Isaiah we read, "Behold, for peace I had great bitterness: but thou hast in love to my soul delivered it from the pit of corruption." This I may say of myself with thoughts of gratitude and praise: I have been in Christian Science for two years and a half, and am now a perfectly well woman. My stomach, which could only retain light food, is in good condition, for I know that "not that which goeth into the mouth defileth a man." Furthermore, Christian Science is conducive in my case to most refreshing sleep, which I had lacked for many years, and I am able to attend to my household duties with great pleasure. Fear and doubt, which would always get hold of me, had to yield, and were replaced by a sense of trust and faith in God. As for my children, who have gained a measure of understanding of Christian Science and appreciate it, I have had the privilege of helping them more than once, which has greatly added to my joy.

I now know what it means to be at-one with God, with Love, and I have come to appreciate Christian Science to such an extent that I cannot imagine what life would be without it. To all who have helped me with word or deed I am deeply grateful, and I think of our dear Leader daily with a sense of gratitude and reverence for having again demonstrated for us the pure Christ-teaching. It shall be my endeavor to grow more and more into the understanding of this wondrous truth and to ask for light from Him, the omnipotent and ever-present One, to whom be glory and praise forever!

FRAU ANNA SCHÖCK, Stuttgart, Germany.

It is more than four years since I began the study of Christian Science, and I now wish to tell of some of the wonderful blessings I have received during that time. About the beginning of my study I gave birth to a little daughter. My mother, who is a Scientist, was with me at the time, and advised me very kindly and wisely about getting up. She said I could get up whenever I felt able, but cautioned me not to do so from a desire to "show off," which, I am sorry to say, was exactly what I did. This occasioned a very distressing condition, for which I first applied material means, though they failed. I then wrote my mother for help, and she advised me to employ a Christian Science practitioner, as she herself had not understanding enough at the time to treat me. Three practitioners treated me in the course of three years before I was completely healed. I have learned, however, that had I but cleansed my own thoughts more thoroughly at first, the healing would have come a great deal sooner, and one practitioner would undoubtedly have done all that was needed. Instead of blaming the practitioner, we should first know ourselves,—search thoroughly for the error which is sure to be lurking about us; then cast it out and rise above it.

I am thankful to God, and very grateful to Mrs. Eddy for this wonderful truth. Each day I am studying to learn more of this Science of Life which is ours. I am also grateful for the harmony which exists in our home since I have learned more of Christian Science, as many ills, such as colds, throat trouble, headache, and other ailments, have been overcome for myself as well as my children. I send these lines with a sincere wish that they may benefit some suffering mortal; and God speed the day when we shall fully realize our freedom from the asserted laws of sin, disease, and death!—MRS. JULIA MULKS, Riceville, Iowa.

Digitized by Google

For some years I have felt it a duty as well as a pleasure to send a word of thanks to the field for the many helpful testimonies and articles given in the *Sentinel,* and I wish to express my gratitude again. My blessings have been many since I began the study of Christian Science, which was in 1904. After belonging to another church over thirty years, it was very hard to cast off the old and to take up the new, but when I had proved for myself the truth of Christian Science, I did so gladly. I am very thankful for even the small understanding I have; thankful to our heavenly Father, also to Mrs. Eddy for the Christ-teaching as explained in "Science and Health with Key to the Scriptures," for I have been lifted out of many ailments. I am a member of The Mother Church, and my desire is to be a worthy Scientist.—M. JULIA KENOYER, Charleston, Ill.

It is with thankfulness to God that I testify to the many blessings I have received through Christian Science. I suffered for years with kidney and bladder trouble, but some two years ago I was healed by Truth. The doctors had said I would never live through the ordeal of childbirth, but just before my baby was born I called in a practitioner, who treated me, and everything was harmonious. I had occasion to call for help again, when the baby was eight months old. His head was covered with an eruption, but in three days after treatment was given him, this was entirely removed. It fills me with gratitude when I think of what Christian Science has done, and is doing, for me.

MRS. CHARLES PUGH, Spokane, Wash.

Two years ago, while reading the Lesson-Sermon before retiring for the night, my daughter, who lived in the same house, came down to speak with me and said there was a peculiar odor in the house, as though gas were escaping from the heater. I smelled nothing, but as the stove was giving more heat than I cared for, I closed the dampers and retired. When the alarm clock rang at five a.m. Sunday, I tried to turn off the switch, but had been so overcome with gas from the stove that in doing so I fell out of bed and lay on the floor. Somewhat later my dog, which I keep in the kitchen overnight, kept up a continual barking. I heard him, but it seemed as though I could not wake up. I finally realized my condition, held to the truth that God is our Life, and managed to crawl from one room to another and open doors and windows. Then I dressed myself and succeeded in getting up-stairs to my daughter's door.

Here I collapsed, and a neighbor and she managed to get me inside and on a chair. They found me stiff and cold, and put me to bed, while I was declaring the truth continually. My husband, who worked nights at the time, came home about eight o'clock, and on learning from my daughter of the conditions, was much distressed; but I told him to be thankful that God had wakened me from a bad dream and that I was able to eat breakfast with him. After breakfast, we read the Lesson-Sermon, and in the evening I attended service at Fourth Church of Christ, Scientist, of which I am a member, all ill effects from the gas having passed away.

I cannot express my gratitude for the enlightenment which has come to me since I have taken up Christian Science. For many years I had been doctoring and taking medicines, but faith in God had been neglected. I was seeking for something, yet knew not what; but when I came to Christian Science, I found what I had been looking for, though it has been very hard for me to understand, as I could not read or write English. I was, however, so hungry and thirsty for the truth which makes free, that now, thank God, I can read and understand that God is my Life; and, thanks to Mrs. Eddy, our beloved Leader, through whom the way has been shown, I am free of all my troubles and happy with the blessings I receive each day.

MRS. CAROLINE FREDERICK, Chicago, Ill.

FROM OUR EXCHANGES.

[*Watchman.*]

At the present time there is a very common tendency, and in some quarters apparently a deliberate intention, to use the terms Christianity and religion as synonymous and interchangeable. Properly used, religion is a much broader term than Christianity. All that is Christian is religious; but there is much that is religious which is not Christian. The truth is, that the attempt to confuse Christianity with all religion, or to include all that is good in other religions in Christianity, is a narrowing instead of a broadening of religious ideas, as it is generally assumed to be. On the one hand, it eliminates from Christianity those elements which make it distinctive from and indefinitely superior to all other religions, and also necessarily excludes those features of the ethnic and natural religions which are plainly incompatible and irreconcilable with the religious and moral ideas of Christianity. The result is an indefinite, hybrid, chaotic so-called religion which can be classed as neither natural nor supernatural. Far better than this mongrel syncretism is it to allow every religion to stand on its merits and demerits; to discover and frankly acknowledge the good in all forms of religion, and sharply to distinguish the errors and evils. Only thus can Christianity take its place of superiority among the religions of the world, and only in this way can it perform its intended service in lifting all mankind to a higher religious plane, and in bringing humanity into communion with God through fellowship with Christ Jesus. When thus clearly and fairly analyzed, it is found that other religions have very much that is good in common with Christianity.

[Rev. J. Estlin Carpenter, D.Litt., D.D., in *Christian Commonwealth.*]

Christianity is slowly undergoing an immense transformation. Its original conceptions are being wholly recast. It is the preeminence of Jesus that the energy which he imparted to the religious life of his disciples has been strong enough to bear the weight of so much illusion, and to emerge after nineteen centuries with fresh vitality. But it is not yet clearly understood that no historic religion can ever claim finality. The new ideas that are born must always take shape in the molds of their age. But this deprives them of all authority save that which later experience confirms. As the author of the fourth gospel translated the Galilean message into Greek, so a similar translation is taking place today. It is the hope of social reform, of the union of the nations in knowledge and industry, in righteousness and good will, of the increase of the gifts of the spirit in beauty and joy, in purity and love, throughout the world. A hundred and one spiritual energies are gradually enlarging the old bounds of thought, opening new vistas of the divine order of the world, and strengthening the faith that we do not live to ourselves alone.

[*Universalist Leader.*]

What we all need is a deeper conviction concerning the moral meaning of life as a whole. What we miss in the crowd is the sense of the presence of God in the movements of nature and men. We are so close to the orchestra that the instruments jangle, and each one stands out in discord, alone. The swing and the rhythm that sweep through them all is for those who are farther away. We need the ear and the perspective of distance, that all minor notes may be lost in the great melody. As we dodge in and out, escape an auto here, a car there, shouting our message, hurrying on to the next task in the line, who could make other than anarchy out of it all? But the days slip away. The years follow fast. Some morning when leisure is here we pause and look back; and then it dawns on us that we have been turning the mills of our God. We understand then that there was a moral and spiritual process in it all. We see the

Digitized by Google

discipline lurking in all experience. What we need is to see and to feel that discipline now. Our lives will depend upon whether we catch glimpses along the way of that moral and spiritual process which includes every one. Take that leisure today. Pause for a time and study the plan of life. Sit down with the facts. Unravel them. See how faith, hope, and love are shot through them all. See how all the world bends us and shapes us. Measure the influence of even the toil and the tears and the losses which harden the fiber and sweeten the temper of those who are wise. Thus in our quiet hours we shall come to understand the ministry of every fact and experience along the way, and on the morrow we shall return to our task with higher hopes and greater consecration.

[*Christian Intelligencer.*]

The character of our Christian lives is the test of the sincerity of our prayers. It is the clear teaching of the New Testament that prayer is to be followed by conscious effort. The reason why many prayers for spiritual blessing are unanswered, is that we make no effort to live as we pray. Our prayers for earthly good are often answered in the negative,—it would not be for our profit to get all we desire of material blessing,—but God never says no to prayer for growth in the spiritual life. A deeper fellowship with Christ, more insight into God's purposes of grace, better fitness for spiritual service, these and other objects of desire are distinctly God's will for us. If we pray for these things and find these prayers unanswered, it is because life is not directed toward the realization of our prayers. The fact is, that many Christians pray all too glibly for such crowning gifts as the Holy Spirit. They straightway forget what they prayed for, and certainly do not act as if they were in earnest in so praying.

[*Living Church.*]

When we really study the record of human lives, we are awed at the final victory of meekness. Truly blessed are the meek; for they do inherit the earth. Throughout history, obscure men and women, sustained by that fire of spirit that is born of the passion for service, have changed the course of thought, turned the feet of humanity into new and better paths, and overturned the vested powers, even after their own deaths and seeming failure. Peace hath her victories. Humility must always triumph, in the end. No man can conquer by his own strength; and merely great minds have never succeeded in maintaining supremacy.

[*Congregationalist and Christian World.*]

It may well be a question whether, in our reaction from the gloom and grim determination of our Puritan forefathers, we take our Christianity seriously enough today. If we are not sufficiently in earnest to give God the perseverance that He claims, if faith is but for summer days and purpose but a flash in the pan, there is nothing in us to meet and respond to God's persevering faithfulness which is the Christian's hope.

[*Churchman.*]

Men want, not more good advice, but more good news, a restatement of the gospel, the glad tidings. They ask it from the church as her business. They demand men and women of faith all down the line to tell them the news and to show the tidings of Christ crucified by lives of faith. It is not euphemism, but a tremendous truth and reality, to say of men that to live is Christ.

[*Zion's Herald.*]

Where the gospel is allowed free play in the heart and the life, it discloses the same power which in the first century converted fishermen into moral heroes and made saints even in Cæsar's household. The power is still resident there in the gospel, if we will only let it out in church and society.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, C.S.B., has been printed in regular pamphlet form and is now ready for distribution. Thirty-two pages and cover.

Some of the lectures recently translated into foreign languages and printed in pamphlet form are listed as follows:—

"Christian Science: Its Results," by William R. Rathvon, printed in German (Die Christliche Wissenschaft: Ihre Resultate).

"Christian Science: A Religion of Progress," by William D. McCrackan, M.A., printed in French (Christian Science: Une Religion de Progrès).

"Christian Science: Demonstrable Religion," by Frank H. Leonard, printed in Norwegian (Christian Science: Bevislig Religion).

These pamphlets are all for sale at the prices as shown on the opposite page under the list of Pamphlets and Reprints.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency. Money orders should be made payable at the Boston post-office.

Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

ITEMS OF INTEREST.

National.

The bill providing for the incorporation of stock exchanges, and placing them under the supervision of the banking department, was passed in the New York Assembly, after a long debate, by a vote of 85 to 34. It was expected that the Assembly would pass the bill, but it has a much harder road to travel in the Senate, many of the senators being on record as opposed to it. Five other Wall street bills, for which Governor Sulzer is sponsor, also passed the Assembly. They were amendments to the penal law as follows: in relation to transactions by brokers after insolvency and in the hypothecation of customers' securities; in relation to trading by brokers against customers' orders; in relation to bucket-shops; in relation to the manipulation of prices of securities and conspiring movements to deceive the public; and in relation to the discriminations by exchanges or the members thereof. The Goldberg "blue sky" bill, relating to the regulation and supervision of investment companies, a bill patterned after a similar law on the statute books of Kansas, also passed the Assembly by a vote of 93 to 22. It has not been introduced in the Senate, and it is not expected that it will pass at this session.

Radical changes in the methods of the state government for the purpose of placing it on a business basis, are recommended in the final report of the committee of inquiry. This report was submitted to the New York Legislature with a special message from Governor Sulzer in which he praises the work of the committee and urges that its recommendations be enacted into law. "The old methods of waste, extravagance, or worse, must be discarded," says the Governor in his message. "The people demand an honest and efficient administration of their affairs. They are entitled to nothing less. If the recommendations herewith submitted shall find place in the body of the state's law, New York will take the place which rightfully belongs to it, at the head of its sister states, furnishing to its people a wise, honest, efficient, and economical administration of government. The people of the state so demand. It is our duty, as representatives of the people, to enact this demand into law." The committee declares that the business of the state is conducted without any system, each department being operated separately.

All business now before the interstate commerce commission is being cleared away for beginning, on May 4, the task of ascertaining the physical valuation of all the railroads in the United States, the two hundred and fifty thousand miles of which have a book valuation of more than fourteen billion dollars and a stock and bond value of over eighteen billion dollars. It is roughly estimated that there will be needed a bureau of experts, auditors, investigators, and clerks doing nothing else for from three to five years. The cost to the government is expected to run from two million five hundred thousand to five million dollars, and the cost to the railroads to be over that figure.

The recording of a trust deed in the Suffolk registry in Boston, Mass., discloses the creation of a system that will ultimately mean millions of dollars to Harvard University. There has been formed a trust, known as the Harvard Mutual Foundation, to which any persons desiring to leave their money or property to the college, may make their donations now. The trustees will invest the funds so received, pay 5 per cent of the income to the giver or his heirs during their lifetime, and at their decease, turn over the principal to the university. Already something like a total fund of two hundred and fifty thousand dollars is assured.

Changes on the pier head-lines on both sides of the Hudson river at New York and Hoboken, which will permit one-thousand-foot piers and, it is believed, will insure the river against further encroachment, have been approved by Secretary of War Stimson. These changes will provide for the longest piers in what are now the broadest reaches of the river.

Despite the ouster by the state supreme court, the Standard Oil Company may continue to do business in Missouri if the Governor signs the bill passed by the lower house of the Legislature and already approved by the Senate. The bill was the result of protests from Kansas City and Sugar Creek, near Kansas City, where big refineries are operated.

An equal suffrage amendment passed the Nevada state Senate 19 to 3, and the amendment is now ready to be submitted to popular vote. Suffrage leaders will ask for a special election, and if it is not obtained, the matter will go over until the next general election in November, 1914.

Congress may be asked to hurry forward plans to build embassies and legations in foreign countries as the result of the failure of the administration to secure men of ability with sufficient means to enable them to accept diplomatic positions.

International.

The tour of Norman Angell round the German universities, in the attempt to interest the undergraduates and professors in the question of the economic disasters which would follow a war between any two great powers, whether successful or unsuccessful, has been met by a counter demonstration from the Burschenschaft of Göttingen, a sort of undergraduates' union, and some two thousand undergraduates and professors have met in Göttingen, and unanimously carried a resolution repudiating the attempt of Mr. Angell to induce the German students to occupy their time with ideals opposed to the character and sentiment of the nation; regretting the action of the International Association of Students, which supported Mr. Angell; objecting to the delivery of Mr. Angell's lecture in English; and expressing an opinion that the presence of foreign students in numerous German universities was becoming a danger to the interests of the native students.

The opium dealers' guild of Canton and Honan, China, have addressed a petition to the chief of police pointing out that they have too large a stock of the drug on hand and asking for an indulgence in the form of an extension of time during which they may dispose of their goods. The chief of police has replied to the effect that the time due for the enforcement of the antiopium laws has been known for a long time, and that those who carried on this trade ought to have prepared themselves long ago to meet the consequences, the arrival of which they knew to be inevitable.

Great efforts are being made in Berlin, Germany, to obtain permission for women to serve on the jury at the court for juvenile delinquents. A meeting was convened recently by the league of German women's societies with this end in view. The large hall was crowded, people coming from many parts of the country to attend and speak, and thirty-eight different women's societies were represented.

At two o'clock, March 25, Ghazi Shukri Pasha surrendered Adrianople to General Ivanoff. For twenty-four hours previously the final Bulgarian assault, which had been prepared with the greatest care, had been driven home until the Turks, defeated on all sides, blew up their magazines and attempted to fire the city.

Dr. Solf, the German colonial minister, recently expressed himself as being opposed to the destruction of birds of paradise and other tropical songsters. The recently imposed tax upon exported birds from New Guinea, he said, was only a temporary check, and he trusted before long that the export would be altogether prohibited by law.

The British government has determined to make a grant to the Irish Agricultural Organization Society for the furtherance of agricultural cooperation on the lines of grants already given to English societies. This will bring the policy of the ministry into line on this subject throughout the United Kingdom.

China's total expenditure for the current year will amount to $903,000,000. To meet this expenditure, China will have a revenue of about $725,733,208. The deficit of $177,266,792 will be met by reducing the expenditure and increasing the land customs and salt taxes.

The universal suffrage bill is attracting much attention in Budapest, Austria. The Hungarians demand a secret ballot, as they say that the system of public voting leads to many abuses. They further wish for direct voting and universal suffrage.

Industrial and Commercial.

A machine has been invented that thrashes standing grain in the field without cutting. Four horses push the machine over the field, and a small gasoline engine drives the thrasher. Only two men are required to operate it; one drives the horses, and the other ties the sacks of thrashed grain and looks after the engine. A machine was made and tried last summer in a wheat field. It thrashed from twenty-five to thirty acres in a day of ten hours. A strong blast of air from a revolving fan is blown against the standing grain and forces it against a toothed cylinder, which thrashes off the grain, depositing it in a trough, from which it is elevated by an auger to another toothed cylinder, which rethrashes it. The chaff is blown out and the clean grain falls into a sack, or may be carried through a tube into a wagon driven alongside.

According to Philippine trade returns, the development in the foreign commerce of the islands, which has followed the establishment of limited free trade with the United States, was well maintained during the calendar year 1912, with import and export values far in excess of any previous year. Imports amounted to $51,667,951, while the export totaled $54,784,738.

After many experiments a German textile expert has succeeded in spinning nettle fiber, and a factory for this industry is being opened in the province of Schleswig-Holstein. It is expected to give particularly good results when mixed with cotton, wool, or silk, and can be used in the manufacture of lace, and dress materials.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"THERE IS NO MATTER."

WILLARD S. MATTOX.

NOTHING seems more difficult for the young student in Christian Science to grasp than the doctrine of the unreality of matter. The statement that "there is no matter" (see Science and Health, pp. 278, 475) often provokes emotions of derision, scorn, or commiseration in the outsider. In order to disprove this teaching, the materialist of today sometimes imitates the Johnsonian method of reasoning, and recommends the application of a sharp pin to the Christian Scientist as a means of affording complete and convincing proof that the latter's theory regarding matter is incorrect. But neither the ancient wits who stamped on the ground to prove that matter is real, nor the latter-day wags, can dispose of this important question by any such frivolous logic.

That it is an important question, no one knows quite so well as the Christian Scientist. At the very beginning of his investigation of this subject, he learns that he must readjust his previous notions about matter, must gain a more scientific sense of it, in order to help himself and others. As he progresses, he is apt to discover very shortly, that modern philosophy has been influenced, perhaps unconsciously but nevertheless not a little, by the teachings of Mrs. Eddy. The unique reasoning in "Science and Health with Key to the Scriptures" respecting the character and nature of matter is found to be confirmed by many modern writers on philosophic subjects. These writers are practically agreed that matter does not exist in any such sense as the average man supposes, and it is being taught today that material things have no entity independent of the human mind. That matter exists in space as a lumpish substance, alongside of mind, and that mind acts on matter somewhat after the fashion of a cat pouncing upon a mouse, are crude conceptions which even material theorists have been forced to abandon. Mrs. Eddy states her position succinctly when she declares, "The objects cognized by the physical senses have not the reality of substance. They are only what mortal belief calls them" (Science and Health, p. 311). According to Christian Science, matter or the material universe exists, not as a separate entity, not as independent substance, but merely as a phase of mortal mind; in other words, the scientific explanation of matter is that it is the expression of, or manifestation of, a belief that there is a material consciousness.

As the metaphysical sense of substance begins to dawn on the student of Christian Science, he comes more and more to appreciate the significance of Mrs. Eddy's teaching as to Principle and idea. He sees that Mind is the reality which is behind the veil of appearance, and that being cannot be separated from its manifestation. When he proceeds to an analysis of the thing called matter, the student sees that a mortal's knowledge of the external world, so called, can be only phenomenal. The things of which mortals seem to be conscious, are not things in themselves, but only false interpretations of reality, only material concepts of spiritual fact. Mrs. Eddy asks the question, Is anything real of which the physical senses are cognizant? And her answer is practically admitted by modern schools of philosophy. She says: "Everything is as real as you make it, and no more so. What you see, hear, feel, is a mode of consciousness, and can have no other reality than the sense you entertain of it" (Unity of Good, p. 8).

Christian Science emphasizes the philosophic truism that there can be no material object without a material mind to conceive it, or to perceive it, and this constitutes the proof that matter is not real, and is not substance. By no possibility can the so-called material universe have any existence or reality outside of the human mind. The average mortal, looking at a rock, does not for a moment suppose that what he sees is a mental figment, that it is something within himself, but he regards it as an external object. He imagines that his perception of the rock proceeds outward, from his brain or mind, across intervening space, to the place where the rock lies. To him the thing itself, and its appearance in consciousness, are one and the same. Now, when we look at a stone, what do we really see? Do we see a lumpish substance, existing in space somewhere, removed from us, from consciousness, by distance, by so many feet or yards? According to Christian Science, all that we see is a mental concept, a mortal belief that stone is material.

Suppose, now, that while I am looking at a stone, I close my eyes. What happens? Apparently the stone has ceased to be; it is no longer in space, it is no longer perceivable. By consecutively opening and closing my eyes, I can apparently create and annihilate the stone; I can apparently bring it into existence, and by the same simple process cause it to cease to be. But is this really so? Surely not; and the explanation afforded by Christian Science is that the stone was never matter; it never existed objectively; it was never in space, was never located, nor was it ever cognized by mortal mind or the material senses. Mrs. Eddy writes: "Mortals can know a stone as substance, only by first admitting that it is substantial. Take away the mortal sense of substance, and the stone itself would disappear, only to reappear in the spiritual sense thereof" (Miscellaneous Writings, p. 27).

Thus we see in Christian Science that real things are ideas, and exist unchanged in Mind, in spite of the fluctuations of material perception. This leads us to the conclusion also that the so-called physical world is only a world of sense perceptions, that for each of us our world is indeed just as real as we make it, and that it is determined by the quality of our thinking. Shakespeare makes one of his characters say: "There is nothing either good or bad, but thinking makes it so." It follows, then, that if the world we live in is discordant, unhappy, diseased, or sinful, thinking must have made it so. "Be a law to yourselves" (Science and Health, p. 442) takes on greater significance in the light of this new scientific understanding.

The teaching of Christian Science on this subject is intended to break the mortal fear of matter by giving a rational, metaphysical explanation of its true character. Matter is not substance. The objects which we seem to touch and see have no independent or separate existence apart from the human belief in them. The real universe is

Digitized by Google

not material, but spiritual. If what is known as the physical world—suns, trees, animals, persons—existed apart from mortal mind, then we should be obliged to think of a material mind. The notion of a universe of material things [illegible] is material. The production of false material [illegible] is all there is of matter. All things [illegible] are ideas. Material [illegible] are only material beliefs, or false thoughts about [illegible].

[illegible] as we begin to see what Mrs. Eddy means, in [illegible] we have also to have less regard for [illegible]. Then, [illegible] we watch and labor [illegible]. We [illegible] the knowledge of [illegible] Mrs. Eddy tells us typifies "intellect," will [illegible], and in its stead we shall discern the "tree of life" whose leaves are for "the healing of the nations."

It is interesting to notice that the cherubims were placed at the east; that is to say, on the side where the sun rose, showing us clearly that our work should commence with the rising of the sun, and that if we only begin to stand porter at midday, a goodly number of serpents may by that time have entered at the gate. It is our work to see that nothing enters our consciousness which defileth or maketh a lie, but that it be kept a veritable paradise, fragrant, beautiful and serene.

There is no further mention in the Bible of the tree of the knowledge of good and evil, and we too shall find, the stricter the watch we keep over our gardens, the more this tree, which Mrs. Eddy tells us typifies "intellect," will disappear, and in its stead we shall discern the "tree of life" whose leaves are for "the healing of the nations."

RESPONSIBILITIES OF THE CHRISTIAN SCIENTIST.

BY THE REV. WILLIAM TUCKER MORSE.

[illegible] that many of those who are moved [illegible] to investigate Christian Science by some [illegible] of its healing or by some failure [illegible] with their own [illegible] fulfill [illegible] the more satisfying [illegible] is the failure to find [illegible] the truth [illegible] it is [illegible] and [illegible] Science [illegible] mental [illegible] it [illegible] the [illegible]

today, as it always has been, the test of worth, and the reproach of unprogressiveness is one of the greatest that can be hurled at an individual or a community.

Let us, then, be up and doing,
With a heart for any fate,

is the injunction, as practical as it is poetic; and if this be accepted as a sound maxim with regard to things material, it is still more so with regard to things spiritual.

Admitting, then, that action is the first and foremost requirement in the Christian Scientist, the next and almost equally important step is to decide upon the form of action to be adopted; and here again there is plenty of opportunity for the inexperienced or the overenthusiastic beginner to make mistakes. That subtle and mischievously busy product of mortal sense called error is ever ready to suggest wrong courses and to pervert judgment, but at no time is it more likely to seek to exert its weakening influence than at that supreme crisis in the career of the individual when he awakes to a first faint realization of his birthright as the child of God.

Many who have accepted Christian Science in Principle will be able to recall the sensation of peace and joy which entered into their consciousness when the truth of Mrs. Eddy's teaching was first revealed to them, and before a deeper study of her writings, combined with experience of the obstacles encountered in the endeavor to give practical effect to this teaching, had brought it home to them that the way to God is not along the "primrose path of dalliance." This is not to imply that the peace and joy thus acquired are of necessity transitory, for indeed they become the permanent possession of the true worker in Christian Science, and that in an ever increasing degree. On the other hand, however, it is as little open to doubt that this exalted sense of uplift soon departs from those who, after having been shown the way, hesitate or delay to follow it, so that there are not a few who have had painful personal experience of the accuracy of the poet Whittier's pronouncement,—

O Love divine, whose constant beam
Shines on the eyes that will not see,
And waits to bless us while we dream,
Thou leav'st us when we turn from Thee.

Happily it can be said, that the number of those who turn back after having realized, even in a slight degree, the import of the glorious tidings imparted to this privileged age by Mrs. Eddy, is comparatively small, and of these not a few are glad at a subsequent period to cry "*peccavi*," and to retrace their steps.

But however well-intentioned and honestly desirous to walk aright an individual may be, he must be prepared, especially at the outset, to do battle with those insidious forms of error which would prevent his progress, either by superinducing mental and physical lethargy or by encouraging him to be contented with his present state. In order, therefore, to avoid shipwreck on the one hand against the Scylla of fear, timidity, or supineness, and on the other against the Charybdis of overconfidence and self-satisfaction, it is incumbent upon every would-be Christian Scientist to ask himself, before he embarks upon the open sea whose rocks and shoals lie hidden beyond the horizon of his limited vision: "What are the duties and responsibilities which this voyage will impose upon me, and am I capable and willing to undertake them? Am I prepared to jettison all that threatens the safety of the ship or limits her sailing powers? Have I fully realized that to call myself a Christian Scientist without at least attempting to prove by my way of life that I merit that description in some degree, is an act of dishonesty?" In short, Christian Scientists, both collectively and individually, have to understand that upon them has devolved the sublime obligation of resuscitating and reestablishing all over the earth, even unto its remotest corners, the Christianity pure and undefiled which was lived and expounded by Christ Jesus two thousand years ago; and as the Master realized that the wrong thinking which enjoyed the sanction of ages was not to be overcome by mere words, however eloquent and however inspired they might seem to be, so too must his followers of today awake to a like realization.

One does not become a Christian Scientist merely by assuming that appellation, but the undiscriminating world is apt to overlook this fact, and to presuppose that every one who bears the name is a true exponent, both in theory and in practise, of the tenets of Christian Science. If, therefore, the Christian Scientist really desires to convince his fellow men that Mrs. Eddy's interpretation of the precepts taught by Jesus is the correct one, he must be prepared to prove that the putting of these precepts into practise in accordance with the scientific rules enunciated in that interpretation, is productive of the same beneficial results today as it was in the time of the great Teacher himself.

It is admitted on every hand, even by many who are not adherents of Christian Science, that the followers of Mrs. Eddy order their lives in accordance with a moral standard much in advance of that which satisfies the generality of their fellow men and with which the Christian church has been content, in practise if not in theory, for more than fifteen hundred years. It is the opinion of the public as voiced by the press that the adoption of this improved standard renders Christian Scientists better men, and therefore better citizens, than they were before, and at the same time engenders in them a cheerful confidence and a happy serenity such as this poor, tired, struggling world had hitherto believed to be impossible of attainment, except perhaps by the "sainted" few. In order, therefore, to impress his fellow men still further and so draw them irresistibly toward the source of all good, it is incumbent upon every individual whose name is inscribed upon the banner of Christian Science to take his part in maintaining, or rather in still further raising, this standard, and in proving that not only is it possible to put into constant practise the lofty precepts enunciated in the Sermon on the Mount, however much these may be regarded by many Christians as being too transcendental for actual fulfilment, but that by doing so he advances alike his own personal welfare and that of all mankind.

OBEDIENCE TO RULE.

HARRY I. HUNT.

ALL through the book of Proverbs we find strong emphasis placed upon the value of understanding. The wise teacher again and again urges upon man the necessity for it, as "good understanding giveth favor," he says; and Mrs. Eddy has thrown the light full upon this precept in her statement: "The understanding of Truth and Love, the Principle which works out the ends of eternal good and destroys both faith in evil and the practise of evil, leads to the discernment of the divine idea" (Science and Health, p. 561).

Turning back in thought to our school-days, we can easily recall our early struggles in the study of mathematics. At the very beginning, we were obliged to accept the basic law of addition on faith; and we discovered that by faith in the law and by obedience to the rule laid down, we were soon able to demonstrate that two and two make four everywhere, under all circumstances. As we gained understanding by the practise of the rule, we learned another thing: we did not have to furnish the answer to our problems, since for every problem the solution was already at hand, and as we followed the rule, we were able to demonstrate, to bring out or manifest, the correct result. Obedience to rule was imperative.

Let us apply this illustration to the rule laid down by Jesus, whereby we may work out our own problem of supply, for it is simple and clear in statement, and as abso-

Digitized by Google

lute as any rule of mathematics. Jesus said: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." This is a rule of addition, to be worked out in the order given; namely, we must seek first all rightness, and then mark the sureness of the result: all needful things shall be added unto us. The good things already provided are to be added, not to be taken or sought for or struggled for, but "added unto you," as the result of obedience to the rule.

Could this rule be more clearly stated? Yet we see on every hand the results of not following it. The world is seeking pleasure and wealth, grasping and piling up riches, reaching out for power and place and the things which perish. But are these things added unto those who disregard Jesus' rule? We know they are not. The rule is reversed, and the results are inevitably those described by Solomon when he said, "Poverty and shame shall be to him that refuseth instruction."

In my own experience, I have proved the truth of Jesus' rule. When I first accepted Christian Science, I did not obey it. It seemed to me that as God had provided all good for His children, all that I had to do was to reach out and take it, and I began work along the line of demonstrating supply. Need I say that the reversal of the rule brought the result that might have been expected? Every dollar I possessed was swept away and a staggering burden of debt was piled upon my shoulders. That bitter experience awakened me to the fact that I was not obeying the rule. So I began at the beginning, to search for "the kingdom of God, and his righteousness." As I obeyed the rule, as I sought the durable riches of Truth which "neither moth nor rust doth corrupt, and where thieves do not break through nor steal," I found that all needful things were added unto me. Then it was that I understood the saying of Jesus: "He that . . . climbeth up some other way, the same is a thief and a robber." I had tried to climb up another way; I had reversed the plain and simple rule, and I had robbed myself thereby.

"Seek ye first," is the command, clear, distinct, and easily obeyed, in the light which Christian Science throws full upon the way to "the kingdom of God, and his righteousness." Then, as the result of obedience to the rule, "all these things shall be added unto you."

AGAINST DISCOURAGEMENT.

FLORENCE STRATTON WEAVER.

In considering St. Paul's statement, "There is therefore now no condemnation to them which are in Christ Jesus, who walk not after the flesh, but after the Spirit," one recognizes at once that it rebukes the habit of condemning others, but he may not perceive that it further rebukes the habit of self-condemnation. Sometimes we are kinder to others than we are to ourselves. There is a tendency to keep self ever before a bar of justice, where we constantly plead guilty of having "come short of the glory of God." This leads to discouragement, which we are taught in Christian Science is evil.

Such a sense of discouragement once argued with the writer all day long, but it was held somewhat in abeyance until about eleven in the evening, when every outlook seemed dark and forbidding. Help was sought but found unavailable at that hour, and the work had to be done alone. Then came the thought, "I'll take my stand for God; I know that He is the center and circumference of my being." A passage from "Miscellaneous Writings" also came which proved a beacon of light; namely, that Christian Science "is not a search after wisdom, it *is* wisdom: it is God's right hand grasping the universe,—all time, space, immortality, thought, extension, cause, and effect; constituting and governing all identity, individuality, law, and power" (p. 364). Almost instantly light came. Before this it seemed that it would take hours to gain a sufficiently clear sense to make it possible to do needed work for others, but now it was done quickly and joyfully, and the writer retired with an abounding sense of the allness of God.

We may always know that discouragement comes from a mortal material sense of things, for, as Mrs. Eddy has said, "Darkness and doubt encompass thought, so long as it bases creation on materiality" (Science and Health, p. 551). Discouragement is therefore only a call to "go up higher." As in Jacob's experience, there stands by us in every dark hour a means of ascent, a ladder by which we can mount up to God, Spirit, and be at peace. It is that knowledge of the truth which, as Jesus declared, makes free. Escape from the manacles of discouragement is possible to all, and it is effected in the scientific denial of the belief of a self apart from God.

LARGER GRATITUDE.

GEORGE C. PALMER.

At our Wednesday meeting in a small place in the province of Saskatchewan, we do not have large gatherings, our society having been but recently organized, and while engaged recently in the very necessary preparatory work for this evening meeting, I felt for a moment that I had no great demonstration of healing to give, and consequently nothing to say. Then this phrase from our Lesson-Sermon flashed across my thought: "I will mention the loving-kindness of the Lord," and I saw it was my bounden duty to express my gratitude for all that Christian Science has done to make existence harmonious and joyful.

Then I realized that it is exactly this mental attitude which gives expression to gratitude, which enables us to receive more, and thus to continue our giving, for the very same reason that a mirror which reflects the sunbeam is able to continue reflecting it. If it absorbed the ray of light falling upon it, no reflection would be in evidence. A very helpful article in the *Sentinel* once explained the "river of water of life" mentioned in Revelation, as the constant flow of the thoughts of divine Love to man; that is, when we express our gratitude, we become a channel for the outflow of divine Mind. Any vacuum, so to speak, which may result from our giving, is instantaneously filled with good from the never-ceasing flow of Love. Thus is it with all true giving. Giving and receiving are one, for God, ever-present Love, is the source of all being.

Since the moon gives again the sunlight, it is seen by mortals who dwell in darkness, and thus as we reflect the light of Truth we have our place in God's universe; otherwise, though we may have a seeming existence, we emit to others no effulgence, no proof of our divine sonship. Here it is well to recall our revered Leader's words (Science and Health, p. 298): "As a cloud hides the sun it cannot extinguish, so false belief silences for a while the voice of immutable harmony, but false belief cannot destroy Science armed with faith, hope, fruition."

We all know with what satisfaction the gentle Melanchthon heard of the burning of Servetus, and with what zeal he defended it. The truth is, the notion that an intellectual recognition of certain dogmas is the essential condition of salvation lies at the bottom of all intolerance in matters of religion. Under this impression, men are too apt to forget that the great end of Christianity is love, and that charity is its crowning virtue; they overlook the beautiful significance of the parable of the heretic Samaritan and the orthodox Pharisee; and thus, by suffering their speculative opinions of the next world to make them uncharitable and cruel in this, they are really the worse for them, even admitting them to be true.—WHITTIER.

SELECTED ARTICLES.

[Frederick Dixon in *London Budget*, London, England.]

The statement of a contributor to the effect that the discovery recently claimed by Sir William Ramsay, that matter was the creation of energy, supported the teaching of Mrs. Eddy in Christian Science, is, if you will permit me to say so, true with certain reservations. It is true, that is to say, of her explanation of the relative facts of physical nature; it is not coincident with her teaching of the absolute. There is nothing new in theory in Sir William Ramsay's discovery. Theoretically, in one form or another, it is as old as Plato and the Vedanta, or as young as Berkeley or Professor Ostwald. What is new in it is that he claims to have demonstrated the process by which the energy of Professor Ostwald resolves itself into matter. The postulate of the famous German chemist was put with delightful lucidity in an address delivered some years ago to a congress of natural scientists, assembled at Lubeck, in the following words: "Matter is only a thing imagined, which we have constructed for ourselves, very imperfectly to represent the constant element in the changing series of phenomena. Now that we begin to understand the actual—that is, that which acts upon us—is only energy, we have to ascertain by tests in what relation the two conceptions stand, and the result is without a doubt that of energy alone can reality be predicated." Sir William Ramsay now claims to have demonstrated by actual experiment how matter is produced by energy. Christian Scientists might accept this theory very much in the manner Mrs. Eddy accepted the theory of evolution when she wrote, on page 547 of "Science and Health with Key to the Scriptures," "Darwin's theory of evolution from a material basis is more consistent than most theories." That, however, would not affect the real crux of the situation, which is not the unreality of matter regarded as a phenomenon produced by mind or energy, but the unreality of the noumenon of mortal mind or energy which produces the phenomenon of matter.

The unreality of matter, regarded as phenomenon produced by mind or energy, is a theory as old as the hills in the proverb; a fact of which the simple exponents of common sense, who assume the ignorance of Mrs. Eddy in a manner delightful if only for its self-exposed ignorance, are blissfully unconscious. The Vedantist avowed it in the doctrine of Maya when he described matter as an illusion. That is what Plato insisted upon in his theory of participation. That was the root of the struggle between the medieval Conceptualists and Realists, and Abelard is not thought to have had the worst of his reply to the doctrine of Anselm. That was at the bottom of Berkeley's dissent from Locke, and that is the gravamen of Professor Ostwald's lecture. When all is said and done, it is something perilously near the battle over the ass' shadow, and Huxley, with his supreme common sense, pointed this out when he wrote, "If the hypothetical substance of mind is possessed of energy, I, for my part, am unable to see how it is to be discriminated from the hypothetical substance of matter," a statement anticipated by Mrs. Eddy when she wrote on page 409 of Science and Health, "Mortal mind and body combine as one."

The Vedanta, in declaring that the divine Mind was unconscious of the illusion of matter, but that this illusion was produced by the intermediary proceeding from this divine Mind, linked matter on to Spirit, just as firmly as Plato when he explained that an idea was something existent in a soul, or Berkeley when he made Spirit the ultimate of matter. The Gnostic of the second century was really in precisely the same quandary; and so is Professor Ostwald when he makes matter the result of energy. The one exception is Jesus of Nazareth. "The Son of the Virgin-mother," Mrs. Eddy writes on page 534 of Science and Health, "unfolded the remedy for Adam, or error; and the apostle Paul explains this warfare between the idea of divine power, which Jesus presented, and mythological material intelligence called *energy* and opposed to Spirit."

The difference between the gospel of Jesus the Christ and the gospel of even the wisest of men governed by human intelligence is just what Mrs. Eddy here points out. Human wisdom, judging through its finite material senses, having eyes and seeing not, and ears, yet hearing not, must find a cause of evil. This is the problem of the ages known as the origin of evil. The human mind making, after the manner of Sir William Ramsay, the test of the crucible the test of all things, would like to find a chemical formula for mind or energy. The consequence is that it devotes all its energy to the so-called laws of natural science, declaring quite unblushingly that this science is confined to the examination of secondary causes or physical effects, and that nothing is or can be known of primary causes or spiritual effects. This it terms Christian; but it is far nearer the frank materialism of the Confucian maxim that nothing is, or fortunately can be, known of the Spirit, than to the teaching of Jesus of Nazareth that "God is a Spirit: and they that worship him must worship him in spirit and in truth."

Jesus of Nazareth was not half such a visionary as the modern chemist, nor did he ask humanity to take anything like so much on trust. From the beginning of time, there has been no such demand made on man's faith as the acceptance of the atom as a scientific axiom, or the predication of the electron or the ether wave. Jesus of Nazareth did not trouble about explaining the laws of matter; he simply broke them, and so proved they were not laws. What he did trouble about was demonstrating the law of God, the law of Spirit, the law of divine Principle. Either the Bible is a record of historical and scientific truth—in which case Christianity is as demonstrable a religion as it was in the first century—or else it is a mere haggadah of mystical ethics, and Jesus of Nazareth is of as much, but no more, account than Confucius or Lao-tsze, Buddha or Zoroaster, Plato, Epictetus, or Mahomet.

Two and a half centuries ago, the apple fell in the garden at Woolsthorpe which started in the active mind of Isaac Newton the theory of gravitation. But nineteen centuries ago, Jesus of Nazareth walked on the face of the Galilean lake, and proved gravitation was not a law. For centuries men have been accounting for the composition of substance, and for years past, until their calculations were confounded by the discovery of radium, science had insisted on the acceptance of the atomic theory with the dogmatism of Torquemada. But Jesus fed the thousands on the shore of Galilee with a barley loaf and a fish or two. "How," asks Mrs. Eddy on page 90 of Science and Health, "were the loaves and fishes multiplied on the shores of Galilee,—and that, too, without meal or monad from which loaf or fish could come?" The medical profession of all times has explained that life is in matter, that once life was extinct the body could not be resuscitated; in short, that, as Thomas Ingoldsby said of the abbot, in the ballad, the dead man is as "dead as any nail that is in any door." Another Thomas, Huxley, of that ilk, would have pointed out that only the common-sense philosopher would have thought of saying that there was no life in a nail or a door. Jesus of Nazareth, speaking of the Christ, declared, "I am the resurrection, and the life: he that believeth in me, though he were dead, yet shall he live." He raised the widow's son in the gateway at Nain, Lazarus in the garden at Bethany, and the daughter of Jairus in the house by the lake.

The truth of course is, that Jesus knew perfectly well that matter was only what the Vedanta calls an illusion, Plato an idea, Berkeley a mental phenomenon, and Ostwald a result of energy. He stated the matter theoretically with illuminating clearness when he said, "If ye have faith as a grain of mustard seed, ye shall say unto this mountain, Remove hence to yonder place; and it shall remove," or when he declared,

Digitized by Google

"If ye had faith as a grain of mustard seed, ye might say unto this sycamine tree, Be thou plucked up by the root, and be thou planted in the sea; and it should obey you." And he demonstrated it with unerring effect in healing the sick, raising the dead, feeding the multitude, finding the tribute money, walking on the water, and in all his miracles.

It is perfectly true that orthodox theology avoids this crux by insisting that Jesus was God and the miracle supernatural, but the second contention is bad philology, bad science, and bad history, while the first, even if it were true, which Christian Science denies, would still remain a perfect example of the art of begging the question. Jesus of Nazareth, Christian Science says, was human inasmuch as he was the son of Mary, but inasmuch as he realized the Christ, Truth, and demonstrated his knowledge completely, he was also Jesus the Christ. This understanding of Christ, Truth, raised him above the evidence of the senses, showed him the pure relativeness and significance of all secondary causes or physical effects, and endowed him with that understanding of the law which is inviolable, of substance which is spiritual, and of cause which is Principle. As this understanding of the Christ permeated the understanding of the man, the mind of Jesus gave place to the Mind of Christ, until, little by little, the human Jesus vanished in the Christ. The Christ was not, of course, visible to material gaze, for humanity having eyes sees not; nevertheless it was there for those with eyes to see, since Jesus said, "Lo, I am with you alway, even unto the end of the world," the extinction of the illusion of matter.

Even if this had not been so, orthodox theology would have been left begging the question. Not once, but in all the gospels, Jesus explained that those who believed in him could heal the sick. Those who expunge this Scylla, as it appears in Mark, from the gospel chart, on the ground that it is an interpolation, are welcome to do so, though they must insert the Charybdis of the other passages which must go with it on the same evidence. When they have done this, however, they will not be an atom better off, unless they are prepared to Bowdlerize the whole New Testament. Again and again, without reference to age or country, Jesus declared that those who believed in him would be able to do his works, and so he, and no other, made the ability to perform miracles the test of a Christian.

What is a miracle? A teacher in a Sunday school once defined it as something a man could not do, and was promptly confounded by a smaller learner who inquired whether Peter and Paul were men. With a less excusable ineptitude, Hume committed himself to the definition that it was a violation of natural law by special interposition of the Deity, only in turn to be confounded by the inexorable logic of Huxley, that a violated law never had been law. If physical law is a law of God, the last thing that could violate it is an appeal to divine Principle. If an appeal to divine Principle can violate it, it is obvious that it is not a law of Principle, but only a relative human acceptance of law, founded on ignorance. The history of natural science is a history of broken law. Sir William Ramsay sits enthroned today on a pyramid of broken law, and with a rather discredited set of court officials shivering before him, in the shape of the elements.

Jesus of Nazareth, preaching the gospel of the Christ in Galilee and Judea, bade men make their own this teaching which the Greek text of the New Testament describes as a full, exact, or scientific knowledge of God. Finding, however, that they had eyes with which they could not see, he was driven to tell them that if they could not believe for the word's sake, they must believe for the very works' sake, and so he made the miracle not a violation of divine law, but a divinely natural object-lesson of the inviolability of that law. If, Huxley once said, I met a centaur in Piccadilly, I should not scream miracle, I should only recognize that my view of anatomy needed rectification. Unfortunately, one Huxley does not make a diocesan or a scientific congress. Hume's definition was really the definition of orthodox theology.

As a consequence, there grew up that conflict between reason and revelation which has been the disgrace of Christendom. The theologian described the speculations of the natural scientists as infidelity, and indulged in sermons in which Darwin was likened to an ape, while orthodox scientists—for science can be as orthodox and dogmatic as theology—retaliated with contumely and references to "the Gadarene pig affair." Had the churches taken their stand on the Science of the Christ, spurned the attempt to divide the seamless garment by separating the command to preach the gospel from the command to heal the sick; had they based their science not on the Augustine exegesis of Genesis but on the plain teaching of the New Testament; had they, in a word, founded their doctrines on an acceptance of primary or spiritual facts, they would long since have induced the natural scientist to take his eyes off matter and to come up higher. The salvation of the world will have to be found, not in a crucible, but in an effort to walk in the footsteps of Christ, to "hold thought steadfastly," as Mrs. Eddy has written on page 261 of Science and Health, "to the enduring, the good, and the true;" in other words, to serve God, divine Principle, with all your heart, and soul, and mind, and strength. Then that which is born of the flesh will vanish before that which is born of the Spirit, for, in the words of Mrs. Eddy on page 266 of Science and Health, man "does not cross the barriers of time into the vast forever of Life, but he coexists with God and the universe."

[Editorial in *Nashua* (N. H.) *Telegraph*.]

By the special act of the Massachusetts Legislature approved by Governor Foss, the famous Eddy will case has been ended in the complete carrying out of the terms of Mrs. Eddy's bequest to The First Church of Christ, Scientist, in Boston, the "Mother Church" of her foundation. As the validity of the will, outside of the narrow issue of the legal competence of the trustees named, had been affirmed by the unanimous decision of the supreme courts of our own state and Massachusetts, the act of the Legislature was simply the legalization of the reasonable preference of the testatrix in the provision of trustees of her own selection instead of a trustee appointed by the Massachusetts supreme court.

The trustees now authorized by the Legislature are the Christian Science Board of Directors in charge of all the spiritual and temporal affairs of The Mother Church, an unincorporated body with many thousand members and many hundred branches, each of which is a separate organization with its own form of government. They are the trustees expected and desired by Mrs. Eddy in bequeathing her valuable real estate in Boston and Newton to The Mother Church in trust to keep in repair the church building and parsonage with authority to devote the balance of the income of the estate and such portion of the principal as may be deemed wise "for the purpose of more effectually promoting and extending the religion of Christian Science as taught by me."

The trustees managing this property during the closing years of the life of Mrs. Eddy were advised by counsel not to make a conveyance to The Mother Church without a court order, in view of an old Massachusetts statute providing that "the income of the gifts, grants, bequests, and devises made to and for the use of any one church shall not exceed two thousand dollars a year." It was undisputed that the income from Mrs. Eddy's real estate greatly exceeded this limitation. The transfer of the property was further embarrassed by the challenging petition of the heirs at law of Mrs. Eddy, her son and adopted son, who sought to have this bequest set aside as invalid on several grounds.

Without entering into the maze of this case or attempting

Digitized by Google

to follow the course of the contests, we shall note simply the pith of the determinations of the Massachusetts supreme court. A gift to a church is a gift to a charity. The building and repair of a church and the repair of a parsonage are charitable objects. A gift directly to a church for its own benefit in excess of the limitation of the statute is prohibited. The provision by Mrs. Eddy observed the vital distinction between an absolute gift and a trust. It was far broader in its intent than a gift to a particular ecclesiastical organization for its special needs. It was the founding of a trust of comprehensive scope for spreading the tenets of faith taught by the testatrix over an area more extensive than could possibly be gathered in one congregation. The promotion of "the religion of Christian Science" is as definite as many donations which have been upheld as public charities. The support of a branch of the Christian religion being the declared purpose of the trust, and this being a public charity, the bequest is not invalidated by the disqualification of the particular trustee named.

In view of this decision that the estate of Mrs. Eddy should be administered by a trustee in accordance with the directions in her will, the Legislature has proceeded to qualify the trustees she preferred for the reasonable satisfaction of the church which she founded. There is no favoritism for Christian Science in the assurance of equity. The estate conveyed for the purpose of extending the teachings of Mrs. Eddy was contributed by her followers for this purpose, and she had a clear right to dispose of it to meet their expectations. The interference of the sons in view of the liberal settlements made with them, and their absolute renunciation of all further claims, was fitly disappointed.

[J. M. Welch in *Jacksonville* (Fla.) *Times-Union*.]

It is with no desire to start a religious controversy with our brother that I reply to an evangelist's statements in regard to the teachings of Christian Science. In "Science and Health with Key to the Scriptures" by Mrs. Eddy, is a brief exposition of the important points of Christian Science, beginning: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life," etc. (p. 497). This does not repudiate any of the teachings of the Bible when interpreted spiritually. In fact, the Bible cannot be understood any other way, for God is Spirit, and we must worship Him "in spirit and in truth." There always is danger in making excerpts from any writing, in separating them from their context, for often the meaning of the whole is entirely changed and distorted.

To explain all the excerpts in the article would take up too much time and space. I can only advise a wholly unbiased reading of the Christian Science text-book to find it one of the most logical and easily understood books. Mrs. Eddy did not claim to have originated Christian Science, for this healing truth has always existed. She simply rediscovered the Christ-healing which had been covered up through many centuries of unfaith by false theology and worldliness.

In quoting the Scriptures the evangelist calls attention to the following: "Wherefore, as by one man sin entered into the world, and death by sin; and so death passed upon all men;" also, "If we say that we have no sin, we deceive ourselves, and the truth is not in us." To the carnal or dust man, sin and death are awful realities, and it would seem a lie to him to say that there is no sin and death, because he cannot cognize the things of Spirit and is not the true man. Christian Scientists are striving daily to put off this carnal man, or "old man," as St. Paul describes it, by knowing the truth about it, which makes them free from the enslavements of its beliefs. Christ Jesus came to show that this man was the unreal or temporal man, which abode not in Truth; and that the spiritual man in God's image and likeness was the real and eternal man. Jesus passed through this seeming death to show that it could not destroy the real man, calling it an enemy which would be the last to be destroyed. As death came by sin, so will death go when there is no sin in us to die. Jesus raised Lazarus from the dead, knowing that he had not died. If he had believed for a single instant that God had sent death to Lazarus, he would not and could not have worked against God's will by raising him from this seeming death or have called it an enemy.

As to the atonement (or at-one-ment) with God, the Christian Science text-book gives the following: "Through demonstrating his control over sin and disease, the great Teacher by no means relieved others from giving the requisite proofs of their own piety. He worked for their guidance, that they might demonstrate this power as he did" (p. 25). Then, "While we adore Jesus, and the heart overflows with gratitude for what he did for mortals,—treading alone his loving pathway up to the throne of glory, in speechless agony exploring the way for us,—yet Jesus spares us not one individual experience, if we follow his commands faithfully" (p. 26). It is this truth which today does the healing. If we would only stand aside with our unfaith and false beliefs, we could live near enough to the great Nazarene to lay hold upon this truth and do the works he did.

An earnest reading of Science and Health will answer all the other statements made by the evangelist, especially the one in which he says, "It may be science, but Christian people should never allow it to disguise itself as Christian." It is only by doing the works that Christ did that we know it is of Christ. In fact, all the Christian Science churches in the world are monuments of this healing truth, and in large part have been built by offerings of gratitude from those healed of so-called hopeless suffering and sin, when all other remedies had been tried and had failed.

[George Shaw Cook in *Champaign* (Ill.) *Gazette*.]

In a recent issue Mr. Spooner takes exception to my use of the verse from Philippians, "Let this mind be in you, which was also in Christ Jesus," claiming that this passage should no more be connected with the healing of sickness than with the social mission of the church. Perhaps it would be still more accurate to say that this mind "which was also in Christ Jesus" should no more be associated with the healing of sickness than with the healing of sin, and *vice versa*. This, broadly speaking, covers the entire mission of the Christian church, and Christian Scientists believe that the Mind "which was also in Christ Jesus" is the only real basis for the hope of mankind to be saved from sickness as well as from sin. Mrs. Eddy says on page 135 of Science and Health: "The same power which heals sin heals also sickness. This is 'the beauty of holiness,' that when Truth heals the sick, it casts out evils, and when Truth casts out the evil called disease, it heals the sick."

Those who have studied the text-book of Christian Science know that its author does not minimize the sacrifice made by Jesus that he might become the Wayshower for mankind. In the chapter, Atonement and Eucharist, Mrs. Eddy, referring to the crucifixion, says: "The burden of that hour was terrible beyond human conception. The distrust of mortal minds, disbelieving the purpose of his mission, was a million times sharper than the thorns which pierced his flesh. The real cross, which Jesus bore up the hill of grief, was the world's hatred of Truth and Love" (Science and Health, p. 50).

Christian Science teaches, however, that even so great a sacrifice as this would have been without avail had not Jesus in that experience proved the efficacy of Christ to overcome even the "last enemy."

Even the Christian is but half regenerated, when the grace of God has not its out-blooming in gentleness, courtesy, and kindness in the whole intercourse of life.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

KNOWLEDGE IS POWER.

AN editorial writer in the *Chicago Inter Ocean*, in commenting upon the efforts of organized physicians to secure legislation which will bar from the work of healing the sick all systems other than the one which they practise, says: "There is one fact that the advocates of statutory compulsion to what they regard as the only medical orthodoxy, would do well to remember. There is nothing, except his religion, which the average man regards as so entirely his own business as his health and that of his family. That is why legislative efforts to repress what the self-styled 'orthodox' call 'quacks' have always failed." He also says: "There is too much sectarianism among physicians—too much of a tendency to condemn because of a difference in theories or 'systems' and regardless of beneficial results."

This writer might have gone farther and said the empiricism of medical science—so called—is so apparent to even the layman that the advocates of the self-styled "regular" system presume too much upon the credulity of the people when they base their demand for such legislation upon the theory expressed by a certain physician, who, speaking in a representative capacity, said: "The public must be educated to take our advice in medico-political matters as they do our pills and powders, without knowing of their contents or effects, but with an abiding faith in their potency."

If the regular school physicians were healing every one of their patients, the public would soon recognize this as a fact and legislation would not be needed to compel every sick person to take "regular" treatment. On the other hand, it is being proved every day that Christian Science heals the sick, and a very large proportion of those who have embraced this religion are persons who have been healed by it after fruitless attempts to be healed through medical treatment. The unescapable conclusion to be drawn from this fact is that there are hundreds of thousands of persons living today in perfect health who, had they not turned to Christian Science for relief, would now be "incurably" sick or in their graves.

Do legislators who are asked by the doctors to pass such laws as will keep the people from seeking to regain their health through Christian Science, realize that these laws would be not only a violation of the rights of the people, but also a denial of a possibility of life and health to those who have been given up by a system of which so learned a man as Dr. Mason Good has said: "The effects of medicine on the human system are in the highest degree uncertain; except, indeed, that it has already destroyed more lives than war, pestilence, and famine all combined"?

Since Science and Health was first given to the public, in 1875, its teachings have been derided and the possibility of healing the sick through "effectual fervent prayer" scouted; and this notwithstanding the Master's commission to his followers of every age to carry on his own beneficent ministry to those in need of salvation from sickness as well as sin, and the apostle James' declaration, born of the assurance which demonstration ever gives, that "the prayer of faith shall save the sick, and the Lord shall raise him up." But every case of healing in Christian Science is the strongest kind of proof that it is indeed the truth which makes free, and day by day men and women everywhere are throwing off the yoke of bondage, claiming the health and happiness which is man's divinely bestowed heritage. "Ignorance, pride, or prejudice," as Mrs. Eddy has said, "closes the door to whatever is not stereotyped" (Science and Health, p. 144); but she adds a prophecy which every day is bringing nearer to a glorious fulfilment: "When the Science of being is universally understood, every man will be his own physician, and Truth will be the universal panacea." Faithfulness on the part of every Christian Scientist will do much to hasten its accomplishment.

ARCHIBALD MCLELLAN.

THE FATHER'S VOICE.

RECENT events recall vividly the Scriptural account of Elijah's struggle with the entrenched beliefs of an idolatrous people, and his further struggle with the so-called destructive forces of nature, when he sought refuge from the wrath of Jezebel in a cave on mount Horeb. Before this, in an hour when spiritual law had triumphed over mortal belief, the prophet had invoked the material sense of justice and put to death five hundred priests of Baal, hence his flight from the consequences of his rash deed. Truth did not, however, forsake him who had been loyal up to the limit of his understanding, and so a new lesson awaited Elijah.

We read that in this wild mountain fastness a storm arose,—"a great and strong wind rent the mountains, and brake in pieces the rocks;" then came an earthquake, and after it a fire. We are also told that God was not in any of these, but was made manifest to the prophet by "a still small voice," at the sound of which Elijah came forth from the cave and communed with God. In Science and Health we read that "the Soul-inspired patriarchs heard the voice of Truth, and talked with God as consciously as man talks with man" (p. 308). This was clearly Elijah's experience as he came forth unharmed from the dread ordeal, which has its lesson for humanity today.

Until very recent times it has been customary to speak of the most distressing and even terrible experiences, including sickness and death, as divine visitations, but this belief Christian Science entirely repudiates, on the strength of Jesus' teachings and demonstrations. Often did he reproach the people with their lack of faith in God, and he said to those who sought to stop his healing work, that they had never heard the Father's voice. They doubtless attributed all distressing things to God, and did not even listen to hear what God had to say respecting His own law. That Jesus both heard and heeded no one would now deny, and we are told that he calmly slept in the midst of a storm, until called by the terrified disciples, when he stilled it by his declaration of divine law, the law which he always sustained and honored. Contrary to mortal opinion, he never needed to suspend, much less annul, its beneficent operation.

Mrs. Eddy has said, "Peals that should startle the slumbering thought from its erroneous dream are partially unheeded;" and she adds, "Marvels, calamities, and sin will much more abound as truth urges upon mortals its resisted claims; but the awful daring of sin destroys sin, and foreshadows the triumph of truth" (Science and Health, p. 223). In the 50th Psalm is given in majestic metaphor the call of God to the whole earth; then the coming of the light to human consciousness, as we read: "Out of Zion, the perfection of beauty, God hath shined." God calls to the heavens above and to the earth, "that he may judge his people." As the demands of Truth are urged, we are told that "it shall be very tempestuous round about him," for error refuses to submit to Truth and disdainfully rejects the law of Spirit which alone can establish and maintain harmony, as when God said, "Let there be light: and there was light."

For long years our revered Leader toiled on, patiently uncovering the baseless claims of evil to place and power, to law and authority, all the while holding before humanity the eternal fact that evil with all its pretensions has no power. Slowly indeed have men come to see and acknowl-

Digitized by Google

edge this, but when all bow before the supremacy of Truth and Love, the new heaven and the new earth will appear, in which there is neither sin, sorrow, death, nor destruction. The material sense of man and the universe must give place to the spiritual, and in view of this we may well address to ourselves Peter's question: "What manner of persons ought ye to be in all holy conversation and godliness?"

ANNIE M. KNOTT.

CHRISTIAN UNITY.

EVERY student of historic Christianity must come to see the very great difference between the individualism of Christ Jesus and the individualism of the Protestant movement inaugurated by Huss and Savonarola and put into organic form by Luther and his associates. Further, if he is also a student of Christian Science he will perceive that the individualism of Christ Jesus was scientific. He knew the truth, the law of Spirit, and he grounded his teaching on demonstrable propositions. Luther and his confrères were impelled by a heroic belief respecting the truth, but the thought that a right apprehension of spiritual things could be verified as it was by the Master, had long since been given up by the Christian church; and while the Reformation was the dawn of the day of Israel's return, its one great inadequacy was found in its failure to reestablish the Science of early Christianity.

As a result of this lamentable fact, the history of the Protestant movement has been the story of the clash of two forces, one of which found expression in the assertion and maintenance of the freedom of every man to worship God after the dictates of his own conscience, to become a king and priest unto God on his own account, and if necessary all by himself. The other force found expression through that instinct, as well as practical necessity, for organization which has looked to fellowship and propaganda effectiveness.

The sense of freedom has always meant disintegration to ecclesiastical authority and organization, always tended to break down attempted cooperation. It has led to the multiplied dissensions which have resulted in divisions in the ranks, and consequent defeat, ofttimes, in the day of battle. The right of private judgment in things spiritual is the palladium of Protestantism, the very heart of Christian democracy. Its maintenance is the religious world's one assurance of escape from enslavement to ecclesiasticism and superstition. Nevertheless, it has always conduced to schism and separation, while over against its assertions the call for a social system and for concerted action has grown more and more imperative, and how collectivism can be made effective and individualism be retained is a problem which rests heavily upon many a heroic Christian heart today.

One can hardly take up a religious periodical without finding an article or editorial which presses home the need of unity. The interests of missionary work, the undesirability of propagating sectarian divisions, the waste attending the multiplied organizations for evangelical effort,—all these are dwelt upon, and yet when the impulse of personal freedom, the pride and prejudice of human nature, the superstitious devotion to the literalisms of denominational interpretation, the contented reserve of ecclesiasticism, etc., —when it is remembered that all these are to be reckoned with, the prospect for anything more than superficial unity seems discouraging indeed.

This view of the existing situation gives one a keener sense of the significance of that reassertion of the Science of Christianity which is the distinctive feature of Mrs. Eddy's teaching. However much they may differ in endowment, disposition, taste, and educational development, the moment men have to do with demonstrable propositions, begin to understand and apply a science, that moment their substantial unity finds its beginning. This is well illustrated in the realm of physics. The individualism, the personal independence of thought and action among a body of chemists may be distinctly marked, and yet they are wholly removed from the possibility of contentions and divisions by their common recognition of the authority of the unvarying laws of chemical affinity and reaction with which they have to do and can individually prove.

Christian Science stands for a corresponding Science of Christianity, for the rule and authority of spiritual laws which are to be demonstrated by every individual Christian. The knowledge of spiritual truth which Christ Jesus communicated to his disciples and which he said would make free, constitutes the only scientific basis of unity of faith and practise among Christian believers, and in its reassertion and proof of this fact Christian Science has inaugurated a new era of Christian unity and reform.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

MILL VALLEY, CAL.—In October, 1902, ten persons interested in holding Christian Science services met at Crown Point, Mill Valley, and the regular church services and Sunday school were conducted there for three and a half years. In April, 1906, a small hall in the Keystone block was secured. As anticipated, our attendance increased, and in January, 1907, a society was formed of eight members, and almost at once provision was made for opening a reading-room. Jan. 21, 1908, in spite of unfavorable weather, a full house listened to the first Christian Science lecture given in our town. In the following May, Wednesday evening meetings were instituted. In March, 1909, it was voted to purchase a lot and take steps toward erecting our own building. The opening services were held July 11 of that year. By the close of 1912, all debts being canceled, the society disbanded, legal steps were taken to incorporate as "First Church of Christ, Scientist, Mill Valley, Cal.," and the church was dedicated Feb. 2, 1913. Each forward step brought a greater sense of responsibility, but proved a means of growth and strength as all lines of activity were faithfully entered upon.—*Correspondence.*

OAKLAND, CAL.—The sale of the property of the First Methodist Episcopal church (South) was disclosed by the recording of deeds transferring the church and site at Thirty-fourth and Elm streets to Second Church of Christ, Scientist, which is already occupying the main auditorium of the church. The land has a frontage of 100 feet on Thirty-fourth street and 165 feet on Elm.

Oakland Tribune.

SHREVEPORT, LA.—First Church of Christ, Scientist, held the opening service in its new church home on Grand avenue, Sunday, Feb. 2. This church recently purchased a lot with a cottage on same, which has been remodeled for a church home. The auditorium has a seating capacity for about one hundred people. The reading-rooms are in the same building.—*Correspondence.*

Digitized by Google

CANON CITY, COL.—A few days since I called on the librarian at the penitentiary and had a long talk with him regarding the use being made of our literature. Only a few months since I had sent on five new subscriptions for the *Monitor* to meet the growing demand. The librarian thought that with these additional numbers, which made fifteen copies, he could supply all. The boys certainly appreciate our periodicals, especially the *Monitor* and *Sentinel*, ten copies of the latter coming weekly. The librarian said the present needs were being met, with the exception of the *Journal*, only one copy being sent.

The two subscriptions to the *Monitor* will certainly be appreciated by the inmates and by myself, for I am trying hard to give the boys all our literature they can read, knowing as we do that the seed sown will in due time bring forth fruit. Only a few days since the warden told an editor in our city that Christian Science had done more for the prisoners than anything else, and that some of the inmates, hardened criminals, after knowing and hearing the Science, had become different men. He often says very kind things about our work. I have met the chaplain and he has only nice things to say about the *Monitor*. He often attends our services, but I do not think he has ever remained through the same.—*Correspondence.*

BINGHAMTON, N. Y.—With the purchase of the old George W. Lester residence, opposite the high school, by First Church of Christ, Scientist, the announcement was made that the Christian Scientists will worship in a new home by next winter. The residence will be remodeled as soon as the church can sell its building on Exchange, between Congdon place and Hawley street. The new church will afford a seating capacity for five hundred people; the church on Exchange street now seating one hundred and thirty-five. The Lester land has a frontage of 100 feet and a depth of 325 feet.—*Binghamton Press.*

COLUMBUS, OHIO.—Members of the Christian Science church of Columbus, Ohio, held services at the stone quarry on Sunday [Feb. 9]. Many of the men had never had the pleasure of being present at a Christian Science service, but they all gave it their hearty endorsement and would appreciate it as a permanent service. We all join in thanks to Supt. J. T. Herrick for inviting them.—*Penitentiary News.*

MALDEN, MASS.—First Church of Christ, Scientist, has recently moved its reading-room to larger quarters and to a more central location. Two rooms have been taken in the Ames building, Malden Square, one to be used as a reading-room, the other to be used by the distribution committee.—*Correspondence.*

HOBART, OKLA.—The Christian Scientists have purchased a lot on the corner of Second and Randelette streets and will remodel the house thereon, to be used, for the present, for their regular church services. Steps have also been taken to perfect a church organization.—*Hobart Republican.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 30, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 14, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 1, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

THE LECTURES.

SHEFFIELD, ENGLAND.

An exposition of the teachings of Christian Science attracted a crowded gathering at Montgomery hall, where Bliss Knapp held the close attention of his audience for well over an hour. Counselor Stembridge, who presided, explained that the announcement that he was to occupy this position had given rise to a good deal of curiosity, and he had been assailed by many inquiries as to whether he had forsaken the old Wesleyan church with which he had been associated for so long. His reply was that he was greatly interested in anything which had for its object the directing of public attention to the sacred volume that set forth the teachings of Christ. He was there as a listener, and he hoped as a learner. He felt the more justified in taking the chair there because, when he was in the United States a year ago, the Christian Scientists were extremely kind to him, and he was greatly impressed by the immensity and magnificence of their Mother Church in Boston and their *Monitor,* a clean paper which published nothing unwholesome. From the success of this paper, conducted as it was, and the vigorous and healthy condition of their church,—with a world-wide membership, and its Wednesday night meetings, attended at The Mother Church, Boston, by three to five thousand,—he felt there must be something worthy of serious consideration in their teachings.

Sheffield Telegraph.

DANBURY, CONN.

A large audience assembled in the Universalist church to listen to an address on Christian Science by William D. McCrackan, M.A. The speaker was introduced by Attorney Charles A. Hallock, who said in part,—

Forty years after the close of the American revolution, up in the little town of Bow, N. H., Mary Baker Eddy was born. Her entire life was spent in diligently searching the Scriptures for the healing power of the Word which had seemingly been lost. In 1875 she published her first edition of "Science and Health with Key to the Scriptures." This is the text-book of Christian Science, and is used in connection with, and not in substitution for, as some people are led to believe, the Bible. It is just what its title indicates, a key to the Scriptures. Do not be misled, therefore, by any statements to the effect that Christian Scientists have a Bible of their own. They have not; they use the same Bible as is used by all other Protestant churches.

We have no better argument to make or evidence to offer as to the efficacy of the teachings of Christian Science than its fruits. "A tree is known by his fruits." Today there is hardly a civilized city, town, or hamlet on the face of the globe where Christian Science is not being studied, taught, and practised, and there are hundreds of thousands of people in the world who have been healed either spiritually or physically in Christian Science. So again I say, "A tree is known by his fruits."—*Danbury News.*

CHAMPAIGN, ILL.

Judge Clifford P. Smith delivered a lecture in the Illinois theater, Urbana, to an audience of about four hundred and fifty persons. Judge Smith was introduced by Prof. William Green Male, B.S., LL.B., of the College of Law, of the University of Illinois, who said in part,—

Christian Science makes its appeal to the reason and not in any sense to the emotions. Contrary to what some people have thought, Christian Science will stand the test of logic. You will pardon me if I refer to my own experience in Christian Science, by way of illustration. I received my first introduction to Christian Science about six years ago. My attitude then was one of ridicule and open hostility. In

Digitized by Google

my ignorance I thought that it was a fraud, to say the least. Further than that, I felt this so intensely that I believed myself called to expose the supposed fraud. It was with this object in view that I began the study of Christian Science, taking the Christian Science text-book, "Science and Health with Key to the Scriptures." I felt that if I were going to expose it, it would be essential and necessary to study it, which some have not thought necessary.

Beginning the study of Christian Science in that frame of mind, necessarily I read the text-book critically. I started at the outset to criticize it word by word, sentence by sentence, paragraph by paragraph, and chapter by chapter. Much to my astonishment, as my study progressed, I found less and less to expose, and in the end I found it a logical and practical religion. I found in it the answer to that question propounded by Pilate, nineteen hundred years ago, "What is truth?" And I found that it was a religion which man could use for his benefit in every walk of life and in every activity. I found it a religion which was all things to all men, a religion which was designed to make man every whit good.—*Urbana Courier-Herald.*

LOS ANGELES, CAL.

Virgil O. Strickler delivered four lectures under the auspices of the churches and society of Los Angeles. At the first lecture, given in the edifice of Third Church, C. E. Millspaugh said in part,—

This is an age of progress and proof, not theory, and because of the very fact that Christian Science is a demonstrable and practical religion, thousands are investigating and becoming interested in this great truth which does solve the moral, physical, and financial problems that seem manifest in our daily experiences.

At the second lecture, which was given at Shrine auditorium, Thomas N. Johnson said in part,—

The continued growth of Christian Science throughout the world is today a subject of wide discussion. Various reasons have been given by learned men to account for the spread of Christian Science. However honest these personal opinions may be, those who have been privileged to test its healing power speak from experience when they say that Christian Science actually heals and saves. The lecture board of The Mother Church, instituted by our beloved Leader, Mrs. Eddy, is doing a splendid service for humanity in awakening thought to the possible at-one-ment with God here and now.

The third lecture was given in Wilcox auditorium, Hollywood, and in introducing Mr. Strickler, Edward W. Dickey said:—

In inviting you to hear a lecture on Christian Science you are asked to consider that this Science does not antagonize anything but evil. Evil in all its forms and methods is destroyed root and branch by Christ, Truth, as made known in Christian Science. Christian Science does not say that your church is wrong or that another's method of healing is wrong. It has not come to controvert, but to fulfil all of the law of righteousness; and in doing this it declares that the Christ-way is the only right way to health and holiness. Its message to the world is: "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

At the closing lecture, which was given in Elks hall, San Pedro, Jess E. Stephens said:—

We read in Proverbs: "Happy is the man that findeth wisdom, and the man that getteth understanding." Since the earliest period of which we read in history, men have been striving to gain more wisdom and a better understanding of their creator. One of the things that has ever indicated to man the existence of a divine controlling power is the fact that in every human being there is a certain fundamental knowledge or force derived from somewhere, impelling that person toward right and good. We have named that something "conscience," but the word itself means nothing more than knowledge or understanding. It seems, then, that if through any doctrine or religion, by whatever name it may be called, we reach a better understanding of the divine source from which we have received this fundamental knowledge or conscience, which is always a power for good and never otherwise, then we have reached one step nearer to perfection, and to that wisdom and understanding which maketh a man happy.

More than a million followers of the Christian Science faith gladly testify that through the words of Jesus as explained by that teaching they are receiving that understanding which is with a man daily and sustains him in every emergency. Surely this is sufficient to command our attention and to call for a fair and unprejudiced consideration of such a teaching at our hands. And so, not only to you who are already Christian Scientists, but also to those who like myself are yet only seekers after the truth wherever we may find it, I take great pleasure in introducing the evening's speaker on the subject of Christian Science.

Correspondence.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Albert Lea, Minn.—Idle Hour theater, 3:30 p.m., April 13.
Anaconda, Mont.—Imperial theater, 8 p.m., April 10.
Appleton, Wis.—Congregational church, April 15.
Beaver Falls, Pa.—Lyceum theater, 3 p.m., April 13.
Belvidere, Ill.—Opera house, 8:15 p.m., April 17.
Bloomington, Ill.—Church edifice, Monroe and Prairie streets, 2:30 p.m., April 13.
Chicago, Ill. (Second Church).—Church edifice, Wrightwood and Pine Grove avenues, 8 p.m., April 11 and 12.
Chicago, Ill. (Third Church).—Church edifice, Washington boulevard and Leavitt street, 8 p.m., April 17 and 18.
Englewood, N. J.—Armory, Engle street, 8:15 p.m., April 17.
Erie, Pa.—Masonic temple, 8 p.m., April 15.
Fort Worth, Texas.—Byers opera house, 3:30 p.m., April 13.
Hartford, Conn. (First Church).—Parsons theater, 8 p.m., April 17.
Hornsea, Yorkshire, England.—Public rooms, 8 p.m., April 25.
Houston, Texas.—Church building, 8 p.m., April 14 and 15.
Kalamazoo, Mich.—Academy of Music, 8 p.m., April 14.
Kankakee, Ill.—Public Library building, 8 p.m., April 15.
La Crosse, Wis.—La Crosse theater, 113 S. 5th street, 8 p.m., April 14.
Lime Springs, Iowa.—Star opera house, 8 p.m., April 10.
London, England (First Church).—Queen's hall, Langham place, 8:30 p.m., April 22.
London, England (Fifth Church).—Alexandra Palace theater, 8 p.m., April 10.
Madison, Wis.—Woman's building, 8 p.m., April 17.
New York, N. Y. (Society of the Bronx).—Masonic temple, 1931 Washington avenue, 3:30 p.m., April 13.
New York, N. Y. (Third Church).—Church edifice, 125th street near Madison avenue, 8 p.m., April 14 and 15.
Reno, Nev.—Majestic theater, 8 p.m., April 13.
Sheboygan, Wis.—Opera house, 8:15 p.m., April 15.
South Bend, Ind.—Oliver opera house, 3 p.m., April 13.
Stillwater, Minn.—Auditorium, 8 p.m., April 17.
University of Columbia, New York, N. Y.—Earl hall, University campus, 5 to 6 p.m., April 16.
Watertown, N. Y.—City opera house, 3 p.m., April 13.
Weymouth, Mass. (auspices Quincy, Mass.).—Bates opera house, 3:30 p.m., April 13.
West Chester, Pa.—Church edifice, North High street, 8 p.m., April 18.
Youngstown, Ohio.—Masonic temple, 8 p.m., April 14.

TESTIMONIES OF HEALING.

I wish to express my gratitude for the many blessings which Christian Science has brought to me and mine during the past year. My husband works at a furnace for melting steel, and one day, when he was opening the tap to pour in the hot metal, the gas used in melting it exploded, blowing the material which plugged up the tap-hole all over the side of his face and one arm and shoulder, burning him severely. None of the men could get to him, as he was in such a dangerous place. He said his first thought was "the scientific statement of being" (Science and Health, p. 468), and he also said it seemed as though a hand led him away from the danger.

As it is one of the rules that any one who is injured at the works must go to the company's emergency hospital, he allowed them to dress the wounds the first time, then he came home alone. This was about three in the afternoon; then I called a Christian Science practitioner, and in half an hour she was at our house. She treated him, and he read in Science and Health for a couple of hours, after which he fell asleep. He went to bed at his usual time and did not wake up until morning, the pain being overcome that first night. He went to work in a week, and in less than two weeks shaved the side of his face which had been burned. It healed perfectly, without a scar. Another man burned in the same way, who was under a doctor's care, was in the hospital three weeks, and it was two weeks more before he was able to go to work. We were indeed grateful that we knew of Christian Science and that it is a help in every time of need.

My own healing was from poisoning caused by an ingrowing toe-nail. It spread rapidly, and strange to say it also started on the other foot. I asked the practitioner who treated my husband to help me. I was not, however, healed quickly, as I was not obedient and wanted my own way. The practitioner knew that I understood what my part of the work was, so after she had treated me for several weeks with but very little result, she asked if I were obedient. I told her no, but that I would be. I then put down my own self-will, the desire to look at the foot and to make a reality of the disease, and I was healed in less than a week, and there has been no return of the trouble. I am very thankful for this healing and glad of the lesson it taught me. During this time I saw what self-will and self-justification really mean. I have been helped many times through Christian Science and have not taken a drop of medicine for over five years. I was healed two years ago of measles and acute lung trouble in less than a week. Abnormal growths in my nose were overcome during treatment for something else. They had interfered with my speech, and the family doctor wanted to operate for them, shortly after I became interested in Christian Science, but he soon saw there was no need to use the knife. I am, however, more grateful for the spiritual awakening that has come to me than for all the other things.

My young brother not long ago fell and badly injured his wrist. It was swollen and very painful. I called a practitioner, and during the first treatment the swelling went down. The next day he could use his hand to write, and two days later he could carry his books with it. I was very grateful for this healing, as I know the boy was saved a great deal of suffering.

I am indeed grateful to God, and to our dear Leader. I did not seem to gain the understanding of Christian Science very quickly, and would use will-power; but the faithful practitioner showed me the right way, until now I see something of what the power of divine Love really means. My constant prayer and aim is to put down self and to be worthy to be called a Christian Scientist.

MRS. HAZEL M. RODECKER, Sharon, Pa.

It is with a heart full of love to God and gratitude to our dear Leader, Mrs. Eddy, that I send this testimony. As a last resort I turned to Christian Science, after suffering about eight years with a chronic stomach and bowel trouble; in fact I was almost an invalid since my marriage, being under some of the best specialists in this city but receiving no permanent relief.

I was on a very rigid diet but could retain almost nothing, and was unable to be up a whole day at a time. I am, however, absolutely cured, and can eat everything that is set before me without any bad results whatever. I have not taken a drop of medicine since I started to read Science and Health in 1911, although up to that time I had been taking drugs several times a day. I am not only thankful for my physical healing, but for the spiritual uplift which I am receiving each day. My husband has also been benefited in many ways. We attend the Christian Science services regularly and find much happiness each day in reading the Bible, together with the Christian Science text-book. That "divine Love always has met and always will meet every human need" (Science and Health, p. 494) is my firm belief.—MRS. ROBERT J. WILLIAMS, Cincinnati, Ohio.

It is with sincere gratitude for the many blessings which Christian Science has brought me that I give this testimony. In 1911 my attention was called to it by my brother in New York city, who wrote of the wonderful things it had done and is still doing for him and his family. At his request, I secured a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had no desire to read the book except that it had helped my brother, and his urgent request for me to read it created curiosity as to what it might contain. For this reason alone I started to read it, but I did not attend any church at that time, had not for a number of years, and never read the Bible. What reading I had done years before was of little avail, for it was not clear to me; but after reading Science and Health for a short time, the change that came over me was almost beyond belief. I was indeed born anew. I could say with the apostle, "Old things are passed away; behold, all things are become new."

I had always enjoyed the use of tobacco and indulged in the sociable drink, but strange as it may seem, the desire for both absolutely left me. I did not give them up, I made no sacrifice; I simply found something better. Although a member of a church, I had not attended service for fifteen years; but with the study of Science and Health a desire to hear more of God's word came over me, and I am now attending the Christian Science services regularly. Severe headaches and terrible bilious attacks of frequent occurrence and long standing have been entirely overcome. The headaches were beginning to interfere with my work at the office, but looking to Truth has freed me. What was pronounced to be ivy poisoning was overcome in several hours. This dreaded eruption generally spreads over a large area, but in my case it was overcome when it made its first appearance. I have discarded glasses after wearing them constantly for six years.

Countless benefits have thus come to me, but the spiritual uplift is the greatest of all. I am gradually overcoming all fear of sickness or sin, and feel that were I disposed to go back to some of my old habits or do anything wrong, that a wall as high as the heavens is ever between me and wrongdoing. God's strong arm is encircling me, and Jesus' words, "Ye shall know the truth, and the truth shall make you free," are certainly true in my case. Great benefits have also come to my wife through this grand truth, and we rejoice in having found the true way.

I thank God for all these blessings, and am striving to show my appreciation by right living each day. God bless our dear Leader, Mrs. Eddy, for making plain the teachings of Christ Jesus.—ROBERT J. WILLIAMS, Cincinnati, Ohio.

[Translated from the German.]

Since childhood I had suffered from headaches, which kept growing more severe as time went on, so that I lost all inclination to do my housework and became very sullen. Then other ills were added, including sleeplessness and loss of appetite. After having unsuccessfully tried in a great many ways to obtain relief, I found myself, in March, 1911, under the treatment of a physician for nervous troubles; but my sad condition remained unchanged, and the constant headaches were so distressing that I became almost desperate, and wished I were dead rather than obliged to endure such conditions.

An uncle in America, whom I had informed of my hopeless condition, then advised me to apply to a Christian Science practitioner, for which purpose my husband went with me to Hannover in the beginning of November. No one can imagine how great were my expectations when I started on this trip, after having experienced so many disappointments with regard to the cure of my troubles. The practitioner led me into the understanding of Christian Science and explained to me the wonderful thought of Truth as revealed through our Leader, Mrs. Eddy. The result was, that I recovered strength from day to day, the headaches as well as all the other complaints diminished, and now have entirely disappeared; my appetite improved, and I became buoyant. When I returned home after one week's treatment, I felt like another being, and my husband and children rejoiced more than all others, as they had been greatly affected by my illness.

I feel that I cannot thank God enough for having made me a partaker of the blessings of Christian Science, and for turning all disease away from us, according to His promise, and revealing unto us anew through Mrs. Eddy this wondrous truth. I thank God with all my heart for the faithful help through which I have now become a well woman, so that I am again able to attend to my household duties cheerfully; yes, even with pleasure, and that happiness is once more prevailing in our home.

FRAU RONSTADT, Hohenlimburg i. Westphalia, Germany.

If I should be asked what was the greatest thing that had ever come into my life, I would immediately answer, Christian Science. Ever since I can remember, I had felt that I was living in vain; but if I could only feel that I was doing some good in the world, that would make me happy, I would be satisfied. I held this ideal continually, until February, 1909, when I was healed through Christian Science. I knew at once that this religion was what I had been looking for, and consequently began to study and live the truth so far as I understood it, until it enabled me to overcome fear, worry, impatience, and many other discords.

It is now over three years since I began the study of Christian Science, during which time I have used no other remedy than the truth, and it has never failed me. I was healed of extreme nervousness, due to the effects of an operation, and also, through study of the Christian Science text-book, of a female complaint from which I had suffered for over twelve years. I have had many more proofs of God's power to heal, one of which I will mention. My daughter had been troubled with a throat difficulty since she was three years old, and the attacks became more frequent and severe, until the physician advised an operation. This I refused to have done, so after I took up Christian Science I began to treat her, with the result that she has had only a few slight attacks, which have been quickly overcome.

For all these physical healings I am most grateful, since if it had not been for the urgent need of physical healing, I perhaps would not be enjoying the precious benefits of Christian Science today. But more than all else do I treasure the understanding which I have gained of God and of man as His sinless child, and I shall never cease to be grateful to the dear friends who first brought Christian Science to my attention. I am so glad that I have never at any time entertained a wrong thought of our dear Leader, Mrs. Eddy, but am learning to love her more and more, as I understand her teachings better. I love Christian Science because it has taught me what God is and where to find Him. It has also taught me man's relation to Him, which is more to me than all else; and I want my life to attest my gratitude to our beloved Leader.

MRS. MYRTIE KINKLEY, Orland, Cal.

It is with a heart full of gratitude to God that I give this testimony. I was brought up in the atmosphere of an orthodox church, but I never felt satisfied; there was something lacking. It seemed to me that there was too much of a Sunday religion, and I was looking for an every-day religion, something that I could use in all of life's problems; and I thank God that I have found it in Christian Science.

This truth was brought to my notice about ten years ago through the healing of my wife of gall-stones. At that time I did not take Science seriously, but acknowledged the fact that it was a good thing to have around in case of sickness. Several years later I was taken with a serious attack of fever, and I called for Christian Science treatment. While our family physician had said that it was a very severe case, and that the fever could not be checked, I was healed almost instantly by absent treatment in Christian Science. I had worn glasses constantly for six years, but was healed by reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. I was also healed of stomach trouble of many years' standing, by the same means.

I find the understanding gained in Christian Science a great help in my business, for I can do more work, and do it better, than ever before. I thank God every day that I have the privilege of reading such periodicals as the *Journal*, *Sentinel*, and *Monitor*. In the Home Forum of the *Monitor* there is something to help me through the perplexities of the day's business, and I am indeed very grateful to Mrs. Eddy for the many blessings that Christian Science has brought to me and mine.—E. E. JONES, Chicago, Ill.

With gratitude to God, and also to Mrs. Eddy, I join with my husband in the above testimony. That Christian Science is indeed an every-day religion we have proven beyond a doubt.—MIRIAM JONES, Chicago, Ill.

When I but dimly realized the great Principle of Christian Science, its glorious truth was brought home forcibly to me by a somewhat serious accident which happened to me a few weeks after I had started seriously to study Mrs. Eddy's various works. While cycling down a very steep hill, I lost control of my machine, with the result that I was thrown violently from it. I was picked up unconscious and taken to the nearest hospital, where the doctors said that the injury to my head was rather serious and that they would not be surprised if I did not regain consciousness for two or three days. They described my injuries as concussion, two slight fractures of the skull, and various cuts and bruises on my head and body.

That same afternoon, at my mother's request, a Christian Science practitioner started to treat me, with the result that I regained complete consciousness the evening of the accident, and during the next day I was absolutely relieved of all pain, which at first had been extremely acute. I was only detained at the hospital a little over one week, in order that the wounds should heal, and the doctors and nurses were dumfounded at what they considered an almost miraculous recovery.

The day after leaving the hospital I was able to walk about without the slightest assistance, and only a little over a fortnight after the accident I was able to return to the

Digitized by Google

horticultural college where I am studying, perfectly recovered, and in an absolutely fit condition to do digging, etc., in the gardens, and to take eight lectures a week. Since then I have been a sincere student of Christian Science, each day receiving more happiness and enlightenment from the study of it, and being able to overcome for myself lesser ills than the one mentioned. Here I would like to express my great thankfulness and deep gratitude for this proof of God's love and omnipotence, and also for Mrs. Eddy's writings, which have been the means of bringing to my understanding the wonderful truths taught by Christ Jesus and now restated in Christian Science.

HELENA T. FERGUSON, Bexhill-on-Sea, Sussex, England.

I did not come into Christian Science through physical healing. My next-door neighbors were Scientists, and they asked me to go to a Wednesday evening meeting. I did so, and hearing the testimonies, I thought there must be something in Christian Science, for surely no one would give such testimonies if they were not true. I had had many troubles, and I began to think if there was a God at all He was very unjust. Among other things my eyes troubled me, and I decided that I would see if I could not get along without glasses. Through the understanding gained from Science and Health I have never used them since, and can see better than ever before, for dressmaking is my chief occupation and I have to use my eyes a great deal. My disposition is much improved also, and many of my friends have noticed the change. I am indeed grateful to find an ever-present help, and I now realize that God is All. I am thankful that our dear Leader has given us this light through her books.—JULIA DULMAGE, Denver, Col.

In the spring of 1911, while working on a building, a heavy stick of timber fell on my foot, and on removing my shoe I found the foot badly injured. I bathed it and applied a material remedy, but it was very painful, and for two nights I did not sleep. As the foot kept paining me, and was badly swollen and discolored, on the afternoon of the third day my wife asked if I was willing to have Christian Science treatment. I said I was, so she telephoned to a practitioner, who came to see me at four o'clock in the afternoon. She talked with me for an hour, then said that she would give me absent treatment that evening. I was healed during that treatment, and the swelling and soreness entirely left my foot, for which I am very thankful.

ALGERNON W. PEIRCE, Feeding Hills, Mass.

[Translated from the German.]

A sense of deep gratitude is the motive that prompts me to tell of the blessings which I have received through Christian Science and through the revelation of divine Love. When some two years ago I first heard of this wonderful teaching, I was sick in mind and body. I had been suffering for years with very severe pain caused by an abdominal trouble, and although I hardly ever was without medical help and did not lack the opportunity for resting, the trouble increased in severity as time went on. To my sense of fear were now added mental depression and discouragement as well as other ailments. I suffered frequently with a throat trouble and swelling of the legs, and hardly a day went by without my experiencing pain. To make the measure full, a lung trouble manifested itself, so that I gave up all hope of recovery. In order to relieve the latter, my physician resorted to powerful remedies, besides which a change of climate seemed necessary every year; yet it all proved of no avail. I may say here that I often wished death would relieve me, for a life so full of sorrow and sickness seemed not worth living.

In my greatest need I experienced God's help, for some dear people told me about Christian Science. We lived in Hannover at that time, where I could attend the Wednesday evening meeting and Sunday service. I also read much in *Der Herold der Christian Science*, but although I earnestly sought God in my distress, I did not seem to be able to understand the teaching at first, everything being so different from what I had been taught. From the start, however, I felt very much inclined toward going to church, and I soon found that I could not get along without attending the services regularly. It was my privilege to do so for a year and a half, then we moved away; but I would like to state here that the hours spent in that Christian Science church were the most inspiring of my life. How many wonderful things it has been my good fortune to hear and to assimilate there! I am unspeakably grateful to God for having led me to the true understanding of man's being.

All my troubles have disappeared without further medical help. After I gained some understanding of the Christ-teaching, I immediately began to make demonstrations along lines such as I would find described in *Der Herold*, and till this day I have not been laid up even for a day. I am also able to make long walking tours without experiencing the slightest pain; in short, I am in good health. I had four treatments in Christian Science for a severe ailment of ten years' standing, and this very ailment, which had seemed to us the most serious one, disappeared readily through the action of divine power, before which the greatest error vanishes into nothingness.

Now, every day is beautiful, and rich with blessings for me, especially since it has been given to us to read the text-book in our own language. Only hereby can we estimate the magnitude of the good for which we are indebted to Mrs. Eddy. It seems impossible for me to express in words my gratitude to God. May many of my dear fellow beings find their way to Truth.

FRAU ANNA GOELLRICH, Bremen, Germany.

Until I found release from the burden of sorrow through my healing in Christian Science, I could not realize the truth of these words of our Saviour: "Come unto me, all ye that labor and are heavy-laden, and I will give you rest. . . . For my yoke is easy, and my burden is light." After the passing on of my young husband I learned in divine Science of "the deathless reality of Life" (Science and Health, p. 487); also that Life, Truth, and Love are the divine reality, while sin, sickness, and death are the unreality, the evidence of which Jesus destroyed through his spiritual understanding of being and its laws. The Comforter has come, "even the Spirit of truth," to my consciousness, and I am most of all grateful for this spiritual uplift. Through the application of the truth I have been healed of severe headaches, to which I had been subject all my life. For all who must cope with business conditions and problems I want to testify that the truth, when rightly applied, always opens the way, and divine intelligence will direct us aright, no matter what our problem may be. I am indeed thankful for Christian Science, and grateful to our Leader, who through love and self-sacrifice has again brought the light to darkened human sense. It is our blessed privilege in this age to know that, whatever the condition to mortal sense, Christ, Truth, will lead us into health, harmony, and happiness.

OLIVE L. SPENCER, Los Angeles, Cal.

I have so many things to be grateful for in Christian Science that it would be difficult to enumerate them all, but I would like to relate a few of the demonstrations that have been made in our family. For several years I had attacks of throat trouble which were painful in the extreme, so that it was difficult for me to swallow or speak. One spring, when I was among people who knew little or nothing of Christian Science and I could not communicate with Scientists, the old trouble attacked me, and I had to meet it

Digitized by Google

alone; but it was completely overcome in a short time and has never reappeared.

One evening my husband manifested severe symptoms of a fever, and as he had been through this illness once before, there was much fear. We asked for help from a loving practitioner, and my husband passed a peaceful night; that was the last of the error. At another time my little sister was wonderfully helped in an attack of measles, and though neighbors predicted disastrous results from the fact that she used her eyes freely, sat and sewed in the bright sunshine, her recovery was speedy and her eyes uninjured.

I have been instantaneously healed of severe headaches, but though that tendency is not entirely destroyed, I know it will be as my understanding of Truth increases. I am so glad that I have known Christian Science nearly all my life, and that I know practically nothing of the laws of *materia medica* through personal experience. I am indeed grateful for the many blessings that have come to us through the teaching and life of dear Mrs. Eddy.

MRS. GERTRUDE E. SANDVEN, Minneapolis, Minn.

I am truly grateful to God for what Christian Science has done for me and mine. In October, 1910, my little daughter, three years old, was suddenly taken very ill with fever and lameness in her limbs. I first tried to meet the ailment with what little understanding I had of Christian Science, but as she seemed to grow worse, I felt that there was no time to lose, so I called a practitioner, and he gave her absent treatment. I could not touch her anywhere but what she cried for pain. She could not even bend her knees or her ankles, and did not eat anything. This started on Tuesday morning, and the first change I noticed was that the fever left her, but otherwise she had great pain. On Thursday morning she was still a very sick child, but that afternoon she seemed to rest better, and on Friday morning she asked for something to eat. She enjoyed her breakfast, and by evening she sat at the dinner table and could bend her knees, but she could not stand or walk. By Saturday morning she asked me to dress her, and she tried to walk by holding on to chairs. By evening, however, she walked alone, and on Sunday morning she walked up-stairs without any assistance. She was perfectly healed. She had seven absent treatments and one present treatment, but not a drop of medicine was used. There has been no return of the sickness, which would no doubt have been pronounced infantile paralysis.

Words cannot tell of the joy in our home when our child could walk again, and all this took place in less than a week! This is only one of the healings in our family, for I could not write all that Christian Science has done for us. I pray that I may have more understanding and more trust in God, whom I have proven to be an ever-present help in time of trouble, when we trust in Him and know that Truth is the only power. I am grateful with all my heart to God, and also thankful to Mrs. Eddy.

MRS. GEORGE B. KLINK, Tacoma, Wash.

The source of your duties is in God. The definition of your duties is found in His law. The progressive discovery and application of His law is the mission of humanity. God exists. I am not bound to prove this to you, nor shall I endeavor to do so. To me the attempt would seem blasphemous, as the denial appears madness. God exists, because we exist. God lives in our conscience, in the conscience of humanity. Our conscience invokes Him in our most solemn moments of grief and joy. Humanity has been able to transform, to disfigure, never to suppress His holy name. The universe bears witness to Him in the order, harmony, and intelligence of its movements and its laws.

MAZZINI.

FROM OUR EXCHANGES.

[Edgar Franklin Blanchard in *Christian Work and Evangelist.*]

All signs point to the rise of a new religious movement which will restore the church to its rightful place in the world. It must come; and the rise of such a religious movement would be the repetition of history. Judaism failed to fulfil the mission of the true church of God. The result was, that a new religious movement arose which gave the world a new ecclesiastical system. This was the early Christian church. The Christian church did not remain true to its mission; and the result was, that in the sixteenth century a religious movement arose which gave the world another new ecclesiastical system. This was Protestantism. And the failure of the church today to fulfil its fraternal mission is prophetic of the rise of another religious movement which will give the world another religious system. Prof. Adolph Harnack of Berlin, who is doubtless the greatest living authority on church history, says that neither Catholicism (the feudal system of organized religion) nor Protestantism (the loose individualistic system) is fulfilling the divine purpose of the church of God to man, and that "the nations are still waiting for a third kind of church as a foundation of their higher life." Many are the signs that point to the coming of this new church, and that it will be a religious brotherhood—a religious system organized on positive ethical and fraternal principles. Only such an institution can represent the spirit of the Founder of Christianity.

[Rabbi Stephen S. Wise as reported in *New York Herald.*]

Surely it is not wholly unfit that Jesus be reclaimed by those who have never organizedly denied him, though oft denied by his followers—that Jesus should not so much be appropriated by us as assigned to the place in Jewish life and Jewish history which is rightfully his own. We accept Jesus for that which he was, a Jewish teacher, a Jewish leader, a prophet in Israel, clear-visioned, tenderly loving, selfless, godlike, though not uniquely godly,—not for that which Christianity has sought mistakenly to make him. Not only does truth demand that we, as his fellow Jews, further the quest of the teachings of Jesus which are unmistakably his own, but we have no right to keep aloof from that movement which seeks to resurrect Jesus the man from the tomb of Christian dogma.

[Rev. W. E. Orchard, D.D., in *Christian Commonwealth.*]

Knowledge of Christ is knowledge of God. That does not mean just what it appears. It is not historical or dogmatic knowledge, but the knowledge of sympathy, love, and life. If we should contemplate the Christ-ideal as set before us in the gospels and growingly realized by the community of the saints, we would become suddenly aware that our true life was pictured there, and our natures would leap to answer that creative life. Then we would find we have come to God. Christ brings us to God because he makes us willing to do the will of God, at all costs; because he makes us content to love, at any price. Then our spirit stands face to face with the infinite Spirit from whom it is derived. That is the confirmation of all knowledge that we have and all that we shall ever come to have, because it alone explains how it is possible to know anything. In that hour we know as we are known; our knowledge answers back to God, who knew us before the worlds began.

[*Congregationalist and Christian World.*]

Joy in the Christian life is far more dependent than we think, on courage, on taking risks for God, on venturing in unaccustomed ways, or searching out new depths of meaning in familiar thoughts and methods. The standstill, unadventurous Christian is always risking his delight of close companionship with Christ.

[*The Living Church.*]

As we turn aside from the study of the multiplied energies of the world today and take up the story of the New Testament, we are startled to find that instead of having lost its old power, it has taken on a strange new power; and the carpenter of Nazareth stands today as not merely the solver, but himself the solution, of all the problems of our teeming age. What is the great characteristic of society today? Is it not a growing appreciation of the significance and sacredness of life? And there stands one there in the gospel story who says to us, "I am come that they might have life, and that they might have it more abundantly." He speaks of himself and his teaching as "a well of water springing up into eternal life."

However far away from Christ philanthropy may seem to have started, however indifferent to him or even opposed to him its workers may have been, those who today go deepest into the human problems and feel most keenly the human needs, are more and more consciously proclaiming that the source of all their power and the star of all their hope is in him who was moved with compassion when he saw a great multitude, "because they were as sheep not having a shepherd." It is because he is living in them today that workers for mankind believe that he lived on earth nineteen centuries ago.

What is the chief characteristic of social and political movements today? Is it not the changing of old things into new, not by revolution, but by growth? Ancient forms of wrong are beginning to realize that they can abide no longer in the brightening light of the ever-dawning day; and they are becoming changed, they know not how, into new forms of helpfulness and progress. And we take up that little book, and we read of one who had walked in Galilee, but who appeared from heaven and said, "Behold, I make all things new;" and we see and know that it is he who is, under all these seething movements of our age, making all things new.

[*Advance.*]

There are rare souls whose horizon is expanded beyond narrow limitations. Partly because of their vision and partly because of their elevation, they see things afar and count great interests their own. There are men who possess their possessions and men who are possessed by them. There are men whose life is the present only, and there are men who live also in the rich experiences of the past and the great hopes and visions of the future. There are men who pray "Thy kingdom come" with one hand on their pocketbook and the other reaching restlessly out for something more for self. There are others who utter the same prayer with the map of the world outspread before them. There are men who contend that one world at a time is enough, and who assume that the doing of present duty and for duty's sake is all there is of life. There are others whose vision widens, till backward in the past it discerns a rocky hill surmounted by a cross, and forward until it discovers a glory which "eye hath not seen, nor ear heard, neither have entered into the heart of man."

[*Christian World.*]

And Christianity in offering Christ, in exhibiting the history and human career of one who, treading our earth and breathing its air,—through this human,—shows us the qualities, the heart, we look for in God,—has surely, as no other faith before or since, hit the secret of a world religion! But the Christian faith of today, in its relation to Christ, is a bolder faith than that of the church creeds. The thought of the theologians who framed them was to exalt Christ by depressing man. They could only make him divine by a breach with the human. To them God was so far from man; and therefore Christ, to be one with God, must be separated by the whole gulf of metaphysics from mere humanity. But the best, the devoutest thought of today, is closing up that gulf. God is at no infinite remove; He is near us, in us, of us.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies; and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

Some of the lectures recently translated into foreign languages and printed in pamphlet form are listed as follows:—

"Christian Science: Its Results," by William R. Rathvon, printed in German (Die Christliche Wissenschaft: Ihre Resultate).

"Christian Science: A Religion of Progress," by William D. McCrackan, M.A., printed in French (Christian Science: Une Religion de Progrès).

"Christian Science: Demonstrable Religion," by Frank H. Leonard, printed in Norwegian (Christian Science: Bevislig Religion).

These pamphlets are all for sale at the prices as shown on the opposite page under the list of Pamphlets and Reprints.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency. Money orders should be made payable at the Boston post-office.

Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy	$ .05	$ .06	$ .07
Twenty-five copies	1.00	1.15	1.30
Fifty copies	1.80	2.05	2.40
One hundred copies	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XIII indicate the year 1913; XIII, 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

Make all remittances payable to The Christian Science Publishing Society.

Entered at Boston, Mass., post-office as second class matter.

ITEMS OF INTEREST.

National.

Referendum on the subject of a permanent tariff commission is very shortly to be taken by the Chamber of Commerce of the United States from its constituent bodies all over the country, so that the vote will be received during the early part of the extra session of Congress. The chamber has taken up the question of banking and currency, and will immediately complete its committee on that subject, so as to be in a position to act upon the bills that may be presented to Congress. There are now three hundred and eighteen organizations enrolled with the chamber, which has constituent bodies in forty-three states, in the District of Columbia, Porto Rico, Hawaii, the Philippine islands, as well as the American Chamber of Commerce in Paris and the Levant.

Secretary of State Bryan has formally notified all diplomatic representatives at Washington of the intention of the United States to recognize the new Chinese republic on April 8, the meeting day of its assembly, and has proposed that all other governments recognize the new republic in concert on that day. At his request, members of most of the foreign embassies and legations in Washington appeared at the state department and were received individually by him. In order to prevent a repetition of the criticism in foreign capitals occasioned by the recent Chinese loan statement, the state department in this instance gave due notice of its intentions regarding China to all interested powers before publication.

Last week, undergraduates of Yale enthusiastically welcomed back to his alma mater former President William Howard Taft. Practically the entire student body, three thousand strong, accompanied by a band, and an equally large number of citizens, were at the station when Mr. Taft and his party arrived from New York.

Whether or not Massachusetts ought to have the single tax and a number of other proposed taxation reforms, is a question that will be gone into this summer by a special recess committee, if an order offered in the House calling for such an inquiry is adopted.

International.

The Turkish government declared last week that it unreservedly accepted the terms of peace proposed by the European powers. The great powers declare at the same time that, as soon as these terms of mediation offered to Turkey and to the Balkan allies are accepted, hostilities shall cease. The terms are:—

The frontier of the Ottoman empire in Europe shall start at Enos, and, following the course of the Maritza river, and then that of the Ergene, shall end at Midia. All territories situated to the west of this line shall be ceded by Turkey to the allied states, with the exception of Albania, the delimitation of which shall be fixed by the powers. The question of the Ægean islands shall be settled by the powers. Turkey shall abandon all claim to Crete. The powers cannot favorably entertain the demand for indemnity, but they will admit the allies to participate in the discussions of the international commission in Paris for an equitable settlement of their participation in the Ottoman debt, and in the financial charges of the districts to be handed over to them. Turkey is to be asked to take part in the labors of this commission.

The Balkan allies, while accepting the conditions of mediation outlined by the powers, make reservations which practically amount to repudiation of the terms.

The diplomatic relations between France and Venezuela which were broken off in 1906 by the arbitrary proceedings of President Castro, have now been resumed, and a treaty has just been signed between the two countries regulating all outstanding difficulties. The main clauses of the treaty provide that three months after its ratification the French government will communicate to the Venezuelan government a list of all claims by French citizens, and that within a period of six months the representative of the Venezuelan government and the claimants shall endeavor to arrive at an amicable adjustment of their respective claims. In those cases where they are unable to arrive at an agreement, the unsettled claims shall be tried before a competent Venezuelan court and a decision rendered within a period of fifteen months, in default of which arbitration will supervene automatically. Every decision of the Venezuelan courts against which the French government desires to raise objection, either in law or equity, is to be submitted to arbitration, according to the rules of the Hague conference. All indemnities are to be paid within one year from the date of the award.

It is now clear that famine had nothing whatever to do with the fall of Adrianople. Not only were there immense magazines of food of all sorts, but vast quantities of oxen and sheep remained untouched within the lines. Had not the Bulgarians and Servians succeeded in storming the defense, the city could have held out probably for months. The curious fact is, that the Turkish staff does not appear to have been aware of its own resources.

Eugene Gilbert, a French aviator, flew from Paris to Lyons last week in a monoplane, a distance of about 318 miles, at an average speed of 93½ miles an hour, a French record for long-distance flying. M. Combres, a French aviator, attained a speed of 114 miles an hour during a flight from Reims to Tournai. The distance is just 100 miles. M. Combres' time was 52 minutes and 36 seconds.

"Evil and insensate folly," "wasteful, purposeless, and futile folly;" "one of the most stupid and unnatural chapters in the history of European civilization"—these are the stinging words in which Mr. Churchill, naval minister in the Asquith government, describes the "present acute rivalry in armaments." And he proposes to suspend the increase of the British navy for a year if the rivals of Great Britain will do likewise.

The treasury statement of the British government for the financial year shows: Revenue, $144,007,995; expenditures, $143,107,650. The revenue is $3,064,995 over the estimate, while the expenditures are $1,575,350 below the estimates.

Industrial and Commercial.

On March 24, for the first time in the history of the world, direct communication between San Francisco and London, England, by cable and telegraph was established, and the operator in London and the man in San Francisco "talked" to each other without the assistance of relay offices. The message was sent over the lines of the Commercial Cable Company and the Postal Telegraph Company through use of a cable sounder, which permits the use of the Morse code for cable messages, an invention recently perfected by John Gott, who for many years has been chief engineer of the Commercial Cable Company's system. Since the first ocean cable was laid, many inventors of renown have endeavored in vain to perfect such an apparatus. The cable line from London was linked up through Mr. Gott's invention with a land wire at the cable station at Far Rockaway. From there the wire ran into New York and then it was looped into a wire to Meadville, Pa. At Meadville, connection was made with a wire running to Chicago, and from there to wires running to Omaha, Neb., Denver and La Junta, Col., Williams, Ariz., and so on to the Postal Telegraph office in San Francisco. It was stated that the transformation from the cable system of sending to the dot and dash code was well made, and the message was as easily read by sound as an ordinary one.

The success that has followed the operations of the farmers who during the last few years have taken up portions of the mallee country of South Australia has stimulated the demand for similar land in the state. The government is now carrying out a big scheme of railway development in the districts east of the river Murray and on Eyre's peninsula, and, in order to keep pace with the demand, the land bordering on the new railways is being surveyed as rapidly as possible. The commissioner of crown lands has announced that two hundred and nine thousand acres of land in the county divisions of Chesson, McPherson, and Mindarie are open to application for allotment in suitable areas. This is the first land offered under the exceedingly liberal conditions of the crown lands act passed during the last session of Parliament, and it will all be allotted on perpetual lease or under agreement to purchase. The fortunate applicants will not, under the provisions of the act, be called upon to pay any instalment of the purchase-money or rent, as the case may be, for the first four years, and during the fifth and sixth years will only have to pay as instalments or rent two per cent on the value of the land as fixed by the land board prior to the land being declared open for occupation.

An important resolution, and one which will have a far-reaching effect on the rural population of France, has been passed by the Chamber of Deputies during the discussion on the budget for 1913. The resolution is in the shape of an amendment to the law of finance by which, from Jan. 1, 1915, the tax upon the value of undeveloped land will be transformed into a rate upon four fifths of the rental value of the land, as established by the last valuation. In 1907 a fresh valuation for purposes of taxation having been made, it was found that for many years agriculture had been subject to excess taxation, amounting to fifty million francs a year. It was to afford a remedy to this injustice that André Rénard, deputy for Nièvre, brought forward the amendment which has now been adopted by the Chamber of Deputies. During the debate on the budget an amendment was also passed substituting for the door and window tax and the personal property or occupation tax a general and progressive income tax harmonizing with the income tax bill now before the Senate.

It is estimated that the Pinnaroo country of South Australia, and other portions of the once so-called "Ninety-Mile Desert," will this year yield more than a million bags of wheat, a result made possible during the past few years by a transformation of waste country into profitable agricultural holdings. There is an immense tract of similar land as yet producing nothing except mallee; but when this is taken up and worked, the wheat yield of South Australia will probably far exceed the most sanguine expectations.

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

MENTAL CHANGE.

WILLIAM D. MC CRACKAN, M.A.

THE world is undergoing a mental change. The evidences of expansion, invention, growth, progress, readjustment, and rearrangement which we see on all hands, are signs of this mental change. The building of great steamships and lofty buildings, the addition of mile upon mile of railroad, telegraph, or telephone, the installation of wireless telegraphy, the cutting of world canals, the storing of water-power,—these activities seem at first sight to be wholly material, to denote material achievement and material power. Such a view is, however, superficial, for it does not go back to the mainspring of action; it evades causation and contents itself with sequences and after effects, instead of probing origins and sources. Every outward manifestation of activity is due to a mental cause. Every house that is built, every road that is laid, points to a plan which has first of all existed as a mental concept.

In the hurly-burly of human activities we must never forget that man is a thinking being. It is to our advantage to enlarge upon this fact, to establish it in our own consciousness, and to reach the conclusion enunciated by the writer of the book of Proverbs so many centuries ago, that as a man "thinketh in his heart, so is he." There is a common temptation to think of man as a material being, buffeted by material conditions, subject to material limitations of time and space, a defenseless creature at the mercy of every breath of adversity, who has apparently come from and must eventually go into a realm of oblivion, the mystery of which no one has ever pierced.

This point of view and this prospect for humanity is anything but encouraging. Surely life under such conditions would not be worth living. To eke out a care-worn existence perpetually on the defensive against the material elements, fearful of their power, attempting to propitiate their ruthless energy, their heartless decrees and doings, such an existence were in fact no existence at all; it would be unworthy the nature of man created by an omniscient, omnipresent, and omnipotent First Cause in His own similitude. This false sense of man's powerlessness before his foes is wholly wiped out by the recognition of man as a thinking being, the manifestation of divine intelligence. If intelligence can guide man, then we can overcome the adverse conditions which would endanger our health, happiness, and holiness, or completeness. By a spiritual transformation, which is based upon the understanding of God, we can change our processes of thought, and so become masters of our destiny, carve out our careers for good, protect ourselves from untoward environment, and rise superior to all evil that would bind or fetter our right activities.

One of the many comforting sayings of the Master is the declaration that "the kingdom of God is within you." This kingdom is not outside of our consciousness; it is not located afar off nor reserved for a future time. The kingdom of God is the consciousness of the all-power of good, and of the corresponding or correlative powerlessness of evil. We are familiar with the expression that "charity begins at home," and we should be no less familiar with the understanding that reform begins at home, in the individual consciousness. As a man thinketh, so will his actions be. His mental make-up determines his career, his conduct, his activities for weal or woe. The call issued to the world to advance, repent, reform, and improve, always comes, therefore, to the individual as a call to look into his own thinking; to see that it is in accordance with Truth, with the eternal facts of being; that it is in agreement with the divine Mind, with God the creator and controller of the universe, including man.

One of the definitions of God enunciated by Mrs. Eddy, the Discoverer and Founder of Christian Science, declares that God is infinite Mind. The understanding of God as Mind has proven most potent in producing the fruits of Christian Science. God as Mind expresses Himself in ideas, and the universe, including man, constitutes the sum total of these ideas, an infinite number of ideas proceeding from the infinite Mind.

This, then, is the nature of the God whom we worship. He is Mind. He is at once infinite and indivisible, and the term Mind perhaps more fully than any other fulfils the requirements of these two qualities. Mind can be ever present, everywhere present, and yet remain one and undivided. From God as Mind also springs the conception of man as a mental being, a thinking individuality, guided and governed by the divine Mind, fulfilling the divine law, exercising divine rights, talents, capabilities, faculties, rejoicing in dominion divinely bestowed, glorifying the divine intelligence as the only real intelligence, and as a logical consequence, rejecting the belief in the reality of any evil mind or evil intelligence.

We can see that these considerations bring us to the very source of all that really exists; they bring us to the fountain-head of all the clear streams which flow with fructifying effect into human consciousness. Farther than the First Cause we cannot go, deeper we cannot probe. Complete and final satisfaction resides in the understanding of the nature of the great God of our fathers. Though physical science and material medicine have tried to ignore Him, and scholastic theology has so grievously misunderstood Him, yet in this age the discovery of Christian Science has "opened the door of the human understanding" (Science and Health, p. 99), so that all who desire may find God available as divine, eternal Mind.

NOW.

FLORENCE E. B. DONALDSON.

IN "Science and Health with Key to the Scriptures," Mrs. Eddy, after quoting Jesus' words, "The kingdom of God is within you," brings home to the reader the wonderful truth that this spiritual consciousness of omnipresent, omniscient, and omnipotent good is "a present possibility" (pp. 573, 574). There is, perhaps, nothing more difficult for the student of Christian Science to grasp than this, since the human mind has looked so continually to the future for the assurance of surcease from pain, discord, and sorrow, and to death as a

Copyright, 1913, by The Christian Science Publishing Society.

Digitized by Google

means of release from weariness or affliction, and has regarded it as being the portal through which all must pass before either heaven or immortality could be gained.

Pope crystallized this thought of a future and therefore logically unattainable blessedness, in his well-known line, "Man never is, but always to be blest." This mortal mind belief has largely governed humanity, insomuch that fear, doubt, anxiety, and kindred errors have grown apace in human consciousness. Every attempt to go forward, and to lay hold of the good desired and sought after, has shown the goal still farther away, still out of reach in that far-off future which, like tomorrow, never comes. It is this material view of life and its conditions which, like the mirage of the desert, has appeared to mankind as all that is desirable and necessary to satisfy human craving and human need, but which proves ever elusive, and ever promises but never fulfils. It lures us to believe, through the testimony of the material senses, that death stands in the pathway to life eternal, instead of learning through spiritual discernment that the well of life-giving water is ever at hand, even in the wilderness of human hopes and fears.

Christian Science, with its recovered message of peace on earth, declares in unmistakable terms that now is the time for discord of every kind to be overcome by truth. Mrs. Eddy has taught us that "the true sense of being and its eternal perfection should appear now, even as it will hereafter" (Science and Health, p. 550). It is to this end that, as Christian Scientists, we are called upon to work daily and hourly; to know for ourselves and others that there is only one Ego, one Mind, and that man in His image and likeness reflects this Mind; that although mortal mind claims to create its own physical conditions, it is in reality no mind, has no entity, and cannot deprive man of his inalienable rights, the inheritance of good, of perfect harmony. It is ours to know that we cannot suffer for doing what it is our duty to do, since omnipotence preserves us from all evil, that we are safe and well eternally, under all circumstances, under all conditions, when dwelling under the law of Love, as we needs must, and from which nothing and no one can separate us. As some one has said,—

> In the name of our God, who is perfect,
> We proclaim that perfection is ours,—

perfect health, perfect harmony, perfect peace, and that nothing short of this is the reality of being.

As we progress in the understanding of Christian Science, we see more and more clearly how every problem presented to us is already solved in divine Mind. In holding steadfastly to the things that are pure, lovely, good, and true, we are living to some extent in the consciousness of the eternal now, which embraces the past, the present, and the future of human concept. The sense of limitation of time, especially of the time which mortal belief has falsely declared must come between us and the attainment of good, whether physical, moral, or mental, drops away in proportion to our faithfulness in endeavoring to turn these laws of time limitation out, and this leaves our mental home free to entertain and to foster a higher spiritual understanding of ever-present Love and its reflection. Only in this way can we realize the import of the words, "Behold, now is the accepted time; behold, now is the day of salvation." It were well, too, if we all devoted some special thought to this matter in connection with the progress, the growth, the knowledge, and the acceptance of Christian Science. When the thought that some person is not yet ready to receive the truth; that a community is slow, or unwilling to see it; or that a place or a district is full of antagonism, presents itself, let us be prompt to meet and reverse every intimation of error with the mental affirmation that all God's ideas are ready for the truth now, and that Truth is always operative.

Another point of great moment in our effort to conform to the teaching of Christian Science, is that we do whatever work is presented to us now. It may be that some form of error has been uncovered to us in our own consciousness. Should this be so, we have no time to lose in meeting and destroying it with Truth. When others come to us for help in overcoming sin or sickness, our Leader has shown us, both by example and precept, how necessary it is to prevent false belief of any kind from finding foothold in our thought even for a moment. Were we always alert in this direction, there would be quicker healing done. There are few of us who have not learned by experience that to put off, even for a few hours, working against some physical ill which may have arisen, doubles, or perhaps quadruples, the amount of work to be done before harmony is restored. In Science work it is well to avoid the "when I have a convenient season" of the trembling Felix, remembering that the demands of Truth are imperative now.

Following in the footsteps of Christ Jesus, we also learn how essential it is to keep heart and mind filled with the spirit of praise and thankfulness now. In his prayers, and in his demonstrations of the power and might of the heavenly Father, Jesus ever began by naturally and spontaneously expressing loving gratitude. This we must do also. Here, again, mortal mind and material testimony would have us withhold the expression of our thanks until the good we desire is manifested, at least in part. Christian Science, on the other hand, teaches us that only as we follow the Master's example and rise to heartfelt spontaneity of praise and thanksgiving here and now, rejoicing evermore in the affluence and in the unchanging love of the Father, can we grasp the blessing desired. To do this, even in some measure, is to see with the beloved disciple something of that heavenly city which, standing in the light of Mind, knows no darkness. Turning to our Leader's explanation of the metaphysical signification of a circle or sphere as representing the infinite without beginning or end, we gain some insight into what it means to dwell continually in the consciousness of good, where night never falls on the eternal today. It is the unfolding of God's day in our heart which fills us with joy unspeakable as we realize that the "irradiance of Life" (Science and Health, p. 584), whether we seem to see it or not, is enveloping us even now.

ABIDING.

ROBERT L. SAWYER.

JESUS said, "If ye abide in me, and my words abide *in* you, ye shall ask what ye will, and it shall be done unto you." Students of Christian Science were given a splendid example of this selfless abiding in the life and labor of their Leader; and something of all this was passing through the writer's mind, one summer morning, when, standing near the beach out on Cape Cod, he watched sun and cloud in a seeming struggle for supremacy. Every time the sun came out clear and bright a peculiar sound as of breaking twigs would start, only to cease when the cloud again cast its shadow. Following the direction from which the sound came, there was disclosed a little Scotch broom bush, loaded with seed pods, and on watching closely while the warm sunshine bestowed its best gift, one of the pods was seen suddenly to snap apart, casting the seed in all directions.

The lesson was plain, "If ye abide in me," ye shall abide in quietness and assurance. The little bush did its work naturally, impelled by the silent energies of that light which so fittingly symbolized the source of all being. So shall we, abiding in the light of Mind, in whom "we live, and move, and have our being," bring forth fruits of achievement, "like a tree planted by the rivers of water." How clearly Mrs. Eddy brings out this great fact when she says (Science and Health, p. 249), "Let us feel the divine energy of Spirit, bringing us into newness of life and recognizing no mortal nor material power as able to destroy. Let us rejoice that we are subject to the divine 'powers that be.' Such is the true Science of being."

FOUNDATIONAL WORK.

MANA WILLIS FISHER.

WORK in the Christian Science Sunday school is often called foundational for the reason that the children who attend the Sunday school expect to become members of our churches, inasmuch as a child who attends long enough to catch a glimpse of the truth is likely to be a Christian Scientist always. How necessary, then, that there should be strict obedience to the by-law which says that the teaching given them "must not deviate from the absolute Christian Science contained in their text-book" (Manual, Art. XX, Sect. 3). In one of our branch churches a few years ago a committee was appointed to form rules and by-laws for a rapidly growing Sunday school. These rules, which were intended for the use of the teachers, included a graded course of instruction; but the more the committee worked the more they saw that the ground was all covered in the apparently brief instructions given in the Manual. The rules were, however, completed, typewritten, and given the teachers, but before long were recalled and destroyed, thus leaving each teacher free to use the inspiration and understanding which came to him as the result of faithful and prayerful work.

Recently, in one of the younger classes, the thought came to the teacher that these little ones were there to find a foundation on which to build. They were asked, "What is a foundation?" and with the answer from a lad whose father was an architect, came the inspiration for study in which the "first lessons" were to be used in accordance with the rule given in the Manual. The little fellow said that a foundation was what the rest stood on; and this led to the construction of a building in Mind, beginning at the foundation or basis. The use which Mrs. Eddy makes of the word "basis" on page 482 of Science and Health, "Christian Science is the law of Truth, which heals the sick on the basis of the one Mind or God," was at once recalled by the teacher and pointed out to the children, and the foundation of our building was thus seen to be God.

Continuing the simile, each child was asked to give a "rock" or foundational truth (see Science and Health, p. 593) of which he knew, in order to help make up the foundation, and they all entered heartily into this effort, from the child of three who lisped "God is Love," to the older ones who gave "substance" and "intelligence" as part of the definition of God (pp. 2, 587). When each child had presented a rock, we compared our foundation with the first commandment, and found that it would stand the test. Then we started to think about the framework, and reviewed the beatitudes to see what Jesus had told us was blessed. After each pupil had given a beatitude, we proceeded to find material for the structure, such as meekness, humility, forgiveness, purity of thought, etc. At this point came the review of the commandments, to see what we should not use in our building. We decided that we must not have idols, or false witnesses, that God's name must not be spoken in vain, and that we must be careful to keep out all dishonest, murderous, adulterous, and covetous thoughts. From the definition of angels as given in the glossary of our text-book (p. 581), we next learned what kind of thoughts we should have.

Our study of this mental and spiritual building was well on its way when the children pronounced it a church, or a "structure of Truth and Love" (p. 583); and we ventured to look inside. One little boy saw man as God's image and likeness, and he was asked if the man he saw was material or spiritual. This called for the "scientific statement of being," where we found that "man is not material; he is spiritual" (Science and Health, p. 468). Then "children" were seen inside, and from the glossary we learned what they are; so we decided that each should watch carefully the following week in order to be a representative of "Life, Truth, and Love" (p. 582). Harmony was of course seen inside, and they all knew what it represented. This study made the children very alert, and they came to realize that the only way to make every one see this church is to practise the truths we are taught in the Bible and Science and Health.

In all our Sunday school work we learn that it is truly "the stone which the builders rejected" that has become "the head of the corner," and for every lesson drawn from the Bible we can find practical support in the teachings of our text-book, thus assuring to these little ones who are to constitute our future church-membership, "the sincere milk of the word," as the apostle Peter advises, that they may grow thereby. This incident of the work of teaching a class in Sunday school is lovingly offered to others as one of the inspirations given to a teacher who has received much help from what has already been contributed through the columns of the *Sentinel* along the same line. It represents a sincere effort to obey the command "Feed my lambs," and one which brought, to the teacher at least, a rich reward.

BEARING TESTIMONY.

H. COULSON FAIRCHILD.

OBSERVING, as we often do, how willing Christian Scientists are to bear testimony to the healing power of Truth outside of the regular Wednesday evening meetings, we sometimes marvel that there should be any hesitancy on the part of those benefited to testify at these meetings. In the Preface to Science and Health our Leader has written that in her early expression of Christian Science "she 'lisped in numbers, for the numbers came'" (p. ix). This would indicate that the desire to express the truth is a prayer which is invariably answered. If we know that the word of Truth is expressed through us, we need not fear that we shall say something unscientific. Humanly speaking, the best testimonies for Christian Science are those where the individuals bearing testimony have actually experienced the healing and reforming power of Christian Science. It is not considered wise to give hearsay testimonies; and they are certainly not so convincing as direct testimony.

To accomplish the best results our testimonies should unmistakably express the idea of the allness and omnipresence of God, good, and the nothingness and unreality of evil. To do this we should avoid, so far as possible, a long recital of the details of discordant experiences, and briefly state the case, name the disease which has been destroyed if need be, and indicate how quickly and wholly we were healed by Christian Science treatment, always remembering to state the facts conservatively. If we have not experienced a quick demonstration, we must be careful, in speaking of the slower cases of healing, not to leave our hearers with the wrong impression; for instance, to say that we applied Christian Science treatment faithfully and without result, "seemingly growing worse," is not calculated to encourage the listener, who may not know that our condition was due to "chemicalization," a term they probably do not understand. If the demonstration has been prolonged, we should take care to convey the idea that progress is the law which continually governs it.

Another point to guard against in these meetings is the use of such terms as "belief," "claim," "to sense," "worked a long time," etc. Instead of using the term "worked," or any other expression with which the public is not familiar, it would perhaps be better to say that we "prayed for the patient, as we are taught to do in Christian Science," or words to that effect. Neither is it wise to bear testimony to unusual and extraordinary experiences. Testimonies as to the finding of lost articles may be strictly scientific, but they must be very carefully given or they are apt to be misunderstood. The only premise upon which success in business can be achieved is the Scriptural one, "Seek ye first the kingdom of God, and his righteousness." A business

Digitized by Google

demonstration cannot scientifically be such unless we are about our "Father's business," in other words, rendering a true service to the community; and it would seem that business demonstrations must be made on that basis, else they are not the subject of Christian Science testimony. Certainly we should not endeavor to teach Christian Science by means of our testimonies or by reason of our remarks on Christian Science in these meetings.

In the book of Job we read, "The ear trieth words, as the mouth tasteth meat," and for this reason we should always try to express our testimonies in a strictly scientific way, as it is of the utmost importance that Christian Science be stated correctly. These meetings are open to beginners in Christian Science, as well as to those who have been healed, for the purpose of giving their testimonies freely and without fear, and we should therefore be most compassionate and considerate with respect to new testimonies. As a rule it ought not to be necessary to correct from the desk the testimonies given, but it would seem to be within the province of the first reader to do so if the statements are absolutely unscientific. Such corrections, if tactfully made, will not be regarded as a rebuke to the individual, but rather as a means through which our mistakes may be set right and our progress in the understanding of Christian Science be assured. Christian Scientists should always be grateful for merited and loving correction.

It is almost unnecessary to add that the Wednesday evening meetings can only accomplish the results intended when Christian Scientists attend them with the intent to give as well as to receive. When such is the motive, we find the words of our Leader in Science and Health (p. 454) fulfilled in our experience: "Right motives give pinions to thought, and strength and freedom to speech and action."

GHOSTS.

FREDERICK HAYES ALLEN.

YEARS ago, when I was a very small boy and knew nothing of the exemption from fear which is the heritage of the normal man, I became very much imbued with the idea that there were ghosts lurking around dark corners, always on the watch to catch small boys. This state of mind was brought about by association with older children who liked to sit big-eyed in the dark and tell ghost-stories. One evening I went to pay my daily visit to my grandfather, and as I passed a certain room I saw a tall white object looming up in the darkness, and I ran to my grandfather with the fearful story that I had seen a ghost. He started to investigate at once. Taking a lamp in one hand and holding fast to me with the other, he advanced on the ghost. When at last we stood near the dreaded object, to my relief grandfather reached out his hand, touched the thing, and said: "My boy, that is only my old linen duster! Put out your hand and feel of it!" I did as he directed, and then he took me on his lap and told me that there were no ghosts, and that I must never fear them again; so from that moment I never did.

Many years passed and I became a man, and once more there came into my life a superstitious fear of various kinds of ghosts. I saw ghosts of sickness and sin, of poverty and misery, stalking throughout the land, and the people seemed to be numb with fear and helpless in their dread presence. God seemed to be so far away that He could not see the misery of His people, and sometimes I thought that He did not care. In dire extremity I cried aloud for help. Then Christian Science came into my life, bearing the lamp of Truth, and holding fast to my trembling hand, bade me approach these ghosts and learn the truth about them also. To my great relief I am now finding that these specters too are unreal. Each day I am pressing onward, following the guidance of that lamp, and each day I leave behind me ghosts that prove themselves to be nothing more fearful than was grandfather's old linen duster.

Fear causes men to grovel in the dust when otherwise they would arise and claim their God-given dominion over all the earth. For those who are beset on every side with fear and misery in the struggle of mortal existence, our revered Leader wrote: "Correct material belief by spiritual understanding, and Spirit will form you anew. You will never fear again except to offend God" (Science and Health, p. 425). When we reach up into the darkness and *grasp* the hand of Love, our fears disappear one by one, *and we* learn that there is nothing in all God's universe to make us afraid.

POETRY OF NATURE.

CARRIE PADDOCK.

A MESSAGE of truth came to me one day recently, while working at the fernery or rockery. I was alone, yet nature was crying loudly all around me, and there was so much company and so many lessons to be learned! I saw that to make beautiful one's surroundings, wherever he is placed, is as certainly a poetic art as the writing of beautiful verses, and points to the wonderful possibilities of spiritual understanding. The mortal vista around me included a tumble-down house and surroundings at the foot of a rocky hillside; a crude smoke-house near a large spring full of uncleanness; beautiful but neglected trees and yard where nature was trying to do her best, regardless of neglectful mortal man, who is ever chasing the gross dollar and letting the great wealth of beauty pass by unheeded.

Then a man and woman who had become tired of seeking that which is material, purchased this ruined heap and undertook to bring it into harmony with nature's true meaning, and it has become a veritable beauty-spot. The spring was cleaned out and enclosed, with a place made for the wayfaring man and his beast to drink. Ferns were planted all along its banks; the crude smoke-house was converted into a pretty little bungalow with vine-covered pergola in front, and a screened-in breakfast-room at the side, under great oaks and elms. On the shady side a fernery was made of the rocks picked from underfoot; potted plants were set in the screened enclosure with a dainty touch here and there, and vines were led to cover unsightly rock piles and outbuildings until they could be removed, fences were built, weeds kept down, and trees trimmed, while grasses were sown and flowers of many kinds bloomed everywhere. More than this, there were two glad hearts that loved the work, for to their world-weary thought it became a poem, new every day.

When one studies nature and its vast possibilities, there is such peace in the beauty which is ever beckoning to greater things! What is nature, spiritually understood, but the reflection of God our Father, who hath given us the kingdom, as joint heirs with Christ His Son. As Mrs. Eddy says, "God, the divine Principle of harmony, is ever with men" (Science and Health, p. 573), but we only understand this when we demonstrate it. The birds sing their glad messages all day long, and every living thing echoes the sweet strain. Why then should not we proclaim the day of salvation at hand, here and now? Springs of goodness are flowing everywhere. Can we not prepare sweet channels for them, and thus make beautiful that which today lies in our path wherever we may be? Can we not give the world a poem which is an answering chord of love to God who is Love?

Slowly have I learned
Not to hurry,
Not to worry.
Also slowly learned
While I'm here,
Not to fear.
All is in God's hands.

ANON.

SELECTED ARTICLES.

[Frederick Dixon in *The Bromley Chronicle*, Bromley, Kent, England.]

From the time the Christian Science movement was started, something approaching half a century ago, down to the present, it has been usual for people who never think at all to follow the lead of others who have thought if possible less, in speaking of a Christian Science which is neither Christian nor scientific. As an epigram, this may be said to contain all the disabilities common to epigrams, without any of the brilliance which sometimes makes them inspiring and occasionally instructive. During the seventeen years that Christian Science may be said to have been seriously established in England, it has been my fate to read this phrase, dragged in by its shoulders by writers who could no more give you an intelligent definition of historic Christianity or of natural science than they could of the teaching of Mrs. Eddy. They have, however, read it so often that they have come to believe it, just as George IV is declared to have described the charge of the Union Brigade at Waterloo so perpetually as to have come to believe that he led it.

What is the meaning of the term Christian? If you are satisfied with the dogmatic rendering of it, it means a person who accepts the teaching of the Greek church, the church of Rome, the Anglican church, the Nonconformist bodies, or any other sect which has existed a sufficient number of years to have become regarded as orthodox. It must not be forgotten for one moment that every orthodox sect has been through a period of being considered heretical. Christianity has not changed; therefore, if the heretical sects ever were heretical, they cannot now be Christian; and if they are Christian now, they can never have been heretical. The heretic of yesterday is, however, always the orthodox of today.

All the time that the sects were fighting as to what constituted a Christian, the Bible was telling them, only they had not time for that. A Christian, everybody will admit, is a person who accepts the teaching of Jesus the Christ. What people differ over is what this teaching is. Jesus himself no doubt realized that these differences would ensue. At all events, he took pains to leave a definition so complete and so scientific as to put it beyond the wit of human ingenuity successfully and eventually to pervert it, short of any means but by destroying the Bible. Not only in one gospel, but in all the gospels, he declared, directly and indirectly, that precept must go with practise, and theory be made good by demonstration. "He that believeth on me," he said, "the works that I do shall he do also." The simplicity of the language is so remarkable that all the ingenuity of theology has stumbled in the attempt to explain it away. A Christian is necessarily one who believes in the teaching of Jesus, and therefore a Christian as a believer is only entitled to the name in the exact proportion in which he succeeds in repeating the demonstration or object-lessons given by Jesus himself. Now the great body of these object-lessons was devoted to the healing of the sick. Delete from the text of the Bible the works of physical healing and you delete a great portion of that text. As if in order that there might be no mistake on the subject, Jesus' instructions to his own disciples were to preach the gospel and to heal the sick.

Obviously, the only gospel which can be the gospel of Jesus the Christ, is a gospel which results in the healing of sickness and sin. He went perhaps even farther than this in his explanation to the disciples of John. When John sent his disciples to ask if he was the Christ, he replied, "Go your way, and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached." In other words, he answered him on the same lines he taught his own disciples, with the exception that perhaps he laid even greater stress on the necessity of physical healing. If one thing is more certain than another, then it is that, in the direct words of Jesus, the only proof that a man is a Christian is the fact that he is doing the works which Jesus did, and giving the "signs following." This is the Christian Science definition of a Christian, and the man who is doing the works is giving a far greater proof that he understands the gospel than the man who is burning or torturing somebody else for not agreeing with him.

There is a sort of infantile belief in the human mind that science is something confined to the examination of material phenomena. As a matter of fact, this has been expressed in the direct statement that it is confined to secondary causes which are material, and that primary causes, which may be spiritual, are beyond its cognizance. It may be remarked at the outset, that primary spiritual causes never produce secondary material causes, unless the grape can produce thorns. This, however, though it is an important point in the Christian Science teaching of the unreality of matter, only affects the present question incidentally. What is quite certain is this: That if you start with the admission that you can know nothing of primary causes, you are never likely to. If Newton had been content to say that nobody could ever know why the apple dropped, he at least would never have been very likely to. If Mrs. Eddy had been content to say that nobody could ever understand how Jesus healed the sick, she, too, would never have been very likely to. Mrs. Eddy had, on the contrary, the scientific instinct in a very marked degree. She was determined to find out how the healing of primitive Christianity was accomplished, and she found this out in the most scientific manner, first, by a process of deduction, formed by accepting Principle as omnipotent, harmonious, and infinite, and deducing the harmony of what may be termed spiritual phenomena from this; and, secondly, by the process of induction, that is to say, by collecting an enormous mass of evidence in the matter of healing, and tracing it back to this First Cause, the infinite, omnipotent, omniscient good which men in general have agreed to term God. Whatever else may be said about science, science is the absolute knowledge of absolute truth.

Either the teaching of Jesus the Christ is absolute science or else it is mere fable. It is absolutely futile to say that it was God interfering with His own laws, first, because even God could not break a law of God; and secondly, because Jesus himself declared that the works he had done must be done by men of flesh and blood. Now Jesus broke every law of natural science which natural scientists have ever described as law,—he healed sickness by a word; he fed the multitude with a handful of bread; he carried the boat across the lake in a moment of time; he calmed the tempest with three words; he raised the dead; and he broke the law of gravitation by walking on the water several centuries before that law was discovered. This is what Mrs. Eddy pointed out. This is what she declared to be science. This is what Christian Science says is science, and this is what the world is one day going to admit is science. Science is law; and law is that in which no variation is possible. The statements of law respecting physical phenomena change with every decade of every century, very much as human conceptions of Christianity change. Throughout all these changes during the Christian era, however, one thing has stood, namely, the knowledge of the Christ as taught and demonstrated by Jesus of Nazareth. This knowledge of the Christ is the most absolute and therefore the truest thing which has ever come to humanity, and the nearer the science of today approaches the knowledge of the Christ, the more, and not the less, scientific it becomes. There is a phrase in the Bible which is translated "knowledge of God." The true translation of the Greek is, full, exact, and so scientific knowledge of God; in other words, an absolute knowledge

Digitized by Google

of absolute truth, which is the understanding of the Christ. Jesus taught it in the first century of the Christian era, and, in spite of all the materiality of mankind, it has endured just as—if a human parallel is admissible—the Arctic solitudes have existed though men did not tread them, and the power of steam was potent though men had not subdued it. "I knew," Mrs. Eddy writes on page 109 of Science and Health, "the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration." That demonstration resulted in the rediscovery of the true teaching of Jesus which today is termed Christian Science. To quarrel with Mrs. Eddy for having discovered it is about as sensible as to quarrel with the sun for giving light, and about as likely to affect the question.

[Marie Hartman in *Gereformeerde Kerkbode*, The Hague, Holland.]

In the *Gereformeerde Kerkbode* I read the articles by V. d. L., and as I am convinced that the writer supposes he has good reasons for condemning Christian Science, I hope the editor of said paper will kindly allow me to correct some of his objections. The writer says: "Christian Science does not teach the existence of God in the way the Scriptures teach this point." Now, the second tenet of Christian Science reads: "We acknowledge and adore one supreme and infinite God" (Science and Health, p. 497). On page 587 of this book, Mrs. Eddy gives the following definitions of God, which are all based on the Bible: "God. The great I AM; the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal: Principle; Mind; Soul; Spirit; Life; Truth; Love; all substance; intelligence."

Christian Science deeply reveres the teachings of Jesus, and holds that a Christian ought to obey all the commandments of the Saviour. Nowhere in the Bible is it found that after a few centuries the signs would cease which Jesus said should follow true faith; therefore these signs are the proofs that the faith is real. Not a single place can be found in the Bible where Jesus speaks of these works as a monopoly by himself or by his disciples, but he said: "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." Christian Science considers this saving truth, the true understanding of God the Father, and of His relation to His creation, as the "Spirit of truth" that comes to all and will guide all into the truth. This understanding of the Christ brings infinite blessings, because it enables mankind to obey God better, and thereby to accept more and more all the good God bestows.

Christian Science teaches that the saving and healing Christ was more than the personality of the man Jesus; it was his understanding of God, and this recalls his answer to those who reject this definition: "If I do not the works of my Father, believe me not. But if I do, though ye believe not me, believe the works: that ye may know, and believe, that the Father is in me, and I in him." Christian Science admits that sin, sickness, and death are indissolubly united, and that sickness will not disappear from the world until mankind learns to understand the acceptance of Jesus' atonement must reveal itself in a holier and purer life, not only after the death of the body but now. The overcoming of sin, which in the last instance is always "wrong thinking," is not reached by only saying to oneself, "I shall stop sinning," but by accepting the salvation from all sin, all false beliefs, which Jesus revealed and which makes man conscious of his oneness with God. This consciousness brings deliverance from evil, and teaches mankind more and more to walk in "newness of life."

Jesus said of the devil, who is the origin of evil: "He . . . abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." He did not consider evil, sin, sickness, and death as creations of God, who is Truth, but as results of false belief; and for this reason Christian Science also considers evil as unreal, not eternal, not originating in God.

The critic further writes that "the Bible is so simple and so clear," and he adds: "Of the gospel we say with Beets (a Dutch poet):

> Your mind and brain will never comprehend,
> Accept it, though you fail to understand."

This is rather contradictory, and therefore it is surely pardonable that many came to Christian Science for help and guidance. They have found that the text-book, "Science and Health with Key to the Scriptures," has indeed unlocked the Bible and given them a far clearer concept of God than they had gained in the church to which they formerly belonged, all of which is in keeping with the promise, "The Comforter, which is the Holy Ghost, whom the Father will send in my name, he shall teach you all things, and bring all things to your remembrance, whatsoever I have said unto you."

[W. G. Ebersole, M.D., D.D.S., in *Dental Summary*.]

Let me call your attention to a condition which exists in another field and is growing more distressing with great rapidity. Earlier I spoke of the rapid progress made by dentistry, and stated that in this dentistry leads all other professions. In making this statement I was either correct or incorrect, depending upon whether the "Christian Science healing" may be considered a profession or not. If it is to be considered a profession, then dentistry must take second place, for no organization has met with more rapid growth and been so freely and kindly received as has Christian Science. As a religion its success has been due to the fact that it offered a heaven which could be enjoyed here as well as in the hereafter, and a God who knows only life, truth, and love, and not a God who knows hate, inflicts punishment, or recognizes sin. Its success in the healing art has been due to the fact that it has not made the mistake that did medicine of old and dentistry of later years. These two professions began their career by treating existing conditions, giving little or no thought to the cause which produced the same. Christian Science, on the other hand, began by ignoring the seemingly existing conditions and going back to the fountainhead and removing the cause.

I would not have you believe that I am a Christian Scientist; it might be better if I were. From a religious standpoint, the world was filled with fear and superstition; while from a medical standpoint, the mind of the public was filled with fads and fallacies to such an extent that millions of dollars were spent annually for the so-called patent remedies recommended to cure all the ails and ills of mankind. Christian Science offered relief from these distressing conditions, and the plans and policies of the movement are of a rational nature, and humanity has been accepting them with such rapidity that great consternation has been felt in both the profession of theology and of medicine. Already so heavily has the hand been placed upon patronage of the medical profession that thousands of practitioners are seeking relief in other fields.

[Editorial in *Morning Telegraph*, New York, N. Y.]

Ministers in charge of the orthodox churches complain that their congregations are small, that there is no enthusiasm any more, and it is hard to stir up an interest in the work of the church and to secure additions to the membership. One of the leading pastors of the city recently announced that he would preach on a topic that should be of interest to every one; and when he entered the pulpit to begin his sermon there were forty-two persons in a church that will seat about eight hundred.

Christian Scientists of this city are making no such complaint; there is hardly room enough in some of their great

Digitized by Google

churches to accommodate the crowds that wish to attend the week-night meetings and the Sunday services. Well may pastors inquire into the reason for the large attendance at the Christian Science churches and the small attendance at their own. The reason is obvious. Christian Science makes a direct appeal on straight lines. Christian Science does not quibble over baptism or close communion or involved doctrines. It does not tell a man he must believe that which his reason tells him he cannot believe; Christian Science does not set itself above the law of the land, and issue dictums regarding marriage and divorce.

What Christian Science does preach is the simplest thing in the world: Get yourself in harmony both in body and spirit with the creator, and walk the straight path, and you not only will find that peace which passes understanding, but you will enjoy good health. Christian Science does not order you to believe anything; it is the rule of common sense that it asks you to follow—that and the golden rule. Do this, and you will be calm and cheerful and well.

Christian Scientists are living examples of the benefit of their appealing religion, or belief. They show a Christian tolerance for every one else and for the beliefs of the older denominations. As a matter of fact, Christian Science is the highest expression of faith. It is a belief, a firm conviction, that the Providence which orders all things will not allow suffering if the people of earth have that faith which it is intended they should have.

One would think that orthodox church-members would encourage this faith which far exceeds their own, and one also would think that physicians and surgeons would seek to work in concord with Christian Science practitioners. Certainly, as far as doctors are concerned, their sole aim should be to secure the good health of patients; and all of them must have noted the fact that Christian Scientists are in good health. Doctors may complain and attack the members and leaders of the church, but they cannot contradict results; they cannot successfully deny facts.

[A. Cope Stone in *Advertiser*, Adelaide, South Australia.]

The explanations given by the reverend gentleman are the very antipodes of the teaching of Christian Science. He leads his hearers to believe that Christian Science rejects the teaching of Christ, whereas every student of Christian Science accepts Christ as "the Way, the Truth, and the Life" (Science and Health, p. 332). Jesus said, "God is a Spirit: and they that worship him must worship him in spirit and in truth." Christian Science is a system consistently deduced from a given premise; that premise is the definition of God as Spirit; from this premise Mrs. Eddy has drawn all her conclusions; they are logical, consistent, and demonstrable, and coincide in every respect with the words and works of our Master.

Christian Science affirms that sin, sickness, and death are not the creations of God, but are the emanations of that carnal mind which Paul declares "is enmity against God." We recognize that these errors must be overcome and destroyed, and that we must "put off the old man with his deeds." This Science brings to the consciousness of the sick as well as the sinful, the fact that he is a slave, not to a real, but to an unreal master, and gives him a sense of the omnipotence of God whereby the seeming reality of evil is destroyed. Through this realization, men are released from the bondage of an unreal master, and are ushered "into the glorious liberty of the children of God."

Christian Science does not teach that "sickness is only imaginary." If the reverend gentleman had read the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, he would have found these words: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being" (p. 460). There are today unnumbered thousands who have been raised from beds of suffering after having exhausted all medical skill, and who have turned to Christian Science in their last extremity, and have found it to be a system which proves its faith by its works.

Christian Science includes the whole of Christianity. Jesus said, "Ye shall know the truth, and the truth shall make you free." The life of our Master proved conclusively that the healing of the sick and the reformation of the sinner were accomplished by this understanding of the truth which frees from all error. Christian Science is not a "new religion," but the religion taught and practised by Jesus on the hills of Judea and the shores of Galilee.

[Willis D. McKinstry in *Wichita* (Kan.) *Eagle*.]

A recent issue of your paper reports Dr. Baird's sermon, in which he says: "Mrs. Eddy, by associating religion with discovered facts of psychic phenomena, rapidly attracted thousands of followers." If this is our critic's apprehension of Christian Science, he has failed to grasp its teachings correctly. The teachings of Christian Science are based upon the spiritual facts of existence as contained in the Scriptures and as taught and demonstrated by Christ Jesus; therefore they can in no way be associated with "psychic phenomena."

The term Mind as used in Christian Science means God; it is a synonym for Deity, and is the basis of all true existence; hence man's being is the image and likeness of God, divine Mind. Through Christ Jesus' knowledge of the scientific action of the divine Mind, he proved his divine sonship, or at-one-ment with God—"I and my Father are one." Through the teachings of Christian Science mankind gains a spiritual understanding of the oneness and allness of infinite Mind, from which emanates all true thought and action. Hence the false beliefs of minds many, of conscious and subconscious thought in matter, of "psychic phenomena" are destroyed.

Mrs. Eddy says, "There is but one real attraction, that of Spirit" (Science and Health, p. 102). It is this spiritual understanding of the Science of being which brings heaven down to earth and meets humanity's need. "Thy kingdom come. Thy will be done in earth, as it is in heaven." The thousands of followers of Christian Science come from all walks of life,—ministers, lawyers, doctors, laymen; all alike have found that "God is no respecter of persons" and that He answers their prayer and heals their diseases.

[Written for the *Sentinel*.]

RELIANCE.

LAURA GERAHTY.

I KNOW not just the moment when
Love's harvest ripe will be,
But as I sow I gather for
Eternity.

I know not what the channel is
Through which my prayer will prove,
But I can wait, because I'm sure
The source is Love.

I know no need, nor suffer loss,
Since Love is my supply;
And in Love's bounty I have part,
On it rely.

I know no death, though friends remove;
No separation, pain;
Since Life and Love are one, I can
Rejoice again.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

PLACING THE RESPONSIBILITY.

SEVERAL weeks ago we called attention to a letter from a physician in which, although these are not the exact words in which he expressed his thought, he boasted somewhat of the fact that a certain other physician had been elected to the Legislature of his state solely because he was a physician and would use his position as a legislator to further the interests of his colleagues in their efforts to prevent the people from employing any method of healing other than that which they dealt in. He also told how this physician was paid by his professional brethren for his work in their behalf while serving in the Legislature.

At this point it is perhaps a pardonable and pertinent question whether or not such practises come dangerously near that which many of the states have tried to prohibit through the "corrupt practises" laws which they have adopted, and whether or not these practises justify the editorial statement of the *Albuquerque* (N. Mex.) *Journal*, "that doctors should not be sent to the Legislature, because in practically all instances they cease to be representatives of their constituents and become representatives of the medical fraternity."

In another editorial the *Journal* calls attention to a bill, now pending in the New Mexico Legislature, which the physicians who are urging its passage say "will not interfere with the practise by Christian Scientists; that it will merely subject them to regulation." This regulation, according to the *Journal*, would "consist of a four-years course at an orthodox medical school, a diploma from the same, and an examination by a board of hostile physicians." It should be borne in mind, however, that the public is not asking for such drastic legislation, and that the reason given by the doctors in their own trade journals for its advocacy is that their own financial interests demand laws which, speaking plainly, will give them a trade monopoly. This is precisely the same course which in the past has been pursued by large corporate interests in the commercial field, and has led to the political downfall of a number of public men when their secret employment and affiliations were exposed.

Mrs. Eddy says in Science and Health (p. 342): "If Christian Scientists were teaching or practising pharmacy or obstetrics according to the common theories, no denunciations would follow them, even if their treatment resulted in the death of a patient. The people are taught in such cases to say, Amen. Shall I then be smitten for healing and for teaching Truth as the Principle of healing, and for proving my word by my deed? James said: 'Show me thy faith without thy works, and I will show thee my faith by my works.'" Since Science and Health was first published, in 1875, thousands upon thousands of the weary and heavy laden have found rest and healing through its teachings, and this without any such "regulation" as is proposed.

Is it not time for the people to put a stop to all class legislation, no matter whose interests are to be advanced thereby? The way to its accomplishment lies in a wise and legitimate exercise of the franchise, and it can easily and quickly be made effective in its action. It is incumbent on every citizen who has the welfare of his fellow men at heart to see that those who are chosen to make the laws of the state or nation are men who, unactuated by selfish motives, will work for just and equitable laws and their fearless and impartial administration, and it is a responsibility which cannot be ignored.

ARCHIBALD MCLELLAN.

OUR WORD OF TESTIMONY.

IN the tenth and eleventh verses of the twelfth chapter of Revelation, St. John gives an epitome of the history of Christian illumination, of human struggle and of spiritual triumph, which is no less scientifically comprehensive than brief, and the more one studies it the more he is impressed with the statement of the revelator that this realization came to him as it were a voice out of heaven. In it he says that the saints have overcome "by the blood of the Lamb, and by the word of their testimony;" that is, by the Christ life relived before men; and we can but remember that to this secret of worthiness and success Mrs. Eddy has directed our attention with forcefulness and frequency.

The expectations of the observing world, that our daily exhibit of character and conduct shall be uniquely faultless, are legitimately grounded in the exaltation of the ideal of life which we are constantly declaring to be practically demonstrable, and to disappoint these expectations becomes the offense which is referred to by St. Paul when he speaks of those who "hold the truth in unrighteousness," who "when they knew God" failed to glorify Him, and thus changed the truth of God into a lie.

The giving of testimony is very generally associated in the thought of Christian Scientists with the Wednesday evening meeting, and the significance of this opportunity to witness to our own demonstration of the practical value of Christian Science and to express our gratitude therefor, grows upon one as he remembers the number of those who thus gain the encouragement and spiritual uplift for which they have longed during many years of pitiful pain.

Nevertheless this service measures but meagerly the extent of our privilege and duty as witnesses for Christ. The world is looking as interestedly for a truly honest man today as did the famous Greek cynic in the long ago. It is looking for that business integrity which stands for genuineness and reliability, and if we as Christian Scientists are not advancing the standards which govern the business world, we are certainly dishonoring both our privilege and our profession. "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven." This is the rule to the fulfilment of which we are pledged, and to walk thus worthily will be the constant concern of every true Christian Scientist.

The same responsibility rests upon us in every other relation of life. We are called to be a peculiar people, and to forget it for one hour is to make possible a stumbling that may be heralded from the housetops. The vital truth of Christian Science enters human consciousness to create a stir which is no less unusual than wholesome. Many a layer of the latent selfishness, sensuality, and wilfulness of mortal instinct is thereby brought to the surface, and if it is not carried away by the cleansing tides of an ever expanding spiritual life, it remains to father all those mistakes and contradictions which mean instant discredit and ultimate humiliation; and it is this fact which renders watchfulness over our every thought, word, and deed so imperative.

Here nothing will help us to escape the clutch of habit more surely than the cultivation of that spirit of universal love and kindliness, teachableness and humility, which is as oil upon the turbulence of mortal mentality. The overemphasis of trifling things which is forever breeding friction, the self-assertion which is the stirrer-up of strife in the home and the church, the desire for power and prominence which distrusts democratic rule and condones political methods of accomplishing ends,—all these offenses and many another which may have marred our record, will cease as the ambition to become a tried and true witness dominates us. In furtherance of this aspiration and end we do well to read thoughtfully, at least once a week, the searchingly affectionate counsel of St. Paul found in the third chapter of his letter "to the saints . . . at Colosse."

JOHN B. WILLIS.

BIBLE STUDY.

IN the fifth chapter of John's gospel we find a lengthy discourse by Christ Jesus on the subject of life as spiritually understood, and this teaching follows the account of the remarkable healing of a man who had for thirty-eight years been a helpless sufferer. After the healing, when Jesus again met him, he bade him "sin no more," lest a worse thing come upon him. We are also told that so far from rejoicing over the healing of this man, those who heard of it persecuted Jesus, "and sought to slay him." This blind antagonism to Truth, however, only served as an opportunity for the Master to reveal the true meaning of life, and its entire separation from sin and death.

Jesus doubtless spoke to those who were familiar with the Old Testament, for he said to them: "Ye search the scriptures, because ye think that in them ye have eternal life; and these are they which bear witness of me; and ye will not come to me, that ye may have life" (Rev. Ver.). Those who are today searching the Scriptures in the light of divine Science are seeking life as Jesus presented it, life which is not subject to sin, disease, or death, and what is more, they are finding it in the ratio of their spirituality. Respecting the Bible, our revered Leader says: "The Scriptures are very sacred. Our aim must be to have them understood spiritually," to which she adds: "Inspired thought relinquishes a material, sensual, and mortal theory of the universe, and adopts the spiritual and immortal" (Science and Health, p. 547).

In establishing the Lesson-Sermons, the purpose of our Leader was to enable all who were willing to accept the truth of being, as taught in Christian Science, to "lay hold on eternal life," and this can be done only as we rise above material belief and grasp the spiritual fact. It was therefore of the utmost importance that the word of Truth as therein set forth should be "uncontaminated and unfettered by human hypotheses" (*Quarterly*, explanatory note). It should be readily seen that the less we depend upon any so-called "Bible helps" in the study of the Lesson-Sermon, the better will be the results in every case. It is safe to say that none of these books were prepared from the view-point of the allness of Spirit and spiritual law, consequently they cannot aid us in demonstrating the unreality of matter and mortal belief, and they may lead us to depend upon the letter, rather than upon the spirit which "giveth life."

This should not, however, be taken as a general condemnation of all study of books on Scriptural exegesis, but as a plea for the study of the Lesson-Sermon under the guidance of the Spirit of truth. Many years ago Mrs. Eddy decided that the Authorized Version of the Bible, known as the King James Version, should be used at all our services, because it expressed the truth with sufficient clearness to enable every earnest student to demonstrate its power. It is true that the authorized revision of the Bible, representing the consecrated work of scholarly men for many years, gives in certain passages a better sense of the original, but its agreement with the King James, in the majority of cases, would make unauthorized and differing versions of very uncertain value, even for private study, except a few which adhere very closely to the original text.

It is true that there are many interesting and scholarly works on the various books of the Bible, which in explaining the habits and customs of other days show the reason for many human experiences which are different in their external settings from our own. The great fact remains, however, that we must come to Life to find the life which is "entirely separate from the belief and dream of material living" (Science and Health, p. 14). What we most need is the spiritual vision which penetrates the veil of sense and discovers "the deep things of God," and this recalls Jesus' statement that if "thine eye be single, thy whole body shall be full of light."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

NEWTON, MASS.—First Church of Christ, Scientist, Newton, Mass., was granted a charter Jan. 23, 1913, the charter membership of the organization being made up of members of The Mother Church who for the most part had been attending services in Boston. Services are being held in Player's hall, Washington street, West Newton, which has been newly and tastefully decorated. The first service was held Feb. 2, 1913, when the seating capacity of the hall, about four hundred and fifty, was taxed. The size of the congregation at each service since would indicate that the community is much interested in the healing message of Christian Science. Pleasant rooms have been provided for the rapidly growing Sunday school, and the church will maintain a reading-room at 297 Walnut street, opposite Masonic building, Newtonville.—*Correspondence.*

MELBOURNE, AUSTRALIA.—Our Sunday and Wednesday evening meetings have been crowded since the last lectures, for many strangers are coming in, and we have opened the reading-room on Thursday from seven till nine in the evening. The attendant of the reading-room brought under my notice three cases of healing within the last two months as the result of the reading of the literature. The first was that of a man with an internal trouble pronounced incurable by six doctors, who was advised to read a wonderful book of the Christian Scientists. He called and was shown into the reading-room, where he read for about twenty minutes and found that something had happened. He got up to go out, when the attendant asked, "Don't you feel well?" and he answered, "I was in a desperate condition when I came in, but this wonderful book has healed me." So the attendant lent him a copy of Science and Health to take home. The second case was that of one suffering from rheumatism, who borrowed the book from the lending library and came in and reported that he was free from all suffering. The third case, a woman suffering from spinal trouble of seven years' standing, which was getting worse, was healed by reading an article in the *Sentinel*. Surely it is time the world awakened sufficiently out of its dream to give Mrs. Eddy and Christian Science credit for being able to do what *materia medica* has failed to accomplish!—*Correspondence.*

KALAMAZOO, MICH.—The Christian Scientists of Kalamazoo are planning to erect on their lot facing Bronson park, at the corner of South and Park streets, a handsome structure costing about fifty thousand dollars. The Christian Science organization started in Kalamazoo in 1896, and the first meetings were held in a private home. The number increased rapidly, and soon the meetings were held in Parson's business college. The site now occupied was purchased in 1902. The congregation has outgrown the seating capacity of the present building, making necessary the new structure. The main auditorium will seat 566 people.

Kalamazoo Gazette.

ATLANTA, GA.—During 1912 there were sent out by the local literature committee: 147 *Journals*, 1,357 *Sentinels*, 4,505 *Monitors*, 2 magazines, 14 lectures, 13 pamphlets, 8 copies of "Life of Mary Baker Eddy," a total of 6,046, or an increase of 1,294 over the year 1911. Annual subscriptions to the *Journal* were placed at Carnegie library and Federal prison; subscriptions to the *Sentinel* were placed at Piedmont hotel and Federal prison; and five *Monitor* subscriptions donated by the Sunday school were placed at the Y. W. C. A., Federal prison, Piedmont hotel, and boys' industrial farm.—*Correspondence.*

Digitized by Google

LOGANSPORT, IND.—The official board of First Church of Christ met this morning (Feb. 18) and awarded the contract for building their fine new church at the corner of Ninth and North streets, contract price being twenty-three thousand six hundred dollars. When completed, the new church will represent a total outlay of something like thirty-five thousand dollars and will be one of the finest in the city. During the time the old church is being torn down and the new one built, the congregation will hold their meetings in the assembly-room of the high school, arrangements having been already made to that effect. The first meeting there will be held on Wednesday, Feb. 26.

Logansport Pharos.

LOCKPORT, N. Y.—Appreciating the splendid work of the daily, weekly, and monthly publications of Christian Science, we are trying to do our part by placing them in every available place, and one of our church-members is giving out the *Monitor* in France and elsewhere as she travels. Our church building is being filled with those who have felt the power of spiritual healing, and better work is being done in all lines. On Jan. 1 we started a building fund for a new church, which stands at eight hundred dollars now. We are growing in the understanding of the truth that makes men free, even as the Master promised. Christian Science shows us that God's will is the only will "in earth, as it is in heaven."—*Correspondence.*

FULLERTON, CAL.—A year ago last December a little society was organized here, there being just a few Scientists in the town. Since that time, services have been held in the Masonic hall; but a short time ago an opportunity presented itself for us to acquire a lot nicely located in the very center of our little city. This lot was purchased, and we immediately began the erection of a small bungalow church seating seventy people. The first service was held in the new church Feb. 23, and it is needless to say that we are very grateful for this beautiful demonstration with so small a membership.—*Correspondence.*

PHILADELPHIA, PA.—At a special meeting of the members of Second Church of Christ, Scientist, Philadelphia, Pa., it was resolved to purchase the James S. McCracken property on Greene street, between Coulter street and School lane, for thirty thousand dollars. This lot is 140 feet wide and 300 feet deep, and is situated in a most beautiful residential section of Germantown.—*Correspondence.*

MERCED, CAL.—A deed was passed today (Feb. 10) to First Church of Christ, Scientist, covering two lots on the southeast corner of Twenty-second and J streets, by parties who held it, pending the incorporation of the local Christian Science society into First Church of Christ, Scientist, of Merced. The church expects to build on the corner at a later date.—*Merced Sun.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 30, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 14, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 1, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

THE LECTURES.

BRIGHTON, ENGLAND.

The opportunity of hearing Christian Science discussed attracted a very large audience to a lecture at the Hove town hall. The Brighton First Church of Christ, Scientist, had secured a visit by Bliss Knapp of Boston, U. S. A., and he placed the tenets of his church before the audience in a noteworthy lecture which commanded the attention of the hearers during the whole of his discourse.

The lecturer was briefly introduced by Algernon Hervey-Bathurst, of London, who said that in the forty-six years which had elapsed since Mrs. Eddy gave Christian Science to the world, it had encircled the globe. Thinking people recognized that it was a correct and practical reiteration of the teaching of Christ Jesus, and this by reason of what Christian Science had accomplished. The trend of human thought of recent years was to reach out for something higher, something better, and more reliable and practical than the dogmas and theories of the past. If they looked back over the history of the world, they would find an innumerable quantity of revolutionary movements along this line, but in the van of them all stood Christian Science, because it formed a proof of true Christianity demanded by Christ in breaking the fetters of sickness, as well as of sin or discord; and above all, it destroyed fear. From his personal experience he knew that Christian Science healed the sick, even when the best available material aids had failed. He himself had been healed in just that way. Of far more moment than the bodily healing, was the making of character, which was inseparable from Christian Science. This wonderful formation of character, which the student of Christian Science alone could appreciate, was what called for expressions of heartfelt gratitude. Christian Science had been misinterpreted and misrepresented, and statements in the press had set forth only too accurately what Christian Science was not and what it did not teach. It was because of this, the speaker explained, that Mr. Knapp was engaged in a lecture tour around the world.—*Sussex Daily News.*

BALTIMORE, MD.

Prof. Hermann S. Hering lectured before an audience of about seventeen hundred at the Lyric, on the subject of Christian Science. He was introduced by G. Ridgely Sappington, Esq., who said:—

The history of man presents one long struggle for freedom, and while the struggle has been crowned with many victories, as one after another of the supposed limitations to man's dominion and obstacles to his progress have been overcome, still the greatest fight, the most unceasing fight, wages as fiercely as ever, and the victory is not yet. This is the fight against sickness and sin, a battle which has been waged unremittingly during all time. In all ages the deep thinkers of the world, face to face with the seeming power of these twin evils, and regarding the faithful and earnest but withal unavailing efforts to meet and overcome them by material means, have turned their gaze to the infinite in search of the remedy which man had failed to find, a remedy which the accumulated wisdom and understanding of the ages seemed unable to bring forth.

The great Teacher, who during his brief stay on this earth left no problem unsolved, no question unanswered for mankind, pointed the way to this freedom from sickness and sin when he said, "Ye shall know the truth, and the truth shall make you free." Throughout all time noble, self-sacrificing men and women have devoted their lives to the search for that truth, in an effort to bring to mankind freedom from those most relentless and cruel tyrants. Back of this effort has ever been the assurance that to know the truth about sickness and sin was to be their master instead

Digitized by Google

of their slave. All man's study, all his efforts to gain wisdom, have had as their ultimate goal the understanding of this truth, the truth about God and man.

In 1875 there was published a little book called "Science and Health with Key to the Scriptures," and in 1879 the first Christian Science church was chartered with twenty-six members. In the brief period from that day to this, within the memory of many of you, that small band has increased to tens of thousands, who declare that in Christian Science they have found this truth. Among their number are men and women from every walk and station in life, from every creed and school. This unprecedented growth has caused us all to ask at one time or another, What is Christian Science? It is to give a correct answer to this question, in the midst of gossip and surmise, that these lectures are given.

Correspondence.

SANTA CRUZ, CAL.

An interested and attentive audience gathered at Knight's opera house to listen to the lecture on Christian Science by Virgil O. Strickler. The lecturer was introduced by Emmett C. Rittenhouse, who said in part,—

Man has been so deeply engaged in the development of the material sciences that it was left to woman to recall and develop that science most beneficial to life, the Science of Life, or Christian Science, which had been so wonderfully taught by precept as well as example nineteen hundred years ago on the plains of Galilee. Her efforts were at first ridiculed, as other sciences have been, but her work has grown upon the minds of thinking people until today it stands as one of the greatest sciences.

Whatever may be our opinion as to its power to do all that is claimed for it, this we must admit, that most of its followers can be distinguished by their tranquil temper, unsullied character, and the sunshine in their faces. The world is interested in this subject, and your presence is an evidence that you are interested in it. I have the pleasure as well as the privilege of introducing to you, and through you to the city of Santa Cruz, one who has come with a message for you of this Science.—*Santa Cruz Sentinel.*

PEORIA, ILL.

William R. Rathvon delivered a lecture on Christian Science to a large and interested audience at the Masonic temple. The lecturer was introduced by Chas. H. Feltman, president of the Peoria board of trade, who spoke in part as follows:—

Recently I was near the place where in 1620 a very small minority of earnest men and women landed on the New England coast, that they might be free to worship God according to the dictates of their consciences. Shortly after I stood before Faneuil hall, that old "cradle of liberty" where began the long struggle which gave us civil and religious liberty, making a meeting of this kind possible. We who have always enjoyed these privileges should not forget that every added blessing brings with it an added responsibility, and while we are of many minds, this one duty is ours, that we "prove all things," and "hold fast that which is good;" that we give an attentive ear and appropriate unto ourselves and into our lives that which seems reasonable and the truth, for the truth shall make us free. The truth will make us free of sin and all our ills. It will free the world from jails, penitentiaries, and wars.

From Faneuil hall I came to a more modern structure, and above its doors, chiseled in the everlasting granite of its walls, were these words: "First Church of Christ, Scientist. Erected Anno Domini, 1894. A testimonial to our beloved teacher, the Reverend Mary Baker Eddy: Discoverer and Founder of Christian Science: author of its text-book Science and Health with Key to the Scriptures."

Surely men do not give of their time and means like this as an evidence of gratitude, except they have received great benefits. Mrs. Eddy and her followers came before the people, not with unseemly instances, but they came simply appealing to men's reason, in an effort to make them better and to do good; and while I am a Congregationalist, I have always recognized the good they have done and have always considered it my Christian duty to think of them in the same spirit of toleration which they have always shown toward every other denomination.—*Peoria Herald-Transcript.*

BUTTE, MONT.

The introductory remarks of Eugene N. Hill, in presenting Judge Clifford P. Smith, at his lecture on Christian Science in the Auditorium, were in part as follows:—

Your presence is an expression of your desire for further enlightenment concerning Christian Science from an authentic source. The speaker brings a message that is receiving attention and respect from thinking people everywhere; and in every community may be found those who owe their health, happiness, and success in life to Christian Science. Applied Christian Science is teaching men how to think "with malice toward none, with charity for all:" how to love their neighbors as themselves, and to live the golden rule.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Arlington, Mass. (auspices Winchester).—Town hall, 8 p.m., April 21.
Astoria, Ore.—Red Men's hall, 8 p.m., April 24.
Auburn, Maine.—Auburn hall, 8 p.m., April 22.
Baltimore, Md. (First and Second Churches).—The Lyric, Mount Royal Plaza, 3:30 p.m., April 20.
Bangor, Maine.—City hall, 8 p.m., April 24.
Calgary, Alberta.—Paget hall, 8 p.m., April 24.
Chicago, Ill. (First Church).—Church edifice, 4017 Drexel boulevard, 8 p.m., April, 22, 24, and 25.
Chicago, Ill. (Eighth Church).—Church edifice, Michigan boulevard and 44th street, 8 p.m., April 18 and 19.
Dublin, Ireland.—Sackville hall, 8 p.m., April 14.
Edinburgh, Scotland.—Synod hall, Castle terrace, 8 p.m., May 2.
Edmonton, Alberta.—Bijou theater, First street, 8 p.m., April 25.
Frankfurt a. M., Germany.—Frankfurt Loge, 8:30 p.m., April 18.
Franklin, Ind.—Franklin opera house, 8 p.m., April 22.
Goldfield, Nev.—Ross Holly hall, April 14.
Grangeville, Idaho.—I. O. O. F. hall, 8 p.m., April 21.
Hackensack, N. J.—State street school, 8:30 p.m., April 24.
London, England (Second Church).—Queen's hall, Langham place, W., evening, May 3.
London, England (Third Church).—Church edifice, Curzon street, Piccadilly, W., 8 p.m., May 6.
Lyons, N. Y.—Memorial opera house, 3 p.m., April 20.
Manchester, England (First Church).—Town hall, 7:30 p.m., May 1.
Manchester, N. H.—Jolliet club, 8 p.m., April 22.
Marlboro, Mass.—Universalist church, 8 p.m., April 21.
Muncie, Ind.—Wysor Grand opera house, 3 p.m., April 20.
Newburyport, Mass.—Griffin hall, Pleasant street, 8 p.m., April 21.
Oneonta, N. Y.—Y. M. C. A. hall, 8 p.m., April 24.
St. Johns, Ore.—Auditorium, James John High school, 8 p.m., April 25.
Scranton, Pa.—Lyceum theater, 3 p.m., April 20.
Springfield, Mass.—New Municipal auditorium, 3:30 p.m., April 20.
Spokane, Wash.—Auditorium theater, 3 p.m., April 20.
Yreka, Cal.—Peters' opera house, 8:30 p.m., April 24.

TESTIMONIES OF HEALING.

When I turned to Christian Science in March, 1907, I was not able to walk across the room unaided. I had not slept for two weeks without an opiate, being in constant pain, and two physicians had agreed that I could never be a well woman again. They advised an operation, saying that though it could not cure me, it would probably bring temporary relief; but more than one operation might be necessary. At this point I remembered friends who several years before had told me what Christian Science had done for them; and how thankful I am to them for the seeds which were sown at that time and which have now taken root. Their words enabled me to turn to Truth when I needed its aid both physically and spiritually, and I was healed of all my troubles in three treatments. The first treatment enabled me to sleep all night without an opiate; at the second, I had to be helped into the room where the practitioner was, being bent almost double, but when I came out, in about half an hour, I took my seven-months-old baby in my arms and danced twice around the room. Every ache and pain had vanished, and I was well! The next day I went to the practitioner's home, being obliged to take two car lines and to walk several blocks, the streets being covered with ice. Treatment was given for bowel and liver trouble, and today I am a well woman.

These were my first blessings in Christian Science, but I have had so many since, that time fails to relate them. The physical healing is to me the least of these blessings, for it is only the stepping-stone to a higher understanding of life, and pales before the spiritual life into which it has led me. Each day I am more and more thankful for knowing that God, who is Truth and Love, fills all space and is ever available if we turn to Him. I wish to express my gratitude to our Leader, Mrs. Eddy, who was spiritual enough to look through and beyond the mists of materiality and discern this great truth and give it to mankind. I pray that I may grow into a fuller understanding of divine Truth, so that I shall be worthy of the name Christian Scientist.

MRS. EVA COOK GILLETT, Chicago, Ill.

I would like to tell others how much I have to be grateful for in the help that Christian Science has been to me. I am a nurse, and four years ago I heard for the first time of Science from a friend who gave me a *Sentinel* to read, and who also told me of some healing she had witnessed. I borrowed "Science and Health with Key to the Scriptures" by Mrs. Eddy from the reading-rooms in the town where I was then residing, and began to study it. I had been reading for about ten days when to my surprise (for I did not know I could be healed through reading only) a stomach affection of fifteen years' standing, and for which I had had various medical treatments, was entirely healed. I was able to eat anything I liked and at any time, which to one in my profession meant much. I then asked a practitioner for help in overcoming sleeplessness, which even from infancy had always troubled me. This was overcome in one week; also at the same time I was conscious of the disappearance of an internal growth which had long caused me great distress, and neither has troubled me since. Every winter bronchial asthma, pleurisy, and heart trouble had been my usual procedure. I immediately developed a cold at any change in the weather, which in the English climate is pretty frequent; therefore I feel that no one has more reason to be thankful to God than I, for all these discordant conditions were overcome in less than two years. I can now go out in all kinds of weather without any ill effects therefrom. The moral healing has not seemed so quick as the physical, still I know I have in some measure overcome much that is unlike God and His idea, as I go on day by day to realize truly and honestly the fulfilment of our dear Leader's counsel in Science and Health: "Emerge gently from matter into Spirit. Think not to thwart the spiritual ultimate of all things, but come naturally into Spirit through better health and morals and as the result of spiritual growth" (p. 485).

For all the happiness that has come into my life through the right understanding of God and man as given us in our text-book, and for the increased practical knowledge of the Bible, I am truly grateful.

MRS. BEATRICE PEARCE, Worthing, Sussex, England.

For some time I have felt impressed to give a testimony in acknowledgment of what Christian Science has done for me in healing my three-year-old son, who was very ill. A short time ago he had high fever and was not himself, and remained in that condition all night. Next morning, as the fever still continued, I began to be alarmed, and I was tempted to call a doctor, but another thought came, namely, that now is my time to see what Christian Science can do; so I telephoned to a practitioner to give the child treatment, and in half an hour a great change in his condition was manifested and my fear was all gone. In the afternoon he was able to be up, and the next morning, on awakening, he began to sing. After breakfast he went out of doors and played in his usual way, and has never been sick since. We realize daily the benefits of Christian Science and are convinced of its true healing power.

MRS. H. O. ZEHNER, Prosser, Wash.

I wish to testify to the efficacy and all-healing power of Christian Science, feeling that some may be benefited by this truthful statement. I hardly know where to begin, having derived so many benefits, but will state that about fifteen years ago I had a severe and stubborn attack of rheumatism which confined me to bed, and I could get in no other position than on my back for about six months. After trying several of the best physicians, Hot Springs, etc., I was relieved, not cured. For several years I was comparatively free from the ailment, but was always having some slight pain, and from then until about two years ago I had three or four attacks, lasting anywhere from a week to a year. During that period I suffered intense agony and took a great quantity of medicine.

About two years ago, when I had my last attack, I tried different reputable physicians with nothing but bad results. After a long period of suffering, often wishing for death as a possible relief, my aunt, who was not a Christian Scientist but anxious to do good, asked me to try the treatment, and begged me to talk with a practitioner with whom she was slightly acquainted. I consented, but was confined to my bed at the time, so the practitioner came and talked a while with me, among other things telling me that "God is no respecter of persons;" and I well remember that I thought unkindly and was positive that He certainly did not respect my feelings. She asked me to try to come to her the next morning; I consented, and though it was raining hard, I dressed, and with the assistance of a cane walked to and from the practitioner's house, about ten blocks. I began to feel relief at once, and gradually became entirely free, and have been ever since. I used to scoff at and ridicule this teaching, but am now a firm believer and know that others can be cured likewise.

Before my healing in Science I was also a great sufferer from stomach trouble and extreme nervousness. I tried all kinds of prepared foods and dieting with no result, and when I took a trip, if only for a day, I carried a lot of medicines, stimulants, etc. I became very dependent on whisky, first to stimulate, then to quiet, and would not think of retiring any night without taking these remedies, such was my false belief. All of this I have overcome, and nervousness is practically eliminated from my system, so to speak. It is indeed gratifying to me to be free from

Digitized by Google

continual suffering, and my friends tell me that I look much brighter and happier than formerly.

In addition to being entirely freed from physical ills, I have also lost false appetites, my thoughts and desires, as also my pleasures, now being in a new, happier, and higher sphere; for not alone physically, but morally and spiritually, have I been benefited by this great truth. At one of our Wednesday evening meetings I heard some one testify that "our enemies are those within us," meaning our thoughts, and I am sure heretofore my latch-string was always out to my enemies; but with God's help I shall hereafter "stand porter at the door of thought," as we are told in our text-book (p. 392).

I desire to add that my wife, and little boy nearly five years of age, have only Science and Health for their physician. The child is very healthy, for which I am indeed thankful, and I consider myself more fortunate than the many who rely on medicine to relieve but not cure so-called disease.

For my many benefits and blessings I am grateful to God, and thankful to Mrs. Eddy, who gave us this great truth.

GEORGE MARR, Baltimore, Md.

Several years ago I became interested in Christian Science through some friends. At that time I was not much impressed with the healing being done, but the fact that it taught a practical religion appealed to me. However, after attending a few of the Wednesday evening meetings and listening to the testimonies of healing, I soon accepted this branch of its teaching also. Since that time I have read the Bible, also "Science and Health with Key to the Scriptures" by Mrs. Eddy, together with other Science literature, a great deal, and by applying the truth therein taught to the best of my understanding, in my daily life, a sense of peace has come to me which words cannot express.

In October, 1909, a baby was born to us, and through the help of a practitioner the birth was absolutely painless. By knowing that God is the only source of our strength, I have been well and strong from the first, and so has the baby. The fifth day I took charge of my home, and have continued to do so ever since, doing all the work alone. For the many blessings received through Christian Science I am very grateful to God, and thankful indeed to Mrs. Eddy, who has shown us the way.

ETHEL M. HEMPHILL, Cleveland, Ohio.

I am impelled to give expression to my gratitude for Christian Science, although I feel that I shall never be able to express it in words alone. It is ever increasing for what Christian Science has done and is doing for mankind in giving a satisfactory demonstration of man's relationship to God. I have been taught to think right, to keep close watch and correct each wrong thought before it becomes a wrong act. This has not been an easy task, but the results authorize the effort, and they are permanent.

I know that I am better physically, morally, and spiritually than before I knew of Christian Science. It has given me a faith in God, a faith which understands here on this plane of thought that Spirit, not matter, is the real. It has also given me a desire to live rather than to die, and an ever-increasing understanding of Life as Love. What our revered Leader has expressed in "Retrospection and Introspection," that "with our Master, life was not merely a sense of existence, but an accompanying sense of power that subdued matter and brought to light immortality" (p. 58), has helped me greatly.

A sense of trust and peace has been gained that all the seeming disappointments cannot take away, and I needed it, for I felt so unhappy. As I have realized that the real man is born, "not of blood, nor of the will of the flesh, nor of the will of man, but of God," it has been easier to free thought of fleshly inheritances. It was the study of the article on page 180 of "Miscellaneous Writings," on Bible Lessons, that brought me such light, understanding, and peace. I mention this that other seekers may turn to it and find what it has for them.

The "scientific statement of being" (Science and Health, p. 468) has been as the bread of life to me from the start. It has been proven in my own case that the truth as demonstrated in Christian Science does make us free in every experience. As I have come to realize more and more of the ever-presence of divine Principle, Love, fear in many of its phases has been eliminated or lessened. Before I knew of this truth I was either suffering (and often in bed) with what *materia medica* called rheumatism in various forms, or fearing I should; but I have been entirely free from it all for several years. The tendency to continuous colds and hay-fever has been arrested, and a chronic bowel difficulty was healed four or five years ago.

When this is only half the story of the salvation that has come to me, is it any wonder I feel profoundly grateful to all who have and are working honestly and faithfully that all may know? These blessings that have come to me are surely waiting for each and every one who will receive them.

I have a great sense of gratitude for all the writings of our Leader and for our other literature, also for the church services and reading-rooms all over the world.

MRS. DAISY A. SNOW, New Bedford, Mass.

I am not a Christian Scientist, but I wish to corroborate all that Mrs. Snow says in regard to her illness, and her healing since becoming interested in Christian Science.

FRED. L. SNOW, New Bedford, Mass.

While visiting relatives in Sweden, four years ago, I was attacked by rheumatic fever. I tried to meet the attack myself, but found that I had to turn to a Christian Science practitioner in Stockholm to realize that man is the perfect reflection of God. Within a week I was out of bed, in two weeks I was restored to perfect health, and there has been no relapse. This has meant a great deal to me, as I had experienced the same trouble before I came into Christian Science. At that time I was confined to my bed several weeks, and it took months before I was perfectly well.

I am very grateful for this healing, for it was an opportunity to prove to those about me (who were not Christian Scientists) that in turning to the infinite we find sure help. Since my healing a sister who resides in Sweden has become a student of Christian Science, and very recently one of her little daughters was beautifully healed through its teaching. In our home we have daily proofs of the ever-presence of God, good. We are very grateful for what understanding we have, and are daily striving to put it in practise.

MISS ELIZABETH JANSON, Mill Valley, Cal.

There are many reasons why I am thankful to God for Christian Science. Every member of my family has received wonderful blessings. My wife was suffering from a relapse of acute lung trouble, and the doctor had said he could do nothing more for her, when we first decided to try Christian Science. She was healed, and went with me to New York on a business trip, all within ten days from the time we called the practitioner. Our little daughter fell and injured her arm close to the wrist. A doctor set the bones, and the healing took place under Christian Science without any inflammation, swelling, or pain. The next day she was out in our yard. Our little son was healed of ailments to which children are believed to be subject. I have been healed of severe burns on my face, affecting my eye. The specialist who diagnosed the case said the injuries might necessitate the removal of one of my eyes, but that fear was not realized. At another time I stepped

Digitized by Google

[illegible] I am trying to show my gratitude to Mrs. Eddy for her tireless labors for humanity, by adhering closely to her teachings and endeavoring more and more to derive help from the wealth of her knowledge, while giving all praise to God for that which has proved such a blessing to me.

Mary M. Stratmann, Magdeburg-Sudenburg, Germany.

I send this testimony with the hope that it may serve to strengthen those who are interested in Christian Science and help them to see the truth of being. After a recent experience of healing I feel as if I should like the whole world to know what Truth can do for us. In the past I have been reluctant to send my testimony, but my heart is so full of gratitude to Divine Love that I can no longer delay. In reaching too far I strained my back so badly that I came near falling from pain, but as soon as I could collect myself I began to declare the truth as I related the modern statement of being ("Science and Health," p. 468). This happened in the early morning, and it took me some time to get dressed, as every movement caused great pain, it being almost impossible for me to stand erect. After breakfast, however, I called up a practitioner over the telephone and asked her to help me. In the mean time I took up my daily study of the Lesson-Sermon, and by five o'clock that evening I was free from all pain. I surely feel thankful to God for what Christian Science has done for me, and grateful to our dear Leader, Mrs. Eddy, for the healing truth. In Christian Science I have found health, happiness, and an ever-present God. The joy I derive from learning to know God is unspeakable.

Mrs. S. B. Cheatham, New Orleans, La.

It is with deep and heartfelt gratitude that I give my thanks to God for all that Christian Science has brought into my life. About four years ago I was a great sufferer from what was diagnosed by the doctors as acute rheumatism and lung trouble. I sought healing in Christian Science, and found not only relief from my sufferings, which were at times almost unbearable, but also peace of mind and calm after deep sorrow. What struck me as so remarkable was the patience, the loving sympathy, shown me, also the sensible answers to all the questions, some quite malicious at times, that were poured out by me. I was taught to overcome hate, to forgive freely, and to know, as our dear Leader tells us, that "to infinite, ever-present Love, all is Love, and there is no error, no sin, sickness, nor death" (Science and Health, p. 567).

Mrs. Augusta J. R. Bruce, London, England.

[Translated from the German.]

Even before I became acquainted with Christian Science I believed God to be omnipotent, but I had been suffering for years with nervousness and stomach trouble. During this period of misery I often secured medical advice, though for the sole purpose of reassuring my wife, for I relied on God more than on anything else, despite the fact that I lacked the proper understanding of His nature and believed with the many that He imposes suffering upon us. The hope of recovery never left me, however, although I looked into the future with a sense of anxiety which at times culminated in despair.

About two years ago I heard of Christian Science. I had injured my ankle at that time, and this incident seemed to serve a higher purpose, as my being laid up afforded me the opportunity of reading some Christian Science literature which was loaned me by an acquaintance. I thereby gained a better understanding of divine Love, and saw that my sufferings were in no wise imposed by God, but that I myself was responsible for them through false thinking and living. I then attended the meetings several times and

---

[illegible] I have also [illegible] and that [illegible] years ago I was healed [illegible] for many years and [illegible] this testimony [illegible] my family by [illegible] I enjoy the Bible better than ever before. Soon after [illegible] began [illegible] years ago, the [illegible] I [illegible] of what I [illegible] done, it is a great joy to teach every one I [illegible] to be good and to do good, to be kind and to love. In closing [illegible] "Science and Health with Key to the Scriptures" [illegible] the Scriptures, by which Love [illegible] are making [illegible] progress. Christ Jesus proved, "Whatsoever ye shall ask in my name, that will I do." Christian Science is teaching us how to ask in his name.

William L. Bolles, Detroit, Mich.

I want to add my following testimony about my remarkable healing to supplement the reference to it made by my husband. In January, 1901, about six years ago, I had a relapse in my long trouble, and for ten days I was not able to retain food or even medicine. The fever was very high, besides which I could not sleep, and I suffered greatly, constantly getting to make me more wakeful and excitable than ever. When the doctor said he had done all he could for me, we turned to Christian Science. A practitioner came about ten o'clock at night, and the next morning my fever was gone and I drank some orange juice. In four days I was sitting up, and in ten days, when my husband had to go to New York on business, I went with him.

This healing was wonderful, but it was not so wonderful as the spiritual understanding of God which we have received through the study of the Bible and "Science and Health with Key to the Scriptures." One Scripture that helps me very much is this: "In him we live, and move, and have our being." To me this indicates that in Truth we live, and move, and have our being, and this thought gives me great strength and happiness. My husband and I have had the great help of class instruction, and now enjoy being able to help others as well as ourselves. We are truly grateful to God for Christian Science and for our dear Leader, Mrs. Eddy.

Mrs. Mary A. Bolles, Detroit, Mich.

[Translated from the German.]

The wonderful blessings which I have experienced through Christian Science furnish the incentive to my public expression of deep felt gratitude to God, and call forth my reverence toward the Discoverer and Founder of Christian Science. I had been suffering with an abdominal complaint for years, and after having consulted many physicians who failed to relieve me, I submitted to a course of "nature-cure" with similar result, when divine Love led me to Christian Science. The first treatment was attended by a sense of unspeakable happiness, which turned my thought entirely away from my physical ills, and with a few more treatments a certain clarity and peace filled my consciousness which enabled me to perform work with the greatest ease, though formerly this had seemed impossible. The relations between my husband and myself have also become altogether different, and financial difficulties have been solved in a wonderful way. Many have been the opportunities afforded me to prove and experience Love's omnipotence, and the power

Digitized by Google

induced my wife to join me. This teaching inspired us with strong confidence, which led us to secure treatment from a Christian Science practitioner for our nine-year-old daughter. She had suffered for five years with difficulty in breathing, for which she was under the constant care of a physician, besides having had an operation on the nose performed; but it was all of no avail, and the trouble usually grew worse in the evening, after she went to bed, so that her labored breathing made it impossible for us to sleep. We were happy to find that the trouble was now yielding, and with twenty-four days' treatment it had almost disappeared, so that we could sleep peacefully at night. There has also been a great improvement in my condition, and we have come to realize what it means to be happy. We freely admit that we never have been so happy as we are now, since we have recognized the omnipresence of God, good, and eternal harmony. We also rejoice that the opportunity is afforded us to give thanks through these channels for the truth as revealed by Mrs. Eddy and which was taught before by our great Master, Christ Jesus. Our desire is that this experience of ours may prove a help in leading our fellow beings to Truth.

W. BORCHERS, Braunschweig, Germany.

Never a day passes in which I do not receive some benefit from Christian Science. It is two years since I became interested, and they were the most restful years which I have ever experienced. I have learned that Truth is the remedy for error of all kinds. The error which seemed to be my worst enemy was excessive fear, brought on by worry over my daughter's ills. She was a sufferer from attacks of throat trouble which at times were very alarming. I tried treatment from several good physicians, without as I thought any good results. I at last heard of Christian Science through a friend, who was kind enough to loan me her much-treasured book, "Science and Health with Key to the Scriptures," in which I eagerly read. While reading this book my daughter was taken with an attack of croup. I called a Christian Science practitioner, and in a short time, perhaps a half hour, the child was healed. With that perfect healing the other ills seemed to disappear one by one, until there is no longer any cause for fear. "By their fruits ye shall know them," could be truly applied in this case.

I am very thankful for my spiritual uplift and a better manifestation of God's child through the understanding gained in Christian Science.

MRS. MAY DELONG, Waukegan, Ill.

My blessings have been so many since I began the study of Christian Science that I can tell only a few of them. Two of my children and I have been healed of malarial fever, and my daughter was treated for a felon. She did not lose a single night's sleep or a day at school. In August, 1910, I was obliged to have some dental work done, and as I could not overcome the fear for myself, I wrote to a practitioner for treatment. She began to treat me on Friday, and I went to the dentist on Monday, as he had told me it would take him three or four days to complete the work. I arrived at his office at eleven o'clock, and by five o'clock he was through. He prepared four double teeth, fitted four crowns, filled two teeth, took the impression for the bridge, and extracted ten teeth. I wish I could have taken down, in his own words, the testimony he gave after he had finished his work. He said that he wished all his patients were Christian Scientists if this was the way it made them act.

I am very thankful to God for this truth, which has helped me over so many rough places, and also to our beloved Leader, Mrs. Eddy, for Science and Health.

MRS. A. E. JONES, Bristow, Okla.

FROM OUR EXCHANGES.

[Woodrow Wilson as reported in *New York* (N. Y.) *Times*.]

Every community ought to realize, it seems to me, that the search for God takes precedence over everything else. What is the foundation of our life? What is the source of our strength? Where is our salvation? Not in ourselves, but in something external to ourselves and greater than ourselves, from which we are to arise. So the first thought that I have in standing here tonight is, that these walls have witnessed the permanent impulses and instincts of human life, that they are greater than the walls of cities. And the second thing that I have in mind is this: that this search is fruitless if it issues in mere conclusion, if it issues in mere intellectual certitudes; it is fruitless unless it gets embodied in men.

I have seen this beautiful thing happen, and I know that the salvation of a church and the salvation of a community and the salvation of a state is to be found only in those men who are thus rendered greater than themselves and greater than their age, and greater than anything that can happen to them. Those old martyrs who went to the stake smiling and singing songs of praise were terrible fellows; terrible because their very gaiety in going to the stake was evidence of the fact that this was an incident, not an end; that this meant nothing, and that after them their ashes would seem to speak the condemnation of those who put them to the stake, and stand up and condemn the generation that dared interfere with the processes of divine Providence.

We ought to bless our churches. We ought to think of them as the instrumentalities by which miracles are wrought, these miracles of regeneration. The example of consecrated men is better than all the books and precepts that the world contains, except, perhaps, this Book that I am touching, which seems something more than a book. It seems to contain something more than words and printed pages, because everything in it is so concrete, the men it speaks of are so real, and the truths it utters are so compelling. Read in this air they are familiar, but they are not redeeming words unless they vibrate beyond the walls of the churches and walk the streets and are seen in the households, and are translated into the public life of the community.

[*The Advance.*]

Some men live in a universe the limit of whose outermost confines they can touch with their own finger-tips. It is their one end and aim in life to change their finger-tip touch into a good, fast clutch. If their arms were only a little longer and their grip a little stronger, they would be able to hold in hand or mouth what is virtually their whole universe. They are as the beasts that perish. From this lowest stage of human apprehension on and up, the universe expands. From the man who is his own world on to the man whose world is his home, and whose concern for humanity is bounded by the four walls within which he dwells, the ascent and widening area are progressive and continuous. There are men whose universe is as big as their own country, their own church, their own profession.

The man with only his naked eye and a small imagination lives in a universe bounded by the horizon. To him even the stars are virtually only a mile high. The man with the telescope adds celestial diameters to the measure of his universe, and the man with the microscope does the same in the other direction, and the man with the X-ray machine sees still farther. But the man with the imagination, the man of spiritual vision, sees farthest of all. He can discover what "eye hath not seen, nor ear heard." He can see beyond the stars. He can possess for his own the regions from whose bourne no traveler has returned. God and the landscape are his; for his eyes see the King in His beauty, and he beholds the land that is very far off.

Digitized by Google

No man can measure out a universe and deed it in fee simple to another man. Discovery is creative. The universe shrinks and expands with the mind and purpose of man; it fits every man like a garment without seam. Each man grows his universe. He makes it big or little; he makes it glorious or contemptible; he fashions it according to the bulk and quality of his own soul.

[*The Universalist Leader.*]

Sometime we shall have a literature which will deal with David and Saul and Samuel, with Moses and the prophets, with a freedom from all the excuses or repulsions of our present state of mind. Those pioneers were in dead earnest. They were human. They had great ideals. They lived in a world of thought where the mystery of the eternal was ever with them. What they said and wrote was but the faint echo of what they felt. The Scriptures bear witness to those who searched for God. We are still searching for God. It is doubtful if we are any nearer the solution of that mystery than they were. When our day of intellectualism, rationalism, criticism, science, has passed over from analysis to synthesis, when the coming age goes about reconstructing its world faith out of the materials furnished by history, those ancient seers will come to their own again. In that day a wise, devout generation of men will go hand in hand with the author of Job, or Ecclesiastes, or the 19th Psalm, through the twilight of this world. The mystery and marvel of things will return in the greater splendor of the new thought, and the human spirit will break forth into nobler appreciation of the mighty struggle of that ancient people who laid the foundations of our faith. When dogmatic theology passes over into the spiritual dogmatism of great convictions about righteousness and conduct and God, we shall sing again those ancient marching songs of Israel, and we shall write a finer commentary on the Book which tells the story of that march.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

Exiled humanity has often longed for its spiritual home without knowing what it wanted; in Jesus the revelation has been given. The spiritual consciousness has awakened on higher levels than heretofore, and has laid hold of and assimilated eternal realities in a way that, apart from the gospel, it has never been able to do. It is becoming ever clearer to me that the grace of God in Jesus Christ has produced unique effects in the world; it is a thing by itself, an impartation of life and power not to be accounted for on any other ground than that it is the eternally perfect, the kingdom of heaven, breaking its way through to the plane of flesh and sense, irradiating, transforming, and uplifting the soul that yields itself to it.

[*Western Christian Advocate.*]

Signs multiply on every side that there is, not only here in America but throughout the civilized world, a decided reaction from the rampant and increasing materialism of our age, with its money madness and its rage for spending, toward something more associated with spiritual development and the higher life of the individual, society, the nation, and the race. This is a movement and a trend in which all Christians may well find a high satisfaction. It is an answer to the protests and the prayers of those everywhere who have noted with dismay the absorption of life in the mere means of living. The meat has become more than life, and the raiment more than the body.

[*The Living Church.*]

Temptation is always with us, but the conflict is always within us. The battle-ground is the lonely solitude of our own hearts; and every war of "the Spirit against the flesh" is lost or won long before the issue is shown in open act. Thus there is seldom, if ever, a sudden yielding to sin; for the fall must take place in the heart beforehand, no matter how unpremeditated the act appears.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been *translated* into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: The New Birth," by Bicknell Young, C.S.B., has been printed in regular pamphlet form and is now ready for distribution. Thirty-two pages and cover.

The English pamphlet "Christian Science: Its Principle and Method," by Mr. Young, will be retired as soon as the present edition is sold out, but the Society will continue the publication of the French, German, and Swedish translations until further notice.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, C.S.B., has been printed in regular pamphlet form and is now ready for distribution. Thirty-two pages and cover.

These pamphlets are all for sale at the prices as shown on the opposite page under the list of Pamphlets and Reprints.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The annual per capita tax, of not less than one dollar, is due June 1, the beginning of the fiscal year of The Mother Church, and is reckoned from that date, whether the admission was in June or November. All remittances in excess of the amount due in accordance with the by-law, will be credited for the current year, unless otherwise specified by the sender.

Please do not send paper money through the mail, except by registered letter; a postal money order, made payable at the Boston post-office, an express order, or a bank draft, is preferable.

To facilitate the work of the Treasurer, please advise him promptly of any change of name or address. No charge is made for this service.

Digitized by Google

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book); single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

ITEMS OF INTEREST.

National.

A comprehensive plan of leasing and future purchase of official residences for American ambassadors and ministers in foreign capitals has been presented to the Senate in a bill by Senator Bacon. Ten thousand dollars is to be allowed for a one-year lease and twenty thousand dollars for furnishing of residences in the capitals of Great Britain, Germany, France, and Russia; eight thousand dollars for a lease, and fifteen thousand dollars for furnishing is allowed for Austria, Italy, Mexico, Japan, and Brazil; seven thousand dollars is the rental and twelve thousand dollars the furnishing fund for Spain, Belgium, Cuba, Argentina, Netherlands, and Luxemburg; four thousand dollars rent and eight thousand dollars furnishing is allowed for Denmark, Sweden, Switzerland, Portugal, Roumania, Servia and Bulgaria, Chile, Colombia, Peru, Panama, and Venezuela; three thousand dollars rent and seven thousand dollars furnishing are allotted for Norway, Greece and Montenegro, Persia, Nicaragua, Costa Rica, Salvador, Guatemala, Bolivia, Honduras, Paraguay and Uruguay, and Morocco.

Included in the Democratic tariff revision bill introduced in Congress on the 7th inst., is an income tax section which would require every resident of the United States who earns more than four thousand dollars a year to pay a tax of 1 per cent on his income in excess of the exemption, adding a surtax of 1 per cent additional on income in excess of twenty thousand dollars; 2 per cent additional on income in excess of fifty thousand dollars, and 3 per cent additional on income in excess of one hundred thousand dollars. The bill also would reenact the present corporation tax law imposing a 1 per cent tax on the earnings of corporations, stock companies, insurance companies, and the like, but it would exempt partnerships. Estimating the loss of revenue from the new tariff rates at eighty million dollars a year, the revenue from the income tax will be estimated at a like amount.

Hundreds of corporations will be relieved from paying the federal corporation tax by a decision of the Supreme Court to the effect that corporations leasing all their property and having no income except that yielded by the lease, are not "doing business," and therefore are not subject to the tax. About six hundred claims, involving seven hundred thousand dollars paid into the treasury under the corporation tax act, turned upon the decision in this case. Besides the many railroads leasing their property in a similar way, nearly one hundred telegraph companies are said to have leased property to one operating company. Justice Day announced a dissenting opinion, in which Justices Hughes and Lamar concurred, holding the company was "doing business."

Woman-suffrage in Michigan was decisively defeated at the state election early in April. Last year the constitutional amendment was defeated by 720 votes, and in nearly all the counties that in 1912 gave adverse majorities the negative vote was increased, while in other counties favorable majorities were reversed. Municipal ownership of street railways in Detroit was carried by a good majority. The constitutional amendments providing initiative and referendum on both constitutional and legislative measures, the recall of state officers with the exception of judges of courts of records, and the fireman's pension, were all carried easily.

President Wilson, in a ten-minute address, told the Congress of the United States, on the 8th inst., that he had called it together in special session in order to revise the tariff on a competitive basis, later to take up the currency, and possibly other matters which grow out of the consideration of these. Delivering his address in person before the members of both houses was a procedure that had not been followed for more than a hundred years.

The war department in Washington has authorized the survey of a forty-foot channel for Boston harbor. This action comes as a result of the public hearing held on March 19, when the port directors, the Chamber of Commerce, and many business men placed before the army engineers' board the reasons why Boston believes that a deeper channel is needed.

In a special report sent to the Massachusetts Legislature, William D. T. Trefry, state tax commissioner, urges a state income tax law as a possible solution of the problem of reaching for taxation purposes securities on deposit in banks and trust companies which are now inaccessible to the assessors.

The national forest reservation commission has decided to purchase two thousand five hundred acres of forest land near Benton, Grafton county, N. H., in the White mountains and the Connecticut river watershed, to protect the navigability of the river. The price agreed upon is $9,375.

When a cablegram from Peking to the Chinese legation at Washington announced the news of the inauguration of the new parliament, the great five-barred flag of China, with its red, yellow, blue, white, and black stripes, was hoisted to the staff over the legation building.

Sir Thomas Lipton has sent an unconditional challenge for a series of races for the America's cup, and after ten years' undisturbed possession of the trophy American yachtsmen must again prepare to defend it. Lipton's challenge was cabled to the New York Yacht Club through the Royal Ulster Yacht Club.

Direct election of United States senators became one of the provisions of the Constitution on the 8th inst., by Connecticut's ratification of the amendment to that effect. Thirty-six states, the requisite three fourths of all in the Union, have now approved the change.

President Wilson has decided to defer the recognition of the republic of China until the Constitutional Assembly has fully completed its organization.

International.

The new Russian minister of the interior, M. Maklakoff, has declared himself opposed to the centralization of authority on account of the vastness of the country which he is called upon to administer, and has announced his intention of bestowing fuller powers on the governors of provinces and of providing against the danger of the abuse of that power by the use of the system known in Russia as the revision system. By this system a member of the Senate is given large powers of instituting an inquiry into the methods of government adopted in any particular case, and of reporting his findings to the central authorities, thus giving Petersburg control of her officials throughout the country.

Under a scheme which will shortly come into operation, signals giving the exact Greenwich time will be sent out at certain hours by a series of wireless stations in different parts of the world. The stations will be at first the Eiffel tower, Paris; Manila, in the Philippine islands; Timbuctu, in the Sahara; Nordddeich, North German seacoast; and stations in Brazil, Italian Somaliland, and the United States. Ships fitted with wireless, and wireless stations, will be able accurately to regulate their clocks by the signal.

A bill to abolish plural voting at elections in the British isles has been introduced in the House of Commons by the government, and has passed its first reading by a vote of 303 against 107.

It is officially announced that Peru has recognized the Chinese republic.

Industrial and Commercial.

Governor Major of Missouri has vetoed the legislative bill which proposed to allow the Standard Oil Company to continue business in Missouri, in spite of the ouster decree of the state supreme court. Testimony to prove that the company was violating the antitrust laws of the state was taken in various cities of the country, and in December, 1908, the supreme court of Missouri entered the ouster decree, under the terms of which the Standard Oil Company of Indiana and the Republic Oil Company, a distributing concern, were ordered to leave the state and to pay a fine of fifty thousand dollars. The Waters-Pierce Oil Company was fined fifty thousand dollars, but was allowed to continue business in Missouri on condition that it sever its connection with the Standard. The Standard Oil Company appealed the ouster decree to the federal supreme court, where the decision of the Missouri court was upheld.

The bids of the Fidelity Lumber Company and Dalkena Lumber Company, both of Newport, Wash., for two hundred and sixty-seven million feet of timber in the Kaniksu national forest, Idaho, have been accepted by the United States forestry service. This sale, when formally signed, will raise the total amount of national forest timber sold by the government during the current fiscal year to approximately two billion feet.

It has been found that the Cape Cod canal cannot be completed by June, 1914, the time set by legislative enactment, and an extension to December, 1915, has been asked for. It is estimated that the whole work is about 70 per cent completed. The total cost will be about twelve million dollars, and stock and bonds have been issued already to the amount of $6,675,000.

The Southern Irrigation & Sugar Company has just been organized, with a capital stock of two million dollars, for the purpose of erecting a large sugar refinery near Brownsville, Tex. Sugar plantations embracing fourteen thousand acres of land in the lower valley of the Rio Grande and a large sugar mill at San Benito, Texas, have been purchased.

There are upward of four hundred million dollars of good roads bonds issued and outstanding in the United States.

The foreign trade of Argentina last year totaled $840,000,000.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

A SECRET OF VICTORY.

GEORGE H. MOORE.

A FAMOUS military genius has said that the "secret of all great victories is in rapidity of movement." Such analysis has interest for us as Christian Scientists, because the task which we have set ourselves is essentially one of war,—and war to be successful must be waged not blindly, but with method and foresight and according to laws tested and proved valid. Hence the advantage of knowing the rules of spiritual combat and fighting according to the rules. Our Leader says: "Christians must take up arms against error at home and abroad. They must grapple with sin in themselves and in others, and continue this warfare until they have finished their course" (Science and Health, p. 29).

Our battle is mental; our enemies are mental; our equipment and armament are mental and entirely adequate to our need. Our field of battle is human consciousness, whence appears the relentless nature of our conflict,—for this is civil war, the most relentless of all strife, waged with an enemy accoutered in a uniform so like our own, and so long falsely identified with our home garrison, that it is not easy at times to tell friend from foe.

Right living has always been accounted warfare. The records of the Israelitish wars, preserved in the Old Testament as allegories of the issue between good and evil fought out in human thought, are of value to us only as interpreted in terms of consciousness. It is significant that the titles given by our Leader to so many of the current publications of Christian Science are associated by origin and fundamental meaning with war. A herald is defined as "an officer [invested with sacred and inviolate character] whose business was to proclaim war or peace, to bear messages to or from rulers or commanders." A sentinel is "a soldier set to guard an army, camp, or the like, from surprise." A monitor is "one who warns of faults, informs of duty, or gives advice and instruction."

It is a foolish fashion in some quarters to minimize the conflict which is upon us, to fold hands complacently, compose the countenance serenely, and, repeating certain ultimate but as yet undemonstrated statements from our great text-book, "Science and Health with Key to the Scriptures," to dispose oneself to a sort of vicarious enjoyment of other people's victories. Such peace, where there is no peace, serves only to keep one satisfied with one's own mental laziness until an alert enemy sees his chance and takes advantage of it. Experience shows that no contestant is so easily overcome in battle or in the sports as an overconfident or a complacent one.

The great betrayal of Christianity in the third century was due to just this dormant attitude. The seal of the state and the approval of society seemed so satisfying and conclusive to the bulk of the church of that time, that they accepted if they did not welcome Constantine's appropriation of Christianity as part of his political treasure and an instrument of statecraft for furtherance of his selfish ends. Thus subtle danger always besets the rank and file of a revolutionary Christianity, and today it lays siege to Christian Science. Popular approval is never in itself a vindication of any faith or any theory. It is simply a further test of its soundness.

"The secret of all great victories is in rapidity of movement." This maxim, and the Master's rebuke to the sleeping disciples, chosen by our Leader as a word of perpetual warning in the *Sentinel*, "What I say unto you, I say unto all —Watch," are correlative. Both alike not only put a premium on mental alertness, but they characterize as the greater victory, not that of the hand-to-hand conflict with an evil which has penetrated our defenses and entrenched itself in home territory, but rather that sharp, quick, authoritative denunciation of an error on its first sally into the field of consciousness, which concedes it no ground to fight on and no weapons to fight with. Our greatest victories are often those of least apparent moment, because they are so soon over. A Christian Scientist, accustomed to victory, has learned to be instant in season and out of season, maintaining his own defense so impregnably, his spiritual poise and balance so perfectly, that he stands always on superior vantage ground for attack, or for defense in behalf of others not so well trained in spiritual combat who may seek his help.

The Christian Scientist who acknowledges evil suggestion or malicious thought, or who dallies with a habitual appetite for unworthy things, with the lazy response, "I must really take that up by and by," and then forgets all about it; or, "I must see a practitioner about this," and then waits a month; who instead of overmatching his recognition of an incipient evil with a vigorous and imperative denial of its validity, accepts it as an unwelcome necessity; who instead of arming himself for conflict, reclines on the thought that he is connected by telephone with some good Christian Scientist who is so armed,—these are the sick warriors, chronic cases, with whom desultory fighting soon becomes a fixed habit and defeat an all too "familiar spirit."

The triumphant army or individual is the one that holds highest regard for the honors and rewards of victory and the example of victorious predecessors; that is mentally the most alert to take advantage of perpetually oncoming opportunity; that has, in short, the most of confidence, of courage, and of understanding of the art of war. These qualities are not natural to the human mind and must be drawn from a higher source. A good fighter keeps in touch with his base of supply. This is his best defense. Our enemy can always be tired out, if engaged long enough, because his munitions of war are limited. Evil can tire us out only as we allow ourselves to be separated from the rock of our defense, the inexhaustible source of our strength.

One of the basic elements of sound wisdom is a due sense of proportion. A good fighter learns to take his enemies as they come, and with some sense of order. It is better to engage and destroy a dozen small errors, and thereby gain fighting skill to direct against a greater one to come, than it is to waste one's undeveloped power and pluck against what are at present great fighting odds, meanwhile allowing the dozen small errors to snuggle down and entrench themselves undetected in the nooks and corners of con-

Copyright, 1913, by The Christian Science Publishing Society.

Digitized by Google

sciousness. Good fighting order does not allow us, however, to remain forever on the defensive. We are engaged, as Mrs. Eddy has said, in a war for the extermination of evil. This obligates us to seek out, undermine, and destroy those inherent qualities of mortal mind which are bad, which are inconsistent with the highest possible standards of moral conduct and spiritual living.

Unkindness, discourtesy, ingratitude, unfair play, unjust competition, pessimism, criticism, discouragement, mental inertia, fear, dishonesty, selfishness, carelessness of appearance or of environment,—these, and a host like them, are the enemies of our peace, and of the peace of others; enemies which, let alone, breed a most unholy brood of even worse allies. We cannot too soon set about the task of eliminating these qualities from thought. This is the perfecting of ourselves in the manual of arms, the acquiring of good fighting trim. It is the daily drill and burnishing of accouterments which goes far toward the making of a good soldier ready for the severer tests and the greater victories which await him. Toward the close of his career, Paul wrote to Timothy, "Fight the good fight of faith, lay hold on eternal life, whereunto thou art also called, and hast professed a good profession before many witnesses. I give thee charge in the sight of God, who quickeneth all things, . . . that thou keep this commandment without spot, unrebukable, until the appearing of our Lord Jesus Christ."

COMPLETE MAN.

IRVING C. TOMLINSON, M.A.

A DISTINCT impression left by the last annual meeting of The Mother Church was the fact that Christian Science is giving to its followers a clearer understanding and a profounder sympathy for their fellow men. One of the speakers quoted an English statesman as saying that "we must learn to think in two hemispheres." When Christian Scientists awaken to the fact that their brethren reside in all parts of the civilized globe, they feel an interest not only in the coreligionists of their own land, but also in those of all other lands and of the isles of the sea. Profound is the meaning of the words of the poet, "No pent-up Utica contracts your powers." As the thought of fellowship thus expands, we gratefully recall the words of a well-known bishop of Boston, that "only in the loves we have for others than ourselves can we truly live."

Advancing farther in our thought of the breadth of Christian brotherhood, we remember that Christ Jesus truly exemplified this all-embracing sense. Meditating upon this example, we find that he whom mankind is bidden to follow, reflected the infinite character of the Father. Jesus taught men how to control self by yielding wholly to God's control, and by his obedience to divine law he became the master of himself and all mankind. Most truly was it said of him that he went about doing good. Surely no child smiled in his presence that it did not gladden his tender heart; not a single tear of a repentant outcast failed to touch his loving thought. Science and Health makes it plain that Christ Jesus presents the true ideal, and that each one can set before him, therefore, nothing less than the attainment of this ideal.

Conscious unity with God brings to mortals freedom and power, before which all sense of limitation must needs go down. Spiritual man includes in himself all that we hear and know of good as seen in the masculine representative, together with the beauty, loveliness, and grace of character manifested by what we name woman. Mrs. Eddy expresses very clearly the height, breadth, and depth of man on page 577 of Science and Health where, speaking of him as "two individual natures in one," she says: "This compounded spiritual individuality reflects God as Father-Mother, not as a corporeal being. In this divinely united spiritual consciousness, there is no impediment to eternal bliss,—to the perfectibility of God's creation." Mankind, then, must strive to achieve this perfection, knowing that the only way truly to glorify God is to become more like Him.

It would be unfair, in view of the greatness of the task placed before us, to think that this perfect ideal is to be won without a struggle, but it aids us in our warfare to know that, by right of our true spiritual birth, we have within us the possibilities of the ideal life which we are striving to attain. We should not fail to recognize that the "old man" claim is that of heredity and all the depravity of mortal mind, and that it is this false mortal seeming which must be put off. "An honest and good heart" is most necessary in the overcoming, since the Master said: "Blessed are the pure in heart: for they shall see God."

We put off the old man and put on the new only through strenuous effort, since each must gain the truth for himself. We must rise above the mists of earth which seek to hide the divine presence; we must remove the veil of matter that shuts God and man from our consciousness; we must overcome the false thinking that there is good in matter, and cast out all that is unlike the Christ. "Finally," as the apostle says, we must be "all of one mind, having compassion one of another, love as brethren, be pitiful, be courteous," and so rise to the "stature of the fulness of Christ," the ideal consciousness, God's perfect man.

SELF-SURRENDER.

KATE W. BUCK.

IT has been well said that "no conflict is so severe as his who labors to subdue himself," but when in an individual a genuine desire has awakened actually to accomplish this end, then indeed there is promise that he will reach the highest. Until such a desire is born, progress toward the realities of being must needs be slow. Most of us are quite ignorant of this giant of self in our pathway, or, vaguely realizing that there is something there, fail to call it by name. Often, while seeing clearly the rocks upon which a neighbor stumbles, we lack the insight that would reveal the same obstruction confronting us.

Humanity is apt to look upon a person of strong will and determination as a tower of strength, and the individual himself comes to feel that he is a help and support, in many instances, to seemingly weaker brethren. This he not unnaturally looks upon as a good thing; he likes to be relied upon, and honestly resolves to be worthy of the confidence placed in him. Eager to help, ready to be called on in any emergency, he trusts to his self-reliance, and uses it as a sort of prop for those who seek and are glad to lean on him for support.

When a person of this character comes, usually through much stress, to seek the kingdom of God, he finds it hard to enter in, and he wonders why, as he recalls his many deeds of kindness and looks upon the records and testimonies of his friends as proofs of a well-spent life. Seeking first perhaps intellectually, and failing utterly, he then starts in, with a fixed determination that has never before failed him along other lines, to conquer here in the same way. Again he meets with defeat. Inquiring of some one who has found the way, it may be gently pointed out to him that he learn humility. "No, I thank you," will doubtless be the response, holding in mind a Uriah Heep sort of man, or one of weak will upon whom no one would ever think of depending. To be dependable seems most desirable, and makes one capable of accomplishing much good. When other things needful to the achievement of that to which he has set himself are proposed, he will be likely to affirm, "All these have I kept from my youth up." Not accustomed to being baffled, however, he keeps on, conscious that he is holding to something of which he would fain let go; at the same time he gets occasional glimpses of light that make him know there are greater glories to be revealed, and he is eager to behold them; yet he brings up again and again against what seems a blank wall, beyond which he cannot go.

Digitized by Google

Sooner or later such a seeker must awaken to the fact that the thing which stands in his way is self, and that if he would truly "enter in through the gates into the city," he must leave self behind; finally acknowledging the truth of the decree, there comes the problem of how to accomplish it. In Science and Health (p. 1) Mrs. Eddy tells us that "desire is prayer;" hence to desire earnestly, sincerely is the first step. Having once recognized the need of overcoming, and being alert to detect the signs of encroaching self, its every form, whether that of self-seeking, self-righteousness, self-pity, self-love, or self-justification, will be readily detected; and detection is the beginning of destruction, for when one has seen an enemy and recognized it as such, he can intelligently work to annihilate it.

In the overthrow of self, the letting go of one's personality, a need is felt for material sense of that which will fill the place now being emptied; and quite a large place it often is. In Christian Science we learn that the space is already filled with divine Love; that it was really there all the time, merely waiting recognition and acceptance, but unable to be made manifest so long as the sense of self-satisfaction lasted. Only those who have confidently learned to cast their burden upon the Lord (and having done so it ceases to be a burden) can rightly know the unspeakable relief of self-surrender. Dropping human care and responsibility, they trust absolutely to the Father, who "hath done all things well," so well that no child of His need worry about the outcome of anything, but unreservedly yield to Him. The sense of peace that such reliance brings does indeed surpass all human understanding.

Many there be who are wearily carrying weights and responsibilities, struggling to be brave, to endure, to be patient and self-reliant, when if they but knew how to let go of this human burden-bearing, to be God-reliant, and know no other but the one reliance, the Almighty, there would be harmony instead of discord. "God's plans go on as best for you and me," whether we know it or not; but in knowing unfalteringly, and in the glad appropriation of this fact, there is rest. The highest type of complete self-surrender is Jesus the Christ. He is the example for all mankind; he knew no self but the Father, wanted no other, sought no other, needed no other. He is "the way," and there is none else; so why seek elsewhere? "No man cometh unto the Father, but by me," said the Master, and he surely knew whereof he spoke. Then to strive faithfully to be done permanently with self, in whatever form, however subtle it may appear, would seem so greatly to be desired that all should prayerfully work to that end, knowing meanwhile that

> The battle of our life is won and heaven begun
> When we can say, "Thy will be done."

WILDERNESS.

EVELYN CAMPBELL.

In the twenty-first chapter of Genesis we read of the casting out of the "bondwoman and her son." We are told that Abraham provided them with bread and a bottle of water for their journey, and the story goes on to tell us that Hagar and Ishmael wandered in the wilderness, and at length when they seemed in a desperate plight, when "the water was spent in the bottle," "God opened her eyes, and she saw a well of water." A well! What abundance the word conveys, and it had been there all the time! She need not have hoarded the drops in her water-bottle.

Two lessons which we may learn from this story are, first, God's never-failing supply; second, that it did not matter to Hagar whether the water-bottle with which Abraham had provided her was large or small, for with the best of intentions he could only have given her a limited supply. Every mortal at some time reaches the stage when a material sense of things, of life and love and happiness, can no longer satisfy; then he recognizes his own helplessness, his water-bottle is empty! He is in a wilderness! In Science and Health Mrs. Eddy gives the spiritual meaning of wilderness as follows: "Loneliness; doubt; darkness . . . the vestibule in which a material sense of things disappears, and the spiritual sense unfolds the great facts of existence" (p. 597). Thus Christian Science explains that the wilderness is not a locality, but a state of thought. The remedy, when we find ourselves in this "vestibule," is to let go our material sense of things, and then we can behold the kingdom of Spirit, God's kingdom, which is intact here and now. Like Hagar, our eyes are opened, and we can declare that there is no wilderness, that there never was one, that divine Love was around us all the time. The loneliness, doubt, and darkness were but a dream, a belief in the absence of God, good, which we had admitted into our consciousness. As the truth is realized, the prophecy in the book of Isaiah becomes our own experience: "In the wilderness shall waters break out, and streams in the desert."

PROTECTION OF LAW.

W. TAYLOR STONE.

Law has been defined as "the operation of a principle." Another definition is, "A rule of action according to which a power acts." To many, no doubt, the dominant thought of law has been one of restriction, harshness, or compulsion, when in reality law is essentially protective.

All law is mental, and the moment a law has received the signature of the supreme authority and been promulgated, that moment it becomes omnipresent and omniactive throughout the state or nation. Air-ships, tunnels, rocky fastnesses, or forests cannot hide from its protection. In what is termed the natural world, it requires only slight observation to note the operation of what is termed natural laws in their protective nature. It is seen how animals, insects, birds, reptiles, and fishes are protected by a similarity of coloring to their surroundings, or by their means of flight, escape, defense, or sustenance.

The writer recalls three instances of the protecting quality of law in human affairs. The first happened in Boston, at the intersection of a busy thoroughfare, where a dainty little girl of seven or eight summers tripped lightly up to the big brawny policeman on duty, and, placing her hand in his, indicated that she wished to cross over. The stern face relaxed as it looked at the tiny charge while escorting her to the other side. Another instance was in New York, where a stranger appealed to a policeman on point duty for directions as to a certain locality. With one arm around the stranger's shoulder, the other regulating the surging mass of street-cars and vehicular traffic, he escorted her to the other side. Another instance was in London's busiest thoroughfare, where a blind man stood on the curbstone while a policeman, stepping from the middle of the road and holding back the surging sea of traffic of almost every kind, led him across the street.

But the timid one, the bewildered one, the ignorant one in the throng and press of life asks, How can I become conscious of being under the operation of the protecting power of divine law? Christian Science answers: God being Spirit, His law must be spiritual. His law is the operation of divine Principle, and that operation can only be made practical for us through mental or thought processes, or by right ways of thinking. There are many who do not avail themselves of the protection of law, thinking and acting otherwise, and who are therefore suffering needlessly because of their ignorance of spiritual law.

On analysis and thoughtful consideration, it can be seen that much of what is called law, is really not law at all, since there is no order, no principle, no power back of it. Take some of the so-called laws relating to human experiences, laws of heredity, hygiene, contagion, atmospheric conditions, etc., that are restrictive and harsh. These are really only beliefs about law, and one who may be suffering

Digitized by Google

from the effects of such so-called laws, is really only suffering from the effects of general belief about law, not from law. In the same sense the dreadful phenomena called shipwrecks, earthquakes, mining disasters, etc., instead of being the result or effect of law, are only the effect of the aggregate belief of mortals that there is another power besides good, another law besides spiritual law. To the human sense this belief of law is so much accumulated evidence of mortal existence, whereas if it proves anything, it simply proves the density of mortal ignorance or stupidity in being unable to grasp the significance of the falsity of the argument which these phenomena indicate, that divine law, the law of Love, and its protective essence, can ever be absent.

The consciousness of the individual who absolutely refuses to admit that man is governed at any time by any law but the divine law, of necessity becomes a better channel for the expression of that law, and thereby is protected in a greater degree by its power and operation. The omnipresence is the omniaction, and the omniaction is the omniprotection of spiritual law. That the universe exists, that man lives, that there is any being, health, and happiness, is the effect, the proof of government by divine Principle, the effect of the operation of divine law. That there seems to be death, disease, and discord, is the false argument that this law is absent, or that they can exist in omnipresent spiritual law.

Mrs. Eddy has very clearly and concisely explained the scientific operation of divine law, having declared God to be divine Principle, infinite Love, hence our protection, sustenance, supply. In her book, "Pulpit and Press," she asks, "Is not a man metaphysically and mathematically number one, a unit, and therefore whole number, governed and protected by his divine Principle, God?" (p. 4.)

The execution or expression of law in human affairs in the arrest of the criminal, is primarily that of protection to the governed. It is said that a police officer is practically never off duty, but is expected to execute the law at any time, where and when necessity arises. How this recalls the words of our beloved Leader, where she says in "Miscellaneous Writings," "Never absent from your post, never off guard, never ill-humored, never unready to work for God,—is obedience" (p. 116). In "Rudimental Divine Science" she also says, "His law of Truth, when obeyed, removes every erroneous physical and mental state" (p. 10). What countless numbers there are today who, having experienced the operation of this divine law in the release from the bondage of sin and suffering through the understanding given them by Christian Science, are ready to exclaim, with a heart full of gratitude, "O how love I thy law!"

FALSE WITNESS.

ROBERT L. SAWYER.

THE command, "Thou shalt not bear false witness," if it were included in the daily manual of every individual, would eliminate much of the unrest of the present time, both from a social and a business standpoint. The hidden channels of this form of error are so intricate that little is seen or known of them by the average individual unless they appear in effects. The witness in court who testifies against his fellow man as being morally corrupt or abnormal, really does less to destroy the normal status of the individual than he who charges his brother with physically abnormal conditions; for he who assails character, by his very accusation bears direct testimony to the right and power of the individual to resume his normal state. In other words, the culprit is accused of doing that which he is capable of correcting.

The helplessness of the invalid is, however, intensified by the physician or friend who not only declares him to be sick, but brings to bear the added accusation, that the victim is unable to exercise any authority whatever in the recovery of his normal condition. Mortal mind, exalting the importance of its own opinion, often makes a mountain out of a mole-hill only to find itself unable to control the situation.

Understanding the perfect dominion of spiritual man, our Leader has written in the Christian Science text-book: "Mind is the master of the corporeal senses, and can conquer sickness, sin, and death. Exercise this God-given authority" (p. 393). It is the trespass upon this "God-given authority" which constitutes a mental device often fatal to the one who most needs to be helped. Unfavorable publicity with reference to the sick will cease when we learn not to "bear false witness," but to seek only the good of our neighbor. Evil deserves neither encouragement nor emphasis, and the more it seems to be in evidence, the less it should be recognized. Good alone is authoritative and commendable.

CONSTRUCTIVE.

CARL E. HERRING.

A CONSTRUCTIVE statesman is one who marks out an entirely new path in legislation, who improves on the former things by building anew from the foundation. As thus used, construction has in it an element of destruction, for it replaces and consequently destroys that which has gone before. Though the word in its popular use has reference only to things material, its significance is enhanced as soon as we carry it into the mental realm. Who that has felt the regenerating influence of Christian Science can begin to describe the experience by a recital of mere physical healing, marvelous though it may have been? Freedom from sin and disease speaks for the destruction which takes place during the process of constructive regeneration. Arguing *a posteriori*, we would know that the regeneration had not taken place if the sin or disease continued. There is therefore something higher, a forerunner, an explanation of the healing, and this operative force is the constructive power of divine Science. Mrs. Eddy speaks of it as the "spiritual understanding, which regenerates" (Science and Health, p. 4). Our text-book emphasizes the casting out of error and the healing of the sick as the demonstrable proofs of Christian Science, yet it is constantly pointed out that these are but the mile-posts marking the way by which the divine origin of this Science is attested.

While Christian Science destroys error of every kind, it does it, not by the grafting process, but by utterly uprooting error; and while progress may be slow, yet it is a constant advancement from the recognition of Principle, and no matter what obstacles may be met with, we can always take refuge in the central structure of Truth which demonstration has established in our consciousness. Job said, "I have heard of thee by the hearing of the ear: but now mine eye seeth thee." Some of us find it hard to understand that the highest constructive ability consists in the destruction of those illusions which obscure our vision of the immortal man, the understanding that God's creation is perfect, not of our construction, nor within our power to improve; that all we need is to know the truth, and thus work according to the true model, the divine idea, the pattern shown in the mount.

Contrast the workings of mortal mind with the workings of Spirit. Mortal mind presents every counterfeit of activity, but always without the understanding of Principle. Human conjecture leads to makeshifts, experiments, apparent successes, failures, breakdowns, having, as Paul says, "no hope, and without God in the world." We are not called upon to discuss with our brother whether his way or our way is the only way to the kingdom. What we are concerned about is, that our way is leading in the direction of the kingdom.

SELECTED ARTICLES.

[Frederick Dixon in *Devon and Exeter Gazette*, Exeter, England.]

Mrs. Eddy, our critic says, "admits that the Bible God was a man-projected God." Mrs. Eddy does nothing of the sort. What she says is this: "The Jewish tribal Jehovah was a man-projected God" (Science and Health, p. 140), which is an entirely different thing. The critic might just as truthfully and just as reasonably say that because Mr. Green says that the ancient Britons worshiped Woden, therefore he admits that Woden is the God of English history. When you come to think of it, if you arrogate to yourself the right to reverse an opponent's premises, there is nothing to prevent your reducing his conclusions to an absurdity. Finally, the critic advances the stock argument of the boil. Mrs. Eddy, he says, contends that a boil cannot be painful, because matter without mind is not painful. "But," he continues, "the man with the boil on his neck is surely mindful of it! He can't forget it." Now, this contributor has been assuring us, throughout an entire column, that Christian Science is nonsense. Let us examine his statement by the light of natural science, in the study of which, he gives us to understand, he is proficient.

When Dr. Johnson wished to prove matter to be real, he did so by the naive method of stamping on it. The argument drew a caustic and characteristic criticism from Huxley. The common-sense philosopher, he remarked, proved matter to be real by stamping on it, or some such irrelevant proceeding. That is what the critic's argument is—just irrelevant. Matter is not real; it is just the other way about; it is "only a thing imagined, which we have constructed for ourselves, very imperfectly, to represent the constant element in the changing series of phenomena." This is not a quotation from Mrs. Eddy; it is a quotation from one of the greatest living chemists, and by chemist I do not mean the druggist of the critic's very questionable witticism about Christ Jesus. Professor Ostwald is one of the leading scientific thinkers in Germany, and when he writes that matter is something we have created for ourselves, he means, among other things, that a boil is a phenomenon existing entirely as a result of energy, or, as the Berkeleians, like Dr. Collyers Simon, would say, of mind.

Now, let us return for a moment to Huxley. That great thinker, discussing the Berkeleian theory, writes that though a man's entire physical sensation assures him, as an indisputable fact, that if you prick your hand the pain is in the wound, just as his eyesight assures him that the sun rises and sets, nevertheless his intellectual training has demonstrated to him beyond cavil that the sun is stationary, and the pain not within two feet of the wound in the hand. With equal certainty the pain of a boil is not in the boil; it is, in short, in Huxley's own words, "a state of consciousness." Perhaps your readers would be interested in reading the brilliant passage in which Huxley exposes the folly of what he contemptuously calls the common-sense philosopher's disregard of metaphysics. "The fish of immortal memory," he writes, "who threw himself out of the frying-pan into the fire, was not more ill-advised than the man who seeks sanctuary from philosophical persecution within the walls of the observatory or of the laboratory."

[Albert E. Miller in *Holyoke* (Mass.) *Nautilus*.]

Permit me to offer a word of appreciation for your excellent comment on the leading communication published in your column "Little Visits" in the January *Nautilus*. Those who appreciate even in part the wonderful uplift which Mrs. Eddy's work is giving humanity, are quick to point out that criticism of this good woman or her work is based, to say the very least, upon ignorance of her purpose. Her untiring effort has made all mankind, broadly speaking, its beneficiaries. Wherever fear has been lessened as a result of her teaching that God's infinitude does not embrace evil or its consequences (and this is a point to which I respectfully call the attention of another of your contributors in the same issue), a debt of gratitude is incurred to be discharged by imparting this reassuring truth to others. Generosity in one's thought keeps open the door for the constant replenishment of good, and the expression of appreciation opens the way for the entrance of greater blessing.

[From *Chicago* (Ill.) *Post*.]

"The press may be likened to a great moving-picture show, to which the world goes daily to see the current history flashed upon the screen."

This was the simile offered by George Shaw Cook, chairman of the Christian Science committee on publication for Illinois, in the course of a lecture delivered at the Press Club of Chicago before the regular meeting of the Illinois Woman's Press Association. The subject of Mr. Cook's address was Clean Journalism, and while he complimented the newspapers generally on their enterprise and public-spiritedness, he deplored the tendency in many directions toward featuring scandal and criminal news. Continuing after the quotation given above, Mr. Cook said:

"The show is generally interesting and sometimes instructive. The principal trouble is that too many 'yellow' films are used. I am aware that some publishers will tell you that it is their duty to expose crime, graft, public and private scandal, and the like. Possibly so, but is this sufficient justification for featuring such matter? I am inclined to believe that an exploitation of criminals and grafters by the press has tended to increase rather than diminish crime. Is there less crime today as a result of sensational newspaper exposure? The publishing of the evils that men do will not destroy evil. Publicity and legislation may serve in some degree to restrain the evil-doer, but only education of the right sort will really benefit him.

"Some publishers of so-called 'yellow' journals, those papers which feature sensational matter—crime and scandal—the evils that men do, have claimed that their reason for publishing such matter is that it is demanded by the newspaper-reading public. Now I am inclined to think that to a certain extent, perhaps to a considérable extent, this is true. This view is evidently shared by Dr. William Coleman Bitting of St. Louis, who recently spoke before the Sunday Evening Club as follows: 'The temptation to give the public what they want, especially if they demand sewage, is hard to resist. To those editors who are conscientiously performing their duty and are keeping their journals clean, every credit should be given. But do you suppose that the "yellow journals" could exist for a moment if you and I should withdraw our support?'

"Even so, the editor is not entirely relieved of his responsibility. Is the demand for sensationalism a legitimate demand, and is the business of supplying it, in the best sense of the word, a legitimate business? We all know there may be a great difference between a demand and a necessity. Sometimes, very often in fact, a demand exists or is created for that which is not at all necessary. For example, there may be a demand for liquor, opium, or tobacco, but with little or no necessity therefor. So with the demand for sensational news, it may be and, in my opinion, generally is, a false appetite. Is it not clear, then, that this appetite should not be indulged and encouraged, but should be restrained and discouraged? Better still, it should be entirely destroyed by cultivating the desire for and supplying that which is wholesome and beneficial.

"Deploring the tendencies of the press, John Strange Winter said: 'The indecencies of journalism, I think, have impressed me more during the course of my life than perhaps anything else ever has done. There are times when one feels proud of one's press, when one feels that it is an organization on which we may justly pride ourselves. But

Digitized by Google

there are other times when I am bound to admit and confess that its indecencies turn one's very soul sick.'

"Here is a recognition of a need for better things. Mrs. Eddy evidently saw this long ago, for I am told she recognized the need for a clean daily newspaper many years before the time came when she felt ready to found and establish such a paper. A little more than four years ago, however, she thought the time had come for launching the newspaper enterprise that is destined gradually to revolutionize the world of journalism, and in sixty days after she had announced her intention to start a daily paper that was 'to injure no man, but to bless all mankind,' the first issue of *The Christian Science Monitor* appeared.

"You may ask whether such a paper could have become successful from a business point of view if published under other auspices. I do not know. The fact remains that the *Monitor* is succeeding. Whether it could have succeeded without the kind of support given it I cannot say. What has been done once can be done again. Already there are many signs of improvement in the making of papers, and for these we should be grateful. One of our Chicago morning papers now bears the legend: 'All the news that is clean.' One of our evening papers has recently excluded from its columns a certain line of objectionable advertising. These are good signs, and there are more to follow. The movement in the direction of improved newspaper methods has begun and will continue until the public will not tolerate anything but a clean paper. In leading the way to better things *The Christian Science Monitor* stands, not as a reproach to newspaper editors, but as an encouragement to them."

[Frank Bell in *Philadelphia* (Pa.) *Record.*]

Referring to an editorial in a recent issue, it should be stated that Christian Science is neither "new hypnotism" nor old, and it is as truly not "psychic cure," "psychotherapeutic treatment," "suggestion," or "scientific use of mind influence." Christian Science is not a system of mental healing, as the term is ordinarily applied; it is essentially and primarily a religion. Its real concern is not with the relief of physical ills, for its activities are wholly moral. The physical healing associated with Christian Science is incidental to the spiritual regeneration that is the object of all its effort, and such an effect is impossible of attainment through any mere "don't worry" formula.

[W. E. Fell in *Bradford* (England) *Argus.*]

I must again take exception to the wild statements made by your correspondent. He distinctly declares in his letter that Mrs. Eddy "had the audacity to rewrite the Lord's Prayer." Need I say that this is not true? The Lord's Prayer as found in the sixth chapter of Matthew is repeated at every Sunday service, and also at the week-day service of all Christian Science churches. The spiritual interpretation was given us by Mrs. Eddy, and for this we are exceedingly grateful to her, as the value of the perfect prayer that Jesus gave us is thereby enhanced. In this connection I quote her words in "Science and Health with Key to the Scriptures": "Only as we rise above all material sensuousness and sin, can we reach the heaven-born aspiration and spiritual consciousness, which is indicated in the Lord's Prayer and which instantaneously heals the sick" (p. 16).

Our critic takes strong objection to Mrs. Eddy's commentary,—the "Key to the Scriptures." Why should he object to the Christian Scientists having a key or commentary to the Scriptures? I should not be surprised to hear that he has such a work on his own bookshelf. I will guarantee that there is not a minister or a clergyman who has not a Bible commentary of some sort. The critic is under a misapprehension when he declares that Christian Science says there is no disease; what Science and Health says on this subject is as follows: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being" (p. 460). In this our critic is correct, that no weddings are solemnized in the Christian Science churches. Scientists are married, as are many other persons, in their own homes.

We do not deny that we have silent prayer and the Lord's Prayer at our services; and why should the privilege of praying as Jesus commanded be denied to the Christian Scientists? "When thou prayest, . . . enter into thy closet, and when thou hast shut thy door, pray to thy Father which is in secret." To enter into the closet is to enter into our own consciousness and come into communion with God.

[David Anderson in *Melbourne* (Australia) *Herald.*]

A contributor to a local denominational weekly foresees that "some terrible spiritual tragedies will yet be recorded among the wreckage produced by Christian Science," which he classifies as a "hybrid heresy." Exactly what the alliterative expression means is not apparent; but when the numerous religious bodies which assume to be orthodox have agreed as to what constitutes heresy, it will be time to take seriously the application of the simple term to Christian Science. Some clerical critics of varying theological caliber, from the Bishop of London downward, have ascribed heresy to Christian Science, just as they have called it other harmless names. But a predecessor of the bishop suffered at the stake for a heresy which has since become orthodoxy; and Wesley and Whitefield were both considered "dangerous" heretics in their day.

Froude asserts that the Christianity of Christendom changed with every century down to the Reformation; and it also has been not inaptly said that the heterodoxy of one century is the orthodoxy of the next. The English bishop who defined orthodoxy as "my doxy" and heterodoxy as "the other fellow's doxy," has given the only definition of these words which the ordinary lay mind has been able to grasp. The average layman of today does not bother much about the heresy of a doctrine; he wants to know what are its teachings and practise.

During the past forty years many doleful predictions have been uttered as to the future of Christian Science, and many prognostications have been made of awful happenings to the "foolishly deluded" Christian Scientist, but not one of the vaticinators has been able to point a confirmatory finger and say, "I told you so." The only wreckage produced by Christian Science is the shattering of every belief which conflicts with the supremacy of an infinite and omnipotent God. The teachings of Christian Science are those of Christ Jesus. They are to be judged, not by the opinion of those who have not even a little knowledge of them, but by the works they produce. In evidence of his Messiahship, Jesus pointed to his works of healing, and the only creed test he ever instituted was, "He that believeth on me, the works that I do shall he do also." Just before his betrayal he also gave to his disciples a "new commandment," obedience to which was to be the indication of discipleship: "By this shall all men know that ye are my disciples, if ye have love one to another." It is a stock boast of the scoffer that there is little evidence of brotherly kindness and charity in the attitude of many professedly Christian sects toward others with whom they are not altogether in creedal accord. If recognition of the Master's combined—and never by him divorced—injunction to preach the gospel and heal the sick be the heresy of Christian Science, heresy let it be.

[H. Cornell Wilson in *Brooklyn* (N. Y.) *Eagle.*]

In the lecture in All Souls Universalist church, Flatbush, reported in the *Eagle*, the critic vouchsafed his estimate of Christian Science, and gave his "survey of the essential facts in the life of Mrs. Eddy." Under the circumstances,

Digitized by Google

it is a matter of importance to state that the "essential facts" in Mrs. Eddy's life have been painstakingly set forth in Sibyl Wilbur's biography of the Discoverer and Founder of Christian Science. This volume has now assumed large historical value. After studying this book, the unbiased reader will pay willing respect to Mrs. Eddy's demonstrated position in the world of "broad culture and knowledge of intellectual movements." It is my humble personal conviction, based on several months' intimate association with the Leader of the Christian Science movement in her own home, that her refinement and intellectual perspicacity so far transcended the average attainment of these virtues as to enable her to do precisely what she did do, namely, become the spiritual seer of this age. By her self-effacement and applied spiritual understanding, Mrs. Eddy has aroused dormant spiritual qualities in enough men to establish for all time the spiritual facts of existence. She completely reversed the false material hypotheses which have prevailed and been responsible for the dominance of human misery—sin, sickness, and death. The critic may learn from a mere beginner in Christian Science that spiritual healing such as Christian Science teaches, and such as resulted from Jesus' practical Christianity, is not the least akin to hypnotism, suggestion, or mental healing as he understands it.

[John W. Doorly in *Manchester* (England) *Courier*.]

I have read with interest in a recent issue a thoughtful article on "The New Ideal, or Some Fresh Ways of Looking at Life," and no one can fail to agree with its writer that a great spiritual awakening is the necessity of today, and the very fact that this is being realized is an actual proof that the much desired awakening is already here. Two statements from probably the two most prominent people in the world today have within the last week been given much publicity in the newspapers, both of them supporting the essential need for true Christianity. I refer to the statement of our own King about his daily reading of the Bible, and that of the German Emperor, in which he says: "The present generation, which is inclined to believe principally in what can be seen, proved, or touched with the hands, and, on the other hand, shows less capacity for that which is transcendental, puts difficulties in the very word religion, may well learn how it may get back to the faith of its fathers."

I notice, however, that the critic's article offers no remedy for the condition, and this is the usual climax of all philosophy, except that of Jesus Christ. It is, however, chiefly to his remarks on Christian Science that I would like to refer. In the first place, he puts it in the category with spiritualism and theosophy, and evidently in his thought it is analogous to these systems; but any one who has given the slightest study to Christian Science knows that it is as far removed from these systems as the north and south poles are wide apart. Nor is his description of Christian Science in any way correct, when he says that it insists on "the power of thought over matter."

To those who understand it, and who have been able to prove in some slight degree that they do understand it by healing the sick and the sinning, Christian Science is that Christianity for which the critic so longs; it is, indeed, the teaching of Christ Jesus carried to its practical conclusion, that is, the destruction of sin, disease, and death, through the attainment of that Mind "which was also in Christ Jesus." The teachings of Christian Science reveal the fact that spiritual being is the only real being, and that what we term material existence is but the false sense of true being. It reveals that there is but one Mind, one cause, and that all activity or thinking that is real and true, is reflected activity, or the effect of that one cause; as our Saviour expressed it, "I can of mine own self do nothing," "the Father that dwelleth in me, he doeth the works."

Christian Science teaches mankind to understand the one Mind, God, to think spiritual thoughts or good thoughts, these thoughts partaking of the nature of God, and operating in human experience to destroy false thinking, whether the result of false thinking be poverty or disease. Christian Science has nothing to do with the control of one mortal mind over another, or over matter, as it recognizes only the one Mind.

We, too, like the critic, long for the time when humanity will have "a fresh way of looking at life," but we realize that the only way that can ever help is the new-old way, the way of Jesus the Christ; the way which is now taught and demonstrated in Christian Science, the supremacy of that one Mind which is God, and the nothingness of so-called mortal mind, manifest as matter, sin, disease, or death. The Christian Science movement is made up of men and women from every rank of life who have sought help in various phases of philosophy, and have today found comfort and a great measure of health and freedom from sin in the only true philosophy, that which has always existed from everlasting to everlasting, the truth and permanence of spiritual being.

[From an editorial in *Jewish Herald*, Houston, Texas.]

It will be found that many of the religious systems of the earth have something in common, whether it be a belief in God, an acknowledgment of moral responsibility, of human brotherhood, etc. General consent proves the eternal verities. While hunting for the conflicts between Judaism and Christian Science, it may be profitable also to consider their harmonies. The youngest and most vigorous child of the dominant faith is spreading with phenomenal rapidity, its creed and devotions are fostering happy souls as well as healthy bodies, and many who have drunk of its waters testify to their regenerating virtues.

Christian Science is not orthodox on the subject of Christ's divinity. It distinguishes between "Jesus," the man of flesh, and "Christ," the Spirit of God. It attributes to the former an exalted nature such as no other human has ever reached. It argues, however, that Christ was the perfect expression of the divine sonship, and contends that the same sonship is possible and natural to all mankind. By denying the reality of sin and suffering, Christian Science seeks to answer the question that puzzled Job and is yet vexing philosophers and theologians. Why does a good God create or permit these evils? While the answer may not be satisfactory to all minds, it is not to be lightly dismissed. If a God of goodness and omnipotence created the universe, a discordant condition may be considered as without foundation in nature. And wherein does this conflict with anything in the Old Testament? The fundamental thought of Yom Kippur is that by getting "at one" with God, raising the human soul [sense] to the altitude of the divine, sin and its effects are destroyed. And there is no reason why the work of one day cannot be duplicated every day of the year through the supremacy of the divine consciousness or immortal Mind over the human consciousness.

The average person knows Christian Science only as a healing cult. In the doctrine that sickness and suffering are unreal, that they conflict with the divine plan and will disappear before the exercise of divine Principle, the new church goes a long way from modern science. And yet substantially the same belief is entertained by millions of Hasidic Jews at the present time. To a people like the Jews, whose message to the world has been the nearness of God to man, who pray in times of trouble and repentance, whose Sabbath-evening prayers include the words, "In Thy kindness Thou sustainest the living, upholdest the falling, healest the sick, and settest captives free," the Christian Science doctrine should not seem far-fetched. It at least offers a new and not illogical theory of the efficacy of prayer. God is not asked to set aside the laws of the universe at the wish of man; but the divine power within man is invoked to harmonize his condition with those laws.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

EXACTNESS IN STATEMENT.

CHRISTIAN SCIENTISTS who travel to any extent are often surprised to hear expressed in conversations to which they must listen, the most erroneous concepts of Christian Science, and they wonder how and where such misinformation could have originated. The persons talking appear to be well informed on other subjects, and generally intelligent in their grasp of affairs, but are utterly without knowledge of what Christian Science is or what it stands for. Few, however, stop to think that in many instances these misconceptions of Mrs. Eddy's teachings are due to the careless or indefinite statements of Christian Scientists themselves. For instance, we often hear Christian Scientists say that they repeated "the scientific statement of being" (Science and Health, p. 468), and were straightway healed. This is, of course, true, but a person who knows nothing of Christian Science, hearing this declaration, might suppose that the person making it claimed that the mere repetition of Mrs. Eddy's words had produced a miracle, whereas the idea intended to be conveyed was that these words express the true status of man and his relation to God, and by their repetition the person was so reminded of this true status and relation that he was enabled to realize the unreality and powerlessness of the evil which had seemed so real to him while forgetful of God's omnipotence and the perfection of His creation.

Another expression oftentimes used by Christian Scientists when referring to some untoward happening, and which it is almost safe to assume does not express what they intend to say, runs something like this: "I know it is for some good purpose, or it would not have happened." To the person who does not know that Christian Science teaches that God does not work through evil to accomplish good, this statement is likely to convey the impression that Christian Scientists believe that sin, sickness, disaster, and death are of God's creation, and the means by which He governs the universe; whereas Christian Science utterly and absolutely negatives this belief, which is so entirely opposite to the nature and manifestation of Deity.

We might quote many other careless, indefinite, or inadequate statements from which the public has gained a false impression of Mrs. Eddy's teachings, but these seem sufficient to indicate that Christian Scientists are not always as careful as they should be in expressing themselves. It will not do for them to say that no harm is done by these and similar erroneous expressions, because their thought is right, nor can they justify their failure to express themselves correctly by Mrs. Eddy's words on page 349 of Science and Health: "The chief difficulty in conveying the teachings of divine Science accurately to human thought lies in this, that like all other languages, English is inadequate to the expression of spiritual conceptions and propositions, because one is obliged to use material terms in dealing with spiritual ideas. The elucidation of Christian Science lies in its spiritual sense, and this sense must be gained by its disciples in order to grasp the meaning of this Science."

In Science and Health and her other writings, the Discoverer and Founder of Christian Science has never been careless, and has never failed to express the "spiritual conceptions and propositions" of this Science with all the exactness and certainty of which material terms are capable, and her followers can do no better than to imitate her in this regard.

ARCHIBALD MCLELLAN.

REPENTANCE.

ALL through the Scriptures we find statements as to repentance, from those which appear in the early records up to the angelic messages given in the book of Revelation. Among other dictionary definitions of the word are these: "A turning with sorrow from a past course; a sincere and thorough changing of the mind and disposition." It may be questioned whether mortals ever repent of wrong-doing until they are awakened by suffering, yet no true foundation can be laid for character building until there is a "thorough" change, as above indicated. In too many cases, vain regret and remorse, both products of the carnal mind, wrongfully usurp the place of repentance, and hinder the bringing forth of its fruits. In the chapter Pond and Purpose, in "Miscellaneous Writings" (p. 203), Mrs. Eddy shows with the utmost clearness how the baptism of repentance precedes that wonderful spiritual experience called the baptism of the Holy Ghost, which John the Baptist foretold when he said that one mightier than he would come, who should baptize "with the Holy Ghost, and with fire."

In the book of Genesis we are told that Noah, whom St. Peter calls "a preacher of righteousness," vainly sought to awaken those of his day to the need of repentance, but that they continued to pursue the shadows of sensuous pleasure until the flood came and swept them all away. Quite different from this, however, was the experience of the people of Nineveh, as recorded in the book of Jonah. In this case the prophet had not sufficient faith to believe that the people of Nineveh would respond to the demand of Truth, but when he was called the second time to declare the message, he obeyed, and the Ninevites, from the king down to the least of his subjects, responded to the royal edict that all should "cry mightily unto God," and "turn every one from his evil way." We are told that, as a result of their repentance, the impending calamity was averted.

Matthew and Mark both tell us that Jesus began his public ministry by declaring the kingdom of God at hand and calling upon men to repent, that is, to turn from the material with its lust and hate, its fear, suffering, and remorse, to the spiritual with its health, holiness, happiness. Happily there are always thousands who are hungering and thirsting after the truth, and who are ready to rise and follow at the call of Christ, whether it come in the first century or the twentieth; but none can be truly healed without repentance, and none can remain healed who do not experience the baptism of the Holy Ghost, which both John and Jesus declared to be essential to the establishment of vital Christianity, either in the case of men or nations.

It is not enough that men regret their sins, while still believing that sin is inevitable so long as we are in the flesh. St. Paul says: "Ye are not in the flesh, but in the Spirit, if so be that the Spirit of God dwell in you;" and John declares: "Whosoever is born of God doth not commit sin." In order to realize this, however, we must have that baptism which separates the chaff from the wheat, that mighty influence which cleanses from all sin, "giving mortals new motives, new purposes, new affections, all pointing upward" (Miscellaneous Writings, p. 204). This indeed means that one has turned away from the dead past of mortal belief, and does not need to lay again "the foundation of repentance from dead works."

In Christian Science we are all striving to solve the great problem of being, a task which demands the overcoming of all that is unlike God, and whatever the individual experience may be, repentance is the first step. If this step is taken in faith and sincerity, there will be a continuous turning away from mortal belief,—the pains and pleasures of materiality,—its eager pursuit of the things of sense and its lukewarmness toward the things of Soul. Let us, then, all heed these words that Spirit saith: "As many as I love, I rebuke and chasten: be zealous therefore, and repent."

LIFE'S SUNSHINE.

THESE days when old earth seems to be speeding in its race toward our northland summer, and when we are enticed on every hand to forget all that hinders our companionship with the sweet out-of-door awakenings, one is led to think again, and with an ever increasing wonder of interest, of the relation of light to life, and of the tremendous fact that this relation is true for all the ranges of history, observation, and experience. One does sometimes come upon low forms of growth in darkened places, but he will look there in vain for the flowers that break out in a riot of blossoming on every sunny slope.

The testimony of all the budding things about us is that light means life and development, while darkness means death and decay, and this is peculiarly true in the mental realm. Apart from the sun's radiation there would be no fragrance or fruitage in our gardens and fields, neither could there have been coal or gems in our mines, and with equal certainty and directness must we trace every spiritual grace and achievement to the perennial activities of Truth. To open our hearts to the Christ-idea, and to escape from that contented spiritual dormancy which impelled St. Paul to revoice the thought of Isaiah and cry out, "Awake thou that sleepest,"—these are always coincident in human experience, and this makes it true that our gains have all been the result of our living in the light.

The capacity to know God, and to become a channel for the divine manifestations of truth and beauty, goodness and healing power,—this, as all Christians agree, inheres in that spiritual and immortal element of human consciousness which is usually spoken of as the soul, but which Christian Science identifies as the true man. When Christ Jesus said to Peter, "Lovest thou me?" he was appealing to spiritual sense, to his possibilities of good; and when Peter could answer, "Yea, Lord; thou knowest that I love thee," he gave evidence of having awakened, of having come to himself in so far since the hour when mortal fear impelled him to deny his Lord. Peter had moved out of the shadows of a false personal sense, and his after career witnessed to what the light of Love can bring about in the way of golden grain though the human soil be rocky and not a few tares still remain in the wheat.

In the fourth chapter of his second letter to the Corinthians the great poet-preacher uses this figure with artful effectiveness: "God, who commanded the light to shine out of darkness, hath shined in our hearts, to give the light of the knowledge of the glory of God in the face of Jesus Christ." He had already explained that the darkness of material sense is the outcome of the fact that "the god of this world hath blinded the minds of them which believe not," and he rejoices with them that they have turned away from this darkness by renouncing "the hidden things of dishonesty." He thus defines Christian Science for us as the radiance of divine Truth, and expresses the simple but complete philosophy of human redemption, a philosophy which can but seem more and more illuminating and practical as we welcome the marvels which the sun's warm rays are now bringing to pass. This then is our lesson, that we begin to live and to be useful when like the flowers we learn to gather and give out the sweetness and joy, the beauty and inspiration of Love's unfailing light.

Mrs. Eddy rebukes the listlessness and self-satisfaction of professional Christianity when she says, "The time for thinkers has come" (Science and Health, Pref., p. vii); and the richer profit and deeper joys of spring will be ours when its unfoldments of life and beauty prompt us, in the hush of a grateful humility, to think upon the glory that is to be revealed, as we welcome the light of Truth, escape from the darkness of material sense in which we have so long been enveloped, and permit our heavenly Father to fulfil the glorious purpose of His creative good will in us.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

EDITOR'S NOTE.—We are glad to have permission to print the following extract from a letter, written on the way home, by one of our friends who lately visited Boston:—

I feel that I must give expression to the gratitude which fills my heart to overflowing when I look back on all the experiences I have had during my late stay in Boston. I can scarcely find words to express my full appreciation for all that has made me rich beyond measure. But it is of my visits to the Christian Science publishing house that I would like to speak more particularly.

We are apt to think (that is, I did) that the publishing house in Boston is like any other publishing house in the world; namely, a business place where those who are employed to carry on the work are rushing back and forth or sitting at their desks too busy to take notice of anybody or anything beside their assigned duties, and with faces that bear the signs of their burden bearing; but there is nothing of the kind in the Christian Science publishing house, and this is at once manifest when one enters the building and feels its atmosphere of peace and harmony.

Busy? Yes, everybody is busy, but with a kindly look in the eye, with a sweet smile on the face, and with a readiness to do anything for the visitor! I went there very often, and I had the same impression every time I stepped inside the building; so it was not surprising when I heard of several cases of healing which took place during my visit there.

To think of that place where those dear workers are busy preparing and sending out the message of Truth and Love, the heavenly manna, to hungering hearts all over the world, fills me with great joy and gratitude to our heavenly Father-Mother God, and to our revered Leader, Mrs. Eddy. To see how the work is carried on in the *Monitor* department was most interesting to me, this Love-messenger which is going out daily into the wide, wide world in order to free humanity from the belief in evil! "God bless the sowers and the seed."

NEVADA.—During the past year, the increasingly active interest in Christian Science in all parts of the state has enabled the committee on publication to enlarge its work in a more effective manner. During the year, Christian Science services have been started in eight places in the state which previously had none. The committee on publication now has throughout the state twenty-five assistants, who are intelligently distributing literature, collecting and sending in clippings concerning Christian Science, health regulations, and related subjects, and otherwise cooperating with the state committee.

The number of pieces of literature distributed from the office of the publication committee was 1,930; and by assistants: *Sentinels* 3,040, *Monitors* 4,344, *Journals* 364, *Heralds* 48, pamphlets 240, miscellaneous 200; total 10,166.

Correspondence.

TROY, N. Y.—First Church of Christ, Scientist, found it advisable, during the past year, to move their reading-room to a more central location. The rooms now occupied as office and reading-room are on the second floor of the new Boardman building, at the junction of River, Fulton, and Third streets, and are light and attractive. The change has been found to be a good one in every way, and the efficiency and activities of the room have been greatly increased.

Correspondence.

LONG BEACH, CAL.—Ground was broken today (March 6) for the handsome new First Church of Christ, Scientist, to be constructed on Elm avenue between Fourth and Fifth

Digitized by Google

streets. The building, including the organ and furnishings, will cost approximately seventy-seven thousand dollars. It will be 90 x 140 feet, and will be of brick and cement. In style the church will be of Italian renaissance, and the main auditorium will have a seating capacity of nine hundred and ten persons. The building is so arranged that a balcony to seat two hundred people can be added at any time in the future. The Sunday school room will be 72 x 80 feet inside, and will be bordered with smaller rooms which will radiate from the center in such a way as to permit them to become a part of the main room when so desired.—*Long Beach Press.*

OSKALOOSA, IOWA.—Oskaloosa's new house of worship, the property of First Church of Christ, Scientist, was opened for services Sunday, Feb. 23. While not fully completed as to exterior detail, the interior was finished, and the public were invited to be present at the opening services. The building combines beauty and comfort with utility, and is a notable addition to the list of splendid houses of worship having location in Oskaloosa. The building occupies a pleasing location facing High avenue from the south, in the half block east of Third street. It has an elevation well above the grade of the avenue and sets back from the lot line a distance of about thirty feet. It is of frame construction, cement faced, and is about 50 x 75 feet.

Oskaloosa Herald.

REDONDO BEACH, CAL.—A resident architect has completed plans for a one-story building for First Church of Christ, Scientist, of Redondo Beach, Cal., to be built on their lot on Broadway near Pearl street, close to the beautiful grounds of Hotel Redondo. It will be one of the most attractive churches in the city, as the building is to be of classical style of architecture. Ground is being broken today (March 9). It is expected that the new church will be ready for occupancy within sixty days. The auditorium will seat about two hundred.—*Correspondence.*

SALT LAKE CITY, UTAH.—A few days before the lecture given under the auspices of Second Church, we sent out fifteen hundred *Monitors* in which was an article on Salt Lake written by the president of the Commercial Club. We enclosed a printed slip announcing the lecture and inviting the recipient to be present. Our largest theater was filled from top to bottom, and we feel that it was a great help to our good cause.—*Correspondence.*

NEW ORLEANS, LA.—The invitation of the Scottish Rite Masons to the members of First Church of Christ, Scientist, to conduct their services in the Scottish Rite Cathedral pending the erection of a new edifice, has been accepted. The cathedral, which is in Carondelet street, between Lafayette and Girod streets, will accommodate seven hundred.

New Orleans States.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 30, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 14, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 1, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are earnestly requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk.*
105 Falmouth Street, Boston, Mass.

THE LECTURES.

SANTA ROSA, CAL.

Virgil O. Strickler delivered a lecture on Christian Science to a large and appreciative audience. Judge John Tyler Campbell, late minister to China, was the chairman, and introduced the speaker in the following words:—

It is my pleasing duty to present to you this evening one who will give you an authentic and instructive exposition of the simple yet profound truths which are dear to the hearts of all. Christian Science is as old as Christianity. It is the message of the Saviour of the world, to heal the sick of all manner of diseases. Its teachings and practises encourage the despondent, comfort the mourner, and fill the heart with joy and happiness. Upon its banner are emblazoned the words: "On earth peace, good will toward men," and proclaiming the doctrine of Love, it has extended its mission over the civilized world, yet it goes not forth to conquer as an army with banners. Small at the beginning, it has extended its loving ministry to millions of human beings.—*Correspondence.*

NORFOLK, VA.

Francis J. Flumo, M.D., delivered a lecture on Christian Science in the American theater to a large and interested audience. He was introduced by Constructor Charles Willis Fisher, U.S.N., who said in part,—

"Go and show John again those things which ye do hear and see: The blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them." So spoke Jesus in answer to the queries of John's disciples as to whether he was the Messiah. Instead of quoting doctrine or presenting arguments, he asked to be judged by his works. Christian Science makes the same appeal. It heals the sick and sinning, and asks to be judged by its fruits. Christian Science should be, then, a demonstrable religion, a religion that can be proved correct; and that is exactly what it is. It is a careful and logical statement of the fundamentals of life, truth, and love as taught by Jesus Christ, and every step in its study can be proved or demonstrated, as evidenced by thousands of happy human beings who have been healed of almost every ailment known to mankind. The dissemination of this good news, or gospel, is therefore of benefit to all humanity, and we are privileged today in hearing one peculiarly fitted to explain the teachings of Christian Science.—*Correspondence.*

BANGOR, MAINE.

A large audience listened to the lecture on Christian Science in City hall by William R. Rathvon. The speaker was introduced by G. C. Eames, first reader of the local church, who said in part,—

The insistent demand of this age is for something besides theory: there must be proofs to substantiate the claims of every subject under consideration. In working out the problem of being, mankind frequently fixes these questions: Is the God of whom we read in the Scriptures as leading, sustaining, and protecting man no longer in existence? Are His laws which were exemplified by the ancient apostles, by the Waysbowen, and by His disciples, no longer operative? Or has our failure to realize proves that He "healeth all thy diseases" as well as "forgiveth all thine iniquities," been due to a lack of understanding? That men and women are again demonstrating that God "is the same yesterday, and today, and forever," and that His laws are ever operative in human affairs, is the message which Christian Science has for you tonight.—*Bangor Commercial.*

PUEBLO, COL.

William D. McCrackan, M.A., who delivered a lecture on Christian Science was introduced by the Hon. C. A. Ballreich. The introductory remarks were in part as follows:—

I am not a Christian Scientist, and can lay but little claim to a knowledge of its teachings, but my daily contact and acquaintance with those who do know its teachings, and believe in them, lead me to the conclusion that it is a religion of joy and not of sorrow—a religion of happiness now, as well as hereafter. Surely the cheerful habit of living in this world has brought more good to mankind than all the lamentations and tears. I believe it has healed the sick and driven darkness from the minds of men; it has helped to put out the fires of hell, and in a measure has brought the kingdom of God to earth. Because of this, I believe it is a religion blessed of God. Let us hope for the time when mankind will see the truth so clearly from beneath the roof of any church that they will no longer war with their fellow men, but will unite in a universal brotherhood in a universal church, with love for its creed and truth for its doctrine.

Pueblo Chieftain.

CLARKSBURG, W. VA.

In introducing Prof. Hermann S. Hering, who lectured for the local church on Christian Science, Dr. O. D. King spoke in part as follows:—

I am not a Christian Scientist, but a Methodist preacher. I am also a Protestant of the Protestants. I believe that every individual who has a message should have the privilege of delivering that message to his fellows. When we feel we have discovered truth, it is one of the noblest instincts of our nature to seek to reveal it to our brothers. Men should have a respectful hearing. There is a regulating force in life called "common sense," and this factor determines whether or not the message has a right to live and grow in the development of our characters.

I was born a liberalist. My father was a Unitarian, my mother a Methodist. I remember the boy reverence of the years of my childhood and early manhood for them both, though each had his and her philosophy of things religious. The fragrance of the beautiful charity and mutual respect and love still lingers, a vivid benediction, blessing me in the cares and service of life. Naturally the question was raised in my mind: Which had the true philosophy of Christianity? I began the study of history and philosophy, and in after years became deeply interested in the study of the history of the Christian church. I began to feel the force and significance of Paul's words: "But I fear, lest by any means, as the serpent beguiled Eve through his subtilty, so your minds should be corrupted from the simplicity that is in Christ."

I find in the Scriptures three outstanding attributes of Christ Jesus: earnestness, liberality, and democracy. Christ's whole being was a burning, living earnestness. He believed in himself, and consequently others believed in him. He lived in a realization of the possession of a strange, sacred, and awful power. He felt its infinity. He impressed others with the conviction that all power was his. It was not so much what he did, though this were phenomenal; but what he might do. His marvelous reserve power impressed all classes and made many stand in holy awe. He lived for one purpose, viz., that his message might be carried to the ends of the earth.

Christ Jesus was the broadest man that ever lived. Can you think of him stopping to write articles of religion; calling conventions to make or revise creeds; critically reviewing a candidate for church-membership in which great unsettled philosophic questions on theism, anthropology, Christology, and eschatology dominate, instead of self-denial, forgiveness, cross-bearing, faith, truth, and love, being the burden of the questions? He preached sincerity in worship, charity for mankind, self-sacrifice at all times, as forming the basic law for all true religious life.

The Samaritan woman, with her skirts all bedrabbled in the sins of the world, heard his strange but blessed message, and asked him where they should worship. He said: "Neither in this mountain, nor yet at Jerusalem. . . . God is a Spirit: and they that worship him must worship him in spirit and in truth." His message to the disciples when they found one who did not exactly agree with them, but who was apparently doing a good work, and whom they had silenced because his philosophy did not articulate with theirs, was, "He that is not against us is on our part."

We in our state of imperfection and limitations have not yet attained unto ultimate truth. We have truth, especially in our methods of seeking after truth. This brings rest to our weary sense. We shall by and by come into the fulness of truth. Then shall we know that which "eye hath not seen, nor ear heard, neither have entered into the heart of man."

Daily Telegram.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Belleville, Ill.—Liederkranz hall, 8 p.m., May 1.
Blackpool, England.—Grand theater, 3 p.m., May 4.

TESTIMONIES OF HEALING.

My attention was first drawn to Christian Science through reading some articles published in a magazine in the year 1907, which though adverse to Christian Science and its Leader, served to awaken in me a great desire to know more about the subject. I had never met a Christian Scientist or seen any of the literature, for I was at the time living on a ranch several hundred miles from a Christian Science church, and how to learn something about it I did not know; but Mrs. Eddy says that "desire is prayer" (Science and Health, p. 1). After saying to the people with whom I was staying, that I believed Christian Science to be the truth, the lady of the house searched and found among some waste papers a few *Christian Science Sentinels* and a *Journal* which a friend had sent them some years before. I had much pleasure in reading these every day until the text-book came, which I sent for without loss of time. In a few days the desire for tobacco and intoxicating liquors left me, habits which had enslaved me for forty years. What I had left of these things I destroyed, together with a box full of medicine, and resolved from henceforth to have only one God.

Having been born in Norway and raised in the Lutheran church, I adhered to that faith for twenty years or more, and then became atheistic in my views, living a life of wretchedness and dissipation, with the thought that self-destruction must be the inevitable end of it all; but, thanks be to God, this has been averted, and I have been made to rejoice in the healing and saving power of Christ. For several years my sight had been failing, and when Christian Science found me, I was wearing specially prepared lenses with very meager results. With the help of a Christian Science practitioner this affliction was soon overcome, and I have been able to read and work without glasses. I have also been healed from rheumatism, kidney and stomach troubles, etc., and have not been sick a day for over five years.

These are the very least of my blessings through Christian Science. The little knowledge I have gained of Truth, and the spiritual uplift it has given me, are blessings that I cannot explain, nor can I describe or express my feeling of gratitude to our Father-Mother God, and to our beloved Leader, Mrs. Eddy, who through her pure life and labor of love for humanity, has been the instrument in God's hand for revealing anew the healing truth to a suffering world.

C. H. OSER, Lynn Valley, North Vancouver, British Columbia.

As long as I can remember I had suffered a great deal mentally because of a sensitive temperament, and this had brought on physical ailments. Disappointment seemed to lurk in every direction, because I was always looking for the realization of my ideal in the human sense of things. Conditions seemed to grow worse until, for some years before I found Christian Science, pain was my constant companion, and mental suffering had so impaired the faculty of applying myself and of remembering, that I could not tell at the end of a paragraph what I had read. A more utterly hopeless and discouraged person it would be hard to find; but I thought I must struggle on, because my little daughter needed her mother. This little daughter was my one comfort; but no words can tell how I suffered for fear something would happen to her. As a consequence, she manifested a very restless temperament, and we kept each other in a constant state of irritation.

I was suffering at this time from a constantly recurring throat trouble and an affection of the ear, together with persistent stomach and intestinal disorders. Besides all these, three crooked places in the spine, the result of an accident, caused much pain and almost unendurable headaches; and my eyes, which had troubled me many years, became much worse, a specialist saying that the medical profession knew no help for me, and that I was facing prospective blindness. With all this it became necessary at that time for me to earn a living. When Christian Science was presented to me, I was too hopeless to consider it, but consented to investigate in regard to placing my little daughter in the Sunday school, thinking that if she could find help it would make my burden that much lighter; so we attended the Sunday service. I did not understand much of what was said, but I felt the healing atmosphere of peace and trust. I was also divinely guided to a Wednesday evening meeting when I was suffering from an almost unbearable headache, and I grasped the words, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494). Trying to realize the import of these words after I had gone to bed, the pain was immediately overcome and I instantly fell asleep, to sleep until morning, a thing I had not done for months. I had proof of God's power, and so I began to have some treatments, and also to work as faithfully as possible myself. In less than a year my eyes were made whole, and gradually I have received healing for the other diseases.

It is indeed good to be free from the constant fears which make us liable to physical suffering; but nothing can suffice to voice the pæan of praise which wells up as we begin to understand that the only reality of being is God and His idea, forever unfolding in consciousness, and giving us freedom from and dominion over hate, anger, jealousy, worry, and a host of other fears. My little daughter and myself have been transformed in the light of Christian Science. We have found peace of mind, spiritual illumination, and therefore mental purity and physical health. The manifestation of divine Love is the realization of the ideal. We have also proved that Truth gives the only sure rule by which to work out the problem of supply.

I am indeed grateful for the experience of that pure woman who was first to recognize the healing power of Truth in this age. My gratitude to God can only be expressed by my works.

MRS. M. C. W. MERRIHEW, Long Beach, Cal.

About twelve years ago, a humble woman who had been working for me gave me a little book to read, and knowing that she must have made a sacrifice to buy it, I promised to read it, little thinking what it would reveal to me. The book, which was "Unity of Good" by Mrs. Eddy, our beloved Leader, gave me a great desire for more of the good news, and I began to inquire for more books by the same author. Finally, I purchased a copy of "Science and Health with Key to the Scriptures," and subscribed for the periodicals of The Christian Science Publishing Society. My mother also became interested, and my children are in sympathy with me.

During the twelve years since then we have been helped to live better and more healthy lives. In sorrow, temptation, and sickness, by turning to divine Truth as found through the Bible and Science and Health, we have gained peace. My husband passed on when I was young in Science, and I then found it a balm for sorrow.

My eldest daughter was brought safely through confinement when two able physicians were fearful for her safety, and my youngest daughter was healed of an attack of illness in four days after the doctor had pronounced it a bad case of typhoid. Words cannot express the help Truth has been in aiding me to try to live up to Christ's standard. My heart goes out in thanksgiving for the pure life of our dear Leader, whereby she was made a fit channel for the truth. I am also very thankful to her devoted followers who have helped to make possible the literature of the Publishing Society.

CHARLOTTE E. LOVELL, Coaticooke, Province of Quebec, Canada.

Digitized by Google

About eighteen months ago, through a sense of deep sorrow, I became quite poorly, able to be up only a short time each day, and when up I walked in a stooping posture. The physical inharmony, together with the sorrow which weighed upon me, made me think my case very serious; but through some assistance from a practitioner and the daily study and application of the truth as understood in Christian Science, I was finally relieved, and though my healing was not accomplished all at once, in the course of a few weeks I was able to be about my work as usual. This is only one of many blessings that have come to me through Christian Science. A few years previous to this I was healed of a severe fever through Christian Science, and at that time I was confined to my room several weeks. Almost all the symptoms usually accompanying a fever came up to be met, but each in turn was soon overcome.

For all these blessings I am very grateful, and I now believe that if we do our work faithfully and well each day, all the difficulties which confront us can be overcome in God's own time and way.

MRS. LAURA A. COATE, Dayton, Ohio.

Too long have I withheld my testimony from publication, and altogether too long have I failed in giving God thanks and praise at our testimonial meetings, where it is the privilege and duty of every one who has experienced the healing power of Truth to speak. Five years ago, I was healed in Christian Science of a severe nervous condition, together with complications pronounced hopeless by a medical doctor. My healing was instantaneous, after I had received six days' treatment in Christian Science. Since this healing, many serious ailments have been met and overcome, and false beliefs are daily being destroyed; for to our human sense the tares grow amid the golden grain, and these have to be separated, and only the good harvested.

As the understanding of Truth dawns upon my once benumbed senses, the way becomes clearer, and strength is given hourly to take up the duties of each day, to destroy the falsities of this so-called life, and its beliefs of sensation in matter. The heartaches, the bitter tears, the exhaustion, are no longer realities; poverty, and losses that once seemed inevitable, are becoming as vague dreams, and a sense of power, that God alone can impart, is becoming real and tangible, wherein man is given dominion over every false belief; hence my way is becoming clearer, and the word which imparts these blessings is becoming dearer. Let not those who are struggling with adversity, no matter what the manifestations may be, feel discouraged, for truly God is all powerful and unfailing in His answer to the prayers of His children who trust and abide in His allness. For many months a sense of dire poverty argued that it was real, and could not be changed; but with the help of a practitioner whose love, faith, and understanding were sufficient to hold fast to the promises of God until the hour of deliverance was come, freedom came to me, and a knowledge of the power of Truth.

For all of God's blessings I am thankful, and grateful indeed for the teaching given this age by the faithful and loving demonstration of our dear, brave Leader, Mrs. Eddy.

LILLIAN E. PORTER, Salt Lake City, Utah.

In February, 1911, while walking along the street in Atlanta, I slipped and fell, striking my knee against the pavement and injuring it severely. A surgeon was called, who examined the injury, and said that owing to the nature of the fracture and my age, he doubted whether I would ever be able to walk unless an operation were performed. I refused to have the operation, and the next day I was brought to my house in Columbus. Two of the best surgeons in the city were consulted, and after an examination they both gave it as their opinion that the knee must be laid open and the broken bone wired together. They also urged that this be done at once; but I feared the operation, and would not consent to have it performed. I insisted that they bandage the knee and give the bones time to knit together. This they did, and after ten days they removed the bandages and said there was little or no union of the pieces of bone, and unless these pieces were wired together, I would not be able to walk without dragging my left limb.

A friend who is a Christian Scientist called to see me, and I told her what the doctors had said, and asked her to find a Christian Science practitioner for me, as I was in a state of fear and dread, and was also suffering much pain. The practitioner came, and it was not long before the pain was allayed and the fear dispelled. She gave me two weeks' treatment, and I am thankful to say that although I did not have the operation, I can walk anywhere I wish to go, and can run up and down steps. I was also healed of a serious throat trouble at the same time. When the doctors saw that I would walk, they said that there was no bony union of that knee-cap, that the union was only fibrous, that a fibrous union would stretch, so that I would eventually be obliged to have the operation; but I thank God that through Christian Science these man-made laws have been broken.

For these and many other blessings which have come to me through Christian Science, I feel deeply grateful to God, to Christ Jesus the Wayshower, and to Mrs. Eddy, the Discoverer of Christian Science. I am also grateful for the privileges I so much enjoy,—for the reading-room, for our services, and for the kind friends who brought me this precious truth. I am praying for more understanding, and for that Mind which was also in Christ Jesus.

ANNIE R. THORNTON, Columbus, Ga.

I desire to express my gratitude for what Christian Science has done for me. For twenty years I was sick, and during that time was under the treatment of twelve different physicians. I was finally taken to a hospital in Cincinnati, and an operation was performed for abnormal growths; but I returned to my home a nervous wreck, unable to attend to the household duties, being confined to the bed at least three days out of each week. Two physicians said I could not live, hence I gave up all hope of ever being well again. A friend then came and recommended Christian Science, and for one year I had treatment at different times, besides reading the literature. For the last few months I have been able to do all my housework, including washing and ironing, something I had not done in sixteen years. I am indeed very grateful for the spiritual uplift which Christian Science brings, as well as for the healing of the body.

MRS. ELNORA STRADER, West Milton, Ohio.

I am very grateful for what Christian Science has done for me. It has completely changed my life, for it has helped me physically, morally, and spiritually. It is showing me how to correct wrong thinking, for thoughts of anger, hatred, envy, and resentment are slowly giving place to thoughts of love, patience, tolerance, thereby enabling me to become more loving, "merciful, just, and pure" (Science and Health, p. 497). It is also showing me how to overcome evil with good, to think rightly, to know that good is the only power, and that nothing can prevent us from doing what is right. I am very grateful for having been helped so much in the truth.

FREDERICK O. DARCY, Sydney, New South Wales, Australia.

[Translated from the German.]

In telling of what Christian Science has done for me, I feel impelled by a sense of love and gratitude. I had been acquainted with the results of the teachings of Christian Science for a good many years, when two years ago it became my privilege to experience the omnipotence of divine

Digitized by Google

Truth in my own case. Having lost both my parents within a comparatively short time, I lapsed into a state of mental and physical depression; fear and a sense of being left alone had taken hold of me. Besides, there were rather alarming indications of a throat trouble (according to a physician's opinion), so that an operation would have had to be resorted to in order to check the disease. To this were added great nervousness, weak heart action, and sleeplessness. Christian Science inspired me with confidence, however, and I asked for help, whereupon treatment was taken up with much kindness.

At first the trouble apparently kept increasing, the heart action especially, and the throat trouble also became aggravated. But in the moment of greatest distress I experienced the power of Truth, and gradually the realization of the ever-presence of divine Truth and Love became a staff on which I could lean, and a weapon which enabled me to defend myself against all evil influences of mortal thinking, manifesting themselves through the various symptoms of disease. Christian Science has also proved a great help along business lines, for I gradually learned to rely on the omnipotence of God, good, and to recognize God, Spirit, as the source of all supply. I saw finally that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

I am grateful to God, and thankful to our revered Leader, Mrs. Eddy, for Christian Science, for the truth which has supported, strengthened, and guided me when its help was greatly needed.

JOHANNA HANKE, Neukölln b. Berlin, Germany.

Four years ago I was playing baseball, but from the first practise in the spring my arm gave me a great deal of trouble whenever I would throw the ball, and in one of the first games of the season I hurt it so badly that I could scarcely put my hand to my head. It was at this time that I was induced to try Christian Science. I went to a practitioner for treatment, and by the time we were ready to play again (we were playing only one game each week), I was entirely healed, and no matter how hard I would throw I have never been troubled since. During the same season I had the second finger on my right hand broken with the ball. I then called upon the practitioner again for treatment, and was advised to have the finger bandaged, but as this bothered me with my work I took the bandage off before a day had passed. I did not miss any time from my work, and at the end of the week my finger was healed and I was ready to play ball again.

During this time I was not studying Christian Science for myself, but I knew that there was more to Christian Science than mere theory, as I could see what it had done for others. Since that time I have been helped in many other ways, and I have taken up the study of Christian Science with the Bible and Science and Health as my guide.—F. A. EVANS, Englewood, Col.

Six years ago I had a severe attack of throat trouble and called a physician. I also had a backache which had troubled me for several years; in fact I had not been considered very strong by my family and friends since I was thirteen years old. The physician said my condition was due to overwork. When I had the attack of throat trouble I was helped by the doctor, but not entirely healed. He said I would always be subject to this ill, and I was troubled with it for the next year. Later I was induced by a friend to try Christian Science, so I engaged a practitioner and bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, the result being that in a short time I was healed of all my physical ailments. I have since relied on the Bible and Science and Health as my daily guide.—MRS. F. A. EVANS, Englewood, Col.

About five years ago Christian Science was brought to my notice, when a doctor had said that nothing but an operation could save me, and when he gave me no longer than two weeks to make up my mind about it. I decided against an operation, as I feared it so much, and it was then that Christian Science was offered me. I *thought* nothing of it, for I knew nothing of it; but I can *truthfully* say that after reading "Science and Health with Key to the Scriptures" by Mrs. Eddy for a few hours, I knew I had found something which I needed very much, and there and then all pain and suffering were forgotten. I went about my work much better and did it easier, and spent all the minutes that I could spare in reading. In ten days from the time I asked for treatment I was perfectly healed, all enlargement, discoloration, and pain gone! My treatments were all absent, and to this day there has been so sign of any return of the disease, although I had been suffering off and on for about fifteen years.

Since then my only child has been healed, in one night, of a fever in its worst form; and although we had been put in quarantine for six weeks, we were discharged in eighteen days. In three days he was eating heartily and there were no after effects of any kind. He was also healed of stammering, which was so bad that at times he would lose his breath, of gravel in the kidneys, and other ills too numerous to mention.

Christian Science has indeed supplied my every need, spiritually, physically, and financially. Words fail me in trying to express my thanks to God, and to our beloved Leader, Mrs. Eddy, for this great and wonderful truth which is doing so much for every one who earnestly tries to follow in the way shown us in Science and Health. I hope this may help some struggling one to realize this glorious liberty from sin and disease.

MRS. MARY ROBERTS, Detroit, Mich.

When Mrs. Eddy declared several years since that there is no matter, the wise men of our day criticized and ridiculed her for speaking the truth. What would the wise men of today say if they should discover that unnumbered thousands have learned and proved in the last few years the unreality of all material things? A Christian Scientist must understand the unreality of matter in order to heal a single case of sickness or sin. He must know to a certainty *that* germs, microbes, parasites, etc., have no foundation in truth; they have no starting-place; they cannot be creations of Mind, for all that God made was "good." On my journey from sense to Soul, it was almost impossible for me to believe that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468). My theory that man was mind and matter combined did not, however, make it so; therefore I had to get right, for God was right and could not be changed,—His work was done.

Early in the spring of 1910 I had reached the limit of all material help; all had failed me. I then asked help from a Christian Science practitioner, and I began to improve even before the practitioner received word from me. I did not understand this at the time, but I decided that if the teachings of Christian Science were of God, He knew my needs before I called upon Him or before I spoke, as the Scripture teaches. I laid aside all belief in materiality as a remedy, and was well, though the physical healing seems a shadow when compared with the spiritual uplift which followed. I was a new man. Then there dawned upon me the meaning of Jesus' words, "These signs shall follow them that believe." I never before dreamed I could be as strong and well as others, but this proof of God's power showed me that strength and health are not dependent upon human knowledge, are not in bone and muscle, not in senseless matter. This lesson learned brings to thought another one, namely, that in God "we live, and move, and have our being," as

Digitized by Google

St. Paul declared. I now understand that the principal work of Christian Science is the healing of sin, and I rejoice in knowing this.

I feel very grateful to God, and can truly say I am thankful to His messenger to this age, Mrs. Eddy. I rejoice too that by much study of "Science and Health with Key to the Scriptures," in connection with the Bible, I am enabled to prove my sonship by doing the works which Jesus said could be done by those who believed,—who understood.

NORMAN C. VOGELE, Hereford, Texas.

It is two years since I began the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I am glad to tell others a few of the blessings I have received from the study of this wonderful Science. I have been transformed, physically, mentally, morally, and spiritually. I had worn glasses for eight or nine years previous to this search after Truth, and as I have been a milliner for a great many years, the work to material sense was very trying to my eyes, which had been giving me some trouble when I called for help from a practitioner, and the healing was perfect. I have been healed of headaches which I had frequently before the healing of my eyes, of female trouble, toothache, etc., and Science has also been a help to me in my business.

For all this I am indeed very thankful, and I feel it is as little as I can do to make this known through our periodicals, that others may have the benefit of these experiences, and hear the voice of Christ, Truth, which calls, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." I am more thankful for the spiritual uplift than for anything else. I find that Christian Science meets our every need, now as in the time of Jesus and his disciples.

Words are indeed inadequate to express my gratitude to God; also to our beloved Leader for the understanding of this wonderful truth, which is again casting out evil and healing the sick. May this small offering reach some hungry heart and turn it to this light which is shining in darkness, though the darkness comprehendeth it not.

MRS. PEARL HELSEL VOGELE, Hereford, Texas.

I desire to acknowledge the many wonderful blessings which have come to me through Christian Science, and with a thankful heart I give my testimony to the unlimited power of infinite Love. Five years ago I believed myself to be a wreck physically, and in a way mentally, for I was very nervous in consequence of the effect other troubles had upon me. I was afflicted with sciatica, stomach trouble, and dizziness. Physicians would not give me medicine for the rheumatism, as my stomach would reject it. I had had this difficulty for thirty years or more, subsisting half the time on liquid food, until sometimes I lost all desire to live, and it was in this condition that Christian Science found me. I called in a practitioner who lived near me, and her loving care brought me up out of the depths in a short time, with great rejoicing that I had found out how easy it is to commune with our heavenly Father. I had been a member of a church for twenty-three years, but after I came into the light of Christian Science I felt that I had been blind. Since the first I have had many demonstrations for myself and others, showing me what it means to be truly a child of God.

Some three years ago I moved away to a place where there were no Christian Scientists and no church. This has been a great deprivation, but I realize that God is here, and I am happy in His love and care, trying to grow in grace from day to day. Fear comes up at times, but the way is clear, and I am trying to walk in it. My daily prayer is for wisdom to recognize the divine leading and to be able to demonstrate my faith by my works.

MRS. A. L. COBB, Mountainview, N. H.

FROM OUR EXCHANGES.

[Prin. W. B. Selbie, M.A., D.D., in *British Congregationalist*]

We are living in a time when the word of the Lord is rare and there is no open vision. Even in churches which boast themselves of the prophetic character of their ministry, it is seldom that men hear a veritable, "Thus saith the Lord." The liberty for which we have fought so good a fight, tends to degenerate into license, and every man does and thinks that which is right in his own eyes. The old authorities which once held sway among us, have largely been repudiated, and nothing as yet has taken their place. Criticism has done its work well, and the acid of it has bitten deep into the very foundations of the faith. Meanwhile the positive and constructive endeavor, which is the only aim and justification of criticism, lingers. The ground has been cleared, but the new growth is not yet. The result is, that men are casting about them on every side for some standing-ground. They have no strong convictions. "They faintly trust the larger hope," and on such terms they find it hard to persuade others. The pulpit is too much occupied with discussing its message, and too little concerned to declare it; and the pew has caught the critical tone, loves to have its ears tickled, and finds it more and more difficult just to be still and worship God. Religion seems to have lost its theological and dogmatic interest; it is great on history and psychology, revels in the subjective, and is content to soothe rather than challenge or sanctify.

There are many signs that a change for the better is at hand for those who have eyes to see. At the same time we must admit that the spirit of indifference now so widespread in the churches is largely due to the lack of certainty and assurance on matters both of Christian life and faith. It is harder than it used to be to get Christian people to give themselves whole-heartedly to the service of the kingdom, and the tendency to a merely nominal church-membership is greatly on the increase. At the same time the pulpit has almost lost the note of unction and urgency. Topical preaching is much in vogue, and has usurped the place of the prophetic and evangelical message. The great themes of sin, salvation, and the life in Christ, tend to fall into the background, and the desire to be interesting often takes the sting and passion out of the message. If this is ever to be mended, it can only be by digging down to the foundations of the faith, and by creating anew that sense of need which the gospel alone can satisfy.

[*The Christian Register.*]

That vast accumulations of wealth have been essential to material progress we understand very well. It is another thing to make of our five million school boys and girls scramblers after wealth. Understand this precept of Jesus, —that it is better to walk with God, day by day, earn what we need, and pay for it as we go, do our daily duties with a cheerful heart, and be content with what he terms our daily bread. Jesus' philosophy was moderation in all things, and it was common sense as well as good social philosophy. Any virtue that does not resolve itself finally into temperance is not worth the while,—in fact is no virtue at all. What we need is evidently in the first place self-control; to set limitations to our desires, so that they shall not slip into greed. Then it is palpably clear that a man is better off who has just enough, than one who has more than he can use. The chief trouble of society is not poverty, but the burden of wealth. One hundred are made slaves of property where one is suffering from hunger, and these slaves become degenerate victims. Out of their bondage grow all sorts of pettinesses, tyrannies, and a blindness to real womanhood and manhood.

"Give us this day our daily bread;" this is the core of the prayer. It will have to be repeated, and it will have to

Digitized by Google

be worked into our daily education before we come to anything like Christianity in our daily lives. It does not debar a man from a bank account. Indeed, in old age one may draw as directly from the divine hand, when he takes from the bank cashier, as when he digs potatoes from his garden or picks apples from his orchard.

[Edgar Franklin Blanchard in *Christian Work and Evangelist.*]

The unchurched millions cannot be won by churches that make theology, creeds, sacred rites, sacraments, and going to heaven matters of chief importance, and brotherly helpfulness an uncertain adjunct to religious life. A new church is needed, one that makes brotherly love and helpfulness a cardinal principle. Such a church would reach large numbers of the unchurched masses. The time is ripe for a Christian brotherhood, as has been outlined, which would be to the great wage-earning, middle class what the Mosaic order was to the ancient Hebrews, the early Christian church to its followers, and what the Salvation Army is to its people. The world is waiting for this brotherhood.

Thousands in present-day churches feel the lack of true brotherly love and helpfulness in their religious associations. They would welcome such a religious brotherhood. There are thousands in the fraternal orders who feel the lack of a vital religious spirit in their associations. They would welcome a true religious brotherhood. There are thousands in labor unions who deplore the unchristian and warlike spirit of their unions and the uncalled-for trouble they often make. They are in the unions because, in spite of these unfavorable aspects, the organizations are of great help to them. These people would welcome a strong and helpful Christian brotherhood that would be more helpful to them than are the labor unions.

[Prof. Percy Gardner, LL.D., in *Christian Commonwealth.*]

During the last century we have learned that the growth of physical science is by no means fatal to Christianity; and now we are in the very stress of a new and severer struggle. The question of the moment is, whether the Christian view of life can survive the immense increase of our knowledge of man, of his history and constitution, as well as the new tendencies of society and the growth of democracy. The prospect might be dark if we did not gather courage from a consideration of what has happened in the past. Has the Christian religion sufficient inner force to adapt itself to these new and startling developments? Every true Christian believes that it has such power, though most of us at present stand appalled at finding how much Christianity must give up and how much she must take in exchange. The official leaders of Christianity are paralyzed. But the inspiration of Christianity has but seldom come from the rulers of the organized church; and when we see the astonishing vitality of what may be called the irregular forces of Christianity, another face is put upon matters.

[*The Universalist Leader.*]

He who advances the thin edge of truth a single inch anywhere, by so much pushes the whole average of the world's life forward. He who turns the flank of an enemy to liberty away out there on the border of the world somewhere, and he who pierces the very center of the citadel of tyranny, are moving on converging lines. Tomorrow they will meet somewhere out there on the way toward the goal. Let each one toil at his own task. Factory and temple and state-house, labor and worship and government, must all be transformed before the work is done. Liberty is not a formula which can be appropriated by any group; it is an ideal so inclusive that when all is said and done which can be said or done, it will still float out into the infinite beyond, freighted with the hopes of men, for ultimately and finally liberty is our vision and our dream of our perfect, free life in God.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The Society has recently published a set of books, cards, and collection envelopes for the use of the Christian Science Sunday Schools, and they may be obtained at the following prices:—

Class Books—4¼ x 6¾ inches, manila covered, with spaces for one year's record of attendance: 12 copies, 75 cents; 100 copies, $6.50.

Registration Cards—3 x 5 inches, with spaces for name, address, and necessary information, one to be used for each pupil: 12 cards, 10 cents; 100 cards, 25 cents.

Collection Envelopes—4 x 6¼ inches, cloth lined, printed, front, with space for class number and name of teacher: 12 envelopes, 50 cents; 100 envelopes, $4.00.

These supplies are sold in lots of one dozen only and all orders are sent prepaid.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on *folded* sheet for use of the branch Churches of Christ, *Scientist,* with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The annual per capita tax, of not less than one dollar, is due June 1, the beginning of the fiscal year of The Mother Church, and is reckoned from that date, whether the admission was in June or November. All remittances in excess of the amount due in accordance with the by-law, will be credited for the current year, unless otherwise specified by the sender.

Please do not send paper money through the mail, except by registered letter; a postal money order, made payable at the Boston post-office, an express order, or a bank draft, is preferable.

To facilitate the work of the Treasurer, please advise him promptly of any change of name or address. No charge is made for this service.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance *in* the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

ITEMS OF INTEREST.

National.

The Greenland bill, providing for pensions for indigent mothers, an administration measure, was passed in the Ohio House, and has the approval of Governor Cox. The vote in the House was: Yeas, 92; nays, 4. The bill makes provision for an annual tax levy of one tenth of a mill, which is expected to create a fund each year of not less than seven hundred thousand dollars for the carrying out of the mothers' pension plan. Destitute widows, women whose husbands are completely disabled, or have deserted them, or are serving prison sentences, are to be cared for under the provisions of the measure. Juvenile courts are to be authorized to pay such women fifteen dollars a month for a child under fourteen years of age, and seven dollars a month for each additional child under that age. The bill makes drastic changes in the juvenile code. Under the latter as amended, boys under fourteen are prohibited from selling chewing-gum or newspapers on the streets.

An inheritance tax bill introduced in the United States Senate proposes on estates of less than $5000, 1 per cent; from $5000 to $50,000, 2 per cent; from $50,000 to $250,000, 5 per cent; from $250,000 to $750,000, 10 per cent; from $750,000 to $1,500,000, 15 per cent; from $1,500,000 to $3,000,000, 20 per cent; from $3,000,000 to $7,000,000, 25 per cent; from $7,000,000 to $15,000,000, 40 per cent; more than $15,000,000, 50 per cent. Such a law as this would make possible the gradual absorption by the federal government of all large fortunes in the United States, while the proposed income tax would tend to prevent the accumulation of such fortunes. The idea behind these proposals is that the accumulation of large estates shall be made, first, difficult, and then impossible.

Thomas R. Marshall, Vice-President of the United States, said at a recent dinner, that unless the tendency of certain men to accumulate vast fortunes was stopped, America might face socialism or paternalism. The temper of the American people regarding individuals who had amassed great wealth through special privilege under the high protective tariff had reached a point where it would no longer brook opposition, and he advised these individuals to go slow or the state might see fit to revoke the statute which made it possible for their fortunes to be handed down to their children. The Vice-President said that the "right to inherit and the right to devise" were not constitutional, but were mere privileges given by the state to its citizens.

Aid to thirty-three coastwise vessels carrying several hundred men, and valued at one million five hundred thousand dollars, was rendered during the past winter by the United States revenue cutters Woodbury, Androscoggin, Itasca, and Acushnet in their four months' patrol along the New England coast. These cutters covered over seventeen thousand miles of active cruising between Point Judith, R. I., and Calais, Me., while the Androscoggin made a fifteen hundred-mile fruitless search in southern waters for the schooner Future, abandoned off Charleston.

Amendment of the Sherman antitrust law by abolishing the Supreme Court's "rule of reason" and defining the specific acts prohibited, is proposed in a bill introduced in the House by Representative Henry of Texas, chairman of the rules committee. His bill defines conspiracy, monopolies, and restraint of trade, providing penalties from two to ten years' imprisonment. "Trust owners and organizers should be sent to prison," said Mr. Henry, "and their controlled products made free of duty."

The state of Texas has begun a suit against Standard Oil interests to recover approximately one hundred million dollars for alleged violation of the antitrust statutes of that state. The substance of the allegations of the attorney-general of Texas is that the Standard Oil companies of New York, New Jersey, Kentucky, Ohio, and Indiana are practically under one control. It is set forth that the "Standard Oil trust" still exists, and operates the Magnolia Petroleum Company as its Texas branch.

The excavation of the Panama canal at Culebra cut has reached grade in all but eight thousand feet of the ten-mile length of the cut. By Oct. 1 the water will be turned on, and the shovels will be replaced by dredges, leaving the latter between two and three million cubic yards of material to remove. Up to Jan. 31 last the United States government had expended on the canal $281,702,639.55.

The old sea-faring terms, "starboard" and "port," must go in Uncle Sam's navy, and "right" and "left" must be substituted, in referring to movements of the ship's head. Rear Admiral Seaton Schroeder made the suggestion. The general board approved by a vote of 8 to 1; and Secretary of the Navy Josephus Daniels endorses the suggestion.

The antitrust suit against the Brazilian valorization scheme, the so-called coffee trust, will be dismissed by Attorney-General McReynolds as a result of definite assurances from the Brazilian government that the nine hundred thousand bags of coffee, valued at ten million dollars, stored in New York, have been sold to bona-fide purchasers.

By a vote of 5 to 3 the Assembly committee on education has reported a bill to abolish Greek-letter societies at the University of Wisconsin.

International.

An interesting report has been issued in connection with the proposed loan of one hundred and fifty million francs for the development of French West Africa. Thirty years ago the enormous French empire in West Africa was practically an unknown country; today it has no less than 2,145 kilometers of railways in full operation, and by means of the new loan a further 1,487 kilometers will be constructed within five years, while in ten years' time it is estimated that there will be not less than six thousand kilometers of railway in complete working order. In ten years the commerce of the country has been increased from one hundred and thirty-one million to two hundred and seventy million francs. An extraordinary social transformation has taken place, following directly upon this industrial and commercial development. Today the inhabitants of Senegal and other districts, owing to their being brought into contact with white workmen, have been entirely transformed, and nearly all the skilled and unskilled labor required, which formerly had to be obtained outside, can now be obtained locally.

Public opinion in Italy, at least among the lower classes, shows signs of weariness at the increasing expenditure by the government on military armaments and colonial expansion. It had been stated at the beginning of the Tripolitan campaign that the treasury was in a position to meet the exigencies of the longest war without having recourse to increased taxation. The people have found, it is stated, that though no direct war taxation had been imposed on them, the government has obtained the money it needed by means of disguised loans, the last one amounting to four hundred million lire, and by the appropriation of the excess of income tax until 1930. The cost of living has increased rapidly and unemployment is rife. The discontent which these conditions have fostered has added many supporters to the ranks of the Socialists, whose party program includes the strongest opposition to militarism and imperialism.

An important conference was held at Spezzia recently, which was attended by all the Italian admirals on active service not at sea, the high officials of the admiralty, and numerous technical experts. The conference, after prolonged discussion, came to a conclusion as to the type of battleship to be adopted in the Italian navy. The proposal to adopt the latest type of superdreadnought was vetoed, owing to the enormous cost. A new type between the superdreadnought and the Cavour class, was finally chosen, chiefly on the ground that four of these ships can be built for the cost of one of the superdreadnoughts. Following upon this decision an order was given for four of these ships at a total cost of eighty-five million lire. They will be of twenty-seven thousand tons, and will be fitted with fifteen-inch guns placed in revolving turrets, besides the secondary armament.

For the first time direct communication has been established between the wireless station on the Eiffel tower at Paris, France, and the one at Arlington, near Washington, U. S. A. The station at Arlington has been able for some time past to pick up messages sent out from the Eiffel tower, but the latter has not hitherto been able to receive those sent out from Arlington. The distance is over four thousand miles.

Industrial and Commercial.

Two billion dollars' worth of merchandise is now being imported annually into the ports fronting upon the Pacific ocean. About 10 per cent of this is drawn from the United States, 25 per cent from the United Kingdom, 8 per cent from Germany and 7 per cent from other European countries, the remaining 50 per cent being drawn from areas adjacent to the importing port or country.

Imports into the United States last month aggregated $149,917,063, an increase of approximately fifteen million dollars over the imports of February, 1912. The exports of the United States for the same period amounted to $193,992,942, a falling off of about five million dollars from the exports for the same month a year ago.

The large harvests of New South Wales, Australia, are taxing the carrying capacity of the government railways, and farmers are compelled to stack produce at the railway stations and await transport facilities.

The aggregate value of shipments from Germany to the United States and its possessions during 1912 was $193,809,158. The increase amounted to over 12.8 per cent, as compared with 1911.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

VALUE OF PREVENTION.

CLARENCE W. CHADWICK.

THE advent of Christian Science marks a new era in the field of therapeutics. In this realm much stress has been and is yet laid upon the efficacy of various remedial agents, while the value of preventive measures has not until recently been seriously considered. As human thought advances out of matter into Mind, however, the value of prevention becomes more and more apparent. Men are fast awakening to the fact that so-called curative methods which deal wholly with effects, fail to get at the root of the trouble. Too long they have suffered from the belief that the effects of sin can be cured by treating the body without reckoning with the mind or mentality of the patient.

Dealing primarily with causation, Christian Science naturally lays more stress upon prevention than upon cure. It by no means ignores the importance of curative agents, but emphasizes the fact that the one universal remedy, divine Mind, is both preventive and curative. In the logic of Science it therefore follows that a certain amount of righteous mental activity can prevent as readily as it can cure disease. The student of Christian Science soon grasps the thought that the only cure for physical ills is the one which will correct and prevent the wrong mental condition which is directly responsible for their appearance. The surgeon's knife has never yet corrected character, or severed the connection between sinful thought and bodily ills. It requires mental surgery to remove the cause of sickness, and mankind are fast finding this out and striving as never before to deal, not with the body, but with the thought which is controlling it. When this is scientifically effected there is nothing in evidence for material surgery to do. The discovery of this great fact sounds the key-note of individual liberty, for it is the only solution of the problem of preventing and curing disease. It is transformation by the renewing of the mind, and not corporeal treatment, which most concerns sick humanity. Attempted bodily adjustments are feeble efforts to remove a shadow without disturbing that which casts it.

In the healing of disease Christian Science says to the sick one, in the words of the great Teacher: "Sin no more, lest a worse thing come unto thee;" in other words, make use of the ounce of prevention, and you will find it worth a pound of cure. Cease thinking sinful or diseased thoughts, and there will be no bodily effects from such thoughts. Christian Science proves this line of reasoning to be both sane and practical, and it challenges the world to offer any substitute which will lead humanity into the kingdom of heaven here or hereafter. Christ Jesus taught no other, nor did his apostles. It is the simple but fundamental rule of cause and effect, and will hold its own throughout time and eternity. There is no causation without thought. If thought is evil, the only possible effect of such thought is evil; if thought is good, its only possible effect is good, for like begets like.

At this juncture there arises the question, How can I avoid thinking sinful or sickly thoughts when such thoughts are constantly clamoring for admission? And Christian Science replies, There is in reality but one Mind or intelligence, and this Mind is God, infinite good, and the only thoughts emanating from this Mind must be good thoughts. So-called evil or sickly thoughts, then, must be only counterfeit or dream thoughts, possessing none of the attributes or characteristics of God's thoughts. When this metaphysical fact is once accepted and adopted as fundamental truth, the method of procedure for the honest seeker for Truth is definitely outlined: when a wrong thought knocks at the door of consciousness, he must be on the alert to cast it out as a meaningless, substanceless usurper of the throne of conscious being. This can be and will be done joyfully and intelligently from the very moment that one accepts divine Truth and loves its highest idea or manifestation. If he is content with lip service, it is because he does not love the truth and is not willing to work for the conscious realization of it. So long as he entertains wrong thoughts, such thinking is sure to manifest itself in erroneous or discordant results, and all the so-called curative agencies of the human mind, whether mental or physical, are powerless to correct such results unless their cause be eradicated.

Herein lies the secret of Christian healing: it deals with spiritual causation, and starting with a pure fountain-head, there is no foul stream to deal with. Good is first, last, and forever the sum and substance of being, the sole creator of man and the universe. This is a sure foundation, besides which there can be no other, upon which to build a sinless superstructure of health, happiness, and holiness. He who builds upon it is working out his own salvation from the effects of wrong thinking. He is putting off the old man, the belief that consciousness is composed of both good and evil thoughts, and is putting on the new man, the understanding that "real consciousness" is good and never evil, and "is cognizant only of the things of God" (Science and Health, p. 276). It will thus be seen that Christian Science is utilizing God's remedy for every phase of wrong thinking, and that this remedy is primarily preventive rather than palliative or curative, although covering the full range of so-called material cause and effect. Its value, therefore, is above the price of rubies. Every human being needs it. Without it human life is little else than a discordant dream of supposed existence in matter, struggling to throw off the effects of erroneous thinking by correcting matter instead of thought.

Mankind live in a thought world. They think, see, hear, and feel thoughts. They feed on thoughts. Rob them of thoughts and they have nothing left, and their existence would be at an end. Then does it not behoove them to know what thoughts really are, where they come from, and what their mission? Must they sit idly by and imagine that so-called evil thoughts have a right to exist, and that there is no Principle, law, or rule by which they can escape from thinking such thoughts? What was the mission of Christ Jesus if it was not to bring into captivity every evil thought, to bind the tares "in bundles to burn them," and to gather the wheat of good thought into the storehouse of consciousness? What can any one ever hope to accomplish with a good and evil consciousness? Is there in reality any such

Digitized by Google

consciousness? Science answers No, but the belief in such a consciousness must be corrected and transformed before reality appears and the Science of right thinking is established in the hearts of men. Such correction necessarily involves the prevention of the experience of evil. The only remedy, therefore, is from above, never in nor of matter.

OMNIPRESENT PRINCIPLE.

MARTHA R. WHITE.

To those who believe that life is in matter, or body, man seems to have two phases of being, a material and a spiritual. The human life, a matter of bone and tissue, is believed to be the present phase, while the wholly spiritual is considered a state of existence only to be attained by passing the portals of death. Life in oneness with God becomes a distant hope under this code, while the present life must be grimly battled for and then defended in conflict with the world.

Under this sense of God as a God afar off, many have sunk with a feeling of intolerable loneliness and separation. Mrs. Eddy's great boon to humanity lies in the fact that she has done away for all time with the belief in separation by proving that man has but one life, and that one spiritual, here and now; that life is not inherent in matter, but in Mind; and that man's oneness with God can be proven here and now by recourse to that Mind, through which recourse the world is once more beholding the object-lesson, or proof through acts of healing, repeating the so-called miracles of the New Testament. She has shown that these miracles, these proofs of the immanence of God as man's divine Principle, are not violations of law, but a bringing into active operation of an ever-present law of being, long unused because not understood. Jesus, she has shown us, "was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause" (Science and Health, p. 313). The comfort and consolation of the right understanding of God and man's relation to Him, as taught in Christian Science, utterly destroys the sense of separation and the ills which result therefrom.

Christian Science shows that life is not inherent in or dependent on bodily structure. It is not a by-product of a certain fortuitous arrangement of organism. On the contrary, the body, as we see it, is the embodiment of a state of consciousness, and changes with the changing phases of that consciousness, as the picture on the lantern-screen changes with the moving film. This is proven in every Christian Science demonstration, where a change in the patient's state of consciousness is followed by a change in bodily condition. Causation is here proven to be mental. Were there not this connection of cause and effect between consciousness and bodily condition, no such phenomenon as a Christian Science demonstration could ever take place.

Mind is the Principle of being, and the Mind of perfect righteousness is God. Man is the image and likeness of God, the Bible declares, and Christian Science shows that this likeness is reflected in the individual consciousness, in which man's oneness with his heavenly Father is preserved intact. Life is no more in the body than the picture on the screen is in the screen. Life is forever apart from bodily conditions, for Life is God. Life forever remains one with Mind, and the real man forever reflects it as the child of the one Father. Without this constant touch of divine Principle, consciousness would be snuffed out, and man would be unaware of his own existence. Every moment of conscious existence is in itself a proof of the present oneness of our true selfhood with God. Descartes began his philosophic system with the declaration, *"Cogito, ergo sum"* (I think, therefore I am). The Christian Scientist can say, "I think, therefore life in God is revealed to me as an ever-present, indestructible fact."

The knowledge that life is indestructible in God, removes the sense that the body must be constantly guarded and watched over lest the springs of our being come to harm. Christian Science has come as a wholesome reaction against the fear that has been inculcated by the health theories of late years. The Christian Scientist knows that the Principle of being is as indestructible as the basic law of mathematics; that its manifestation cannot be destroyed; and that the assurance of immortality lies in this very fact. Mrs. Eddy says on page 306 of "Science and Health with Key to the Scriptures": "If God, who is Life, were parted for a moment from His reflection, man, during that moment there would be no divinity reflected . . . the Father would be childless,—no Father." Jesus the Christ, who possessed in all perfection the knowledge of God, knowing that his life was forever "in the bosom of the Father," allowed his enemies to try to destroy his life by mutilating his body. The attempt failed, and Jesus presented himself alive, a victor over the belief of life in matter. He did not need to go through death a second time, to lay aside every vestige of the claims of matter, and find once more the untrammeled spiritual sense of life which is the heritage of the sons of God.

Not only Life itself is omnipresent Principle, to be reflected and expressed, but the many qualities and attributes of spiritual being are at hand for those who know how to lay hold on them as their heritage. Men have listened too long to the argument that they are bound and limited by hereditary qualities. Every individual rests on the broad foundation of the infinite Mind which is the Father of all. The claims of heredity can be cast aside by the understanding of man's true sonship. Every perfect attribute of being is at hand for those who are ready to do the necessary work to demonstrate it. The realization that God's man is not limited, must be gained before men will be willing and ready to make the necessary effort. Understanding must go before achievement. Just as every phase of the basic law of mechanics is at hand for anybody to apply who will, so it is with the qualities of spiritual being. The basic law of mechanics is as free to one as to another. The Bible says that "God is no respecter of persons." Then let those who will, lay hold on man's ever-present Principle, with confidence in their right, as the children of God, to call themselves "joint-heirs with Christ."

CORRESPONDENCE.

PETER B. BIGGINS.

We occasionally hear it said, "I would give a great deal to be able to write a good letter." Many people acknowledge that their success has been due in no small degree to the habit of answering their letters promptly and fully. The disinclination to perform one's duty in correspondence is not due to a lack of something to say, as many a fluent and entertaining speaker seems to suffer from this disability; it is not on account of the fear of committing literary improprieties, as a very ordinary education saves one from serious errors in composition. No, we must look elsewhere for the reason, and when this is discovered we are nearing a satisfactory solution.

This disability may be due to a lack of perception of the importance of attending to such duties promptly, failure to recognize the comfort a few kind words may bring to a friend, or the belief that one does not have the time. These are some of the erroneous reasons for neglecting correspondence, and too often they are entertained when they should be instantly dismissed. In any event, the remedy lies in improved understanding. While correspondence viewed humanly is a matter between person and person, regarded scientifically it is a matter between the individual and God. St. Paul reminds us that we should do all things "as to the Lord, and not to men." When one first takes up the study

Digitized by Google

of Christian Science, a transformation in the nature of the contents of one's letters to friends is quite sure to take place. Personal gossip gradually disappears, and the rehearsal of crime and disaster is entirely omitted. An excellent opportunity is thus secured to count our many blessings. A letter in which sincere gratitude is expressed does not stir up envy in the heart of the recipient, but prompts him to consider how much he too has to be thankful for. Thus, like mercy, whose quality is so beautifully portrayed by Shakespeare,—

> It is twice blest:
> It blesseth him that gives and him that takes.

But some may ask, Why should not one recount the evil as well as the good? The reason is not far to seek. While Christian Science shows that good alone is real, it does not ignore with lofty disdain the evils manifest in human affairs. A Christian Scientist is too keenly alive to the necessity for overcoming evil to regard it from such an impractical standpoint. Nevertheless, it is evident that to rehearse evil continually does not lessen it, but magnifies it; and in order to destroy evil more effectually, one is quite consistent in refusing to discourse upon it unnecessarily.

The advice is often given to young writers that they specialize in their literary work, that they devote their entire attention to a certain department of thought or research and become particularly identified with it. What an excellent plan it would be to become a specialist in good news, so identified with it that our friends to whom we write no longer expect to receive anything else from us. This does not mean that we should ever be untruthful and call evil good; but there is so much of good surrounding us that we are ungrateful if we hide our appreciation of it under a bushel and expatiate on the least inconvenience or indisposition that seems to confront or assail us. To attain and maintain this standard may mean for many of us a careful revision of our past methods, but this revision, and the reversal which naturally follows, repays a thousandfold.

OMNIPOTENT GOOD.

LAURA GERAITY.

MANY years ago, in answer to the argument that it was God's will that her mother should suffer, a child retorted, "I don't see how you can love God, if you think He likes to make you miserable." That little heart was ready to reflect the love that it was always absorbing from its surroundings, and it instinctively rebelled against the quiet, almost unspoken teaching of its mother, that God, whom she believed to be Love, was ready to do less. The little one naturally resented such a thought, but the mother through years of contact with materiality nursed and nourished it, and suffered correspondingly in brave silence, believing it was the will of God that she should do so.

This pathetic situation is encountered very frequently, and as yet there are relatively few Christian people who perceive its incongruity and wrong; but as their number steadily increases year by year, the old concept of God is surely passing away. A few years ago, that child, grown older, reached out greedily and gratefully for the new and welcome truth that sin and suffering, wrong desire and its punishment, are not of God, and hence that they have no abiding-place in God's perfect creation, where, as we are told, there shall be no more pain, "and sorrow and sighing shall flee away." She drew a deep breath of satisfaction when she could unreservedly acquit God of all the blame which had held no insignificant place in her simple and wavering beliefs; and there grew a great longing to give to God, even at the eleventh hour, some of the love and gratitude which those same beliefs of ignorance and mistaken tuition had so long made her withhold.

Of the many burdens from which Christian Science has relieved its students, this one, that God wills us to suffer, though perhaps smaller than that of vice, has been, nevertheless, a very large factor in the mass of errors which have stood in our way on the upward path to spiritual truth. There is a constant desire to get rid of the load of suffering, and any method is eagerly grasped for the sake of the result to be obtained. But are we as ready to use every argument against our brother's failings or misdemeanors? Surely not. There is a subtle argument almost unconsciously presented within, that it is not so serious or deadly that we must necessarily interfere. The same subtlety works with our attitude to God. We say we have loved our brother, and we say we have loved God, but we have not loved either the one or the other sufficiently well to separate them wholly from all belief in error.

The little child truly loved God. If God were good, she could not believe Him guilty of sending pain, sickness, sin, or misery. Therefore she accepted and retained the fact of His goodness, and at the same time stoutly refused to admit that He was less. The two conditions were not possible even to her infantile logic; and when in the course of years she by degrees put the fact somewhere behind her and by daily material intercourse and erroneous surroundings began to absorb the fiction, there was such mental discord that from sheer apathy and selfishness she avoided the disturbing question entirely, and swung like a pendulum between the truth and a lie. So long as life goes smoothly, we do this, until we sleep so heavily that no ordinary sound wakes us, or until a storm of pain within or without is necessary to rouse us to something like action; then we begin to see it may be worth while to "prove all things" and to "hold fast that which is good."

Mrs. Eddy has shown us the way to prove what it was difficult and full of weary work to prove for ourselves. She has opened up the way for the lazy ones who have let go their childish beliefs, sometimes called childish fancies, and who have slid down the precipice that leads to the seeming rest of apathetic disbelief. Some of us have been suddenly roused by a storm of discord; a clap of thunder has brought down upon our heads the dust and ashes of the treasures of a lifetime, or a torrential rain of sorrow has drowned all our hopes of the material future, and we have awakened in the heavy atmosphere of doubt, dismay, and fear. Then we have risen to our feet and have begun by judging God harshly, but have ended by falling on our knees, listening to His "still small voice" of comfort and consolation, and have learned to raise our eyes to the hills, whence cometh our help. Then far, far above the dream of chaos, discontent, and sorrow, we have seen the hand of Love ruling all that is, all that ever can be, all that ever really was.

DAILY PROBLEMS.

W. C. FERGUSON.

THE immeasurable value of Christian Science to humanity consists in its immediate and continuous availability in solving the many problems which confront mankind. When one first catches a glimpse of the beauty and truth of being as given in our text-book, "Science and Health with Key to the Scriptures," he experiences a sweet sense of joy and freedom; but it is only when he begins to put in practise the teaching of this book that he experiences the calmness and confidence which is the result of understanding that all his daily problems are capable of solution by this means. Unless one is on guard, however, he may be robbed, by any one of a number of insidious arguments, of the harmony which is his through an absolute reliance on the spiritual. Among the most crafty and frequent of these is the one which would lead him to believe that pressure and hurry of business life make it impossible for him to use continuously his understanding of Science, and that if things get too discordant, he can take a half hour off and "do some work" or telephone a practitioner; another is, that if he has

Digitized by Google

gone over the Lesson-Sermon that morning, his affairs ought to adjust themselves automatically. The argument which causes a man to put off until some more "convenient season" the consideration of a problem, is one which is apt to be productive of much discord.

Let us consider the method we pursue with regard to the mathematical problems of our daily life. When we awake in the morning we look at our watch, and in doing so, use a slight understanding of mathematics. No matter how sleepy we are, we use it. When we go into a store and make a purchase, we give or we get the correct change. We might be in a very great hurry and a number of people might be waiting for the clerk whose time we were using, but we would never think for a moment of not using our mathematics to see that we have the correct change. Likewise, in writing a check, in looking over a statement, in fact in a hundred matters, every day we use our knowledge of mathematics and never think for a moment of abandoning or neglecting it. Now, is not this the way we should use our Science? When a belief of anger comes into our consciousness, whether personified in ourselves or a brother, do we give him the "correct change" then and there, or do we put it off until we have more time to consider it? When a man comes to us with a dishonest thought, do we then and there know the truth about that? When the thought of hurry comes up, do we get the correct answer for that mortal belief then and there?

If one were to disregard the laws of mathematics for a single day, using any number that came into his head indiscriminately, he would not be able to correct all the mistakes he had made by going home and reading the very best treatise on arithmetic. In fact, it would require days and even weeks, probably, to correct his inaccurate bills, checks, etc., and it would have been better had he done nothing all that day. Then how can he any more expect harmony to result in the affairs of his every-day life, if he neglects to solve correctly the problems as they come before him? It is only by unceasing and persistent effort in meeting daily problems that harmony is obtained and development and progress are made. In Science and Health (p. 283) we read: "We must receive the divine Principle in the understanding, and live it in daily life; and unless we so do, we can no more demonstrate Science, than we can teach and illustrate geometry by calling a curve a straight line or a straight line a sphere."

TRUE MODEL.

ADÈLE LESLIE BECK.

To those who have been taught to think of God as a magnified human being, the second commandment is a mystery, or else it has been so materially interpreted that the spiritual import is lost; but it needs to be understood before we can comprehend what we worship as God, since it defines more than any other commandment what the Godhead is. "Thou shalt not make unto thee any graven image, or any likeness of any thing that is in heaven above, or that is in the earth beneath, or that is in the water under the earth." How could we have a corporeal concept of God if we understood this? Have we ever seen the form of love, unselfishness, purity, life, or truth? Could they be pictured as anything that we have seen, in the heaven above, or in the earth beneath, or in the water under the earth?

Mrs. Eddy says, "We must form perfect models in thought and look at them continually, or we shall never carve them out in grand and noble lives;" and then she continues to define the perfect model, which is not a picture of any corporeality, when she says, "Let unselfishness, goodness, mercy, justice, health, holiness, love—the kingdom of heaven—reign within us, and sin, disease, and death will diminish until they finally disappear" (Science and Health, p. 248). Says St. Paul, "We look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal," and this in obedience to the command, "Thou shalt not bow down thyself to them, nor serve them: for I the Lord thy God am a jealous God, visiting the iniquity of the fathers upon the children unto the third and fourth generation of them that hate me." And here we ask, What and who hates Life, Truth, and Love? Only that father-lie, which was a murderer from the beginning; which abode not in the truth, and the truth was not in him.

Will not infinite Truth, this zealous God (for zealous is the spiritual signification of jealous), visit the iniquity of the father-lie upon its children, sin, disease, and death, and destroy all untruth with the truth, unto the third and fourth generation, and show mercy unto thousands of those that love Truth and keep God's commandments? Paul tells us that "eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love him." Again he says, "I am jealous over you with godly jealousy: for I have espoused you to one husband, that I may present you as a chaste virgin to Christ." In Christian Science we soon learn the vital importance of rejecting all false concepts of God and man, and of trusting Truth to reveal to us the spiritual idea which is the model for all true thinking and living.

[Written for the *Sentinel.*]

MY VISION.

GRACE NIXON STECHER.

THE blinding mists have lifted from the face
Of all mankind, of earth, and troubled sea;
Time's sickle reaps no more, and in its place
Revolve the cycles of eternity.

Earth's shades have fled before eternal light,
And men no longer live in dread and fear;
They cast away the shackles of the night,
And man his Father's image doth appear.

With rosy glow of truth the sky is flushed,
And all the world in harmony doth blend;
The claims of mine and thine forever hushed—
All pain and want and woe are at an end.

And what has ushered in this blissful state
Of universal love and holy truth,
Where mightiest on humblest e'en doth wait,
And age is lost in one perennial youth?

The word divine, irradiating light,
From century to century has sprung,
Cleaving and rolling back the clouds of night
That round the hearts of men have groped and clung.

And now 'tis done! the truth with us remains—
His word has not returned unto Him void!
And in the peace that follows flow sweet strains
Which touch the heart and leave it overjoyed.

At last our prayers, devoid of self, ascend
In vibrant tones of purest harmony;
They with God's waiting answer meet and blend,
Thus forming part of heaven's symphony.

Again the morning stars together sing!
The joy which seers have prophesied has come—
And from high heaven itself these words outring:
"Behold, 'tis here, the great millennium!"

SELECTED ARTICLES.

[Frederick Dixon in *Australasian Church Quarterly Review*, Sydney, New South Wales, Australia.]

[The following reply by Mr. F. Dixon of London, chairman of the publication committee of the Christian Science movement, was received through a Sydney representative of the Christian Science movement. This *Review* had already published in its last number a reply to "Medicus" from a local Christian Scientist and an editorial comment upon that reply. However, in view of the gravity of the questions at stake, it seems best to depart from our rule of not continuing a discussion beyond a single number. Mr. Dixon's reply is, therefore, printed herewith, but its contents obviously require further comment from the Christian standpoint. We cannot lend the pages of a church review to the unchallenged advocacy of such a movement, even in the form of a reply to an earlier contribution. The discussion is now terminated.—EDITOR.]

The article entitled, Notes on Healing, contributed to the June issue of *The Australasian Church Quarterly Review* by an anonymous writer, under the pseudonym of "Medicus," contains a criticism of Christian Science which really could only have been written by some one sublimely ignorant of the teaching supposed to be elucidated. The contribution seems, indeed, to be fully up to the writer's own standard of "spurious metaphysics, bad logic, and bewildering, unintelligible theology." I do not, however, intend to follow the example of the author of this phrase by making statements *dans l'air*. I propose, no matter how unkind it may seem, to substantiate them.

The writer starts off with the declaration that Mrs. Eddy was "a woman in no way distinguished as a scholar, but rather profoundly ignorant of any of the requirements of a religious or social leader." On the very next page, however, the writer says that "there are thousands of people wandering to and fro, restless and unhappy, looking for mental and spiritual comfort," and adds that it is impossible to be "altogether surprised that they were misguided enough to accept as true revelation the rubbish in Science and Health." Now, hundreds of thousands of copies of Science and Health have been sold; the book, in fact, has had a larger sale, probably, in the lifetime of its author than any book ever written. It is clear, therefore, that Christian Science has inspired the lives of an enormous number of people; but this is not all. The movement is a world movement. It matters not to what country or to what quarter of the world you go, there you will find Christian Science churches and Christian Science healing, for wherever it is found, Christian Science is discovered preaching the gospel and healing the sick. You will find it throughout the United States and the Dominion of Canada; you will meet it in South America and in the islands of all the great oceans. You will discover it firmly seated in the British Isles, and the countries which comprise the continent of Europe. It has overflowed into Egypt, and spread itself from Bechuanaland to Cape Town. Its services are read along the Persian gulf, and in the cities of India from Quetta to Mandalay. In China and Japan it has a devoted following, and it is not unknown in Australia.

Not only does it contain in its ranks all nations, but all sorts and conditions of men. Squatters in Australia, Dutch farmers in the Transvaal, engineers in Egypt, great merchants in America, miners in Peru, distinguished soldiers in India, equally distinguished sailors on the ocean, fruit-growers in Canada, scholars in Europe, and, to be accurate, all these in all countries. What Matthew Arnold would have termed the culture of the movement may not come up to the standard of "Medicus," but it has come up to the standard of the universities of Europe and America, while as for its religious instinct, there is not a member of the church who could not give from the Bible a reason for the faith that is in him or her. The anonymous critic may not approve of the movement; if the *nom de guerre* he has adopted has any fitness, it is not to be expected that he should; but that does not make it any the less a world-wide one which has profoundly influenced the thought of the century, and in these circumstances it is just a trifle ridiculous to indulge in so dogmatic an *obiter dictum* as that Mrs. Eddy was "profoundly ignorant of any of the requirements of a religious or social leader."

Then again, when "Medicus" explains that Mrs. Eddy was "in no way distinguished as a scholar," does he realize where this is leading him? Obviously, Plato and Aristotle, indeed the whole gamut of pagan philosophers, were more qualified to act as religious guides than the apostles and the Christian fathers. Virgil, and not David, should have written the Psalms; Xenophon, and not John, the letters to churches; and not Luther, but Erasmus, should have wrought the Reformation. No wonder the Jews said of Jesus, "How knoweth this man letters, having never learned?" It has perhaps escaped the attention of "Medicus" that most of the New Testament was written by a publican, three fishermen, and a tent-maker. Certainly "Medicus" never gained from the Bible, or from history, the idea that to be a religious leader it was necessary to be a scholar. Jesus of Nazareth walked in the groves of no *academia* with his disciples. His theater was a hillside, his rostrum the prow of a fishing-boat, his students a handful of fishermen and tax-gatherers; but he taught them to preach sermons which healed the sick and raised the dead; a "bewildering" theology certainly, and "unintelligible" enough to the mightiest authorities on Greek verbs today.

Mrs. Eddy was nearer to Peter and James and John than she was to Erasmus or Professor Osler. That is to say, she knew more of Principle than of particles, more of God than of microbes; but this did not make her so uneducated as "Medicus" fondly imagines. She was a well-educated, cultivated lady, well informed and keenly interested in all the problems of the day. She had, however, a sense of proportion which kept things in their correct perspective, and she knew that what the New Testament calls the full, exact, or scientific knowledge of God, was of more importance to humanity than theoretical speculations on the subject of electrons or ether. Jesus said, "Ye shall know the truth, and the truth shall make you free."

It is a little disconcerting to his argument when on one page "Medicus" writes that "Mrs. Eddy's teaching makes a clean sweep of all the accumulated religious and philosophical experience of centuries," and on the next that her "fundamental belief" is "common to many religions," and her "assertion of a unity" though "true, is no way new." It seems, to a Christian Scientist, a curious result of a teaching which has "made a clean sweep" of "religious and philosophical experience," so curious that one can only suppose it to be the result of the "bad logic" to which "Medicus" has already alluded. After this, it appears quite logical to be told that "philosophers and scientists in all ages have looked to an underlying unity."

The argument of "Medicus" is, however, not only logically absurd, it is historically preposterous. What does he imagine has been the centuries-old dispute between the materialists and the idealists but this very question of the reality or unreality of matter? What does he imagine was the meaning of the Platonic theory of ideas, the contention in the medieval argument between the Conceptualists and the Nominalists, or what does he think "The Principles of Human Knowledge" was written to prove? What Mrs. Eddy really did was to abandon the idealism of the schools for the idealism of the New Testament. "The Bible," she wrote, on page 126 of Science and Health, "has been my only authority. I have had no other guide in 'the straight and narrow way' of Truth."

The evolution of Christian Science is extraordinarily simple. Truth, like God, is eternal, for God is Truth. This truth, however, does not consist of the relative facts of human knowledge, but of the absolute facts of being. The writers of the early Bible documents perceived something of this truth from the frank anthropomorphism of the "Jehovistic writings," through the more spiritual atmosphere of the "Elohistic," down to the "Priestly." This vision of

the truth grew through succeeding ages, ever broadening into a fuller and clearer perception, until the full understanding of it was given to the world in the teaching of Jesus the Christ. Jesus, however, never separated cause from effect, precept from practise. "Ye shall know the truth," he said, "and the truth shall make you free;" but he also said, "He that believeth on me, the works that I do shall he do also."

Those works were done by Jesus' disciples or students, but the practise did not stop with their martyrdom. It was part of the demonstration of primitive Christianity in the first three centuries, and it did not cease until it occurred to the emperors that the way to render Christianity nugatory was not by the cry of "*Christiani ad leones*," but by seating the bishop of Rome on the throne of the Pontifex Maximus, and building a cathedral on the site of the Circus of Nero. Riches and social prosperity accomplished what persecution and poverty had failed to do. The preaching of the Christ continued; the healing of the Christ came to a sudden end. Then came the centuries of recovery, during which the evolution of the Christ-idea from the time of Abraham to the day of Jesus of Nazareth was repeated. The dark ages gave place to medievalism; medievalism passed through the renascence to modern history; and then at last there came a woman, pure enough to grasp the meaning of those wonderful words of Jesus, spoken in the night-time to Nicodemus, in all probability on the housetop in Jerusalem, "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit," and selfless enough to put into practise the command, "If any man will come after me, let him deny himself [utterly], and take up his cross daily, and follow me."

It was this very command to deny the flesh utterly, for that is the true translation of the Greek, to divorce that born of the flesh from that born of the Spirit, which distinguished the idealism of the New Testament from the idealism of the schools, and constitutes the fundamental teaching of Christian Science. Mrs. Eddy draws the distinction between the real man born of the Spirit and the unreal man born of the flesh, who is only the counterfeit of the real man or the image and likeness of God. "Medicus" mixes the two up in inextricable confusion, and then, with delightful ingenuousness, talks of Mrs. Eddy's "spurious metaphysics." You might just as well define an equilateral triangle and an isosceles as the same thing, and then scoff at the spurious geometry of Euclid. There has never been anything like it since the Mad Hatter's tea-party, when the Dormouse said, "You might just as well say that 'I breathe when I sleep' is the same thing as 'I sleep when I breathe.'" The Hatter said it was in his case, and the same train of reasoning seems to apply to the logic of "Medicus." If you permit yourself to define your opponent's premises with Aristophanic license, there is no reason why you should not reduce his conclusions to Gilbertian topsy-turvydom. If "Medicus" is going to criticize Science and Health, some one ought to insist on his reading it.

Christian Science is the idealism of the first century of the Christian era applied to the requirements of the twentieth. It demands that today, as in the time of Jesus, the affairs of man shall be governed not by human wisdom, but by that knowledge of the truth which is to make the world free. Now, absolute truth is necessarily the most scientific thing in the world, and being scientific, is necessarily equally capable of demonstration. This was why Jesus always insisted upon the connection between preaching and healing. What are termed his miracles were nothing more than what the Greek words so translated really imply, that is to say, the object-lessons in proof or demonstration of the accuracy of his theology. It was because of this that he insisted that those who believed on him would be able to repeat these miracles. Those who believed on him were necessarily those who understood his teaching, and, in the exact proportion in which the teaching is understood, the demonstration becomes possible. This understanding is not, however, acquired by an intellectual exertion; it is the result of a man's spiritual perception, and this is, in turn, inseparable from the determination to walk as closely as possible in the footsteps of the Master. Just as a man is successful in this, will he attain the Mind that was in Christ Jesus, and attaining *the Mind* that was in Christ Jesus, be able, as Jesus *himself promised* and demanded, to do the works which he had *done*. *It was* the Founder of the Christian religion, *and none other*, who made the capacity to perform the works he did the test of the ratio of a man's faith.

[Editorial in *Poughkeepsie* (N.Y.) *Star*.]

It seems strange that there are still some clergymen who feel that they are called upon from time to time to attack Christian Science. That form of advertising oneself was formerly more popular than at present. Only a few clergymen now yield to it. It would seem that the clergyman who has a sincere desire to do good, could keep reasonably busy without trying to tear down some other organization which is doing its share of the good work of the world. This paper holds no brief for the Christian Scientists, but it seems to us that if there were no virtue in it, Christian Science would have perished from the face of the earth long ago. Instead, however, it has spread all over the world. Most of the large cities have from one to many great churches filled with a highly intelligent class of persons who, in the main, would scarcely be expected to follow something that had no virtue.

Christian Scientists get results from their system of healing disease, and a clergyman should be the last one to quarrel with this. Christian Scientists mind their own business; they do not go out of their way to attack other systems of healing or of religion. They try to obey the Scripture and do as they would be done by, and they are trying to walk in the footsteps of the great Wayshower. They do not accept challenges to heal any diseases, nor are they seeking any controversies whatsoever. They do not seek to foist their system upon those not ready to receive it. Those who have eyes to see, can see the good being done by Christian Science. Those who cannot see it, are not yet ready to open their eyes; but the time will come when they too will see it, for Christian Science contains such elements of truth that it must ultimately be recognized even by those who now think they are inspired to attack it.

[Thomas F. Watson in *Hanford* (Cal.) *Sentinel*.]

In a recent issue, under the heading "Christian Science and Methodism—How Far Between?" a Methodist minister "pokes fun at the rapidly increasing cult in his Sunday sermon." From obeying Christ's command, "Feed my sheep," to "poking fun" at another church or religious teaching, one might well ask, "How far between?" The commandments of Christ Jesus, "Go ye into all the world, and preach the gospel," "Heal the sick," etc., which the Christian Science church emphasizes, its members are humbly and earnestly endeavoring to obey; and the fact that they have undoubtedly met with some success along this line explains why its followers are "rapidly increasing."

The avowed purpose and mission of the Christian Science church today is to "reinstate primitive Christianity and its lost element of healing" (Church Manual, p. 17). The first tenet of Christian Science, as given in the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is as follows: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (p. 497). Surely there is nothing in this teaching which could produce "spiritual wrecks," as the gentleman avers; but among the followers of Christian Science are thousands who have been healed of their infidelity, their sickness, sorrow, sin, and despair, through the study of Science and Health, which has taught them how to understand God; and they gratefully testify to this fact.

It has been well said that Mrs. Eddy's writings "arouse an insatiate hunger for more of the Bible, more of God, more of the Christ, more of Jesus, more of the Holy Comforter." Our friend the minister admits that Christian Science "performs many cures," but states that the Indian witch doctor does the same, which reminds one that in those days when Jesus healed the sick, there were some who would not admit that the healing was done by the power of God, but by Beelzebub. Even the disciples could not understand why some were casting out devils, and yet were not following them; but they were rebuked by Jesus, as we read in St. Mark.

In the critic's attempt to disparage Christian Scientists on the subject of cleanliness, he omitted the lines which read, "'Cleanliness is next to godliness,' but washing should be only for the purpose of keeping the body clean;" and also, "I insist on bodily cleanliness within and without" (Science and Health, p. 413). Further, on page 382 it is written, "We must beware of making clean merely the outside of the platter," implying that it is the inner cleansing or purification of thought which must not be neglected. In no way does Christian Science disparage or belittle personal cleanliness, proper ventilation or sanitation, and the Christian Science homes and churches are arranged with due regard for these considerations. It is also a well-known fact that Christian Scientists are cleanly, intelligent, law-abiding citizens who observe all sanitary or other laws which safeguard the public welfare.

[Frank Bell in *Reading* (Pa.) *Eagle*.]

The statement in an address by a clergyman as quoted in a recent issue, that Christian Science conforms to pantheism, is not only incorrect, but directly contrary to the fact. Pantheism is defined by the Standard dictionary as "the form of monism that identifies mind and matter, the finite and the infinite;" the theory that material beings and things are literally a part of the creator. Christian Science teaches exactly the opposite. It repudiates the notion of mind in matter, denies to the finite any place in or relation to infinity, and differentiates clearly between that which creates and that which is created. To say that the true creation is like its creator is not to say that they are identical, any more than to say a human son resembles his father is denying that they are two persons.

Christian Science if true is, of course, not new. Truth always was and always will be. Mrs. Eddy in her writings claims for Christian Science that it is a revival of primitive Christianity. The manner of its presentation to this age is all that is "modern" with regard to it.

[George Shaw Cook in *Chicago* (Ill.) *Record-Herald*.]

The article by Dr. James J. Walsh, "Nosophobia—the Dread of Disease," published in the Sunday *Record-Herald*, doubtless has been read with interest by many whose thought has turned in the direction of a mental cause and cure for disease. The information contained in this article relative to needless fears, which often result in disturbed functions and diseased conditions of the body, is interesting. Likewise the author's citation of many cures which have apparently resulted from a changed mental state alone, should have interest for those who have possibly given drugs an all-important place in the healing of disease.

In classifying Mrs. Eddy with Greatrakes, Perkins, Dowie, and Schlatter, the author makes a mistake which is sometimes made by those who do not fully understand the true nature of Christian Science Mind-healing,—those who perhaps consider its effects more than the *modus operandi* by which those effects are brought about. It is well known that some said of the healing works of Christ Jesus, "He casteth out devils through Beelzebub the chief of the devils," and the tendency nowadays is to account for Christian Science healing by calling it mental suggestion or some form of mesmerism. The difference between Christian Science practise and all forms of mesmerism is that the one who employs mental suggestion generally believes thoroughly in the reality of disease while trying to change his patient's belief regarding it, whereas the Christian Science practitioner understands the unreality of disease and frees his patient from fear and false belief by knowing that, as Mrs. Eddy has said on page 335 of "Science and Health with Key to the Scriptures," "reality is spiritual, harmonious, immutable, immortal, divine, eternal. Nothing unspiritual can be real, harmonious, or eternal. Sin, sickness, and mortality are the suppositional antipodes of Spirit, and must be contradictions of reality."

[William J. Bonnin in *Oldham* (England) *Chronicle*.]

Your contributor, the Rev. A. J. Waldron, has more than once generously testified to the wide extent of the healing work accomplished in Christian Science, and consequently your less cautious readers might be inclined to regard him as speaking with authority on the subject, and to accept as accurate a statement of his appearing in your last issue, which is, in fact, quite an erroneous one. In his article on patience, this clergyman says that virtue is the key of the "New Thought and Christian Science philosophy," and he further explains the "key" as thinking of success, a dwelling not on affliction but on hope.

In the first place, to imagine that Christian Science and what is known as "New Thought" are capable of being coupled as allied systems is a grave mistake. I do not say that what the critic has written may not be applicable to "New Thought," but it is entirely and fundamentally wrong to say that Christian Science has for the key of its philosophy the exercise of the human will and determination. It is just this human will which is the source of trouble, and Christian Science reveals a Christianity in which it is possible for all to experience the good effects to come of its subjugation, and to manifest in some degree the power manifested by him who was able to say, "I can of mine own self do nothing: . . . I seek not mine own will, but the will of the Father which hath sent me." Christian Science develops spiritual understanding, and this means the understanding of absolute Truth. Every advance in this development is a clearer vision of the eternal fact that only the good is real, and a keener recognition of the fraudulent and unreal nature of evil. And so it is not a question of "thinking of success" and banishing thoughts of affliction, for that is a mere exercise of the human mind, but it is to attain to the consciousness of the omnipresence of God, good, and to realize that through this very consciousness He avails to save and protect, which is the Christian Science practical way of praying to God and so providing a channel for His will to be done on earth. And His will is always good.

[From *The Spectator*, Portland, Ore.]

Christian Science offers a broad field for the contemplation of humanity. The physically ailing say it heals them; the mentally ailing say it cures them; the spiritually ailing say it saves them. Its appeal, therefore, is wide, and its efficacy seems far-reaching. The growth of Christian Science has been remarkable—almost as much so as its effect on those who practise its teachings. It seems a religion of sunlight, that gives its followers a notably cheerful interest in life; they seem to have given up the thought that they must die to be happy. Judge Clifford P. Smith says Christian Science teaches that heaven is not reached through the dark door of death, but by right living, and that heaven is a living, active state of goodness on earth. It is a very pleasant belief, and if followed even without expectation of any other heaven than the one that Christian Scientists make for themselves here on earth, it must indubitably lead to that heaven which the rest of us hope for beyond the grave.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"NO ROYAL ROAD."

MRS. EDDY'S admonition to students of Christian Science on page 405 of Science and Health, to "study thoroughly the letter and imbibe the spirit" of this Science, must be accepted by these students as the only road leading to the correct and demonstrable knowledge of God which heals the sick. This admonition is also in line with her statement on page 330: "To understand all our Master's sayings as recorded in the New Testament, sayings infinitely important, his followers must grow into that stature of manhood in Christ Jesus which enables them to interpret his spiritual meaning. Then they know how Truth casts out error and heals the sick. His words were the offspring of his deeds, both of which must be understood. Unless the works are comprehended which his words explained, the words are blind."

Mrs. Eddy knew of "no royal road to learning" by which she herself or her students could obtain without labor and study that full and complete knowledge of infinite Mind which ushers in the kingdom of heaven and gives humanity the power to interpret the Scriptures and heal the sick. On page 100 of Science and Health she tells of the years of earnest study which preceded her practise of the great truth which had come to her through revelation, and as she walked the straight and narrow way, so it must be with all her followers.

Christian Science is not a subject to be lightly skimmed over or casually looked into. It is the most serious and most far-reaching and comprehensive subject with which mankind has to deal, for it embraces the knowledge of God which Christ Jesus possessed and said was life eternal. Because of this great importance it must be studied prayerfully, earnestly, and continuously in order that it may be demonstrated, and the knowledge thus gained must be demonstrated in order to be sure that it has in fact been gained. This is the line of action which Mrs. Eddy followed, and the same order must be followed by all who call themselves Christian Scientists if they are to obtain the full benefit of her teachings. If Christian Science is the truth, then it must be a rule of conduct applicable not only to some human experiences but to all human experiences, and too much time and attention cannot be given to its study nor to its demonstration. Human experience is but a series of problems to which there are right answers. To obtain these answers by the demonstration of Christian Science is to grow in grace and in readiness to reach that evaluation which constitutes the "new" line of Spirit.

Is it not worth while, then, so to "search the letter and imbibe the spirit" of its teaching that there will be no delay in applying the answer to any of these human problems? Is it human experience which is to be forgotten, and without fear or favor or mentally clutching the skirts of any one system, are we not rather to press forward with both the spirit and the letter of truth, that we may more and more fully understand the things of the Spirit and of God, knowing that we are to be judged by the measure we mete out to others? Let us not, then, be content with a mere knowledge of the letter of Christian Science, but let us strive to attain the spirit of it, that we may be able to heal the sick and cast out evil in the name of the Christ, Truth.

ARCHIBALD MCLELLAN.

ASCENDING MAN.

HUMAN sense makes such frequent exhibitions of its consent if not attachment to the unideal, impulses which are unquestionably opposed to Spirit are so frequently in evidence, that aspiring hearts sometimes experience a sense of great discouragement. The stamp of evil seems so inerasable, the impress of good so evanescent, that the struggle is apparently unequal and hopeless. On the other hand, this same human sense not infrequently discloses a perception of and love for good, a capacity to be unselfish and heroic, which supplies a confidence and strength that is adequate, as we are wont to think at the time, to the demands of any issue or situation, and the shift from one side to the other of this consciousness of self often leads the introspective to wonder if Stevenson was not portraying his thought of the human as a whole, in his famous story of a dual nature, rather than outlining a preposterously unique personality.

Despite this confusion of consciousness, however, the innate instinct for the square deal, the recognition of right which becomes an inflexible law of conduct for all men, in some of their life relations, is emphatically manifest in present-day progressive thought. In our political and economic agitations even the most radical and revolutionary in the arena of party contention are declaring ever for "the rights of man." It is true that selfishness is always deceived and deceiving, it is ever assuming the garb and accent of righteousness that it may fool the gullible, but that the evil-minded should thus clothe themselves with pretense speaks volumes for the rule and authority of right among the many. Moreover, no one who is well acquainted with himself will question the genuineness of that nobler though perchance momentary sense which the thought of his mother or the story of some brave deed has brought him. There are best moments for all of us, when we are "caught up" into [illegible] above the mean, the petty, the commonplace, and catch something of the poet's vision, the seer's sense of beauty and goodness and truth.

This inextinguishable divine factor, this constantly regenerating man, is becoming more assertive and more authoritative every day, and Christian Scientists can give an explanation of this fact which is of the highest moment. They have time to realize in some degree that the least right idea in human consciousness is buttressed and supported by omnipotent Truth, that God is behind all good, while evil has no other foundation than a lie. The significance of the real and the true as related itself for them to every phase and phenomenon of human experience, and their appreciation and declaration of truth is reaching and affecting every earth plane and problem, in keeping with the psalmist's words: "Day unto day uttereth speech, and night unto night showeth knowledge. . . . Their line is gone out through all the earth, and their words to the end of the world." Speaking of this "boundless realm of right ideas, Mrs. Eddy has said: "The [illegible] sphere of scientific thought reaches . . . the globe's remotest bound. The impalpable voice of Truth is to the human mind as when a bird warbles. It is heard in the desert and in the lurking-places of fear. . . . There is the power of Truth [illegible]—made manifest in the destruction of error." Science and Health, p. 511.

[illegible] the immediate and eternal supremacy of the right in consciousness [illegible] to emphasize the fact that [illegible] of its spark to affect not only the existence of error which is so entrenched in every field of human endeavor, but to affect its entire destruction. [illegible] is a matter of only such import to the solution of [illegible] problems, but larger than [illegible] in human history as well as in [illegible]. This is the [illegible] of the [illegible] of the [illegible] Christian Science. [illegible] by the [illegible] and [illegible] [illegible] of mental [illegible] the [illegible] and [illegible] [illegible] [illegible]

SEPARATENESS.

A GREAT deal is said about the need for unity among Christian people, but it is not always remembered that the demand for separateness is of equal importance. In the sixth chapter of II Corinthians this demand is expressed in no uncertain terms, and strict obedience to it makes one's spiritual progress a path which shines "more and more unto the perfect day."

The command itself reads: "Come out from among them, and be ye separate, . . . and touch not the unclean thing;" then follows that wonderful promise: "And I will receive you, and will be a Father unto you, and ye shall be my sons and daughters, saith the Lord Almighty." This passage has, however, been robbed of its true significance by the supposition that the command could be obeyed by keeping apart from those whose religious views were different from our own, an opinion which has never brought to any one a sense of the nearness and tenderness of the all-loving Father. The ancient Jewish worship presented at every turn by type and symbol the need of separation from evil, and in Leviticus we read: "Thus shall ye separate the children of Israel from their uncleanness; that they die not in their uncleanness." At that early day the priests and Levites were set apart by certain rites and ceremonies, but in the early days of the Christian church fasting and prayer took the place of these outward forms, and thus Paul and Barnabas and others were separated from materiality and prepared for the work of healing and evangelizing humanity.

It is sometimes asked how Christian Scientists regard this Scriptural demand. To this it may be answered that they are taught from the first the need of intelligent and unhesitating obedience to it. Their revered Leader says (Science and Health, p. 451): "Christian Scientists must live under the constant pressure of the apostolic command to come out from the material world and be separate,"—in other words, they must take their stand by the teaching of the Master who said to Nicodemus, "Ye must be born again." Now the one to whom this was spoken was undoubtedly a man of high moral character, but he had to learn the need of separation from the fleshly belief of a material origin, with all it implies in the way of mortal passions, desires, and fears, none of which, so said the Master, can enter the kingdom of God. Nicodemus had opened this interview by an inquiry as to Jesus' mighty works, and he admitted that no one could do such works except God were with him. Then the great Teacher went straight to the heart of the subject by declaring for the new birth. He said: "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit. Marvel not that I said unto thee, Ye must be born again." This was his way of presenting the unreality of matter.

Mrs. Eddy says that he "who is begotten of the beliefs of the flesh and serves them, can never reach in this world the divine heights of our Lord" (Science and Health, p. 325). If, therefore, we would heal others, or be healed, we must come out from error and be separate. If we fail to do this, we are blindly and foolishly separating ourselves from God, and Paul asks: "What communion hath light [spiritual understanding] with darkness [material belief]?" Some may ask whether we should ever separate ourselves from people, those who do not help us to realize harmony. It is best to let infinite wisdom guide us in this as in all else. If the right kind of separation is going on in our consciousness, Truth will inevitably remove from our experience whatever offends or tends to work "iniquity," and the clearer our sense of Truth the more surely and quickly will this result follow. The unfoldment of spiritual sense will separate us from material ways, means, and methods, and as Love rules us, hate will be farther and farther removed. All the while we should remember that the Christ-ideal is "holy, harmless, undefiled, separate from sinners, and made higher than the heavens."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

OGDEN, UTAH.—Christian Science was first introduced into Ogden about twenty years ago, as a result of the healing of both sickness and infidelity. Services were held in the residences of those who espoused the cause until May 6, 1895, when First Church of Christ, Scientist, was organized, and then services were held in different halls until the organization was strong enough to purchase a church edifice, corner of Lincoln avenue and Twenty-fourth street, where services were held for several years. This location was found to be undesirable and the property was sold; but from the proceeds of this sale a lot was purchased at the corner of Monroe avenue and Twenty-fourth street, where it is intended to erect a church building, the balance being held as a building fund. For about two years two Christian Science services were held, but it was found that one service was sufficient for the city, and after due consideration the two churches united, and are known as First Church of Christ, Scientist. The church now holds Sunday services and Wednesday evening meetings in the new Masonic temple, where a goodly attendance fills the south hall. The church maintains a Christian Science reading-room in the First National Bank building, where Christian Science literature is at the disposal of those wishing to take advantage of same.—*The Standard.*

UTICA, N. Y.—Another advance in the progress of First Church of Christ, Scientist, during its life of almost a score of years in this city, is the decision to erect a new church building on the lot owned by the society at the corner of Genesee street and Avery place. This will cost about forty thousand dollars, it is expected. It is hoped to have the plans approved and bids received, so that work can begin by mid-July. The site, which has been owned by the society for a long time, is in a splendid location.

Utica Press.

SANTA PAULA, CAL.—The Christian Scientists have purchased a corner lot near the high school grounds upon which they are making payments, and when the title is secured clear of all encumbrances, which will be in about three months more, the matter of the erection of a church building will be considered.—*Santa Paula Chronicle.*

TROY, N. Y. —The children of the Sunday school have for several years been sending the *Journal, Sentinel,* and *Monitor* to Clinton prison. We find, in reading a letter sent to the Sunday school children by the chaplain, that it is considered a privilege to have these periodicals, especially the *Monitor,* to distribute in the prison.—*Correspondence.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 30, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 14, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 1, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

THE LECTURES.

SAN FRANCISCO, CAL.

A lecture on Christian Science was delivered by Virgil O. Strickler, before a large and interested audience, in Dreamland rink, under the auspices of Second Church of Christ, Scientist. The lecturer was introduced by Charles A. Davie, who said:—

The subject of Christian Science is engaging the attention of people over practically all of the civilized world, and there is much speculation among the uninformed as to what it is. While it is believed to be similar in some respects to other forms of religion and healing, yet it tends to upset theories which have long been accepted as true, and on which these systems have been founded. Various human opinions are expressed concerning Christian Science, but many of these are misleading and harmful, being based on ignorance rather than upon knowledge. Some suppose that Christian Science is merely a method of healing physical disease without the use of drugs, and this gives rise to the belief that anything which professes to heal the ills of the flesh through other than material means is Christian Science. This Science does heal bodily sickness, and without the use of drugs, but what it is can best be told by those who have studied "Science and Health with Key to the Scriptures" by Mrs. Eddy. One who has thus studied and practised its teachings is to speak to us this afternoon, and he is qualified and authorized to give information upon this subject, which is of vital importance to all mankind.—*Correspondence.*

ASHLAND, KY.

Attorney J. B. Wilhoit, first reader, in introducing William R. Rathvon, who lectured on Christian Science, said in part,—

We meet here at the close of the day which was set apart by the President of the United States as a day of thanksgiving, for the purpose of learning more about God, "whom to know aright is Life eternal" (Science and Health, Pref., p. vii). It is said in the book of Job: "Acquaint now thyself with him, and be at peace." For those who are unacquainted with God there is no peace; and in order to obtain that peace "which passeth all understanding" we must know God. Christian Science reveals to us the truth about God, man, and the universe, and this truth, when understood and rightly applied, reforms and saves the sinner and causes the blind to see, the lame to walk, the deaf to hear, and the dumb to talk. In every land and country there are living witnesses to the healing and saving power of this truth today. The Bible contains the recipe for all the ills of the flesh, but we did not know how to apply this truth until Christian Science was discovered. In order that everybody may know more about this healing and saving truth, The Mother Church sends lecturers all over the world to carry the glad tidings of "on earth peace, good will toward men," and to tell of a risen and glorified Christ.

Correspondence.

GREENVILLE, OHIO.

In introducing Prof. Hermann S. Hering, who lectured on Christian Science at the Henry St. Clair Memorial hall, the Hon. D. L. Gaskill, a prominent attorney of the city, said:—

Some of us who are allied with other denominations have been for years astounded at the wonderful growth of the Christian Science church, and we have come to the conclusion that there must be something strong—something very attractive in this new movement, new, as it were, compared to some of the other denominations we have had in this country for many years.—*Greenville Tribune.*

MOBILE, ALA.

William D. McCrackan, M.A., lectured on Christian Science at Battle House auditorium. He was introduced by C. D. Henderson, first reader, who said in part,—

Christian Science comes to this age to magnify *the name* and character of God, proclaiming Him to *be the only* cause operative in the universe; that He is *in deed and in* truth omnipotent, omniscient, and omnipresent. Its mission is to heal and to save by the understanding or direct realization of His almighty power, and it bears a message of love, peace, and good will to a world sorely in need of relief from its own discord and error. Christian Science is founded upon the teachings and works of Christ Jesus, who said, "He that believeth on me, the works that I do shall he do also;" and again, "By their fruits ye shall know them." In accord with this supreme test, is the progress, glory, and success of the gospel which Christian Science teaches, and its wonderful growth and spread into every land and country establishes and gives it place among the great religious movements of the world.—*Correspondence.*

TERRE HAUTE, IND.

Francis J. Fluno, M.D., who lectured on Christian Science, was introduced as follows by H. R. Ihrie:—

When I was invited to introduce the speaker of the evening, the first thought that came to me was how grateful I should be for Christian Science. Had it not been for this new-old truth, as demonstrated by the Galilean Prophet, who promised us "another Comforter," revealed to this age by Mrs. Eddy in Science and Health, this would not have been my privilege this evening. About nine years ago, I was told by at least three prominent physicians that I had an incurable disease. They told me that by proper diet and careful living possibly I could live a year, but this would be the extreme limit. You may imagine that my future looked anything but bright. It was while contemplating this verdict, as laid down by *materia medica,* that Christian Science was brought to my attention. From what I had heard about this teaching, I thought little of it, but was finally persuaded that it could at least do me no harm. I was healed of this disease in one week's treatment, and from that day to this I have been perfectly free. Christian Science *has* met every problem in my home since that time, so *you will* understand something of my reason for gratitude for its teachings.—*Correspondence.*

SEVENOAKS, ENGLAND.

There was a large and representative gathering at the Club hall, when a meeting was held in connection with the local branch of Christian Science, and a lecture was given by Bliss Knapp. Lawrence Beesley occupied the chair, and in the course of a few introductory remarks said it was a pleasurable duty for him to welcome them to the lecture on behalf of Sevenoaks. The few words he would say were not needed, except to explain the objects of this lecture on Christian Science. First of all, Christian Scientists in Sevenoaks did not invite them there to persuade them against their own wishes and well-reasoned judgment. They had no right to make others believe what they believed in, and Christian Science had no need for that. Its position in the world today was too well established, and its healing and saving work, by which thousands of people had been saved, was too well known to need any such support. It carried its recognized place as a religion in the world and did not need any missionary work in Sevenoaks. There were a lot of incorrect statements made of Christian Science; he would leave it to them whether they would accept in its entirety what they would hear, but they could belie some of those incorrect statements.—*Sevenoaks Chronicle.*

KANSAS CITY, MO.

Judge Clifford P. Smith delivered two lectures on Christian Science in Second Church of Christ, Scientist. At the first lecture the introduction by Lavern Reynolds, former president of the church, was in part as follows:—

A large majority of Christian Scientists of today were weary wanderers, athirst in the desert of material sense, before they received the words of encouragement to be obtained through Christian Science. The seeker for Truth finds great help and assurance offered him in all of Mrs. Eddy's writings. He finds that his rewards come to him in proportion to his faithfulness in applying the truth to his daily needs; he also finds great pleasure and happiness in so living the truth that he reflects it to his fellow men, and thus becomes a silent preacher of God's laws and of divine Love.

At the second lecture, J. W. Wilson in introducing the lecturer said:—

Up to the age of nearly forty-five years the Bible was practically a sealed book to me, as it seemed to contain contradictory statements which from my limited conception of God and His creation could not be reconciled. It was not until I began the study of Christian Science that faith gave way to understanding, doubt to certainty, and the conviction that Christian Science is indeed the search-light of Truth, illuminating the pages of Holy Writ, bringing to light the seemingly hidden things of God and revealing them in their simplicity, so that he who runs may read, and he who will can understand. The mission of Christian Science is to spiritualize thought, regenerate mankind, heal all manner of sickness, comfort the sorrowing, reform the sinner, and preach the gospel of "on earth peace, good will toward men."—*Correspondence.*

BELOIT, WIS.

Frank H. Leonard delivered a lecture on Christian Science before a large audience at the Wilson opera house. He was introduced by Roy L. Harvey, city editor of one of the daily newspapers, who said in part,—

In the eleventh chapter of St. John's gospel we read these words, spoken by Christ Jesus: "I am the resurrection, and the life: he that believeth in me, though he were dead, yet shall he live." This verse appeals especially to those of us here tonight who are Christian Scientists, for we know by demonstration the wondrous power of this resurrection. On all sides we have seen those who were dead in sin and those who were stretched on beds of pain made to live anew through the belief in and understanding of this divine curative, the knowledge that God's power is infinite and that His love is everywhere and all inclusive.

Correspondence.

WILMINGTON, DEL.

Willis F. Gross gave an interesting lecture on Christian Science in the Du Pont auditorium. He was introduced by G. Harold Pim, first reader of the church, who spoke in part as follows:—

Christian Science is a religion of love. Christian Scientists are learning to love all mankind. They are learning to love even those who would think themselves their enemies, to bless those that curse them, to do good to them that hate them, and to pray for them who despitefully use them and persecute them. Jesus said, "Ye shall know the truth, and the truth shall make you free." Pilate asked of our Master, "What is truth?" Mankind are still echoing Pilate's question. Christian Science is solving the problem and is presenting the truth as Jesus taught it, as a practical, logical, demonstrable Principle, which is today healing the sick and reforming the sinner as it did over nineteen centuries ago.—*Every Evening.*

PARIS, FRANCE.

At a lecture on Christian Science given under the auspices of First Church of Christ, Scientist, Paris, France, in Washington palace, Bicknell Young was introduced by Prof. Williamson de Visnée of the University of Chicago and directeur de l'École du Château de Soisy-sous-Etiolles, who said:—

Christian Science is such a potent factor in the daily life of so many people that strangers are led to ask, What is the secret of their calm and quiet strength? Nothing is more impressive than a fact. That Christian Science is a practical, demonstrable religion, is a fact. It has turned sorrow into joy, replaced tears with smiles, and silenced hatred with love. This beneficent truth is showing that man-made barriers must fall; that the real man is ever the same, be he American, German, English, or French; that God's kingdom is universal. Christian Science teaches us how to live, and proves that there is a correct solution for our every problem, no matter how appalling it may seem. Wars will cease, national misunderstandings will fade away, human strivings will disappear, until at last all men shall know that the kingdom of God is come.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Adrian, Mich.—Croswell opera house, 8 p.m., May 6.
Alameda, Cal.—Unitarian church, Grand street near Santa Clara avenue, 8 p.m., May 5.
Alhambra, Cal.—High school auditorium, 8 p.m., May 6.
Auburn, N. Y.—New Jefferson theater, 4 p.m., May 4.
Conneaut, Ohio.—City hall, 8 p.m., May 8.
Darlington, England.—Mechanics hall, 8 p.m., May 2.
Elyria, Ohio.—8 p.m., May 6.
Galt, Ontario.—Gore Mutual, corner Main and Ainslee streets, 8 p.m., May 6.
Geneva, Ohio.—Armory, 3:15 p.m., May 4.
Grand Rapids, Mich.—Powers theater, 3:30 p.m., May 4.
Hoquiam, Wash.—Hoquiam theater, 8 p.m., May 9.
Hornell, N. Y. (First Church).—Woodbury Universalist church, 8 p.m., April 25.
Kirkwood, Mo.—Church edifice, 8:15 p.m., May 2.
Lexington, Ky.—Woodland auditorium, Woodland park, 8 p.m., May 6.
Little Rock, Ark.—Majestic theater, 3 p.m., May 4.
Lorain, Ohio.—Lorain opera house, 8 p.m., May 5.
Memphis, Tenn.—Church edifice, 3 p.m., May 4; 8 p.m., May 5.
Painesville, Ohio.—High school auditorium, 8 p.m., May 5.
Peru, Ind.—Wallace theater, 8 p.m., May 8.
Pine Bluff, Ark.—Shriner temple, 6th and Main streets, 8 p.m., May 6.
Porterville, Cal.—The Moore opera house, 8 p.m., May 6.
Potsdam, N.Y.—Opera house, 8 p.m., April 28.
Rochester, N. Y.—Lyceum theater, 3 p.m., April 27.
Sacramento, Cal.—Tuesday Club house, 8 p.m., May 8.
Salida, Col.—Salida skating rink, 8 p.m., May 5.
Saline, Mich.—Opera house, 8 p.m., May 8.
Salt Lake City, Utah (First and Second Churches).—Salt Lake theater, 3 p.m., May 4.
Sandusky, Ohio.—Carnegie Library building, Columbus avenue and Adams street, 8 p.m., May 8.
San Francisco, Cal. (Third Church).—Dreamland rink, 3 p.m., May 4.
Traverse City, Mich.—City opera house, 8 p.m., May 9.
Ventura, Cal.—Lagomarsino theater, 3:30 p.m., May 4.
Waterloo, Iowa.—Waterloo theater, 8 p.m., May 4.
Watts, Cal.—Odd Fellows hall, 3 p.m., May 4.
Wilmington, Del.—Turn hall, 8th and French streets, 8 p.m., April 25.
Winnipeg, Manitoba.—Winnipeg theater, 7:30 p.m., April 27.

TESTIMONIES OF HEALING.

If by any chance there remained with me a single doubt as to the truth and availability of that statement found on page 384 of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, ending with these words, "Your Mind-remedy is safe and sure," that doubt was destroyed in an experience I had a few months ago. While on a moving train, performing my usual duties, a heavy box standing on end became dislodged, toppled over, and fell with terrific force to the floor, the upper end striking me with full force on the right ankle just above the joint, fracturing one bone and badly lacerating the flesh. So intense was the pain that the interior of the car for a brief moment became perfectly dark to me; then the above words from Science and Health presented themselves as clearly as if some one had audibly repeated them. I rose up and walked about, at first with difficulty, but denying determinedly the evidence of evil and knowing the allness and the omnipresence of God.

Now that the wound is entirely healed I can look back and truthfully say that after the first two or three minutes not a single sensation of pain was ever afterward experienced. Within an hour I arrived at my destination, where I boarded a street-car and went to my hotel as usual and without difficulty. Upon removing my shoe it was fully apparent how severe the shock had been, and before noon the ankle was swollen to about three times its normal size. By night, however, I was able to wear my shoe, and went to a friend's house for dinner, walking to and from the cars without difficulty and without pain. On returning to my room, I opened the Concordance to Science and Health, and found a veritable flood of references which, when read in the text-book, lifted thought to such harmony and confidence that all fear was at once banished, and I knew from that moment that the healing was complete.

For several days the swelling was very apparent, and the flesh to the knee was discolored, but only for a short time, and throughout the experience I was not for a moment prevented from performing my usual duties. A strange experience seemed to accompany the healing of the cut across the ankle, for the flesh healed over very quickly, except at one end, where it remained open, apparently to allow a discharge from beneath, next to where the bone was injured. The discharge seemed necessary, and was perfectly normal and painless; but in due time this spot also healed over, and that almost within a night.

This experience has taught me that if the flesh be exposed to bruises and cuts, and even to fire, it is possible today, as we know it was proven possible in olden times, to have a wholesome uplifting faith and understanding of God sufficient to annul evil effects, and no suffering need follow such experiences. I know that in a complete demonstration of the teachings of Christian Science there need have been no discoloring of the flesh, also that in a complete knowledge of this teaching there could have been no accident; still, at this hour I am thankful to know that the usual effects of such experiences can be destroyed. I believe that it was the knowledge that such things would for a time be experienced that prompted the utterance of these memorable words by the Master, "What I say unto you I say unto all, Watch," and also our Leader's prominent use of these words.—J. T. ACTON, Kansas City, Mo.

I first became interested in Christian Science when, on going home for a visit, I found my father reading the text-book, "Science and Health with Key to the Scriptures." He eventually became a member of the Christian Science church. As he had always been a good man, and had held nearly every office in the church to which he belonged, I therefore felt sure there must be something in Christian Science to lead him to take such a step. I started to read the text-book, and was much impressed by it. At the time I was a member of a church, but I often felt that one's spiritual life was much neglected and I was very dissatisfied. The love expressed in the Christian Science church appealed to me very much, but I had scarcely any interest in the physical healing.

In 1908 I had a great mental trouble, and what helped me most then was the advice of a Christian Scientist who told me not to make a reality of the error. In October of that year I was taken very ill with acute lung trouble, and other complications. My parents were wired for, my condition being very critical, and my father immediately began to treat me in Christian Science. This had been going on ten days, and I was delirious most of the time. It never occurred to me to ask for this help until one night, when I completely regained consciousness, I had a strong desire to see some one to whom I had once spoken for a few minutes at one of the services at Rochdale. When I look back now, I can see God's guiding hand. The obstacles were many, but the absolute assurance of the power of Spirit reflected by this Scientist will ever remain fresh in my consciousness. Error was close on the heel of Truth, for when the lady came I would have given anything had I not sent for her; but before many hours we were all rejoicing, as I seemed to improve suddenly, and asked for food, which I had not had before.

The following morning the doctor came, and he was amazed to see me so well and my high temperature reduced to normal. The practitioner returned home and my father went back to his occupation; then I began to be irritable and so grew worse. A week later the doctor brought a surgeon to perform an operation, and things were found so bad, there being abscesses on the lungs, that he said I would have to be taken to a nursing home as soon as I was able to be moved, and have another operation, and that a part of the rib would have to be removed. For three weeks I was in the nursing home, but got no better. I had such a craving to be brought home that I left, much against the surgeon's wishes. He said that I went entirely on my own responsibility, but I immediately realized that I was under a greater power. After I reached home things went from bad to worse, though everything that love and money could do was done.

About ten days after, my mother stood over my bed, and I said to her that I was dying. A few minutes later the doctor came and verified what I had said. He told my mother that I had an abscess in the heart cavity so large that nothing could save me. Mother said, "But her father is a Christian Scientist, and he says she will not die." The doctor laughed and said, "Well, if you wait a couple of hours, you will see who is right." The practitioner came just as the doctor went, and was told the doctor's verdict, but she denied it, saying that God is all-power. A short time after, my side opened and a great discharge poured out. The doctor was telephoned to, and the first word he said to my mother was: "Your husband is right; there is a power here above the human."

The doctors and nurses then said I was in a decline, and I certainly had every symptom. I was told I had not a perfect cell in my body, and it was impossible for any one with gangrene to get better; yet in a couple of months' time I was pronounced perfectly whole. The specialist who performed the two operations said that unless he saw the marks on my body he would not believe there had been an abscess in the heart cavity. An interview was arranged, and when he examined me he said, "Ah, well. 'All's well that ends well.'" And I said, "Yes, but I should not have been alive now were it not for the help of Christian Science;" and from what the surgeon said I learned that the disease had not followed the usual course, and I then realized with St. Paul that "the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death."

Digitized by Google

I can never express how grateful I am for the understanding which Christian Science gives and for the undaunted faith of its adherents. I know that after God I owe my life to a godly father and a faithful practitioner, for when the storm was raging the strongest they only held on the firmer. I am also thankful for many other smaller demonstrations, though I have much yet that needs to be overcome; but I know that this depends on myself, since "God is no respecter of persons." My greatest desire is to know more of the one true God, and Christ Jesus whom he has sent.

FLORENCE MARY WILCOX, Rhos-on-Sea, N. Wales, England.

I turned to Christian Science five years ago, and since that time it has met my every need. For several years I had been a semiinvalid, and had been told that I might as well make up my mind to be patient as I would probably always be in that condition, which was certainly very discouraging. I have, however, been freed from the extremely nervous condition which held me in bondage for so long. All my life I had been subject to throat trouble, and the removal of the tonsils, besides several minor operations, was of no avail. When, shortly after taking up the study of Christian Science, I had an attack of this ailment, I went to a practitioner, and as a result of her faithful work I was completely healed in five days, and entirely free from the usual month of convalescence. I had worn glasses for nearly five years for conditions which specialists said I had had from birth, but after my healing in Christian Science I was able to lay them aside in a very short time.

About four years ago our little daughter, now twelve years of age, was healed of hernia, from which she had suffered almost from birth, and she was also healed of a stomach disorder which appeared periodically. These are only a few of the physical conditions of which we have been freed; indeed, it is only a very small part of what Christian Science has done for us. I am truly thankful that Christian Science came to me when it did.

MRS. CORINE B. KING, Auburn, N. Y.

[Translated from the German.]

My brother had given his children into my charge for several weeks, and one day I heard loud crying, when my daughter brought my little niece to me, saying that she had been run over while skating. The little one seemed to be badly hurt, for one of the wheels had gone over the left arm, and it was very much swollen and deeply cut near the elbow, apart from other injuries. On the temple was a deep wound, and evidently the wheel just stopped there, as a lot of hair was torn away. I treated the child at once, and she soon calmed down and fell asleep; but during the night she began to vomit severely, and my first thoughts were of an injury to the brain, though the next were to deny this testimony of material sense and to declare God's allness. Before I could get to the child the vomiting ceased, but she still complained. A few words of truth quieted her fears, and under treatment she fell asleep again, and when she awoke in the morning the fever had gone down, she could move her fingers again, and at noon she could leave the bed.

She made steady progress to recovery, and I had never seen so wonderful a healing of wounds. They gradually closed, and in a fortnight all the external ones had healed and the swelling was gone. After another week I took the child back to her parents, who up to that time knew nothing of the accident. The little girl looked so fresh and rosy that her mother remarked on it. The arm had been healed, only she could not quite straighten it, although otherwise she could move it in all directions. My sister-in-law is interested in Christian Science, but my brother is not, and after he had examined the arm, he expressed his opinion that the wheel had cut one of the extensor muscles, and that in healing it had contracted. This, he said, might also have happened under medical treatment, yet he thought that I had undertaken a great responsibility to treat this case. To my question whether he would not now rather have medical treatment for the child, he answered that there seemed to be no need for it, and he would not object to my giving the child absent treatment. After two and a half weeks I received word that one day in school, during gymnastic exercises, the arm of the child had perfectly straightened, and that they were now all very happy and thankful.

I cannot adequately express my thanks to God in words for this wonderful healing, and for all that I myself learned by this experience. I daily understand better how much gratitude is due Mrs. Eddy for her loving obedience to God's will when He called her to become the revealer of the truth to our age.

FRAU HELENE SCHMIDT, Berlin, Germany.

I do not wish to withhold my testimony regarding the wonderful recovery of my child's arm, after a very serious accident which might have crippled her for life. Though myself not a believer in Christian Science, as my critical thoughts cannot accept it, I yet will not deny that I did not expect my child ever to have a perfectly straight arm again; but my thoughts were proved wrong. My child's arm is again perfectly straight, although I had reasons to believe that the extensor muscle was cut by the wheel, and in healing it had become shortened. Whatever the agency may be that brought about this cure, I am deeply grateful for it, and as my wife is now undergoing Science treatment I can only hope that she who has been ailing for many years may be equally successful in finding help.

GEORGE BARELLA, Frankfurt a. M., Germany.

I feel impelled to make an acknowledgment of the many blessings I have received from the study of Christian Science. The truth was brought to me a little over six years ago, and I began the study of it, not for the physical healing, but because it was presented to me as a demonstrable Science, through the study of which I could learn what God is and what He does for man, and that I could prove it today, without waiting until after death to find whether it was true or not. In these years I have had many proofs, through the healing of sickness and sin, that God is ever present, and that the right understanding of Him is made manifest in perfect harmony. I have been healed in one treatment of acute illness, the pain and fever all leaving at once, with no return of any of the symptoms; also a severe attack of bowel trouble yielded in one treatment, leaving me perfectly free.

I have been able, through my own understanding of this Science, to overcome all sense of seasickness, from which I had always suffered when on the ocean. My little girl has been helped in many ways, one of which was the healing of whooping-cough. She had the usual symptoms, one at a time, for a little over one week, when she was entirely free. Later she had a similar attack, but it was soon overcome by declaring and realizing the truth.

These are a few of the proofs which I have had of the truth of the teachings of Christian Science. The Bible, which was to me a closed book, is now my daily study, and I am very grateful for the better understanding of it which makes it possible for us to "take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). Our beloved Leader has also said that "action expresses more gratitude than speech" (p. 3), so I am daily striving to express my gratitude to God, and my thankfulness to Mrs. Eddy and to all the dear ones who have helped me, by living this truth as nearly as I understand it.—MRS. ESMA L. HUST, San Diego, Cal.

Digitized by Google

I wish to let others know what Christian Science has done for me. I was taken sick shortly after Christmas, 1910, and had medical attendance, but it did not help me; indeed, I kept on failing very fast for about four weeks, and then we called in a professor to consult with our doctor, and he made three visits, but could do nothing for me. At last they said there was just one chance for my life, and that was to go to a hospital, for through all my illness I was in terrible pain, the only relief coming from hypodermic injections. At last they took me to the hospital; but I did not improve. On being questioned as to what my ailment was, the doctor said he did not know, that no man living could tell. I was given up by three doctors; then my husband thought of Christian Science, and he called in a practitioner. She came to see me, and in a few minutes my pains stopped. I gained from that time on, for it was an instantaneous healing, and I am now doing all my housework. We have had another demonstration in Science which was very remarkable. My son had been troubled nine years with pains in the bowels and always had to wear a bandage; but after my healing we spoke to the practitioner about him, and with six treatments he was entirely well, and has been working ever since.

MRS. L. F. WALDECK, Cleveland, Ohio.

[Translated from the German.]

I have enjoyed the rich blessings of Christian Science for the past four years, and gratefully acknowledge the fact that I could not now live without it. Before I came to Christian Science I was almost constantly under medical care, yet no physician was able to help me, and my condition rather grew worse. For many years I suffered with severe stomach trouble, headaches, a heart difficulty, and other ills. Besides these I was very much depressed whenever sorrow or worry encompassed my thought.

My distress had reached its height when I was divinely led to seek and find Christian Science. I attended the Sunday services and the Wednesday evening meetings regularly, and as a result of the teaching and of treatment from a kind practitioner, the truth gradually became clearer to me, so that I patiently put my trust in God. I have been freed of all my troubles, and my husband has been healed of an eye trouble of more than twelve years' standing. My child was healed of measles with two treatments, and we are happy and contented people who have found in Christian Science a religion which meets all our hearts' desire.

I would like to say that, as I am not acquainted with the English language, I gained my understanding of Science through the German Christian Science literature alone, especially *Der Herold der Christian Science*. For all our blessings I give thanks to God, and am deeply grateful to our dear Leader, Mrs. Eddy, whose privilege it has been to bring to suffering humanity the knowledge of the healing power of divine Truth.

ELFRIEDE BOHRISCH, Berlin-Wilmersdorf, Germany.

In April, 1911, I called at a house where there was a case of serious throat trouble, and when I found this out I had a great sense of fear. In a short time my youngest daughter complained of her throat, so I went to a Christian Science practitioner and told her the circumstances and asked for help. On Thursday the child went to bed with all the symptoms of the disease, and on Friday morning she seemed even worse. I telephoned the practitioner, and she came to the house and treated her. When leaving, I told her I would let her know how the child was getting along later in the day, and in doing so I mentioned the characteristic odor. That evening it had entirely disappeared, and the throat was somewhat better. Saturday she sat up part of the day, on Sunday she got up and dressed, and by Monday she was entirely well. For this and other benefits I have received through Christian Science I am very grateful.

MRS. ALICE M. THOMPSON, Cambridge, Mass.

Christian Science was brought to my notice by a friend, and my wife and I took up the study immediately. We purchased our first copy of "Science and Health with Key to the Scriptures" at Christmas, 1910, at which time I was a slave to tobacco. I had also worn a double truss since I was eight years of age (am now thirty-nine), and I was always subject to severe headaches. In April, 1911, I engaged a Christian Science practitioner, and I am happy to state that with her kind help all these ailments have been removed through the knowledge of this wonderful truth. My wife also has received help by the truth, which has overcome headache and female troubles. We are now the happy possessors of all of Mrs. Eddy's works.

L. F. PRIDEMORE, Seattle, Wash.

I should like to give my testimony as a token of gratitude for what Christian Science has done for us. One little daughter, five years old, has been healed of self-will and ill temper. This mental condition made our home very unhappy, but it has been changed to one of obedience and love. She received three treatments in Christian Science, and now, when a disturbing thought appears, even in its slightest form, she meets it for herself by declaring the truth.

We have another little girl seven years old. These children have attended the Christian Science Sunday school for two and a half years, and the understanding they have received of this truth is indeed wonderful. My husband also has been healed of stomach trouble, and I was instantaneously healed of a severe headache through our younger child seeing that it was not of God and that error has no power. Another ailment has been overcome for this child recently, and she remarked how lovely it is that we know about Christian Science, and that if every one knew our secret they would not need any medicine. Our oldest child was able to do two terms of school work in one, recently, by realizing that Truth enables us to do all that God gives us to do. I can ask nothing more than to have our children grow in the knowledge of the allness of God and the nothingness of error. I am indeed grateful to God, and to our Leader, who has been able to guide us into an understanding of this truth.

MRS. KATHERINE M. HUTTON, Highland Park, Mich.

No words can tell how terribly I suffered for more than twenty years before I learned of Christian Science. So-called organic diseases brought on other ills, till every organ in my body was said to be so badly affected that I was in agony day and night, and every movement caused intense pain. I had been confined to my bed nearly four months, when an old acquaintance called one day and asked me why I did not try Christian Science. I replied that I did not know anything about it. She then told me some wonderful things which she had known it to accomplish, and asked if I was willing to try it. I answered that I had suffered so much, and so long, that I was willing to try anything to get relief, for I had reached the limit of human endurance. She brought a practitioner to see me, and I began to take treatment, and to study "Science and Health with Key to the Scriptures" by Mrs. Eddy. In three days I was up, helping with the work, and in two months could do all my work, including housecleaning, something it had been impossible for me to do for a good many years. I was treated just two months, and some of my neighbors, knowing what a bad condition I had been in for so long, and seeing that I can work so hard now, all day and every day, say that Christian Science has certainly wrought a miracle for me.—MRS. J. H. GRAHAM, Petaluma, Cal.

I wish to express my gratitude for what Christian Science has done for me and my husband. I had severe hemorrhages, and it seemed that I would pass out under *materia medica*, but at this point Christian Science healed me. Besides this, my husband was almost blind, his condition

Digitized by Google

being supposedly due to steel dust from filing of saws, which got into his eyes. He tried all material means, but they failed, and finally he was unable to see the house when we drove up to our home. He then decided to take Christian Science treatment; and while the healing was not immediately successful, after a few months he was healed, and became interested sufficiently to know that he had to understand the truth in order to receive the greatest help. I am very grateful for the understanding received from the study of "Science and Health with Key to the Scriptures," and later from class instruction, as it has enabled me to help myself and others. My earnest desire is to be obedient to the teachings and take the steps as our Leader has directed us, and to follow the message of Christ as given in the Bible.

MRS. LOUISE F. WOODY, Denver, Col.

It is with great pleasure, as well as thankfulness to God for His goodness and mercy in sparing my life, that I can say I am a well man today. Some four years ago I was afflicted with appendicitis, and the pain became so severe that I consulted with physicians, who all told me that the only help I could get was through an operation. I dreaded this very much and my fear was terrible, but I thought it would be necessary to take the only means of help, as I believed at the time. I boarded a train for one of the best hospitals in the country, and on the way met a friend, a business man, who inquired where I was going. I told him. He then recommended Christian Science treatment and left with me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I read this book nearly all the way, and I noticed beneficial results, but upon my arrival, when put under the doctor's care, the old enemy appeared again in full force, so I went through the operation, and in a short time returned home.

I seemed to get along fairly well until about two years ago, and then a general complication of diseases set in, and I was again advised by physicians to go through another operation. At this time I got some Christian Science literature and began to read it, and this, together with what I had read previously, caused me to decide that I would take up Christian Science as the best means of help, my wife urging me to do so. Then I bought a copy of Science and Health of my own, as I was in great pain, and could see that something must be done; and thank God, I got help at once from reading the words of our dear Leader, Mrs. Eddy. This was my only means of help, and in a very short space of time I was healed. Like the man that Jesus healed, I can now say, "Whereas I was blind, now I see." Later, some of the symptoms appeared again, but they were overcome with a few treatments by a Christian Science practitioner. I am convinced more and more that God is the only Life, substance, and intelligence of man (see Science and Health, p. 330), and my prayer is that this testimony may help some poor sufferer in need, for it is a pleasure to tell the good news to others. My wife and I are endeavoring to the best of our ability to prove this truth by demonstration.—JOHN S. ELROD, Elrod, S. Dak.

I am indeed grateful for what Christian Science has done for me in the last year. I was being treated by a doctor for varicose ulcers and what was said to be a poisoned system, until a very kind friend told me of Christian Science. I decided to give it a trial, and I am glad and thankful to say that I now feel perfectly well.

MRS. R. W. LOCKE, San Francisco, Cal.

Somewhat of goodness, something true
From sun and spirit shining through
All faiths, all worlds, as through the dark
Of ocean shines the lighthouse spark,
Attests the presence everywhere
Of love and providential care.

WHITTIER.

FROM OUR EXCHANGES.

[The Rev. Reynold E. Blight as reported in *Los Angeles* (Cal.) *Journal.*]

Christian Science is the most remarkable and significant religious movement the world has known since the birth of Christianity. Within twenty years it has compassed the globe, established thousands of local organizations, accumulated property to the value of millions of dollars, created a world-wide constituency, profoundly influenced the thought of the age, healed tens of thousands of sick, and astounded the world by its success. This success is all the more amazing when we remember that every other church is complaining of decreasing membership and diminishing income, and the leaders of all denominations are bewailing the decline of religion.

Like every religious movement of history, Christian Science had to endure its baptism of fire, and for decades it suffered the bitterest persecution and the severest attacks. Its enemies, religious, social, and medical, fought it with malignant hatred, and used every weapon of misrepresentation, abuse, and ridicule in their efforts to destroy it; but it quickly triumphed over its foes, and today is perhaps the most popular of all churches. The reasons for this phenomenal success are not far to seek. Christian Science comes to a densely materialistic age with a message of splendid idealism and spirituality. Denying the reality of matter, it affirms the reality of Mind, of Spirit, of God. It calls upon the nations, drunk with material prosperity and crazed in the delirium of sensual pleasure, to forsake their follies and learn to know God. A world mesmerized by sense hears the command to awake from its hypnotism and come to self-realization. The multitudes enslaved to sin, error, and sickness, hear the voice of the deliverer bidding them leave the fleshpots of Egypt and take their pilgrimage to a promised land of virtue, freedom, truth, and radiant health.

Christian Science is the religion of spirituality, optimism, good health, and success, because it rests upon the fundamental verity that God is All and God is Love. Physical health, moral victory, and spiritual illumination follow inevitably from the realization of this primary truth. To bring men to the consciousness of their spiritual sonship, of the divine perfection, is the work of Christian Science, and that is why the gates of hell shall not prevail against it.

[*The Universalist Leader.*]

The idea of God is changing. We understand why He is called King, Judge, and Lawgiver in the Bible. These titles were borrowed from the oriental political systems. They were only symbols. We see now a deeper stratum of thought in the Bible itself. Scholarship has discovered that always in its noblest spiritual experiences even ancient Israel escaped from the governmental to the spiritual idea of who and what God is. It is God's fatherhood that wells up in the soul of prophecy and poetry and philosophy, all through the Book. And wherever this idea emerges, that ancient people saw that the sacrifices of God are a broken and contrite spirit.

As religious experience becomes more spiritual and less passionate, it widens out toward a nobler and more gracious idea of God. For this new experience of the eternal we have no better term than fatherhood. In this idea we find heights and depths of communion which the older thought could not give. The sense of wisdom and beneficence increases. There are prophetic hints of filial relationships, anticipations of a great, insistent, patient demand for our affection. In all this there is no room for substitution. The call is for us. The burden is on us. We must ourselves become obedient. We must learn to love Him who loves us. He cannot permit, and we cannot permit, Jesus to usurp our place or our responsibility. Whatsoever sorrow or suf-

Digitized by Google

fering or retribution is required by the insistent holiness of God, we must accept as best for us. If through the life and love and devotion and martyrdom of Jesus we come to understand the price which sin demands and the sacrifice which love requires, then by these revelations of the heart of God and the obedience of Jesus we must measure our own obligations to our Father and to our fellow men. We must make our own great atonement for the sins of men, even as our Master did. We must be reconciled to God.

[*The Advance.*]

Life is a vapor. The apostle James says so, and he is good authority. A vapor is an evanescent thing; it appeareth for a little time and then vanisheth away. Some people suppose that because life is a transitory thing, a vapor, it is of little worth. That is not a necessary inference. Life is a vapor; but what is a vapor? It is all that it ever has been. It was a pearly raindrop that fell down from the skies, and as it fell it brightened and made beautiful the flower in whose golden heart it lay; and then, dropping to the earth, watered the root that there might be other flowers; and then, by subterranean channels breaking forth into a spring, it flowed singing to the sea, turning the wheels of industry as it went, and laughing in the sunlight as it bore great ships upon its blue bosom. The sun caught it up and it vanished into heaven, smiling as it rose. All this the vapor was and is; all this it did and does. It appeareth for a little while and then vanisheth away. But when it vanishes, it rises fragrant with the odor of the flowers it has refreshed, dignified by the burdens it has borne, radiant with the honor of thirst it has quenched, and jubilant in the memories of service it has rendered. It vanishes away, but as it vanishes, the sun catches it up into heaven, pours through it the sevenfold glory of its prismatic splendor, and imparts to it a radiance fit for the diadem of God. It vanishes away, but as it vanishes, it smiles in the glow of promise of joyful service still to be, and its rainbow gladdens the eyes of men and reminds them of the covenant of God.

[The Rev. Canon Bannister in *Christian Commonwealth.*]

To those who can discern the signs of the times, it seems as if all things were working together for the speedy coming of the kingdom; for it is not true, what some will tell you, that all things are going wrong. We are in the midst of a new renaissance, in which physical science has played the part which four hundred years ago was played by the rediscovery of Greek learning: and the immorality, the worldliness, the unbelief, the unrest, which we deplore, are simply, as it would seem, the invariable and apparently inevitable accompaniments of a great intellectual awakening. It was so in the Italy of the fifteenth century; it is so with us today. These ugly features are the proof that the new light is spreading, since it is dazzling many weak eyes, until they lose sight alike of faith and of morality. But our renaissance, as did that other, is preparing the way for a great new religious movement, of which the hope of denominational peace is but a part; and in this new reformation, it may be, we shall need men like Melanchthon and Erasmus, rather than men like Luther.

[*The Watchman.*]

Our faith in God has its peculiar difficulties on account of the ideas and spirit of the age in which we live. Many of the old conceptions of the world that were favorable to religious faith have been taken away by the sciences and criticism; but there is a pathway of faith in God, and one essential element in knowing it and following it is the spirit of obedience. This leads into experience of fellowship with God, and with increasing faith comes more complete obedience, which in its turn increases faith in God, and thus like Abraham of old we are led on into stronger faith, more complete obedience, and deeper fellowship.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The Society has recently published a set of books, cards, and collection envelopes for the use of the Christian Science Sunday Schools, and they may be obtained at the following prices:—

Class Books—4¼ x 6¾ inches, manila covered, with spaces for one year's record of attendance: 12 copies, 75 cents; 100 copies, $6.50.

Registration Cards—3 x 5 inches, with spaces for name, address, and necessary information, one to be used for each pupil: 12 cards, 10 cents; 100 cards, 25 cents.

Collection Envelopes—4 x 6¼ inches, cloth lined, printed, front, with space for class number and name of teacher: 12 envelopes, 50 cents; 100 envelopes, $4.00.

No orders are filled for less than 12 of one kind, and the dozen rate applies on any quantity from 12 to 100.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The annual per capita tax, of not less than one dollar, is due June 1, the beginning of the fiscal year of The Mother Church, and is reckoned from that date, whether the admission was in June or November. All remittances in excess of the amount due in accordance with the by-law, will be credited for the current year, unless otherwise specified by the sender.

Please do not send paper money through the mail, except by registered letter; a postal money order, made payable at the Boston post-office, an express order, or a bank draft, is preferable.

To facilitate the work of the Treasurer, please advise him promptly of any change of name or address. No charge is made for this service.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: **Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.**

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

ITEMS OF INTEREST.

National.

Secretary of State Bryan explained to the Senate committee on foreign relations last week his plan for avoiding war between nations by giving their passions six months or a year in which to subside before proceeding to hostilities. Mr. Bryan proposes that when a situation arises where two or more nations, having exhausted all the expedients of diplomacy, are virtually on the edge of war, an inquiry into the merits of the case may be made by an international commission of inquiry which shall study and report upon the case, the parties involved pledging themselves meantime not to go to war with each other within a period of six months or a year, as may be determined in the treaties the secretary of state proposes to negotiate. Two new features are introduced, one providing that the international committee of inquiry may undertake investigation upon its own initiative, and the other that, pending the report of the commission, or within the period specified by treaty, neither party involved shall increase its military or naval program. The machinery to carry out the Bryan plan of investigation is already in existence, in the form of the international commission of inquiry appointed under authority of the Hague convention, hence all Secretary Bryan now has to do is to go ahead and make his treaties. He was informed by the committee that they cordially approved the principle embodied in his plan, and that he would have their hearty good will in attempting to negotiate the new treaties. He also laid his plan before the diplomatic corps, and almost every ambassador and minister in Washington responded to his invitation to hear his explanation.

The completed Democratic tariff revision bill, presented to the House last week by the Democrats of the ways and means committee, contemplates a radical readjustment of the entire fiscal policy of the nation. They propose to make an income tax the means of accurately adjusting the funds to be raised by taxation to meet the necessities of government expenditure. The Democrats, outlining their policy in the preparation of the bill, announced an absolute disregard for the cost-of-production theory as regulatory of tariff rates, and declared that in the pending bill they had attempted:—

"To eliminate protection of profits and to cut off duties which enable industrial managers to exact a bonus for which no equivalent is rendered.

"To introduce in every line of industry a competitive tariff basis providing for a substantial amount of importation, to the end that no concern shall be able to feel that it has a monopoly of the home market gained other than through the fact that it is able to furnish better goods at lower prices than others."

The Pennsylvania Senate has concurred in the House amendments to the joint resolution proposing an amendment to the constitution permitting the state to borrow fifty million dollars for good roads. The proposition will be voted on by the people at the November election. The resolution to amend the constitution of Pennsylvania to give the right of suffrage to women has passed the Senate by a vote of 26 to 22. The bill prohibiting the sale of aigrettes and the shipment of such feathers into or out of the state after July 1, 1914, has been approved by the Governor.

Consultation with the President of the United States and the six governors in New England to determine the scope of the work possible and desirable to accomplish, was decided upon at the first session of the railroad conference of New England in the State House at Boston last week. With the exception of New Hampshire, all of the states were represented in the first session. The delegates met to discuss the recommendation of Governor Foss of Massachusetts for uniform railroad legislation in New England.

Treaties between the United States and more than a dozen foreign governments will be necessary if a plan for international protection of migratory birds, which is embodied in a Senate resolution, is to be fully carried out. This resolution was favorably reported by the Senate committee on foreign relations. It provides that the President be requested to propose to the governments of other countries the negotiation of a convention for the mutual protection and preservation of birds.

Proposing to classify newspapers as public utilities by an amendment to the state constitution, to be submitted to the voters at the next general election in November, 1914, petitions demanding that the secretary of state of Colorado place the same on the ballot are being widely circulated.

International.

The German Reichstag has passed the resolution introduced by the Clerical party providing for the appointment of a commission composed of members of the Reichstag and experts to investigate all German armament contracts. This is the outcome of disclosures made by the Socialist leader, Dr. Carl Liebknecht, with regard to the relations of the Krupp firm of arms and ammunition manufacturers with officials of the German war office for the purpose of gaining information about armament contracts.

The first Chinese Republican Parliament was opened on the 8th ult., the Senate and House of Representatives being jointly inaugurated in the lower chamber, while a salute of one hundred and one guns was fired near the city wall. Enormous crowds were present. Many representatives and senators wore European dress. A message from Yuan Shih Kai was read, congratulating Parliament on the inauguration, and the day was observed as a general holiday throughout China.

The British budget showed an expenditure of upwards of $978,200,000, which was $57,500,000 more than the revenue of the fiscal year just closed.

The Montenegrin troops last week forced their way into the fortress of Scutari, which for over six months had offered stubborn resistance.

The Greeks and the Servians last week concluded an agreement with Turkey similar to that made between Bulgaria and Turkey, by the terms of which hostilities were to be suspended for ten days.

Industrial and Commercial.

With claims aggregating $16,604,721.63 filed against the owners of the Titanic for loss of life and property and for personal injuries, the petition of the Oceanic Steam Navigation Company, owners of the steamship, that the liability for damages be limited to $91,805.54, was denied by Judge Holt in the United States District Court. In dismissing the petition Judge Holt held that the American Admiralty Court was without jurisdiction in the proceeding.

"Laying out of view the authorities in the case," he said, "it seems to me that three great fundamental principles of law relied on are decisive. The rule that the law of no nation has any extraterritorial effect is universal. The rule that a ship on the high seas is a part of the country to which she belongs is universal. The rule that the liability for a tort is governed by the *lex loci delicti* is universal." The fact, Judge Holt added, that the sinking of the Titanic on April 14, 1912, resulted from collision with an iceberg does not affect the application of the British law in determining the liability of her owners. Therefore, he held, they are not entitled to any exemptions under the United States statute limiting liability. Under the present British law, he said, the owners of a ship, British or foreign, are liable for damages, in respect to loss of life or personal injury, up to fifteen pounds for each ton of the ship's tonnage, and in respect to loss of property they are liable up to eight pounds for each ton.

Missouri purposes to conserve the vast undeveloped water power within its borders for the use and the profit of the people generally. A legislative commission is now making an investigation of the power possibilities of the streams of the state, and it will recommend in its report that the state maintain undisputed rights to every power development in the state, while at the same time encouraging their development by private interests. The commission will recommend legislation that will permit power companies to earn a fair return on their investment, the surplus revenue going to the state. The state will retain rights of regulation of charges and service and flow of water. According to the committee, the value of the undeveloped water power in Missouri is second to the value of the farm land of the state, and in its development lies the possibility of revenue enough to run a large part of the state government.

The coal operators of Kanawha county, W. Va., have accepted Governor Hatfield's proposal for a settlement of the miners' strike. The Governor's recommendations provide for a nine-hour day, a semimonthly pay, a check weighman where the majority of the miners so desire, and the matter of discrimination to be taken up in conference, while the miners are allowed to purchase supplies wherever they please. The developments seem to mark the end of the strike, which has lasted nearly a year. Three times the militia has been called to take charge of Kanawha county, and the strike has cost the state over five hundred thousand dollars, while the loss to operators and miners cannot be accurately estimated.

A committee of seven, six of whom are connected with private banking houses, has been formed with the view of enlisting financial support to bring about a merger of nine trust companies of New York city. These companies have an aggregate capital of eight million dollars and total deposits of approximately eighty million dollars.

The wheat crop of British India this year gives every promise of being exceptionally good. The amount of land under cultivation is more by 603,000 acres than last year, being an increase of 2½ per cent. The total acreage now under this crop is 24,634,000.

The world's production of beet sugar in 1910-11, of 8,982,220 long tons, exceeded that of cane sugar. Europe produced 90 per cent of the total.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" · JESUS

CHARITY.

FREDERICK DIXON.

THERE is perhaps no passage in the Bible which is better known than that famous verse in the first letter to the church in Corinth, "And now abideth faith, hope, charity, these three; but the greatest of these is charity." Whether charity is the best translation of the original, or whether the revisers of 1885 were well advised in adopting the word love, is no mere matter of scholarship. The variation between the two contains a deep metaphysical lesson which the superficial reader is apt to pass over. One of the greatest Greek scholars of our own times has pointed out that the Greek word has a peculiar religious ethical meaning. It was a perception of this which induced the revisers of 1611 to reject Tyndale's rendering of love and return to Wyclif's adoption of the word charity.

The fact is that the Jacobean translators perceived something that was quite clear to the greatest thinker of their age, perhaps of any age, that "because of the indifferencie and aequiuocation of the word Loue with impure Love," it had failed to express the meaning of the apostle. Unfortunately, the revisers could not impart to those without ears to hear, their own spiritual perception of what the change meant. Just as the true sense of love had been lost in the physical sense, so the true sense of charity was, in turn, lost in the material act of almsgiving, so impossible is it for the human mind to regard things metaphysically. Faced with this narrowed vision of the Christ, the revisers of 1885 returned to the rendering of Tyndale, of Cranmer, and of Geneva. It is only necessary to quote perhaps the most perfect extant translation of the passage to show what the materialization of the apostle's wonderful words has lost to humanity:—

> I may speak with the tongues of men and of angels, but if love I have not, they are the blaring of a trumpet or the crashing of a cymbal. Even if I read the mind of God, and am at home in all the mysteries and in every field of knowledge; even if I have faith entire that can shift mountains from their places, but have not love, I am nothing. Even if I give in alms all I possess; even if I yield my body to be burned, but have not love, I am none the better. Love is long-suffering, is kindly given. There is no jealousy in love, no parade, no conceit, no bad manners, no self-seeking, no flying into a temper, no imputing of ill motives, no relish for anything wrong, but instead a responsive delight in everything honest. Love is always content, always confiding, always sanguine, always patient. There can never be a time when love is not. Spiritual sagacity, its works shall one day be finished; tongues, they shall cease; knowledge, its task shall be achieved. Because we are imperfect, we seek knowledge; because we are imperfect, we try to read the mind of God; but the perfect state once reached, that which is imperfect can serve no purpose. When I was a child, I spoke as a child, I thought as a child, I argued as a child; now that I am a man, I am done with childhood's limitations. The things we see now are reflections from a mirror that we have to make out as we best can, but then we shall see realities face to face. Now I know imperfectly; then I shall know all, even as I have been known. But meanwhile faith, and hope, and love last on, these three, but the best of them is love.

Substitute the word charity for love in this passage, and it will be seen to what a level of degradation the passage has been brought by a lack of metaphysical analysis.

The fact, indeed, which emerges from such an analysis, is the interdependence of the words love and charity. The larger sense of the word charity begins to be apparent, and it becomes possible to understand what the medieval writers had in view when they adopted the word "charitie." From the twelfth century, charity was commonly a synonym for either God's love for man or man's love for God. Its employment in this sense begins in 1175, and extends down certainly to 1846. Its use in the sense of almsgiving is purely subsidiary. The writer of the first epistle of John, using love as a synonym for God, declares, "God is love," or, as Wyclif translates it, "God is charitie." The word love, used there as an attribute of God, means then, love of Love. Now it is quite impossible to love scientifically without understanding what you are loving; anything else is a mere unreasoning animal attraction, which is about as far removed from what the Greek of the New Testament means by love as anything could be. True love, then, in its "religious-ethical" sense, means without question, an understanding of divine Principle. Substitute the word charity for love, and you have a view of charity about as far removed from promiscuous almsgiving as is imaginable. The new tongue of the Bible begins to unfold to you. You stand, as it were, on the summit of Pisgah, and get some view of the infinity of Christian Science.

Ruskin once commended the beggars with their tin plates, at the doors of the continental cathedrals, to the English tourists. Be sure, he said, that you deserve to give, whether or not they deserve to receive. A more frankly immoral suggestion from a great moralist, it would be difficult to imagine. It constitutes the unworthiness of the donor an obligation for an unworthy gift. As a matter of fact, indiscriminate charity is the very antithesis of love. If the parable of Dives and Lazarus means one thing more than another, it is what Mrs. Eddy means when she writes, on page 265 of "Science and Health with Key to the Scriptures": "The pains of sense are salutary, if they wrench away false pleasurable beliefs." This, of course, does not in the least mean that there is no such thing as wise almsgiving; but almsgiving, if it is to be wise, must always, like physical healing, be accompanied by the effort to explain what true substance is. It can scarcely be termed healing to get a man's body well, and leave his mentality unprotected against the intimations of disease which mortal mind is always showering. In the same way, it is very little good, it may easily be positively harmful, to supply a man's material wants while leaving him unconscious of the true source of supply. The one is as much healing as the other, and so Mrs. Eddy writes, on page 358 of "Miscellaneous Writings," "The student who heals by teaching and teaches by healing, will graduate under divine honors."

When Jesus said, "Him that taketh away thy cloak forbid not to take thy coat also," he could not very well have meant it literally. Such an action would very soon have left respectable humanity the target for disreputable humanity. He did presumably mean, if a man ask you for charity, give him what he needs, but give it to him also with that true sense of charity which is love, so that he may come to understand what substance truly is. We must never attempt to remove the landmarks of God. Progress, Mrs. Eddy truly says, should be painless, but a relief from suffering which inculcates a belief in ease in matter may be dearly paid for. Charity is love, and love is a realization of man's

Copyright, 1913, by The Christian Science Publishing Society.

Digitized by Google

spiritual birthright. If any one doubts this, let him stay to think it it is possible to show greater love to any man than to realize his spiritual being, since this would help to free him from all the claims of the senses. "Jesus," Mrs. Eddy writes, on page 476 of Science and Health, "beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick." Is not this a parallel to that famous saying of Jesus, "Greater love hath no man than this, that a man lay down his life for his friends"? Just so, in other words and at another time, he said, "For their sakes I sanctify myself."

This being so, real charity is a realization, like love, of man's spiritual birthright. This birthright suffering humanity is only too willing to sell for a mess of pottage. So far from permitting this, the really charitable man will endeavor to make his alms no mess of pottage, but an understanding of spiritual life, of what Mrs. Eddy terms the real man, which will free a man from poverty in the only way in which man can be freed, by giving him dominion over the senses, so that with the power to gratify them comes a realization of their unreality which makes gratification an impossibility. He who found the Roman tribute money in a fish's mouth, could have found the gold of Ophir just as easily. He who fed the people on the shore of Galilee, could have reproduced Belshazzar's feast without an effort. Far-fetched as it may seem, these tasks, easy as they would have been, were none the less a demonstration to them. While the man clothed in the shadowy purple of Cæsar feasted in the metropolis, the one who wore the armor of God toiled in the desert. While Agrippa was carried through the streets of Cæsarea in his litter, Jesus was tramping the Galilean hills. While the glorious apostle knew not where he should lay his head, he was a son of the most High.

[illegible]

ARMED TRUTH.

[illegible]

it be so, our God whom we serve is able to deliver us from the burning fiery furnace, and he will deliver us out of thine hand, O king. But if not, be it known unto thee, O king, that we will not serve thy gods, nor worship the golden image which thou hast set up."

The effect of such a bold answer upon a king of those times can easily be imagined. In his rage, he ordered the furnace prepared for the offenders, and so intense was the heat that it consumed the men who threw them into the furnace; yet all that the flames did to the offenders was to destroy their bonds, so that they were able to rise and walk about. Astonished, the king approached the mouth of the furnace and, addressing them as the "servants of the most high God," bade them come forth. They had entered into this fiery experience "bound," and now, through the understanding of the spiritual law revealing man as inseparable from his Maker and ever intact, they came forth "loose," unharmed by the flames, which had had no power save to destroy the bonds that held them,—error destroying itself.

And this is the only real power that any trial through which we may pass can have over us, if we meet it as did these young Hebrews, with confidence in our God as able to destroy our bonds and thus bring us advancement in our spiritual growth. The value of any experience, whether pleasurable or painful to the senses, is in the way it is met, the part it is made to play in our spiritual development. A kingdom, riches, and honors proved a curse to Nebuchadnezzar, and he was "driven from men," while the fiery furnace proved a blessing to the young Hebrews. It is thus seen that no experience in itself is either a curse or a blessing, but the way in which we meet it makes it so. Further on we read that not "the smell of fire had passed on them;" and thus we too can come forth from our wrestlings with error, spiritually refreshed, strengthened, without the smoke of battle clinging to our garments.

fying of God, and all thinkers will admit that a mere emotional outpouring of praise to God is far from satisfying. This is because men have for so long failed to see that existence in the flesh is not life, for, as Mrs. Eddy says in "Science and Health with Key to the Scriptures" (p. 244), "If we were to derive all our conceptions of man from what is seen between the cradle and the grave, happiness and goodness would have no abiding-place in man, and the worms would rob him of the flesh."

If God is the Father of all, then His children should represent that fatherhood, and this is surely a sufficient reason for the being of all the sons and daughters of God. In line with this statement Jesus said, "Because I [the Christ] live, ye shall live also." Jesus constantly tried to turn men away from a material to a spiritual view of life, not only by his own method of living, but by such declarations as "The flesh profiteth nothing," "The life is more than meat, and the body is more than raiment." His example and precepts should forever settle the question as to whether mere animal existence, which rests in absolute dependence upon food and drink and is subject to every passing whim of so-called nature, is the truth of being. If the material body is man, then indeed would all mankind be justified in echoing the despairing complaint of Job when he temporarily went down before that false belief and lamented the day that he was born; and this distorted sense of life is what the Preacher had in mind when he voiced that pessimistic cry, "All is vanity."

How, then, shall man glorify God? The Bible makes it clear that it is by doing those things which God would have him do. Glorifying God neither begins nor ends with lip service, as this method of praise is only an incident; neither is it comprehended in a superficially perfunctory observance of the ten commandments or the rules of some church. In order to glorify or serve God aright, His laws must be incorporated into our daily lives, not merely as a code of moral ethics, but as Paul says, in "demonstration of the Spirit and of power." There is a vast difference between a religionist and a Christian, though, despite the triteness of this saying. It seems to be forgotten, not infrequently, that Jesus himself left a definite rule by which his followers should be judged, in such unequivocal statements as "These signs shall follow them that believe;" "He that believeth on me, the works that I do shall he do also." As to the nature of these works, one has only to turn to the pages of the New Testament to find a detailed account of the wonderful healing which was such an essential part of his ministry. These works were not essential, however, in the sense that they constituted the whole, or even the greater part, of his mission to men, but in the sense that they were the inevitable consequence of his teaching, just as darkness must disappear in the presence of light.

There can be no true happiness except in service, and this truism has been recognized by pagan and Christian thinkers alike. Says Stevenson: "So long as we love, we serve; so long as we are loved by others, I would almost say that we are indispensable; and no man is useless while he has a friend." And he might have added, "or is a friend." So, after all, we only serve God by serving our brother, and this service of God is not confined to the so-called larger things of life, but enters into the little things as well. One of the first lessons learned by the student of Christian Science is the importance which its teaching attaches to everything in God's creation, and the vision of Peter is thus repeated with its accompanying command, "What God hath cleansed, that call not thou common." This thought lends a sublime dignity to the humblest service and glorifies the little things with a halo of divinity not born of earth. New beauties are seen where formerly dwelt only the dulness of monotony, and all mankind comes closer to us with the touch of a brother. The outlook on life is broadened and deepened, the sublime law of loving our neighbor as ourselves takes deeper root in thought, and life is no longer looked upon as a treadmill existence whose ceaseless grind must be endured, and which is only endurable because of a dimly defined, chaotic hope of possible happiness beyond the grave. With this realization comes the conscious knowing that we are all members of "one body," and that "much more those members of the body, which seem to be more feeble, are necessary." How true it is that millions of God's children treat life as a bread-winning experience only; as consisting solely of working in order to get enough money to buy enough food to get enough strength to do some more work throughout an endless chain of hopeless existence so far as this life is concerned, with a torturing apprehension of an uncertain existence hereafter!

It is to such as these that Christian Science comes with its compassionate appeal and its radiant assurance of better things now and always. This new outlook on life is transforming in its nature, and the student begins to realize that all good work is God's work, and that each individual fills a niche in the economy of the world which no other can fill. Thus the humblest occupation is invested with a new interest, and every rising sun is welcomed as the herald of a fresh opportunity to do good by rendering to our fellow men every service we can. Who, then, dare say that anything made by God can be trivial or insignificant? In Christian Science every task becomes lighter and every day becomes brighter.

> The trivial round, the common task,
> Will furnish all we ought to ask;
> Room to deny ourselves; a road
> To bring us daily nearer God.

Paul says, "Whether therefore ye eat, or drink, or whatsoever ye do, do all to the glory of God." It matters not how material or menial our work may seem to be, if its object and end is good, it is God's work, and meets the present demand upon us as well as our present needs. While Christian Science is superlatively idealistic, it is also intensely practical, for every phase of daily life is governed by that law of God which is applicable to every human need and condition. In God there is no such thing as a treadmill existence, and every work to be performed is glorified by the presence of Him who is ever present. We should not forget that Jesus himself was a carpenter, and that the twelve apostles were chosen from the very humblest walks of life. Is it conceivable that they moped over their tasks or were ashamed to have their occupations known? Today's task, well performed, will lead to still higher tasks in the spiritual realm until, in the fulness of time, "man is clothed and fed spiritually" (Science and Health, p. 442). This realization will forever annul the Adamic law, "In the sweat of thy face shalt thou eat bread," and man will then work as God works. Thus, and only thus, will the true meaning of life dawn upon the consciousness of all mankind.

OPPORTUNITY.

CHARLOTTE PAULSEN.

WITH a desire for the opportunity to prove an understanding of God, the writer began to search for the meaning of opportunity. In the old way of thinking, opportunity had meant chance; it presented itself regardless of expectation, wholly independent of one's knowledge or control. Its habit was to arrive unannounced, and we were taught to believe that having arrived, an opportunity knocked but once. Thus, the individual needed to exercise unceasing vigilance lest he miss his opportunity when it presented itself. Two incidents, seemingly trivial, brought to the writer an awakening to the truer meaning of opportunity, for which there is much gratitude.

As a member of a choral society comprised almost wholly of church-members, there had been a disposition to withhold the information that she was a Christian Scientist, lest it precipitate an argument or stir unnecessary antagonism. On a certain Sunday, a rendition of Handel's "Messiah"

Digitized by Google

was to be given in a church building, and the writer, who had been striving all day to see the unreality of a discordant bodily condition, had made what seemed a big effort to be present at this vesper service. Sitting apart for a few moments of quiet thought, before the service began, another member of the chorus approached with the friendly query, "To what church do you belong?" The unconsciously feared moment had come, and the Christian Scientist, unprepared to meet it in truth, gave an evasive reply and sought to turn aside; but the questioner, thinking she had not caught the reply correctly, repeated her inquiry. The conversation which ensued disclosed a very friendly attitude toward Christian Science and an interest in it which had been awakened by the healing of a mutual friend. Following this explanation came uplift, kindliness, joy, gratitude,—all the activities of Love were brought into play; the oratorio became a hymn of praise instead of the anticipated effort, and the sense of physical discord was corrected even before the service began. Then came an unfoldment of what opportunity really means. Opportunity was seen as an idea in Mind, and man being the manifestation of Mind, opportunity lies within man, not outside of him. To let Mind be in us, is to become the opportunity for Mind to express itself.

Not long after this, one severely cold day, the writer was again reminded of this meaning of opportunity. A small boy had slipped and fallen on the ice. Surrounded by a group of school children, his little face distorted with cold and fright, he appeared unable to rise. A word of cheer from the consciousness filled with the reflection of Love to the exclusion of all sense of cold, brought the little fellow to his feet and sent him on his way. It all seemed to have been done in a moment, and the opportunity to prove Love's nearness had never appeared to the Christian Scientist so certain or so big as it did at that moment.

At our Wednesday evening meetings, every member of the congregation is a channel for God's opportunity to bring the healing word. To rejoice in this fact as the truth for both ourselves and our brother, is to give pinions to redemptive thought; it will prepare "the way of the Lord," and open up the channels so that the healing power of Love may flow. It will destroy the fear of incorrect expression on the part of the speaker, and the temptation to criticize on the side of the listener; give renewed activity to faith; clarify understanding, and transform the weary seeker and the search into a God-inspired consciousness of heaven nearer than at hand, even present with us now.

SUPERSTITION DISPELLED.

LEWIS HENRY BEESLEY.

Among the many superstitions that have been handed down to us from our forefathers, there is one which stands out as particularly remediable by Christian Science and which really deals with the whole field of superstition. This is the aptitude with which we were wont to protect ourselves from some accident by some physical act. Perhaps one may have pursued the even tenor of his way for a long time in as harmonious a manner as is possible in human experience, and during a conversation with some one he may have remarked on the fact. If he had not learned the unreality of evil, it is likely that a sense of fear would have presented itself that because he had voiced this state of things it could not possibly last.

Let us consider the subtle temptation which mortals have to fear that an ideal state of happiness cannot last. If we begin to dive deep into the cause of all things and ask ourselves where happiness comes from, we find through the study of Christian Science that Love is the Principle of the universe, and therefore the Principle behind any true happiness is God. When we realize that God is, as Mrs. Eddy expresses it on page 140 of Science and Health, "universal, eternal, divine Love, which changeth not," and apply our understanding of this truth to assuage the sense of fear, then we begin to understand where happiness comes from, and know that it can never fail or alter. That we can ever be tempted to doubt that happiness will remain permanent in our lives, is because we have sought for it through the wrong means; having found the right means, all sense of superstition is destroyed, and we give God the glory. We are learning through Mrs. Eddy's teachings to realize in our consciousness that divine Love is being eternally expressed, and that no mortal belief, however subtle, can "separate us from the love of God."

If one cared to take the trouble to seek the explanation of all superstition, it would be found in every case that it is the human belief in a power opposed to God; and it is wonderful how, through Christian Science, we find ourselves unconsciously acting contrary to these so-called laws of mortal belief without any consequent inharmony. In the spirit of our Leader's beautiful words on page 389 of "Miscellaneous Writings," we are learning that Love is indeed our refuge; that

> His habitation high is here, and nigh,
> His arm encircles me, and mine, and all.

SILENCE.

DAISY WOODWARD.

In Proverbs we read, "In the multitude of words there wanteth not sin: but he that refraineth his lips is wise." How few there are who really appreciate the value of silence! Which of us, when troubles arise or difficulties confront us, can resist the temptation to tell our woes to a fellow mortal instead of availing ourselves of the priceless privilege of silent communion with God? We may argue that the Bible says, "Bear ye one another's burdens." Yes, and gladly do we give a word of cheer or a helping hand to a sister or brother toiling along the narrow road; but do we ever stop to think how much more quickly that burden might "vanish into its native nothingness" (Science and Health, p. 365) if we were content to be silent "about the space of half an hour" while we laid our problem before divine Love alone?

Perchance we sometimes think a cruel injustice has been done us; we feel sore and resentful, and as soon as an opportunity occurs we straightway pour our complaints into a sympathetic ear, thus encouraging a sense of self-pity; or, we may hear an unfavorable report of some one's conduct, and the temptation may come to repeat it to another, as error subtly whispers, "just to find out whether it be true," etc. What a blessing to take to heart the old saying, "Silence is golden," and instead of giving voice to error, to wrestle alone with it, as did Jacob, thereby proving the truth of our Leader's words, "The warfare with one's self is grand" (Miscellaneous Writings, p. 118).

Knowing that divine Love is ever present, ready to respond to every call, can we not trust more fully in His omnipotent, unfailing help, which so infinitely outweighs every human support, the clearest counsel and the tenderest love of mortals? Well may our hearts overflow with gratitude for the Christian Science reading-rooms all over the world, those quiet sanctuaries which, amid the toil and hurry of a busy day, afford to the seeker after Truth such golden opportunities for silent communion with our Father-Mother God.

It is sometimes with life as with poetry. As the real poet can express the truest and most beautiful, although fettered by metrical form, so man should know how to preserve freedom of thought and feeling notwithstanding the restraints of society.—Max Müller.

SELECTED ARTICLES.

[George Shaw Cook in *Lakeview* (Ill.) *Times and News.*]

That the founders of the American republic reached the point of divine inspiration in some of the statements contained in the Declaration of Independence there can be little doubt. Few finer expressions of the divine will to man may be found in literature than the sublime assertion, "Man is endowed by his Maker with certain inalienable rights, among which are life, liberty, and the pursuit of happiness." Especially when examined in the light of Christian Science do these words reveal a deep spiritual meaning which probably was not fully discerned by those who first spoke them. This immortal declaration of our forefathers is particularly dear to Christian Scientists, and perhaps a brief analysis of its peculiar significance to them may be of benefit to others.

Man is endowed by his Maker with life. If this be so, then the teaching of Christian Science is seen at once to be true, namely, that it is legitimate and right for men to live, and therefore everything which has the tendency to abridge, circumscribe, interrupt, or terminate the existence of man, is contrary to the law of God, who is man's Maker. On this basis rests the further teaching that sin, disease, and death are illegitimate and destructible because they are not God-ordained. According to this teaching, therefore, man is lawfully entitled to repudiate the claim of that which through disease, accident, or any other cause would seek to end his existence. Christ Jesus, who was the greatest exponent of divine law, said, "I am come that they might have life, and that they might have it more abundantly." He confirmed his words by his works, healing the sick and raising the dead. Christian Scientists therefore feel that they have good authority for their contention that man has an indefeasible endowment of abundant life.

Man is endowed by his Maker with liberty. He is therefore divinely entitled not only to life, but to liberty. He accordingly has the God-bestowed right to liberty of life or freedom of life, unhampered and unhindered by adverse circumstances or conditions. Paul, the great apostle of man's freedom, said, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." So also Christian Science teaches that man who is created in the likeness of God, Spirit, the real man, or the reality of man, is free from the law of sin, disease, and death. It teaches that a recognition of this freedom and insistence upon its rightness, brings into human experience here, today, a greater sense of exemption from the ills of the flesh than can be realized in any other way. It teaches that it is possible now scientifically to demonstrate man's rights to bodily, mental, and spiritual freedom.

Man is endowed by his Maker with certain inalienable rights to the pursuit of happiness. He therefore is divinely empowered and equipped to pursue or follow happiness or harmony through, or as the result of, righteousness or right thinking. Even as long ago as David's time, it was recognized that man's true heritage is security from turmoil, for David said, "He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty. . . . There shall no evil befall thee, neither shall any plague come nigh thy dwelling." Christian Science confirms this promise, and proves that it is not only possible but right and natural for man to dwell in the secret place of God and abide under the shadow and protection of omnipotence. It teaches that man's life is sustained and preserved by the good that he knows and does. It shows that the true spiritual freedom, real happiness, health, and holiness, are man's God-given, inalienable heritage, which he may rightfully claim and take possession of on earth.

Christian Scientists not only have perceived these great facts, but have begun to demonstrate their truth in daily experience. They do not claim to have progressed far in the direction of ultimate perfection, but they are grateful that Christian Science is enabling them to prove in some degree that, as Mrs. Eddy has said on page 227 of "Science and Health with Key to the Scriptures," "slavery is not the legitimate state of man. God made man free."

[Albert E. Miller in *Transcript*, Holyoke, Mass.]

Will you kindly permit me to take exception to a reference to Christian Science appearing in a recent issue? The article in which this reference appears is copied from another paper, and the statement is, "The Christian Scientists and other faith-healers who close their eyes to the possibilities of material aid, that may often so potently be added to the psychotherapy they are employing, swell the death-rate." The writer of this article is mistaken in assuming that Christian Scientists "swell the death-rate." The contrary is true. Christian Scientists are largely recruited from the ranks of those who have at one time been considered hopelessly ill. They have turned to this teaching as a last resort, and found therein the healing which they had failed to find in other systems of cure.

In discussing the merits of Christian Science it should be borne in mind that those who advocate this teaching do so from no sense of religious fanaticism, but base their decision upon practical experience. This experience covers not only their acquaintance with Christian Science, but usually with medicine as well. It is interesting to note, that in the same mail with this article from your paper came another clipping from a western paper which stated that Christian Scientists were considered as among the best risks enumerated by certain authorities on life insurance. Those who have acquaintance among the Christian Scientists can testify that these people are enjoying good health and are apparently happy. It is true that they depend upon the prayer of understanding for the healing of their ills, but in doing so they depend upon a God who is omnipotent and omnipresent, a God who throughout all ages has been looked to as the infinite, in whom can be found that peace "which passeth all understanding" and who healeth all our diseases.

[Charles K. Skinner in *Charlevoix* (Mich.) *Sentinel.*]

It is not often that a little band of Christians is so highly honored as to be the butt of concerted attack by all the evangelical ministers (not churches) of their city, therefore the Christian Scientists of Charlevoix should feel flattered by this attention. Some years ago, when commenting on a bitter, untruthful attack upon Christian Science, Mrs. Eddy, the Founder of this movement, made the following statement: "I love the orthodox church; and, in time, that church will love Christian Science" (Miscellaneous Writings, p. 111). About this time her old home church, the Congregational church of Concord, was making a great effort to pay off its debt, and Mrs. Eddy, learning the fact, sent the trustees her check for five hundred dollars to help lift the burden. That the time for the fulfilment of Mrs. Eddy's words is not so far away is quite evident, judging by the statements of many of the clergy in the past few years, statements which serve to show the difference between those who are willing to be tolerant, though they may not understand another's views, and the personal opinions resulting from misapprehension of the teaching of Christian Science as recently expressed by the various pastors of your city in their sermons against it.

One critic says that Christian Scientists "are not willing to go out into the world and make bad men good." I will make the assertion that Christian Science heals more sin-stained mortals, who stay healed, than any other denomination. Christian Science welcomes one and all, but it does no proselyting. While "comparisons are odorous," I will refute the critic's uncalled-for assertion by relating an incident which came under my observation a few years ago.

Digitized by Google

A family, poor in the extreme, had moved into some quarters not far from one of the large churches of the city. The wife was taken ill and the husband was out of work; two or three small children comprised the family. The husband called on the pastor and asked him to go to see his wife, but the pastor said that he had no time, nor did he offer to send any one. The man then went to the Christian Science reading room, which was also near by, and stated his needs. He was given the address of a Christian Scientist some distance away, and he called on him for help. The Christian Scientist went with him and took care of the case for two days, when the woman was healed and able to do her work.

We are told that "Christian Scientists are not students of the Bible," and it may be conceded that they do not read the varied comments of physical scientists on the Bible. It is admitted by opponents of Christian Science, however, that its followers are the closest students of the Bible of any class of people. Jesus once said to his followers, "It is the spirit that quickeneth; . . . the words that I speak unto you, they are spirit, and they are life." This is the teaching on which Christian Scientists believe and trust and strive, and by obedience to which they are able to do their works. When they believe that the "letter killeth, but the spirit giveth life"

. . . . . .

. . . . . .

. . . . . .

[H. Cornell Wilson in *Brooklyn* (N.Y.) *Eagle.*]

It is common practise among self-appointed critics to classify Christian Science promiscuously with whatever their fancy may be temporarily occupied. Without the least understanding of its spiritual metaphysics, there are those representing fixed general opinion, on the one hand, who put Christian Science in the category with anything they think of as being unscientific and unchristian. On the other hand, investigators, propagandists, and theorists of one shade of belief or another, seem determined, if they can, to dispossess Christian Science from the foundation in God, Spirit, where Jesus unveiled it and where Mrs. Eddy discovered it, and drag it down to the physical or mortal mind level of their own operations.

The former give the impression of feeling under the necessity of ousting an uncomfortable pretender, to be rid of a teacher; and this, because of its results, makes them look anxiously to their tottering superstructure. The latter express an evident desire to be known as one with Christian Science in essence, though differing in non-essential details. Both positions are false. Both contentions are an imposition on Christian Science, and would deny its proper place and identification. Christian Science is the scientific Christianity taught and exemplified by Christ Jesus, "uncontaminated and unfettered by human hypotheses, and divinely authorized" (Christian Science *Quarterly*). After giving to Christian Science sufficient study to enable one to demonstrate its teachings according to Principle and rule, then, and only then, may it be said that one understands Christian Science and has earned thereby the right of judgment or comparison.

[Ezra W. Palmer in *Colorado Springs* (Col.) *Telegraph.*]

A critic is quoted in a recent issue as saying that Christian Science denies sin, the atonement, and consequently the teachings of the Scriptures. Perhaps it would be well for this gentleman to find out what Christian Science does teach on these topics before making it the subject of newspaper attacks, because, if he had informed himself before speaking, he would have discovered that Christian Science does not deny either the sense of sin in human experience, the atonement, or the plain teachings of the Scriptures. Doubtless it differs in its view of these important subjects from the view held by this critic; but that does not necessarily imply that the Christian Science view is incorrect, since diverse views of sin, the atonement, and the divinity of Christ are held by members of churches this critic would doubtless consider fully orthodox. I am inclined to think he would have considerable difficulty in drawing up a thesis covering these subjects that would satisfy all the members even of his own denomination; and yet he denounces Christian Science for not subscribing to his view!

Our critic would doubtless assent to the general proposition that the intent of the gospel is to heal and save mankind from sin, disease, and death; but could he show that his concept of Christ, his interpretation of the atonement, or his view that sin is real and therefore God-created, heals the sick as Jesus commanded? Christian Science does heal the sick; it reforms the sinner; and it points to these "signs following" in proof that its interpretation of the Scriptures is correct. Christian Science takes the position that death is not a part of the kingdom of God, and that in the universe of Spirit there is no such thing as death. The whole mission of Jesus on earth was to prove the nothingness of sin, disease, and death, and he proved his mission by his works, "healing all manner of sickness" and raising the dead. If death were of God, Jesus would have been going contrary to the divine will in overcoming it for himself and for Lazarus. His attitude toward sin was exactly the same, and in one instance in particular he pointed out that sin and disease originate in the same manner, and that the power of God was equally applicable to destroying both.

Relative to the atonement, Christian Science teaches the primitive Christian doctrines upon this subject, namely, that atonement is "*at-one-ment* with God," and that it exemplifies "man's unity with God" (Science and Health, pp. 19, 18). Until the opponents of Christian Science can unite on a working definition of the atonement, it would perhaps be advisable to refrain from attacking the Christian Science view of this subject. A criticism of Christian Science based on dogmatism and scholasticism is utterly unconvincing. Christian Scientists are well aware that their religion differs in many respects from the theology of this critic, but this does not convince them that they are wrong, because they have proofs in their own experiences which are sufficient to convince them that Christian Science is the restatement of primitive Christianity which Jesus and his apostles taught.

[Olcott Haskell in *Modesto* (Cal.) *News.*]

In his last letter to your paper "Junius" enumerates again the good things he concedes to be in Christian Science, and generously adds another in that he "recognizes *The Christian Science Monitor* as a good newspaper." Our friend tells of the abundant peace to be gained through believing on Jesus Christ, "where the spiritual life is concerned." Christian Scientists rejoice at whatever of spiritual blessing is found in other churches, and they recognize that as compared with the so-called physical life the spiritual is all-important; they also understand, however, that Jesus, through both his words and his works, taught a full salvation, freeing men from sickness as well as from sin. He said, "The Father . . . he doeth the works;" and he promised that those who through his teachings should come to know the Father, would be able to do likewise, for, he said, "these signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover."

The critic also says, "The facts are evident on all sides to prove the fallacy of Mrs. Eddy's theories." It should be remembered that in Jesus' day equally plausible arguments were advanced against his teaching, and that every case brought to him for healing presented, from the standpoint of the senses, conclusive "evidence" of the reality and permanence of disease; yet Jesus rebuked this evidence, and destroyed the sense testimony which had seemed so real.

Should not every Christian be thankful that there are those today who are striving to apply the teachings of the Master in this direction, and who have already attained to some degree of success? Our critic demands that Christian Science shall show "as large a comparative number of cures as medicine." It shows a larger number. According to statistical comparison in two states, one in the extreme north and the other in the extreme south, seventy per cent of those who applied for Christian Science treatment during a period of one year, had already failed to recover or to receive permanent benefit, through medical treatment. Of these, ninety per cent recovered, or received permanent help, under Christian Science.

[Written for the *Sentinel.*]

OPPORTUNITY.

ROY FOSTER.

WHO says I knock but once and pass
Ne'er to return, speaks not the truth.
I come from the e'er present One.
Dost think He gives only one chance
To His beloved? Wouldst limit God?
Admit me then, when at thy gate
I stop and knock. Shouldst thou not hear,
Grieve not, but hope; that very hope
Shall call me back and back again.
When thou art ready, thou wilt know
The time I come, nor need to fear
I'll pass thy door. Throw wide the gate
And bid me enter—I am here.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

OUR TEXT-BOOKS.

In the opening pages of the chapter on Science, Theology, Medicine, in the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy gives us a vivid picture of the years of persistent and painstaking research whereby she acquired a demonstrable knowledge of the Principle and rule by which the sick were healed and the sinning reformed, not only by the Master and his immediate followers, but by the faithful who, in fulfilment of the great Teacher's promise, "He that believeth on me, the works that I do shall he do also," likewise trusted in the omnipotence of Him "who forgiveth all thine iniquities; who healeth all thy diseases." With an unfailing trust in God, she patiently wrought her appointed task, until the time came when, as she tells us on page 110, "the Scriptures were illumined; reason and revelation were reconciled, and afterward the truth of Christian Science was demonstrated."

We who today are the beneficiaries of the wonderful truth again made available to mankind through this labor of love, should never lose sight of the lesson that this narrative, so simply yet convincingly told, conveys. For hundreds of years the Bible, the inspired Word of God, has been the text-book of the Christian church, and yet, for only a brief period was the Master's command when he sent forth the seventy, "Heal the sick . . . and say unto them, The kingdom of God is come nigh unto you," understood in its rich fulness of purpose, namely, that "it is not the will of your Father which is in heaven, that one of these little ones should perish." Christian people had come to believe that the truths of the Bible, so far as the healing of the sick was concerned, had become a dead letter, and it remained for the Discoverer and Founder of Christian Science to open the blind eyes and unstop the deaf ears, to proclaim to all mankind the present-day efficacy of Jesus' teachings, and to prove her faith by her works. So, too, must her every follower demonstrate in works of healing the "reason of the hope" that is in him.

With the apostle Paul, Mrs. Eddy believed in preaching "the unsearchable riches of Christ," and in ordaining the Bible and "Science and Health with Key to the Scriptures" as the forever pastor of the Church of Christ, Scientist, "our only preachers" (*Quarterly,* explanatory note), she gave her approval to these books as the acme of Christian Science teaching. Not only this, but she admonishes those who teach this healing truth that they "shall steadily and patiently strive to educate their students in conformity to the unerring wisdom and law of God, and shall enjoin upon them habitually to study His revealed Word, the Scriptures, and 'Science and Health with Key to the Scriptures'" (Miscellaneous Writings, p. 315).

Here, then, clearly and unmistakably stated, are our instructions. The Bible and Science and Health, and these only, are the authorized text-books, supplemented by our Leader's subsidiary writings and the periodicals which she founded and guided. It cannot be too strongly emphasized that the literature thus provided should have the first place with every Christian Scientist, be he the veriest novice or the most advanced student and demonstrator of this Science which is the knowledge of the only true God. Nothing else can accomplish for the sick and the sinning what the study and application of the unadulterated teachings of the text-books of Christian Science have wrought in hundreds of cases, as witnessed by the grateful testimonies given in our periodicals, at the Wednesday evening meetings, and told by one to another as "good tidings of great joy" to this and succeeding generations.

ARCHIBALD MCLELLAN.

"WHY ART THOU CAST DOWN?"

The psalmist's query, "Why art thou cast down, O my soul?" is of deep significance to students of Christian Science, especially when they ponder their Leader's words respecting the same. She quotes from the forty-second psalm, in which these words occur, first the mournful question, then the response of spiritual sense, which says, "Hope thou in God: for I shall yet praise him, who is the health of my countenance, and my God." Then she adds these words from another psalm: "Who forgiveth all thine iniquities; who healeth all thy diseases," and asks, "This being the case, what need have we of drugs, hygiene, and medical therapeutics, if these are not man's preservers?" (Christian Science versus Pantheism, p. 4).

The psalms give a wonderful model for prayer, for while the downcast human sense pours forth its plaint, spiritual sense declares for the permanence and power of divine law, and in this we find a picture of all human experience, its manifold sorrows and sufferings, with the light of spiritual being but faintly discerned. At the same time we see throughout the entire Scriptures, as in present-day experience, how efficacious is even a gleam of spiritual understanding, for this light, leading ever to its divine source, becomes brighter and brighter, the hope in God's power to restore health becoming in due season the realization of Truth's majesty expressed in the words, "Who redeemeth thy life from destruction; who crowneth thee with loving-kindness and tender mercies."

Now the very question, "Why art thou cast down?" points to the changeless fact that none of God's children should ever be cast down. It is alas too true that mortals have sinned and suffered throughout long centuries, but this has been because of their belief in another power than God, Spirit, and with strange inconsistency they have chosen to attribute many of their ills to God, while they have turned to matter and mortal mind (which are really one and the same) for relief from their woes, even while calling upon God to stay His chastening hand. It is also true that so long as this false view of God and man is entertained, there can be no real change in respect to the suffering, and material means and methods at their best can only prolong the tragedy of mortal experience. Happily, however, full and complete deliverance from all this misery of mortal belief was offered by Christ Jesus, and not only so, but full proof given by him that the truth he taught would bring entire salvation from sickness, sin, and death. And did the world accept this truth which sets men free? A goodly number of sufferers did, but the world, as represented by a materialistic theology and statecraft, rejected it because its demands were purely spiritual. More than this, in their effort to crush it out the "rulers of the darkness" condemned Jesus to death, and for a brief moment terrorized his followers; but when their Master rose from the tomb, and appeared before them in demonstration of the truth he had taught, they were stronger than before and were thus better prepared to do the works which he required of all who profess to follow his teachings.

Throughout the years since that day, this mortal mind which was then defeated in its evil intent has sought to compromise with Truth's followers, has, to put it briefly, asked them to admit the reality of matter and material law; and it would leave them to believe all they chose about God, that is, so long as this did not conflict with belief in materiality. To this demand humanity has blindly submitted, but those who are being awakened by Christian Science are learning how to answer the psalmist's query. They

Digitized by Google

are learning, too, that "the god of this world" cannot blind men to the power of Truth when the divine Principle of Jesus' teachings is known, nor intimidate them in their efforts to demonstrate Truth's power in the overcoming of sickness and sin. Though, like the one of that olden time, the waves and billows may at times seem to go over Truth's followers, they do not charge these to God, but look to Him for deliverance, and praise Him for the health which is an abiding fact, and the soul [sense] which is not cast down, but declares, "Thou art the God of my strength."

ANNIE M. KNOTT.

COMING TO OUR OWN.

IT sometimes happens that those who have a great deal of property, have also a great deal of difficulty in paying their debts. An individual may have inherited a fortune, but not the business ability to care for it; hence, though his assets are large they yield no return, and he can neither meet his responsibilities nor fulfil the legitimate expectations of those about him. Under these circumstances, a friend who could teach him so to relate his assets to his liabilities that his wants would be supplied and he be freed from bonds, would be an unqualified blessing.

All this may serve to illustrate the fact that, whereas according to the Bible every believer is an heir of God, the rightful possessor of unlimited spiritual riches in Christ, nevertheless most Christians have a sense of inability to meet their obligations to God and their fellow men. They are actually in want, and ofttimes "sick or in prison," wholly incapable of meeting life's demands or solving life's problems. That they regard themselves as the legitimate heirs to all good, is evidenced by their constant desire and effort to get all good, health, abundance, happiness, peace. All these every worthy, aspiring man is trying to secure, and this he could not do if he did not think they lawfully belonged to him. He is seeking for his own, but he fails utterly to relate his supply to his need, and to all such Christian Science comes as a counselor and guide, a much-needed friend. It comes to place every spiritually-minded man in command of his spiritual resources, to show him how to realize and utilize his every endowment and capacity as the child of God, and it is this fully verified fact of its practical value that is winning for Christian Science the attention and approval of mankind.

It is quite apparent that we really possess only that which we can and do use. A millionaire may in fact be beggarly poor. Indeed it is the irony of the money-lover's experience that in acquiring his riches he loses the capacity to find any real profit or pleasure in their expenditure. The chagrin and self-contempt of the wealthy worldling who thus comes to realize that he has not the ability to command his own, must be unspeakable, and yet how much more humiliating and pitiful the condition of the professed Christian who is so far awakened as to see that, despite the vastness of his inheritance in Christ, he is famishing and in rags. This is the greatest need of the Christian church today, to be aroused, made aware of its spiritual inheritance and privilege in Christ. In an era of marvelous material discovery and progress, when the lure of earthly gain and achievement is so seemingly irresistible and enslaving, men, Christian men, seem to have lost all thought of what it means to enter into life, all desire to become the almoners of that patrimony of spiritual good which awaits their fitness to command their own. Speaking of this, Mrs. Eddy has referred to the limitation and injustice to which we are subjected because we are "ignorant of our divine rights," and declared that, discerning these rights, "we cannot fail to foresee the doom of all oppression;" that the voice of Truth is heard today "asking a fuller acknowledgment of the rights of man as a Son of God" (Science and Health, pp. 381, 227, 226).

This is the mission of Christian Science, to awaken men to their true selfhood, to enable them to apprehend, utilize, and enjoy all their possessions and privileges as the children of God. The bounty of heaven is unlimited. "All things," cries St. Paul, "are yours,"—every province of the Canaan of good; and the word of the Lord in Christian Science is this, "Go in and possess the land."

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

UTAH.—A Christian Science service similar to the regular Sunday service is held every second week at the Utah state prison, to which all the male prisoners are invited but attendance at which is entirely optional. The number attending these services varies from sixteen up to twenty-five or thirty. One yearly subscription to the *Journal* and one to the *Sentinel* are sent regularly, and there are two yearly subscriptions to the *Monitor*. I am also informed that eighteen copies of the *Quarterly* are sent to the penitentiary each quarter. A most interesting feature of this work is the extreme courtesy with which our people are treated by the prison officials and the guards. In addition to the above subscriptions, every week a large bundle of *Sentinels, Monitors,* and *Journals* is distributed among the men and women inmates.

A yearly subscription to the *Monitor* is sent to each of the Salt Lake county and Weber county jails, and a bundle of *Sentinels, Monitors,* and other literature goes each week to the former. For a number of years services were held in the Salt Lake county jail, first every third week, then two weeks out of every three. When, however, a new jail was built, no provision was made for any sort of chapel and these services were discontinued.

In addition to the above, services are held each week at the Salt Lake county infirmary, at which the regular service is read. A yearly subscription to the *Monitor* has been placed there and large bundles of literature go out each week. I am also informed that twenty-four *Quarterlies* are sent out each quarter.—*Correspondence.*

WESTERN KANSAS.—We came here six years ago, and knowing the benefits we had received through Christian Science, we were very anxious that others should know the truth. Although at times I had asked myself what I was doing to help in this great work, for a long time I could see no results; but the good seed was being sown, as on Dec. 29 we began services in our home, and it is surely gratifying to know the result. Our attendance is from nine to twenty-five every Sunday, people coming six, eight, and ten miles; and some healing has been done at our services. I could tell you of many beautiful experiences of those from other churches who have never found their Bible study satisfactory, but are doing so now, as the result of what one pure thought of God manifested through our dear Leader, Mrs. Eddy, has given us. I could write more, but will only add that the *Journal* and *Sentinel* are certainly doing a great work. They are our missionaries, and have been a very great help in our cause here.—*Correspondence.*

BALTIMORE, MD.—The efforts of the committee on distribution of literature have brought encouraging results this past year, for 25,313 pieces of literature have been sent out to carry the gospel message. The subcommittee on men's clubs, hotels, athletic associations, and all labor and business organizations, has sent out 2,311 marked *Monitors* and packages of Christian Science literature. This branch has received several grateful letters from lighthouse keepers. The Advertising Club, in accepting an offer of a free subscription to the *Monitor,* recalled with appreciation the hearty cooperation of the publishers of that paper in making the Ad Club convention at Boston a success. The subcommittee on penal institutions and reformatories has distributed 2,299 *Monitors, Sentinels,* and other literature to these institutions. In response to an offer to send a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, nine have accepted. The matron of the Maryland school for girls said that the children's page of the *Monitor* would be gratefully received, so a copy is sent each week. She also extended an invitation to the committee to send some one to the school to talk on the aim and work of the *Monitor.*

The activity of the subcommittee on stores, factories, lunch-rooms, and women's clubs has been manifested in the distribution of 6,441 pieces of literature. Twenty-three lunch-rooms have accepted wire racks filled with literature for free distribution, in addition to those placed in stores and factories. The Women's Civic League of Baltimore, and others, have gladly accepted an offer of a year's free subscription to the *Monitor.* The branch whose work is to look after special cases, and individual classified lists of professional and business men and women, has borne abundant fruit, for 10,252 pieces of literature have found their way into many homes, offices, and schools.

While it would be impossible to trace the immediate results of all this missionary work, word has reached us of several cases of healing resulting from the introduction of the literature into the homes of strangers to the cause of Christian Science. A young woman applied for Christian Science treatment who first heard of it through her sister receiving a free subscription to the *Monitor* at the Pure Food show. Since her healing, the sister has bought a copy of Science and Health, and she, with her mother, is attending our church services. Last winter, through request, Christian Science literature was sent to a home where it was thought it would be accepted. Later, two cases of poisoning occurred in this family and Christian Science treatment was asked for. Quick healing followed, sincere gratitude was expressed, and subscriptions to all the periodicals were immediately sent to Boston.—*Correspondence.*

FORTUNA, CAL.—Plans have been accepted by the directors of First Church of Christ, Scientist, for the fine edifice at the corner of Seventh and D streets in the Haight addition.—*Fortuna Beacon.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 30, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 14, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 1, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

THE LECTURES.

OTSEGO, MICH.

A good audience was present at the lecture on Christian Science given at Edsell's opera house by Frank H. Leonard. He was introduced by Harry A. Bardeen, who said in part,—

Many centuries ago there appeared upon earth one whose life proclaimed, "On earth peace, good will toward men." He came with sweet humility, teaching purity, truth, and brotherly love, healing the sick, and even raising the dead. The doctrine he taught and demonstrated was so strange and incomprehensible to his age, that with the exception of a few who recognized the Christ, he was reviled, rejected, and even crucified. But he appeared again to his followers, proving his eternal sonship with God and demonstrating conclusively man's oneness with the Father. Through inability to comprehend the Master's teachings, and consequent futile efforts to perform the works he did, the divine light which he brought to the world was nearly lost sight of in a few centuries after his ascension; but again the light has shone forth, revealing that Principle and unerring Science which Jesus taught and proving its divine source by its works. Again has this truth been reviled and rejected by those who are ignorant of its meaning, but today there are many thousands of people who through this truth or Science have been released from a life which was once a weary burden, perhaps from sickness, sin, or the other haunting specters of mankind,—poverty, failure, and fear of death; and these people are eager to proclaim the truth which makes men free.

To prove the good work of Christian Science, it is only necessary to point to its remarkably rapid and substantial growth throughout the entire world where man abides, including in its ever widening circle the rich, the poor, the high, the low. Observe also that those accepting this new-old light are not fanatics, but are intellectual, thinking people, who are endeavoring to follow calmly and fearlessly "the way, the truth, and the life," as pointed out by the humble Nazarene. It is not the purpose of these lectures to teach Christian Science, to evangelize, or to take issue with any class or creed, but simply to explain its facts and forestall unjust criticism and mistaken beliefs. There is only one Christian Science, and that was discovered and founded by Mrs. Eddy, and it stands on no creed, ritual, or personality.—*Otsego Union.*

ROSSLAND, BRITISH COLUMBIA.

At the lecture on Christian Science delivered by Virgil O. Strickler, the introductory remarks of Dr. Tanner, mayor of Rossland, were as follows:—

I deem it an honor as well as a pleasure to be permitted to introduce the lecturer of the evening. Christian Science is, as I understand it, a scientific statement of spiritual truth as discovered by Mrs. Eddy. It strives to preach the gospel, to heal the sick, to comfort the sorrowing, and to reform the sinner. That it is meeting with great success is demonstrated daily by thousands of living proofs in the form of men and women walking up and down the streets of our villages, towns, and cities who have been rescued from sin, sorrow, sickness, and the grave through the teachings of this great Science. Its adherents are better morally, socially, and spiritually; they are better friends, better neighbors, and better citizens; they are at peace with themselves, with the world, and with their God. The marvelous amount of good accomplished through Christian Science makes it incumbent upon us to give a careful, an unbiased, and an unprejudiced consideration to the facts we are now about to hear.—*Correspondence.*

GARY, IND.

William R. Rathvon lectured on Christian Science at the Commercial Club hall before a large audience. Mrs. Katherine D. Coles, first reader, introduced the speaker, saying in part,—

We have come here this evening to listen to a lecture on a subject which is not wholly unfamiliar to many of you. Christian Science is often misunderstood, and in consequence misrepresented, thereby withholding from many the joy and peace which its ministry always brings to the receptive heart. The human heart has many longings, but desires nothing quite so much as peace; and probably no sentence in the language furnishes a more concise or satisfactory answer to the question, What constitutes peace, and where may it be found? than does Isaiah's wonderful assurance, "Thou wilt keep him in perfect peace, whose mind is stayed on thee." This is a favorite text with Christian Scientists, and its practical value has been realized in so many instances that its truth cannot be doubted. There are many in this hall who like myself have received countless benefits from the study of this truth; and because Christian Science is based on the absolute spiritual law, we know it is universal in its application, and what it has done for us, it will do for all who study and practise its teachings.

Correspondence.

LONDON, ENGLAND.

At the lecture on Christian Science by Bliss Knapp for Third Church of Christ, Scientist, the church was completely filled by a most appreciative audience. The lecturer was introduced by Lieut. Col. E. E. Carter, C.M.G., M.V.O., who said in part,—

Your presence here this evening denotes the interest which you take in this engrossing subject, and to my mind emphasizes the fact, recognized by us all, that thoughtful humanity of today insists, consciously or unconsciously, on Christianity's being treated on a scientific basis as distinct from a merely dogmatic basis. In other words, humanity is beginning to demand proofs—practical proofs that will appeal to the every-day life of the individual—that the Christianity which our Saviour gave to the world is today capable of demonstrations similar to those which he himself performed before his contemporaries, and that it will also be capable of those "greater works" to which he referred as being practicable in an age later than his own. As the Principle of Christian Science is declared by its Discoverer, Mrs. Eddy, to be infinite, so its treatment and exposition by various lecturers always opens new channels of thought. Consequently, Christian Scientists themselves, no less than inquirers and young students, invariably find some new line of thought for subsequent consideration and development, and I am sure that this evening there will be no exception to the rule.—*Correspondence.*

ASBURY PARK, N. J.

William D. McCrackan, M.A., lectured on Christian Science before a fair attendance. He was introduced by Albert J. Roe, first reader, who said:—

In the eighth chapter of the gospel according to St. John, we read: "Then said Jesus to those Jews which believed on him, If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." If we wish to know the truth about a given subject, we invariably turn to the recognized text-book on that subject; and so, if we wish to know what Christian Science is, we turn to the Bible, and then, with the aid of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which is a commentary on the Bible, we find that Christian Science is scientific Christianity, and when put into practise in Jesus' way can be so proven. A Christian Scientist is one who has taken the trouble to study this text-book and then proved its truth by the practise of what he has learned.

I can speak from my own experience of the healing effects of this Science, and what the continuance of its study and practise in every department of life means. I was healed by it when *materia medica* could not do anything for me. I learned of the truth, and the truth set me free. Christian Science is a demonstrable religion, and can be used by the child as well as the adult. Jesus said: "I speak that which I have seen with my Father." The four gospels are full of the healing works of Jesus, works called miracles, but which were nothing more or less than the natural results of his knowledge of who and what God is, and who and what man is, and their relations to each other. Our Christian Science churches are built by and filled with those who at one time scoffed at the idea of our being able to heal as Jesus did, but who were eventually healed, they or their dear ones, by the same method as explained in Christian Science.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Altus, Okla.—Court house, 8 p.m., May 16.
Anderson, Ind.—Grand opera house, 8 p.m., May 9.
Cadillac, Mich.—Congregational church, 8:15 p.m., May 15.
Carbondale, Ill.—Opera house, 8 p.m., May 12.
Detroit, Mich. (First Church).—Detroit opera house, 3 p.m., May 11.
Dresden, Germany.—Kuenstlerhaus, Grunaerstr., 8 p.m., May 10.
Elyria, Ohio.—Church edifice, 8 p.m., May 6.
Florence, Ala.—Court house, 8 p.m., May 16.
Goshen, Ind.—The Jefferson opera house, 8 p.m., May 12.
Hamilton, Ohio.—Smith's theater, 3 p.m., May 11.
Idaho Falls, Idaho.—Scenic theater, 8 p.m., May 15.
Johnstown, Pa.—Nemo theater, 3 p.m., May 11.
Joliet, Ill.—Auditorium, 8 p.m., May 13.
Lockport, N. Y. (Second Church).—Temple theater, 3:30 p.m., May 18.
Los Angeles, Cal. (joint lecture).—Shrine auditorium, 3 p.m., May 11; Third Church edifice, 734 South Hope street, 8 p.m., May 12.
Milwaukee, Wis. (First Church).—Church edifice, Prospect avenue and Keene street, 8:15 p.m., May 12 and 13.
Moline, Ill.—Moline theater, 3:30 p.m., May 11.
Montesano, Wash.—Opera house, 8 p.m., May 8.
Mulberry, Kan.—Thompson's opera house, 3 p.m., May 11.
Orange, N. J.—Church edifice, 4 p.m., May 11, and 8:15 p.m., May 12.
Oshkosh, Wis.—The Century, 8:15 p.m., May 13.
Ottawa, Ill.—Church edifice, 8 p.m., May 12.
Portland, Ore. (Third Church).—Edifice First Church, Everett street, between 18th and 19th streets, 8 p.m., May 12.
Quincy, Ill.—Empire theater, 8 p.m., May 16.
St. Anthony, Idaho.—Opera house, 8 p.m., May 16.
Santa Monica, Cal.—Church edifice, Nevada avenue, between 2d and 3d streets, 8 p.m., May 11.
Seattle, Wash. (First Church).—The Hippodrome, Fifth avenue and University street, 2:30 p.m., May 11.
Swansea, Wales, England.—Albert hall, 8 p.m., May 5.
Waupun, Wis.—Davison theater, 8:15 p.m., May 9.
Waupaca, Wis.—Opera house, May 16.
Wausau, Wis.—Universalist church, corner McClellan and Fifth streets, May 15.

TESTIMONIES OF HEALING.

Christian Science has redeemed my life from destruction. Never will I forget the joy, peace, happiness, and freedom that took possession of my heart after I had read a few pages in the chapter on Prayer in "Science and Health with Key to the Scriptures" by Mrs. Eddy. For months after coming into this new sense of life I read little else, but studied the Bible until it became a new book to me in the light of Christian Science. Within a short time I was completely healed of a stomach and bowel complaint of years' standing. We have had clear, strong proofs of the healing power of Truth in our home, and nothing can take the place of Christian Science.

Our baby, now three years old, showed signs of an eruption on his face soon after he was born, and at first we paid little attention to it, thinking it would soon disappear; but instead it grew worse, until it spread over both sides of his face, and at times was very irritating, the child suffering greatly from it. We lived in a small town where there were no Scientists except ourselves, and many who saw the child would remark that it was a skin disease for which there was no cure. I was not so fearful as I would have been before we learned of Christian Science, for we knew that the trouble could be overcome as we became better acquainted with a God that does heal diseases. The baby was then six months old, and I wrote to a practitioner five hundred miles away to treat him. Help was gladly given, and in less than two weeks his face started to heal, and there was no irritation after the healing began. In a very short time he was completely healed, the little face being left clear, and there has never been a return of the disease.

Last winter our daughter had trouble with one eye. We noticed a white speck on it, which spread until the surface was completely covered and the sight almost gone, and the pain was so great that she kept it closed most of the time. Through the help of the practitioner, whom we had never seen, the eye was healed in about two months, leaving it as clear as it used to be and with perfect sight. In the face of such proofs, who can deny the all-power of God? Our daughter has also been healed through Christian Science of a bowel complaint in its worst form, which no material remedy known could reach, as we had tried many different physicians and everything that *materia medica* could offer, as well as taking her to Hot Springs, with no lasting benefit, but instead discouragement and heavy expenses.

The first time I visited a Christian Science practitioner my burden was heavy, and I was disheartened by my seeming load. I said to the lady that it seemed unjust of God to send afflictions on us; but she surely opened my eyes on that subject, and answered that God is Love, and that He sends only what is good to His children. From that moment I found myself loving God as I had never loved Him before, though I had been taught all my life that good comes from God, as well as evil, for some wise and unknown purpose. I then went on to express dislike for certain ones, as that was my sentiment for every one around me. The Scientist looked at me with the compassion of a true Christian and lovingly said, "My dear, if you cannot love those whom you have seen, how can you love God whom you have not seen?" I can hardly say just how I felt at that statement, for it struck me with full force and laid bare my faults as nothing else could do, and set me to work with myself.

As Mrs. Eddy says in "Miscellaneous Writings," "The warfare with one's self is grand" (p. 118), and with the study of the Bible and Science and Health, I too was born again and baptized of Spirit. While the pathway has not been without thorns, I know that it has been smoother than ever before, and many obstacles have been overcome and mountains laid low. When I wander into by-paths or stumble, the exact course to take is again made plain to me through the Bible and our Christian Science literature. We are indeed grateful to God for revealing these hidden truths to Mrs. Eddy, and especially grateful to her for her faithfulness when she stood alone with God.

MRS. ROSE GRUNEWALD, Noonan, N. Dak.

About four years ago I was healed of a very serious throat trouble through Christian Science. I had been examined by five physicians, four of them claiming that there were symptoms of tubercular disease. I was then placed under the treatment of one of the most noted throat specialists in the country, and remained there for a number of months, with very little benefit but at considerable expense. I could scarcely speak above a whisper, was greatly depressed both physically and mentally, and my life sentence was pronounced very short. Finally the physician told me that I would have to go to a higher altitude, as he could do nothing more for me. I, however, felt that there was something for me besides a change of climate, and it was at this time that a friend urged me to try Christian Science. I went to a practitioner and began taking treatment, not unbelieving, for I had heard of many remarkable cures through Christian Science, but I had very little understanding of the Principle of true living.

My improvement began with the first treatment, and while my healing was rather slow, I did not once feel the least sense of discouragement, for I was getting what I so much desired, and in six months I was perfectly well and strong. The actual expense during this time probably did not exceed fifty dollars. For years previous to this I was not strong, and had very little endurance, but now Christian Science meets my every need, and I cannot be too grateful for this inspiring truth, the truth that makes one free mentally and physically.

MRS. HULDAH L. E. ELLIOTT, Tacoma, Wash.

It is with sincere gratitude that I stand ready and willing to testify to the truth of the statement made by my wife. When apparently at the evening of her life, there came a message of divine Love which revealed the truth, and in this case where all material efforts had failed, we were led to try Christian Science with the results as stated.

GEORGE M. ELLIOTT, Tacoma, Wash.

[Translated from the German.]

I owe to Christian Science all that has made my life beautiful and happy, and to recount the physical benefits derived through the understanding of Truth would not be telling half of the blessings which it has brought me. When I attended a Wednesday evening meeting for the first time, I could not help feeling greatly impressed, especially by the silent prayer and the beautiful hymns which were sung. Besides being a physical sufferer at that time, I was burdened with the effects of a great sorrow, and in such a state of mental exhaustion that the apathy ensuing was a hindrance to mental effort. Life seemed to me absolutely dull and void, without purpose or aim. My religion afforded me no help, as it was not susceptible of practical application. I had sought after God's love, but had experienced only the stern unchangeableness of a crushing fate which seemed to be imposed upon me as a "trial," and yet I had honestly striven to be a good Christian.

All this was incomprehensible to me, and blind faith being an impossibility with me, I was at a loss as to how I should pray. I had no spiritual support and I daily struggled to force myself to continue living in this void. Finally, the only way to pray which seemed left, was that it might be given me to discern the truth. Christian Science then came once more. A Christian Scientist who called at the home where I lived at that time, read to me from "Science and Health with Key

Digitized by Google

to the Scriptures." At first I busied myself while she read, but soon dropped everything in order to listen, as what I heard meant deliverance for me. I was deeply stirred by the convincing power of this truth, and then experienced such a sense of joy that everything appeared to me in a new light. Many thoughts seemed to me surprisingly familiar and as if I had long yearned for them. The greatest comfort to me, however, was the fact that our material life and its experiences are no part of reality, but are the illusions of mortal mind, hence that no loss can really occur, and that God wills only good. The dawning recognition of God's infinite perfection and love brought me great peace of mind and inspired me with courage. I was filled with joy for having found the Christianity which heals the sick as did Christ Jesus, and when during those first wonderful days I began to understand that God does not know sin and never created disease, because He is Love and purity itself, a severe rheumatic trouble, with which I had been afflicted for twenty years at least, left me without treatment being given. About the same time I was also freed within a few days, through Christian Science treatment, of sleeplessness, which for a long time had been almost unbearable. Since early childhood I had hardly been one year without some severe illness, and had suffered in a great many ways; but I now enjoy good health and could tell of many instances of physical healing, one trouble after another disappearing as I have advanced in the understanding of the divine nature as the result of my study of the Bible in the light of Mrs. Eddy's writings and other Christian Science literature.

I experience the greatest happiness in knowing that divine Truth is ever available to us and enables us to demonstrate the unreality of all evil and disharmony. My life has since been filled with love, joy, and spiritual hope, such as I have not known before. I am deeply grateful to God for all the blessings of infinite Love.

FRÄULEIN PAULA STADLER, Königsberg, Germany.

Most gratefully do I attest the healing and transforming power of Truth. My early training and experience led me to that mental condition where I was a profound skeptic in matters religious; I found little in the old creeds to satisfy or strengthen, and the works of infidel writers were my constant companions. Physically, I saw scarcely a well day from childhood, erroneous conditions of thought resulting in continual suffering and various disorders of body and mind. Incidentally, I had become an inveterate user of tobacco.

Finally a good friend called my attention to Christian Science, but my distance from Truth was so great at the time that I was neither able to receive nor properly to comprehend its message. I, however, read Science and Health somewhat, and although I knew it not, the seed had been sown. After that, I occasionally received literature which also added to my slight understanding, but for the time being without apparent result. Then, in a city fifteen hundred miles from my home, where my work had called me, a great aggravation of symptoms, which was to me most alarming, took place. This condition literally forced me to the acceptance and understanding of that which was needed, simply another case of that extremity which is God's opportunity. After much hesitation, I went to a practitioner, and although most kindly received, I was in much doubt as to my restoration, as my troubles had seemingly been with me so long.

I felt no decided betterment until the second treatment. After receiving this, I went to my room, opened my traveling-bag, took out my copy of Science and Health, and also a box of cigars. With a cigar in one hand and the book in the other, I went to work, but to my great astonishment I found that the cigar had lost its power to please the appetite, and I threw it out of the window. I have never smoked since, neither have I felt any desire for tobacco; it had simply lost its assumed power. This was a most encouraging sign to me, and further treatment for a short time by the same practitioner, persistence in the study of Science, and an honest effort to put in practise all of good that I knew, have worked a transformation in me, both mentally and physically. I now enjoy health and strength such as I never knew before. The Bible, which for years I neglected and sought to deride, has become for me a new book, and read with the understanding which Science gives, I find it helpful in every situation which confronts me. For this understanding, which has been made possible through the loving labor of our Leader, I am indeed most grateful.

CLIFFORD S. MCINTYRE, Detroit, Mich.

I wish to express my sincere gratitude for a few of the many demonstrations which we have had since coming into Christian Science about three years ago. Recently our little girl, who is five years old, was healed of an acute attack of bowel trouble, accompanied by very severe pains in the abdomen, vomiting, throat trouble, and high fever. For two days she lay in what appeared to be a very serious condition, not being able to take any nourishment at all, even a teaspoonful of liquid causing great pain. I asked for help from a practitioner, and inside of a few days the conditions were overcome. After the tenth day the fever was broken, when she started to eat as formerly, and was soon up and at play. This to us was a very wonderful demonstration of God's allness.

I myself have been healed of a catarrhal condition of the stomach, an organic trouble, the wearing of glasses, and an ear trouble. For all of these I had taken treatment in *materia medica* off and on for several years, but had received no permanent benefit. My husband has been healed of appendicitis, for which two physicians had told him that it would be necessary at some time to have an operation performed. This was over three years ago, and he has never felt the need of an operation. We feel that no matter what the demand may be, God is always ready to take care of His own.

My daily prayer is, that I may so increase in knowledge that I may help others to know God as I am endeavoring to know Him, as a good and perfect God, who is always willing to help us out of our difficulties.

ANNA S. WEIDLER, Austin, Ill.

I would put on the garments of praise as I give thanks for the spiritual consciousness that has come to me through Christian Science. With seemingly everything to make me happy and contented in the way of human relations, and with a purse sufficient to meet every modest desire, I was yet as one alone in a strange land. I was living at that time in Portland, Ore., but had become so depressed that I had resigned my business connection in that city and made plans for a two-years outing on horseback, as I believed that an outdoor life held contentment and curative qualities for mind and body. A Christian Science friend, however, who had himself been greatly helped, counseled me to stay in Portland, saying it was unnecessary for me to sacrifice the best years of my business life searching for those treasures which must be found within. Immediately upon beginning to read Science and Health, I knew I had found the remedy for all that ailed me, the fountain of life and love, forever springing up from the infinite source. I drank thirstily, eagerly, day and night, from the revealed Word of God, and almost at once the desire for smoking dropped from me, never to return.

How happy I was now, that arrangements had been made for my departure, in the knowledge that I was free for a while from the thoughts of business! Time to study and ponder the Word of God seemed a blessed privilege indeed, and I made good use of it. Arriving at my destination, however, I found that my intended companions on the outing could not go; but so engrossed was I with the study and contemplation of this wonderful truth, that I was not dis-

Digitized by Google

appointed at all. In fact I was glad, for now I had two new companions, the Bible and Science and Health, and during two months these were diligently read, as was also the other Christian Science literature which I found at the reading-room. A few treatments from a practitioner rooted out the beliefs of a supposititious material creation, and I learned to look, as St. Paul declared we always should, "not at the things which are seen, but at the things which are not seen," and to understand that "to be spiritually minded is life and peace."

A telegram came from my former main office in Seattle, offering me a position, and I promptly wired my acceptance, for I had been fed bounteously with the Word of God and was ready to try the demonstration of its divine Principle, God, an ever-present help in time of trouble. My fiancée, who had also recently become interested in Christian Science, was at this time traveling in Europe, and upon her return we were married. Since that time we have joined The Mother Church, whose Board of Directors we lovingly support as those into whose hands our most dear and revered Leader in her far-seeing wisdom placed it. Many blessings are ours, and these are multiplied as we become more alert, more faithful in increasing the talents given us. Various physical ills, such as colds, throat trouble, accidents, rheumatism, and other bodily problems, have presented themselves in our family, but all have been overcome in Science with the aid of faithful practitioners.

Our two children have also been blessed by the law of Love. At the coming of our first child, the practitioner was called after dinner, and the Christian Science nurse came at nine o'clock. At half-past eleven the child was born and the household was soon asleep. In the morning the maid, who occupied the next room, was much surprised when informed that a daughter had arrived, which indicated the harmony attending this experience. The second demonstration was even more harmonious than the first, and this time my wife was out of doors on the fifth day. These children are healthy and happy, and we rejoice with them in breathing an atmosphere of truth and love, while our own vision grows clearer as we listen to the "still small voice" of Truth, and enter His courts with praise and thanksgiving.

W. R. COLBY, JR., Seattle, Wash.

[Translated from the German.]

I seem unable adequately to express my gratitude to God that through Mrs. Eddy's teaching it is possible for us to gain an understanding which enables us to rise above sin, disease, and their inharmonious conditions. Years ago I was very ill, and the physician advised me to submit to a dangerous operation; but through Christian Science treatment my health improved within a few weeks, and it thus became possible for me to attend to my household duties, and even to do some work at the sewing-machine. Three months later a healthy little girl was born to us. Our children have grown up in Science, and have learned from infancy to demonstrate the power of divine Love. We are in a position to apply the divine Principle in our daily life, and of this I had a beautiful proof some time ago, for our eldest daughter was about to take an examination which seemed difficult to her, and she was afraid that she would not do as well as her schoolmates. I explained to her that divine intelligence inspires those who seek its aid, and that God would help her. A few days later she came home radiant with joy, and told me that her paper was found to be the best in the whole class. The child herself is filled with joy to have learned how to overcome the sense of fear.

A few weeks ago she became afflicted with boils all over her body. The school physician, to whose examination she had to submit, finally declared that it was probably a nervous trouble. The boils caused much irritation and kept her from sleeping at night. After I had treated her for some time to the best of my knowledge, I felt that I could not cope with the case successfully, so we asked a practitioner for help, and it was wonderful to witness the quick destruction of the error. The child was able to sleep after the first night, and within a few days the trouble had completely disappeared, which made us very happy. Christian Science has become a comfort, a strength, and a blessing to me and my family.—LUISE MUTH, Dresden, Germany.

I am more grateful than words can express for the knowledge of God that I have gained through Christian Science. In taking up the study through the seemingly hopeless condition of one dear to me, not realizing that it was for myself as well as for another, I was overwhelmed with the knowledge that God is all-power, and this thought has been with me constantly in the three years I have been in Science, enabling me not only to help myself out of difficulties, but to help others. In the first reading of "Science and Health with Key to the Scriptures" by our beloved Leader, I was enabled to leave off the steel insoles I had worn in my shoes for five years. Severe headaches have also been entirely overcome and eye-glasses have been discarded; but the greatest blessing comes to me in "following Christ in the daily life" (Science and Health, p. 179), for we not only thus preach the gospel, but heal the sick, and free the sinner from his bondage, through God's power. The *Christian Science Sentinel, Journal,* and *Monitor* are food for the hungry, and with our Leader's writings and this Christian Science literature we can "feed the hungry, heal the heart," as Mrs. Eddy has said (Poems, p. 14).

MRS. FRANCESE C. LYON, Pasadena, Cal.

Four years ago I began to study Christian Science, but previous to that time I had read the *Sentinels* which a kind friend occasionally posted to me, a favor I much enjoyed and appreciated. I did not, however, feel very desirous to know more about the teaching, until I was asked to read "Science and Health with Key to the Scriptures" by Mrs. Eddy to one who was near and dear to me, and who was undergoing treatment at the time. Though the result of this treatment was not what we so much desired, *I felt* constrained to continue the reading of the text-book. I became so interested that I could not read anything else, and all other reading seemed empty and useless. I *loved the* book, for its teaching came to me just when I most needed help, and healed my sense of sorrow. Divine Love was my comforter, and I realized more than ever before that God is "a very present help in trouble."

Within the last two years I have been healed of an internal ailment from which I had suffered intense pain from childhood. I had consulted several doctors, one a London specialist, but none of them seemed able to help me, and the medicine they prescribed only appeared to aggravate the trouble. After studying Science and Health for some time, I decided to have treatment, with the happy result mentioned above. Words can never express my gratitude to God for this healing, and for the unspeakable joy and comfort which Christian Science has brought into my life; but most precious to me is the better understanding of divine Love, and the realization of God's ever-presence and power.

My heart goes out in love and gratitude to our Father-Mother God, also to Mrs. Eddy for showing us the way out of fear and bondage into the freedom of the truth.

MRS. PRISCILLA THOMSON, Great Ayton, Yorkshire, England.

I am writing to tell of my wonderful healing, through Christian Science, of gall-stone and kidney trouble, which was indeed remarkable, as heretofore in like circumstances I have had to make many trips to a watering-place supposed to be a cure for just such complaints, and where I had to spend weeks in order to be relieved. In this particular case

Digitized by Google

the healing came within three or four hours, after which time I was entirely well and at my place of business. For this demonstration in Christian Science I am most thankful, as well as for one in a business matter.

Since this healing I have had several beautiful demonstrations over troubles, all of which I am glad to say, were met promptly and with entire satisfaction. The more I know of this truth, the more I am convinced that God heals and hears when we depend on Him for guidance. My experience should convince any man of the power of Truth as made known in Christian Science.

W. A. SHARPE, Nashville, Tenn.

[Translated from the German.]

For four years I was a sufferer from gout, for which I tried every conceivable means and method of cure; but the physicians lost hope of my recovery, and I was afraid lest I should become paralyzed. I then became acquainted with Christian Science, and having never heard of its teachings before, I was enabled to approach the subject without prejudice. I immediately had Christian Science treatment, and my healing progressed slowly but steadily. Being quite versed in *materia medica,* I naturally experienced some difficulty in remodeling my thought along Christian Science lines, but my healing was complete. I recovered all my former strength, and am able to undertake walking tours of several hours' duration with my children, a thing I had been unable to do for a long time. I was also freed of chronic hoarseness, with which I had been troubled for three years. My three girls, who were ailing a good deal formerly, have been healthy and strong since we started to work according to the teachings of Christian Science. We constantly experience new blessings in our daily lives through this glorious teaching, and we are deeply grateful to God for having become partakers of His love and truth through the ministration of Mrs. Eddy.

FRAU HULDA FRICKART, Aarau, Switzerland.

In grateful acknowledgment to God I wish to add my testimony of healing through Christian Science of what my physician called intestinal and liver trouble, or chronic appendicitis, which trouble came on about the first of June, 1909. I had medical treatment continually from that time till about the first of December, under one of the best physicians of this city, but without any permanent relief, when a friend of mine advised me to try Christian Science. Acting on this advice, I engaged the services of a practitioner and read Science and Health diligently, and from the first there was a sense of relief. While my complete restoration to health was not gained for about two months, I can say that I now feel no trace of the trouble. I had despaired of ever getting well, and spent many sleepless, restless nights, and suffered so much pain that it was with difficulty I attended to my daily duties. I also wish to say that my healing came through absent treatment. I trust that some poor sufferer may be benefited by this testimonial and know that there is the same healing power with us today as when Christ Jesus healed all manner of diseases.

G. A. BECK, Richmond, Va.

In December, 1903, our daughter, then five years of age, was suddenly taken very ill. She was unconscious for some time, and for several days and nights we were kept in terrible suspense by our fears. She was either sleeping, so that we could scarcely arouse her, or suffering when awake. When hope of her recovery had almost fled, a telegram was sent during the afternoon to a Christian Science practitioner for treatment, and by evening there was a change for the better. After one week's treatment in Christian Science, the child was healed.

MRS. MINNIE CONARD, Mansfield, Ohio.

FROM OUR EXCHANGES.

[The Rt. Rev. William Lawrence, D.D., in *The Living Church.*]

The advance of the faith has seen a shifting of the battlefield in the last fifty years: massive redoubts of the past are falling before the enginery of modern warfare; the struggle is on a larger field and along more scientific and thoughtful plans of action. We all know something of the change: the rise of the scientific spirit, which seeks the truth, and which, while opening to us the glory of the universe, has changed our conception of God and man; the rise of the historic spirit, which has studied literature, even Biblical literature, as the geologist studies nature; the rise of industrialism, which has increased wealth, and by rapid transit has shrunken the world, caused the shifting and mixing of races, and has given millions on millions of people money to spend and little knowledge as to how to spend it. Even the faiths of religious races are in close competition, and the Christian ideals are in a hand-to-hand struggle in the centers of their power with Mohammedanism and Buddhism. Never in history has there been such a shaking of forces and an unsettling of conditions. The wonder is that the Christian church, which was largely supported by the logic and traditions of the past, has been able to hold its own, or, if you will, to prevent its retreat from becoming a disastrous rout. Blunders, pathetic efforts to hold untenable positions, tragic defeats of heroes of the faith, have been frequent, but the readjustments have been wonderful; and in spite of all superficial evidence I believe that the Christian church in this country stands as strong and as confident as it ever did in history. The fact that no change of base and no assault has touched the essential truths of the Christian faith has given immense confidence; the growing consciousness that Christ is the truth and that no truth can of itself be unchristian, kindles in every disciple of Christ an enthusiasm for the truth and an assurance that whatever temporary disasters may seem to come, Christ will emerge from every conflict for the truth.

Looking at it too from the industrial point of view, are we not at this very time rising from a situation in which men had, or seemed to have, supreme faith in the powers of mechanism and the results of competition, the increase of wealth and population? These were to make a great nation. Are we not now discovering that behind all these must stand the spiritual resources, men and women of character, of self-restraint, of purity, and of high ideals?

[The Rev. Frank C. Bruner as reported in *Chicago Inter Ocean.*]

They say that calamities are the providential dealings of our big-hearted Father in heaven with humanity. It is not that the awe of a cyclone may not prompt to greater watchfulness, but when the soul is in a reflective mood after such appalling catastrophes as the recent series of cyclones, in which He destroys the innocent, it embitters the heart when it gets the idea that God did it to discipline us. It is the most irrational thought possible to sensible thinkers. The heart unregenerated will cast the idea of an all-merciful God to the wind and shout with the mad, unredeemed wife of Job, "Curse God, and die." Ah, when we get the rubbish out of theology, tear down the narrow walls about God, find His heart in splendid broadness, when love like a shoreless sea beats its rhythmic sweetness on the shore of humanity, then the Adamic idea of the Holy One will die, and the new generation of the Christ, in which we all shall be made alive, will turn its endless love side to the world; then through the windows of God we shall see the uncurtained glory, we shall see His loving-kindness, hear him who has conquered the world and won it by the love of his cross,—say in tenderness: Having loved them who are in the world, I will love them to the end. The tragedy of a cyclone is not God's tragedy.

[The Rev. Canon Bannister in *The Christian Commonwealth.*]

Christianity is a life rather than a doctrine or a creed, and it is by the life alone that Christian principles are to be tested and judged; and they are the truest Christians who claim fellowship in Christ with every one whose life declares that he is holding out hands of faith, however lame, to the one God and Father of us all. Do you remember our Lord's parable of the good Samaritan? Have you ever thought how it must have sounded to those who first heard it? Think of him, in a haughty and exclusive church, in which he held no official position whatever, choosing as his pattern of goodness a member of a despised and hated sect of heretics. It is not the doctrine, what we think about God, but the love of God, and the will to do the will of God, which makes the Christian. The doctrine will come, in God's good time, to the individual as well as to the world, if the will is right with God. Provided only the love is there, our Lord, I think, would say impartially, alike of the Christian agnostic as of the most stalwart supporter of the Athanasian creed: His sins of unbelief or misbelief are all forgiven him, for he loveth much.

[*The Universalist Leader.*]

"I came . . . not to do mine own will, but the will of him that sent me," said Jesus. And "of myself I can do nothing" is the refrain of one who has come under the rule of the law of liberty. For herein lies his strength, not that his freedom is his own, but that it belongs to God. A world of free men in Jesus Christ would be a world of men as obedient as he was to the spiritual law under which he was born. It is in this mystery of the moral and spiritual law, unwritten but divine, in men's souls that we must look for the society of tomorrow. Out of our common identity as children of God must come our common sense of that one rule which is set over us. And he who has looked deeply into the soul of humanity, and has watched long by the path up which the world has climbed and is still climbing from tyranny, has no fear for the government, the civilization, and the social order which rest on the rock of the moral consciousness of humanity; for the law of liberty is the ultimate and final expression of an authority which is eternal, because it is the expression of our highest good and our heredity from God.

[Dean W. R. Sellis, M.A., D.D., in *The British Congregationalist.*]

Our modern religious temper is too subjective. Man is not saved by theories, nor will his own efforts ever compass for him the renewal that he needs. No plan of salvation is of the smallest use that leaves out of account the original activity of God. If it is by God's grace that we are what we are, then only grace will be sufficient to make us what we ought to be. The preacher is not in the pulpit to speculate on things in general, but to proclaim the word of the Lord. He must have heard for himself, in the secret place of his own life, that authoritative word in the life, death, and glorious resurrection of Jesus Christ, and so be able to say to men, "I know, and am persuaded." Any one can sit in the philosopher's chair and argue and surmise; but what the world wants and the church needs today is witnesses, men who have been there and faced facts and have a tale to tell.

[*The Congregationalist and Christian World.*]

The business of the church is to make real to its members that Christ lives with them and they with Christ. It must become a witnessing force in the earth to the effect and promise of the heavenly life which God has bestowed upon us. God wants us to live habitually on the high level of our best moments, a life that is shared in true and full fellowship with the risen Christ. That is God's claim—but we who are citizens of the kingdom should become alive to the heavenly life of our citizenship with Him, and with His family. Then our citizenship is in heaven, while one of the most useful Christians

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The Society has recently published a set of books, cards, and collection envelopes for the use of the Christian Science Sunday Schools, and they may be obtained at the following prices:—

Class Books—4¼ x 6¾ inches, manila covered, with spaces for one year's record of attendance: 12 copies, 75 cents; 100 copies, $3.50.

Registration Cards—3 x 5 inches, with spaces for name, address, and necessary information, one to be used for each pupil: 12 cards, 10 cents; 100 cards, 25 cents.

Collection Envelopes—4 x 6¼ inches, cloth lined, printed front, with space for class number and name of teacher: 12 envelopes, 50 cents; 100 envelopes, $4.00.

No orders are filled for less than 12 of one kind, and the dozen rate applies on any quantity from 12 to 100.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church.—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their pastors, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 105 Falmouth Street, Boston, Mass.

The annual per capita tax, of not less than one dollar, is due June 1, the beginning of the fiscal year of The Mother Church, and is reckoned from that date, whether the admission was in June or November. All remittances in excess of the amount due in accordance with the by-laws will be credited for the current year, unless otherwise specified by the sender.

Please do not send paper money through the mail, except by registered letter; a postal money order, made payable at the Boston postoffice, an express order, or a bank draft is preferable.

To facilitate the work of the Treasurer, please advise him promptly of any change of name or address. No charge is made for this service.

Digitized by Google

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book); single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Entered at Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Governor Tener of Pennsylvania has approved the bill recently passed by the Legislature providing for county systems of pensions for mothers under the administration of a commission of from five to seven women to be named by the Governor for each county availing itself of the provisions of the law. The trustees are to investigate all cases and may recommend payments to any abandoned mother or widow who is unable to maintain her children at home. Payments are to be made monthly, and the combined maximum payment shall not exceed twelve dollars a month for one child, twenty dollars a month for two children, twenty-five dollars a month for three children, and five dollars a month for each additional child. For the purposes of the law an appropriation of two hundred thousand dollars is made. The mothers' pension system has been put in operation in four states and has been advocated by many organizations of Pennsylvania men and women.

Land stipulated to be worth thirty million dollars, and estimated by experts to have a value of between forty and sixty million dollars, has been ordered by the United States district court to be taken from the Southern Pacific Railroad Company and returned to the federal government. The Oregon-California land grant case, involving more than two million three hundred thousand acres, will be carried to the circuit court of appeals sitting at San Francisco, and later to the United States Supreme Court for final adjudication. The case was instituted in 1908. Early in its history about sixty private suits were filed for men induced to locate the lands. The main case, demanding forfeiture of two million three hundred thousand acres remaining unsold, were then filed.

British Ambassador Bryce, on the 25th ult., laid down the office he has held at Washington more than six years, and left for New York to begin his trip home. In New York he said his farewell to the United States at a dinner of the Pilgrims Society. He and Mrs. Bryce will go overland to San Francisco to sail for Yokohama, touching at Honolulu. They will spend some time in China and Japan, where Mr. Bryce will study the evolution of the new Chinese republic, and then proceed to London by way of Siberia.

An appropriation of one million dollars for a national archives building in the District of Columbia for the orderly storage of public documents is contemplated in a bill introduced in the House of Representatives. The bill asks for five thousand dollars for investigation and presentation of plans and estimates for the building. It provides that the building shall be of library construction, have a capacity of one million five hundred thousand cubic feet, and be so built that its capacity can be increased to four million cubic feet.

A voluminous petition containing tens of thousands of signatures has been submitted to the Post-office Department protesting against Sunday closing of post-offices to "the transient population of the United States." It was urged by the petitioners, in behalf of "commercial travelers, those engaged in theatrical pursuits, and others whose business interests make it compulsory for them to travel, that special provisions be made by the Post-office Department for the delivery of mail on Sunday."

Last year the Massachusetts forestry department maintained seventeen fire lookout towers at different points in the state, and it expects before the end of the present year to have twenty-five. Many fires are prevented from spreading because of timely discovery from these high places, all of which are equipped for locating the fires and reporting them to the proper authorities. Thus far this season, about six hundred forest fires have been reported through them.

In a decision of momentous importance, especially as to railroads, the Supreme Court of the United States lays down the general principle that a creditor of a corporation not a party to its organization may hold its successor for his debt. It is regarded as a direct blow at the practise of reorganizing corporations to get rid of onerous contracts or to escape payment to unsecured creditors. Its effects will be far-reaching.

Three billion dollars for new roads and their maintenance, the same to be raised by national and state cooperation, is the proposal submitted to the joint congressional committee on federal aid in the construction of post roads. One billion would be used for construction and two billion for maintenance, both extending over a period of fifty years.

Widows and other relatives of deceased bankrupts won a victory last week in the United States Supreme Court, which held that only the cash surrender value of insurance policies goes to the trustees in bankruptcy for creditors, and the remainder to the widows or other relatives of bankrupts.

A currency reform bill, representing the views of President Wilson on what is needed to place the monetary system of the United States on a solid basis, will soon make its appearance in Congress in a concrete form.

It is reported that an American banking firm is carrying on negotiations with Chinese authorities for a loan of twenty-five million dollars, which may eventually be increased to five times that amount.

Secretary Daniels of the navy department has abandoned the scheme of placing college students on board battleships of the Atlantic fleet this summer.

International.

One of the fond hopes of the people of Panama is about to be realized in the building of a dock for the landing of passengers and baggage in the bay of Panama. Its cost is to be not less than fifty thousand dollars United States currency. Passengers now are carried to the steamers in small boats, paying for themselves and their baggage according to the distance the boat is from shore, often as much as one dollar United States currency for one passenger and a very small trunk. At present all freight is lightered.

The strike in Belgium for equal man-suffrage has ended in most of the industrial towns of the provinces. A good many insurgent miners at first refused to descend the coal pits, notwithstanding the orders of the National Socialist Congress. Competent economists reckon the money loss caused by the strike at twenty million dollars, which the Socialist leaders declare to have been well lost if the country has thereby won equal suffrage.

News from Hankow tells of the official burning of a large quantity of opium, implements, lamps, and paraphernalia for the preparing of the drug, to the total value of ten thousand taels. These burnings are carried out once a month, and a different space is selected for each fire. The opium and utensils on this occasion were wholly confiscated from smokers, and the smokers themselves were either fined or imprisoned.

The protest of the Socialists against the increased armament policy is being expressed in every part of Germany. Crowded meetings to the number of twenty are reported from Hamburg and its neighborhood, and in Leipzig seven have been held quite recently. At all these meetings an identical resolution was passed in condemnation of the "armament madness."

Thomas Gainsborough's painting, "The Market Cart," was sold by auction in London recently for one hundred thousand eight hundred dollars, a record price for a Gainsborough picture. The previous best price for one of his works was sixty-three thousand dollars.

Considerable activity is being exhibited in northeastern India in taking preliminary steps for the establishment of railway systems destined not only to connect Burma with India but also to link India with China.

Postmaster-General Samuel, in presenting the annual post-office budget in the British House of Commons, declared himself in favor of universal penny postage.

Industrial and Commercial.

The use of ramie among the textiles has made considerable progress during the past ten years, and new purposes for its use are appearing with frequency, says *Dry Goods Guide*. The fiber is noted for its luster, almost equaling that of silk, also for adaptability for spinning into yarns. It possesses the property of resisting damage from moisture and damp, has been used in the manufacture of knit goods, and within a few years has made considerable progress in lines of dress fabrics, tapestries, curtains, plushes, velvet, etc., while experiments are now going on in the way of table linens, sewing threads, curtains, towelings, coverings for furniture, sheetings, canvas for ships' sails, and tents. Fishing lines may be made from it, and nets, fire and other hose, motor tire canvas, twines, and bands. It is a better base for weather-proof and rubber goods than cotton, as it bears without injury the high temperature at which rubber is vulcanized. When mixed with wool it can be used for tweeds, and in hosiery manufacturing prevents shrinkage of the fabric. Recent experiments show that when mixed with silk it presents a fabric that appears to be silk, and bears a consistency of texture that makes it ideal for dresses for women and for summer suits for men.

The new Woolworth building in New York city was opened last week. It is next to the tallest structure in the world, the Eiffel tower in Paris being the tallest, and it cost over seven million five hundred thousand dollars. It measures seven hundred and ninety-three feet from the street level to the top of the cupola, has fifty-five stories, and overtops the Singer building by thirteen stories, while it contains more than twenty thousand tons of steel girders, thirty-six elevators, and thirteen million two hundred thousand cubic feet of space.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

DIFFERING POINTS OF VIEW.

HON. CLARENCE A. BUSKIRK.

WHEN one finds that another is entertaining a belief which differs radically and yet honestly from his own, and that one deems it worth while to consider the reasons for the difference, it is useful to compare the points of view. In this way we may be enabled to help another, as well as not infrequently to help ourselves.

When those who have been benefited in Christian Science relate their experience, they may meet unkind criticism at times, just because the view-point of their critics is different from their own. I recall that I was once describing to an acquaintance, who was a physician (and withal a bigoted materialist, according to my point of view), a then recent experience. I related to him that I had been traveling for several weeks in two of the Gulf states where there is a wide-spread belief that people coming from a more northern latitude are quite liable to be attacked by a so-called "break-bone fever" which is too frequently fatal, and how I had been delivered from an attack of it, through the ministry of Christian Science, in three or four hours, although the prevailing belief is that one is very fortunate if he recovers in as many weeks. He listened rather incredulously from the beginning. I explained, in answer to his questions, as best I was able, that the students of Christian Science do not believe that there is anything contrary to the law of man's being in such a recovery as I had experienced, but, on the contrary, that such a deliverance from sickness, as well as from a belief in sin, is according to God's universal and eternal law. But I observed that his point of view was so stubbornly materialistic that it closed his ears to any concept of the all-power and all-presence of divine Principle; and so long as this point of view remained substantially unchanged, it is probable that all conflicting facts and evidence were rejected by him simply because they were contrary to his established habits of thought.

There seems to be a world-wide belief in the inevitable probability of a considerable percentage of railroad accidents, and that these include an inevitable percentage of fatalities. During the last eight years the writer has traveled tens of thousands of miles on railroad trains, and been in several derailments, more or less serious, but he is grateful to be able to state that no one was injured in any of them. There is much evidence in proof that students of Christian Science travel far more safely than others, and that they gain a mental equipoise which is very much to be desired. Those whose point of view is different in respect to what man is governed by, would probably declare that my deliverance in two derailments, where the coaches were badly wrecked, was a mere coincidence; the view-point of the Christian Scientist is radically theistic, and coincides with the point of view of the writer of the ninety-first psalm.

When we need to consider the beliefs of others, in order to try to rectify them and their more or less pernicious effects, it is useful to study their basic point of view, and thus increase our appreciation of that which we have gained in Christian Science. In broadening and deepening our own point of view, the better to comprehend with more loving sympathy what we regard as the erring beliefs and view-points of others, it is well for us to remember the case of Lord Eldon. He was one of the greatest chancellors in English history; but he became so habituated to taking into sympathetic consideration both sides of the issues which came before him for decision, that after a time he found himself becoming altogether too unwilling to stop weighing the questions involved and thus to arrive at final opinions. In Christian Science, however, we learn what it means to judge "righteous judgment," at the same time remembering the Master's admonition: "Agree with thine adversary quickly." We also find that we can comply with both of these requirements with less and less difficulty as we are "looking away from matter to Mind as the cause of every effect" (Science and Health, p. 268). Thus doing, we are able to bring harmony into our own lives as well as into the lives of others.

DETECTING THE COUNTERFEIT.

LUCY HAYS EASTMAN.

EVER since the fruit from the "tree of knowledge" was first eaten, the world has taken upon its shoulders the responsibility of designating the right and wrong of human belief. It has never had a given standard whereby to assume such authority, however, and so, until awakened to spiritual understanding, humanity is left groping in the dark for a knowledge of Truth, the absolute good. Moreover, the fact has been entirely overlooked that right must necessarily proceed from obedience to Principle, no less certainly than the determination of an eclipse proceeds from conformity to law. Too frequently the interpretations of the Bible have been determined by the dictates of personal opinion, and they have thus misled the many. Under the direction of such influences, though every human being were to succeed in living his highest sense of right, evil would still exist as a belief in human consciousness, because each individual's concept of right differs from his neighbor's in the degree that unlike experiences, environments, teachings, and temperaments have in each case located the point of view. For example, one man believes it is wrong to work on the Sabbath day; another declares, "The better the day the better the deed;" while still another insists that every day should be Sunday. These conflicting concepts of the same day are externalized in conflicting experiences which are termed right or wrong according to individual belief; and a belief, let us remember, is never to be relied on until its truth has been demonstrated.

The mathematician can never be correct if he deviates in the slightest degree from mathematical rule; neither can he, if he ignorantly makes a mistake, no matter how accurate his work may appear to him, ever gain a satisfactory result until he perceives and corrects the error. He cannot believe whatever he may like about mathematics, and cause this science to coincide with his personal views or theories.

Digitized by Google

On the contrary, he must let go of opinionated thought, and bring his understanding into parallelism with an established law. Righteousness is just as demonstrable as mathematics, but to be right, one's thought and actions must conform to the requirements of Principle. We need to find this out and replace our ignorant or dogmatic sense of moral rectitude with an obedient understanding of spiritual law, or else, no matter how sincere and honest our motives, we may, forsooth, awake to find ourselves radically wrong. Jesus said that the Holy Ghost would come to reprove the world of (its sense of) righteousness. In ignorance of these demonstrable rules of Christianity the good man often pays the penalty of unconsciously breaking spiritual law, even as a child who, in ignorance of chemical law, plays with a match and suffers the sad consequence. Furthermore, because of such unenlightened thought the most conscientious natures often struggle against fear and indecision lest they should err when they would do right. Did humanity but understand the laws of absolute good, it would realize the unreality of evil, whatever the phase it assumes, and fear it not.

Relatively speaking, the lack of a scientific understanding of good is as dangerous to the Christian as to the unchristian, for the false belief in evil would transform itself into what the apostle Paul called "an angel of light," and take advantage of such ignorance by making a good man sin without knowing it. Error often appears clothed in the garb of good, and the well-meaning are sometimes caught in the trap and led to believe wrong to be right. This phase of error is set forth by St. Paul when he says: "What I would, that do I not; but what I hate, that do I. If then I do that which I would not, I consent unto the law that it is good . . . for to will is present with me; but how to perform that which is good I find not." In olden times this same form of error appeared as the champion of honor, courage, yea, even love, and succeeded in inducing the supposedly God-loving Christian to kill his brother man in duel. To-day it more subtly winds its illusive way in and out among the reeds of personal attachment, self-love, and self-justification, intimating that it would be an act of loyalty and love to cover up wrong, even at the expense of falsehood, and thus accumulating and disseminating a deceiving sense of good. Even now it is bartering with mortals in the name of protection and health for legislative authority, that individuals may unconsciously be deprived of their freedom in the selection of healing agencies. Thus would humanity be enticed to place life in the care of mortals who are declaring the inevitableness of death, even while they seek to cure.

Looking further at the mirage of evil belief, we find it often appears as "an angel of light" in that type of human nature which yields up its own individuality, to be voluntarily owned and dominated by whatever gods it may adore, and how often is this mistaken for meek obedience and unselfishness! Though presenting a sharp contrast to the self-will and cruelty of a domineering temperament, this parasitic type is just as radically wrong, for both would make one person dependent upon another, and would exclude from human comprehension the supremacy of God, good. Plastic and easily molded, this fetch-and-carry type, when uncontrolled by spiritual law, is readily shapen into whatever forms the enemy of goodness desires, sometimes making even unselfish motives serve the purposes of error. Thus does evil seem to be trying to enslave, cheat, and deceive even the best of mankind in the name of good. But oh, ye strangers and pilgrims, ye who are striving after righteousness, rejoice! for in seeking Truth ye shall find that this falsity is to be feared not at all. She who drew so close to God as to discover the divine Principle of being, has demonstrated that the right understanding of God, of His nature and nearness, saves mankind from every form of mistaken belief in evil, including the belief that mind is subject to matter. We have a splendid example of this in St. Paul's conversion. The impersonal hatred of truth had led this good man to believe it was right to persecute and kill the Christians, yet he was too true at heart to be so deceived for long; and when his eyes were opened to perceive his mistake, this phase of error could control him no more. Does not this prove the truth of Mrs. Eddy's statement (Miscellaneous Writings, p. 355), "Error found out is two thirds destroyed, and the last third pierces itself"? Manifestly, neither a negative right nor a positive wrong is either real or true, no matter how much it is supposed to be right. Hence, in order to overcome the fictitious claims of evil it is only necessary to recognize their unreality.

Through the teaching of Christian Science we learn that "the nothingness of error is in proportion to its wickedness" (Science and Health, p. 569). Though often seeming to be "an angel of light," evil is but the supposititious opposite of good, typified by Gabriel, who ministers love, while in the guise of personal leadership it becomes a delusive counterfeit of Michael, the angel whose character is spiritual strength, and who "leads the hosts of heaven against the power of sin, Satan, and fights the holy wars" (p. 566). Those who by the aid of spiritual strength and divine Love are causing mortal beliefs to give place in consciousness to metaphysical truths, need fear no evil, for as we are told, when "there was war in heaven: Michael and his angels fought against the dragon; and the dragon fought and his angels, and prevailed not; neither was their place found any more in heaven."

REFUGE.

WILLIAM THORNTON BROCKLEBANK.

A VERY helpful lesson was brought to the writer from a visit to what is known as Holy Island, the home of St. Cuthbert, the beloved father of the faithful, in the early days of Christianity in England. In order to visit *this* island, one has to cross the channel which divides *it from* the mainland. This is passable on foot twice daily, at ebb-tide; and legends tell us that this was one of the miracles of the great saint, which enabled pilgrims to be present at services in the church. The pilgrims were sometimes beset with perils from the waters being driven in sooner than was expected by the strong winds from the sea; and in order to escape danger from these, places of refuge were erected at intervals across the channel, where those in peril could mount by means of stairs and wait until the waters subsided. On these places of refuge are inscribed passages from the Scriptures to encourage the pilgrim.

The writer well remembers a visit to Holy Island, when the day was stormy and the sky gray; and although there were no perils from the sea, yet mentally the passage from sense to Soul seemed stormy, as he was then a pilgrim and a stranger approaching the land of Christian Science, struggling with old-time faiths and those who adhered to them. This was his mood when a place of refuge with its comforting and assuring message gave him rest above the sea of error, for, directly in front of him, in the place of refuge, were written these words of the Master, "Fear not, little flock; for it is your Father's good pleasure to give you the kingdom."

These inspiring words have ofttimes proved a place of refuge when the way seemed dark and stormy and the perils great and near. The psalmist tells us that "God is our refuge and strength, a very present help in trouble." When we are in trouble, we naturally seek help, also a place of refuge, and our realization of this is through prayer. When prayer is answered through spiritual understanding, then we are in the place of refuge, the kingdom our Father has given us, which we come to understand through the spiritual interpretation of the Lord's Prayer (Science and

Digitized by Google

Health, pp. 16, 17). The only true place of safety is outlined in our Leader's beautiful hymn (Poems, p. 4),—

Love is our refuge; only with mine eye
Can I behold the snare, the pit, the fall:
His habitation high is here, and nigh,
His arm encircles me, and mine, and all.

JUSTIFICATION.

IRA W. PACKARD.

CHRISTIAN SCIENCE teaches that in order to comprehend God aright, and to understand our divine sonship, our eternal unity with God, thought must be freed from false trusts and the erroneous conclusions resulting therefrom. One of the most subtle of these malconclusions is the belief of a material past, the belief that we have been mortal, and have had in the past material experiences which were realities. While this error remains undestroyed or unrebuked in our thought, it binds us with mental shackles to the conclusion that we have a debt to pay for past offenses, physical or moral; thus we labor under the blighting influence of fear and self-condemnation,—the procuring causes of sickness and death.

A number of years ago, a Christian Science practitioner had as a patient a civil war veteran, who was suffering from a wound received in the war. The case not yielding to treatment, Mrs. Eddy was asked what she thought the error could be that prevented the healing; she replied in effect, that the practitioner as well as the patient believed there had once been a war, and regarded it as a link in the man's history. How many of us have freed our thought entirely from the belief that error, evil, has had a history? We are told that Christ came to destroy the works of the devil, and in order to demonstrate the truth for ourselves and others, it is absolutely necessary that thought be relieved from this incubus, this belief in a material past, for so long as it remains we are yielding assent to error's claim that we possess a life separate from God.

If Life is God, as the Bible and Christian Science teaches, then belief in existence apart from God is an illusion, is not real and never has been real; it is the Adam-dream to be overcome, proved unreal, in the way that Jesus showed us, and this can never be done surely, so long as we admit its reality, either past or present. The belief in material conception, birth, growth, maturity, never was in Mind, never was man or man's belief; it is and always has been nothing but a self-constituted falsity, as Jesus defined it when he said: "Ye are of your father the devil, and the lusts of your father ye will do. He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." Our Leader says: "Because man is the reflection of his Maker, he is not subject to birth, growth, maturity, decay. These mortal dreams are of human origin, not divine" (Science and Health, p. 305).

Of what a load we can be relieved when we understand that, in truth, there is no evil past to torment and nag us by its memory. Thus the belief of heredity is blotted out, the belief in prenatal influence, and the belief that man, God's idea, has ever been the slave or servant of sin. We can also find escape from the conscious or unconscious belief that we are under any "parental verdict," "doctor's verdict," or human sentence of any kind; that we have ever been injured by malpractise, either physical or mental; that we have broken a physical law in the past, and must suffer the consequences thereof. In the light of Truth, all of these claims are seen to be false, no part of true existence, for "if any man be in Christ [the spiritual idea of being], he is a new creature: old things are passed away;" because these things never were. Many Bible texts can be cited in illustration: "I have blotted out, as a thick cloud, thy transgressions, and, as a cloud, thy sins." "And their sins and their iniquities will I remember no more." "Thou wilt cast all their sins into the depths of the sea."

From the scientific standpoint that "now are we the sons of God," and consequently ever have been, we can understandingly combat and overcome all the assertions of the false belief called evil. In criminal law, if a man charged with an offense can prove an alibi, he is at once acquitted; for it is self-evident that no one can be in two different places at the same time. So let us through spiritual understanding establish our alibi: let us know that we were not there when the alleged offense was committed; we were in God, and ever have been, for "in him we live, and move, and have our being." To be free from mortal beliefs we should make no false mental admissions; we must concede to error no more reality in the so-called past than in the present, for as a man "thinketh in his heart, so is he."

We must know that a false belief, or false claim, never was our belief or our claim, but was simply one of evil's lies about man; and this lie has never affected man in the least, or changed the fact about man, any more than a lie about the multiplication table has affected its immutable truth. Both man and Science are coexistent and coeternal with God. All of God's ideas are perfect and indestructible. The Adam-dream of material existence has no God, no creator, no divine Principle; it is no ego; therefore let us cease to identify ourselves with it, in the past as well as in the present; but let us identify ourselves with the real man, God's man, and from this Christ view-point all the claims of evil will be seen to be falsities. The Saviour, who knew man's possibilities, said, "Be ye therefore perfect, even as your Father which is in heaven is perfect." Not by doctoring the so-called mortal man can we be saved, but by overcoming the belief that we are or ever have been mortal. The promise is: "To him that overcometh will I grant to sit with me in my throne, even as I also overcame, and am set down with my Father in his throne."

EXACTNESS NOT EXACTION.

J. LILIAN VANDEVERE.

"I AM so thankful that as we grow in the understanding of Christian Science we become more exact."

"Yes, but not exacting," said the friend with a smile.

The first speaker thought a moment, then admitted, "I believe I see your distinction. I'll think it over till it is more clear."

Careful consideration of the idea presented brought a very definite realization of the individual nature of progress. Thought aroused by Christian Science is alert to discover bold or subtle evil which would retard the redemptive process. Our standards become more loftily inflexible, and in our enthusiasm we would fain act as our brother's pilot, would make our opinions the light for his path. The fact that we have proved somewhat of the law of being to our own satisfaction does not, however, give us the slightest authority to interpret that law for another unless he seeks our help. When we see how wonderfully our problems are solved by an adherence to Principle, we are naturally more assiduous in our guard over thought, word, and deed; but no misdirection of this worthy animus should carry us to the "seat of the scornful," there to sit and criticize a brother's course. We cannot exact of him an obedience to law for which he is not ready. He himself must realize how far he strays, and take the necessary steps back to the narrow way.

Let those who cherish so-called individuality and personal freedom have no hesitation in entering upon the study of Christian Science. It is not a limited personal "say so" which they are called to follow, but what the poet has defined as

The working of the law whence springs
The rhythmic harmony of things.

Digitized by Google

No joy exceeds that of working with a certainty of rule, and a corresponding certainty of result. All trade standards—the spirit-level, the square, the tape line—show forth a universal need of that which, beyond and above human judgment, can be depended on to remain true and lead to scientific results; and if the arts and trades demand an unvarying standard, how much more the greatest of all arts, the art of living! This Christ Jesus gave us in his life and works, and this Mrs. Eddy has made the more intelligible to human understanding in Science and Health. As she has said, "The perfection of the rule of Christian Science is what constitutes its utility" (Miscellaneous Writings, p. 233). This rule is our guide, and its absolute exactness abides forever.

As we begin to shape endeavor along the undeviating lines of Principle, we become more and more exact; nevertheless the mother grows more loving, the teacher more inspiring, the practitioner more patient. A sweet humility invariably develops as we respond readily and lovingly to the exactions of the ideal, and the sword of criticism is beaten into the plowshare of self-examination.

ACCURACY.

DAISY CYNTHIA WOOD.

ACCURACY is a demand of Truth, and Truth demands obedience; hence, to be truly obedient one must be accurate. Faithful obedience to the demands of God enabled our Leader to give to the world accurate, because inspired, statements of truth. When one less inspired attempts to quote or read these statements, and is unmindful of obedient accuracy in so doing, it must result in a loss, to some degree, of the positive healing power of the word of Truth. Egotism, satisfied with its own attainment of knowledge, blinds its victim, and breeds careless, slipshod expression. Obedient accuracy is demonstrated only when self-immolation displaces self-satisfaction; then the truth stands forth in all its impressiveness.

Obedience awakens thought to perceive with the "seeing eye" and the "hearing ear." This quickened sense readily detects inaccuracies, and when these are corrected and replaced by the exact truth, the native power and effectiveness of the word is brought to bear. Healing by means of argument requires accurate statements of truth, whether expressed audibly or silently. Otherwise, thought is blurred and confused, and the results may be only such as Mrs. Eddy describes in "Miscellaneous Writings," "chronic recovery," instead of "instantaneous cure" (p. 355).

Readers in our churches need to strive assiduously for accuracy. An inaccurate rendition of a paragraph, omitting a phrase, supplying a "the" or an "and" where it does not exist, incorrect or indistinct articulation or accentuation, interdicts or weakens the efficacy of the absolute truth contained therein. Take, for instance, the matter of inaccuracy in giving expression to the "scientific statement of being" (Science and Health, p. 468). This inspired message of our Leader epitomizes the Christian Science method of healing and regeneration for all mankind; hence, its correct rendition is of the highest importance. Nevertheless, one frequently hears the words, "for God is All-in-all," read with a supreme emphasis upon the "in," when in fact the hyphenated All-in-all indicates simply a supreme sense of All. Accentuating the "in," unwittingly leads the uninstructed thought into byways of pantheism, and leaves a subtle impression that God, infinite Mind, can sometimes be in something,—some finite sense. This is a direct contradiction of the premise, "All is infinite Mind and its infinite manifestation," and amounts to a positive untruth. Science and Health defines the word "in" as a "term obsolete in Science if used with reference to Spirit, or Deity" (p. 588). Truth demands of each one of us the "seeing eye" and the "hearing ear" which result in obedient accuracy.

RIGHT CONSCIOUSNESS.

A. E. JENKINS.

WHEN we first begin to work in Christian Science, we find a task confronting us which requires unbounded patience and persistence, the task of replacing the slovenly, illogical, confused, sinful thoughts and thinking processes of the carnal mind, by the orderly, logical, right thinking of divine Mind. When we begin to be interested in Christian Science, we read the inspiring statements of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and we are flooded with a sense of joy and peace. Then we learn that this mental condition, though natural and constant *in the* real man, has to be demonstrated gradually by *mankind*. Little by little we begin to challenge mortal mind's thought processes, gaging them by the standard which Christian Science has given us, the activities of divine Mind, with which we day by day become more familiar through a study of the Bible in the light which Christian Science throws upon it.

The task which confronts us is not a discouraging one, for we are not trying to change the mortal mentality from evil to good, which is an impossible feat; we are only taking possession of man's true mentality. Mortal mind is composed wholly of erroneous thoughts and thought processes which can never be improved, but which must be gradually replaced by true thoughts and thought processes. In the eighth chapter of Paul's epistle to the Romans, we read that the carnal or mortal mind "is enmity against God: for it is not subject to the law of God, neither indeed can be;" but as we cast out the evil thoughts, replace the counterfeit by the real, then true thoughts take control of the situation and bring into subjection the false thoughts of sin, sickness, and death which may still seem to be in evidence, and our mental habitation begins to be better regulated.

For example: Suppose we get up in the morning with a confused and discouraged sense of a crowded day ahead. If we have begun to be alert and on our guard, we look that state of consciousness squarely in the face and measure it by our new standard of right thinking. Knowing that the thinking of the one divine Mind results always in harmony, order, joy, and peace, we see at once that this disorderly, unhappy thinking is not, scientifically speaking, thinking at all: it is illegitimate, and we begin to replace it. According to Christian Science, day stands for unfoldment (Science and Health, p. 584). Then when we wake to a new day, we are at the standpoint of unfoldment, the unfoldment of God, Love, Truth, Life, and its harmonious activity.

This, then, is truly our day's work, to learn more of God. It is a process of eternity, not time; hence there should be no sense of hurry or pressure about our work. We know that man expresses God, omnipotence. He then manifests strength and power to go about his Father's business, and whatever comes to his hand to be done is his Father's business. Nothing is too difficult for him, for his capacity to do is in proportion to his task. In reflecting intelligence, omniscience, he goes wisely about it. In manifesting infinite Love, he makes his work a blessing to mankind. Before the confident, intelligent declaration of such truths as these, a sense of confusion or discouragement goes out.

If each day, each hour, we are at work replacing thoughts of sensuality, weakness, hatred, and sickness with the truth of real being, we shall at last find that every trace of mortal mind has disappeared, and that man's consciousness is eternally godlike, joyous, serene, active, loving, living. This is the consciousness of which it can be said, in our Leader's words, "To infinite, ever-present Love, all is Love, and there is no error, no sin, sickness, nor death" (Science and Health, p. 567).

SELECTED ARTICLES.

[Frederick Dixon in *Woodford Times*, Woodford, England.]

The critic made use in his first letter of two specific arguments: the antagonism of Christian Scientists to doctors, and their insistence on the unreality of evil and matter. I replied that Christian Scientists never attack doctors, but that the abuse of Christian Scientists by doctors was certainly a thing to be regretted. I also explained what I regarded as the unsoundness of his argument on the second point. He now says that Christian Science is antagonistic to medicine. Of course it is, but he surely did not write to the papers to tell the world that. Allopathy is antagonistic to homeopathy, and homeopathy to allopathy; conservatism is antagonistic to liberalism, and liberalism to conservatism. Materialism is antagonistic to idealism, and idealism to materialism. No one, however, thinks the worse of any of their exponents for this. When this critic embarks on giving chapter and verse for his statements, the barrenness of his polemical land is exposed in a moment. He is forced to be satisfied with two harmless generalities. In the first, Mrs. Eddy says that "the hosts of Æsculapius are flooding the world with diseases, because they are ignorant that the human mind and body are myths" (Science and Health, p. 150). This is very much like what, to give a single example, the Liberal press and Liberal speakers say about once a day, when they talk of the Conservatives as "the stupid party," or what the Conservatives say about every hour, in declaring that the Liberals are destroying the constitution. The critic's second instance is even more singularly unfortunate. It is taken from an allegory in Science and Health, and refers not even to people generally, but to *materia medica*. One trembles to think what he might have to say about Bunyan if he were to write a criticism of "Pilgrim's Progress."

If the critic wrote his original letter merely to point out that he regretted that Christian Science dissented utterly from the ordinary practise of medicine, I can only say that such was not my impression, nor, I think, is it the impression of your readers. I am sure it was not the impression of one of them who is not a Christian Scientist, but who drew my attention to the letter and proposed that I should reply to it. What, I am convinced, the ordinary reader would have understood, is just what I pointed out, namely, that Christian Scientists were in the habit of indulging in unseemly attacks on doctors, which they never are. As everybody knows, however, doctors are perpetually indulging in the most violent attacks on the intelligence and morality of Christian Scientists.

Now, leaving the critic's first and personal argument, may I come to his second and metaphysical one? He begins by taking exception to my reference to the philosophers. He intimates broadly that philosophy and Christianity have nothing to do with each other. I think, if he will forgive me for saying so, he is getting a little out of his depth. The father of realism in England was one of the greatest of primates, Archbishop Anselm. The opponent of Abélard was Bernard of Clairvaux, most famous of Cistercians. Whatever was medieval scholasticism if it was not the very language of the church? and I suppose the critic will not argue that scholasticism was not philosophic. It taught, for instance, evolution centuries before Darwin, as he will find if he will read St. Thomas' "Contra Gentiles." Why, the schoolmen were churchmen to a man. Peter Lombard was bishop of Paris; Aquinas and Albertus Magnus were Dominicans; Alexander of Hales, John of Fidenza, Duns Scotus, Roger Bacon, and Occam, were Franciscans. The last of the schoolmen, and first of the Protestants, was Wyclif, the translator of the Bible. And our critic wants to know what philosophy has to do with Christianity! "The subject of my lecture," he sums up, "was Christianity and Christian Science, not Plato and Berkeley and Christian Science." Plato, we all know, was a pagan, but Berkeley, we all thought, was a Christian; anyhow, Queen Anne did when she made him bishop of Cloyne. For centuries, then, the champions of the orthodox church have been discussing nominalism and conceptualism, materialism and idealism, the reality and the unreality of matter. Does this critic seriously mean that philosophy has not been bound up, root and branch, with Genesis? Is he going to maintain that the Augustine exegesis of Genesis has not been the battle-ground of centuries of philosophic warfare? The church burned people wholesale for questioning it. Yet this gentleman wants to know why I drag philosophy into a discussion on the Christian Science teaching of the unreality of matter.

Then the critic indulges in two personal statements, and one *ex cathedra*. He says he "entirely disagrees with Mrs. Eddy in her reading of both Plato and Berkeley." May I ask him in his next letter very kindly to explain to your readers what Mrs. Eddy's reading of Plato and Berkeley is, and why he disagrees with it, and to assist them by giving the references to the passages he disagrees with? For myself, I have always imagined that Mrs. Eddy's reading was precisely that, say, of Huxley, for example, and that was why she dissented from Berkeley's particular conclusions. As for Plato, there is the greatest difference of opinion among Platonists as to the subtleties of the reasoning; but again, I should have said that Mrs. Eddy's reasons for dissenting from him were based on a reading of his philosophy which all Platonists would have accepted. The *ex cathedra* statement of this critic, on the other hand, is to the effect that "there is not a single professor of philosophy in all the universities of Great Britain who would regard Mrs. Eddy's philosophy as anything but the very essence of shallowness." I must admit that this asseveration reminds me, in its thoroughgoingness, of Captain Corcoran's declaration that he had never been untrue, and his wiser second thought, in answer to the challenge, "What, never?" "Well, hardly ever." The critic may be able to speak in the names of all these (there are quite a lot of them, be it said); I cannot. But to those I know personally, I am quite sure his tremendous *ipse dixit* could not be applied.

Finally, the critic closes with the purely metaphysical statement in his argument, and in one short paragraph disposes of it more completely than any one else could hope to. He quotes several passages in which Mrs. Eddy says man is sinless, and several in which Jesus says he is sinful, and evidently thinks he has disposed of the whole matter. Now let me draw his attention to a simple warning contained in my first letter. It is from that brilliant critic, Anthony Froude, who certainly loathed metaphysics, speaking of one of the most metaphysical of writers, Spinoza. A critic, insists Mr. Froude, must accept the definitions of an author, and unless he wishes to be foredoomed, must master them. Mr. —— is one of the most complete instances of a foredoomed critic any one could desire. If you confuse Euclid's definition of an equilateral with an isosceles triangle, there is no particular reason why you should not reduce the whole structure of his reasoning to an absurdity. This is exactly what this critic has done, and it is this which has emboldened him to take the name of all the professors in vain.

The real man, Mrs. Eddy insists, is spiritual and sinless; he is the image and likeness of God, of divine Mind. The supposititious counterfeit of this man is the material human being, the image and likeness of the carnal mind, "conceived in sin and brought forth in inquity." It is of the image and likeness of God that Mrs. Eddy is speaking in the passages quoted by the critic from her writings; it is of the carnal man that Jesus is speaking in the passages he quoted from the Bible. When Jesus said, "Ye are of your father the devil, and the lusts of your father ye will do," he was referring to the carnal man whom Mrs. Eddy calls mortal man; when he said, "Be ye therefore perfect, even as your Father which is in heaven is perfect," he was referring to spiritual man, whom Mrs. Eddy terms the real man. Our critic could

Digitized by Google

[illegible] has joined realm as God and spiritual creation and mortal, mortal, and sin, as the unreal. This is exactly what Jesus taught when he declared that the devil or power for evil was a lie, for there is actually no reality in it. The real, the absolute or actual, he spoke of as the kingdom of God, which in the words of a great [illegible] was ——, was also a [illegible] and [illegible] [illegible] [illegible]

Now, if God made all these evils, we could agree with the evangelist that they were an "awful reality" and eternal, hence indestructible, and that Christ would not or could not have destroyed them, for he knew that he could destroy none of God's works. On the contrary, he healed all manner of sin and sickness, knowing that evil is the absence of God, just as darkness is the absence of light. In fact, when light is brought into a dark room, darkness disappears into nothingness. When the truth is brought into our consciousness, sin disappears in like manner, for it was only a false mental state which the truth destroyed.

When we begin to understand that God is ever present, never absent, and that where God is there is the kingdom, it becomes an easy matter to know that sin has no part in this kingdom. The Scriptures declare that the kingdom of God is within us (in our consciousness). When this great truth begins to fill our minds, sin ceases to have an abiding-place there and is destroyed. If every individual in the world would work and pray for that Mind to be in him which was in Christ Jesus, then heaven would be realized today, and there would be no more sorrow or suffering of any kind, for all tears would be wiped away.

[E. M. Ramsay in *Evening News*, Edinburgh, Scotland.]

In my first letter in answer to the critic I pointed out that he had most seriously misrepresented the teachings of Christian Science on the very important question of sin. In his letter of the 19th he offers no apology on this score, but proceeds to misrepresent its teachings still further by falsifying the text of "Science and Health with Key to the Scriptures" by Mrs. Eddy. "God is identical with nature," he says. "That surely sounds like pantheism." We admit that as quoted by him it certainly does sound like pantheism, but let any one look up the passage in the text-book, and this is what he will find: "In one sense God is identical with nature, but this nature is spiritual and is not expressed in matter" (Science and Health, p. 119). It will thus be seen that the meaning of the sentence has been completely reversed by the critic.

He then quotes in inverted commas the following sentence, if sentence it can be called: "Man is incapable of sin; because soul is immortal, soul cannot sin." The first five words are taken from page 475, and form part of a section on man which occupies two pages and a half. The remaining words come from page 468, and deal with the nature of Spirit! Christian Science accepts the Bible statement that man was made in the image and likeness of God, and was part of that creation which God Himself pronounced to be "very good." If we are to be benefited by the Scriptures, we must have an intelligent understanding of their meaning. We take this statement to mean that that which is essential and fundamental in man is like God, and that whatever is unlike God must be unlike the man made in His image and likeness. This recognition, that the good in us is the real, gives us far greater power to resist evil and part company with it than did the views we previously entertained. Thus the words, "Man is incapable of sin," means that the image and likeness of God cannot sin.

The second half of this concocted sentence should read: "Because Soul is immortal, Soul cannot sin." Immortal sin appears to us to be a contradiction in terms. Sin is a destructive agency; only perfection can be immortal. Good dies not; truth is indestructible. No man possesses any private or personal good or truth; the good he manifests, the truth he expresses, is a quality of God, Spirit, the supreme Soul of the universe. "Every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning."

I have no time to enter into all the other points brought forward by the critic, nor do I think that it is profitable or possible to discuss such subjects in the columns of a daily paper. It will not surprise your readers to hear, however, that a man who can be so grossly inaccurate in quoting from the text of a book has quite failed to grasp its teachings. As Christian Scientists we believe in the divinity of Christ; we believe that our Lord had a human body in the sense in which the disciples had such bodies; we accept as historically true the gospel narratives from the virgin birth to the ascension, and we are daily endeavoring to gain an understanding of the inner meaning of those great events that we may be enabled the closer to follow in the Saviour's footsteps, the better to obey his commands.

[Marie Hartman in *Nieuwe Rotterdamsche Courant*, Rotterdam, Holland. (Translation.)]

In your recent article, it is rightly said that the "New Thought" movement differs from Christian Science. The difference, however, is not stated exactly, for Christian Science is not dualistic. It acknowledges but one Principle, one creator, God, who is omnipotent and omnipresent. His omnipotence and omnipresence exclude the possibility of a power beside or outside of Him. God's creation is the spiritual universe, which, as His reflection, is eternal and expresses His perfection. Evil can find no place in omnipotent and omniactive good. Christian Science considers it a product of ignorance or wrong thinking, and not a creation or expression of God. Evil arises in the same way as a mistake in a mathematical problem, and has the same seeming reality, which vanishes at once, however, as a better comprehension of mathematics, or in this case of the law of Life, is gained. Christian Science calls evil, sin, sickness, matter, etc., false beliefs of the human or mortal mind, from which mankind is saved through Christ, the saving and healing truth. Christian Science acknowledges as real the spiritual existence in which man does not serve false gods, false beliefs; awakening from the dream of materiality is the way which leads to this better consciousness of Life.

Christian Science does not believe that man is "an individualized God," but on page 475 of "Science and Health with Key to the Scriptures," Mrs. Eddy defines man as follows: "Man is idea, the image, of Love; he is not physique. He is the compound idea of God, including all right ideas." Man exists only as God's idea, indissolubly united with the Father.

Christian Science teaches the way to overcome evil, disease, mortal man, and matter, by revealing their unreality, by explaining them as false beliefs. This, however, is quite another thing from "acknowledging" them.

[Editorial in *Similkameen Star*, Princeton, British Columbia.]

A chair of metaphysics should not be overlooked in the new university curriculum for this province. The orthodox theological schools have so long taught materialism that the world is steeped in it and the consequent religious retrogression. The day is breaking when Spirit is demonstrated and defined with as much precision as any mathematical problem. The origin of thought, the power of mind over matter, and spiritual healing will be better understood if studied with metaphysical aid. Humanity is peering toward Spirit more and more, having found materialism insufficient, unsatisfying.

Not one holy day, but seven.
Worshiping, not at the call of a bell, but at the call of my soul;
Singing, not at the baton's sway, but to the rhythm in my heart;
Loving because I must,
Giving because I cannot keep,
Doing for the joy of it.

From "My Little Book of Prayer," by MURIEL STRODE.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL DEPARTMENT

"LIVELY STONES."

THE *Salem Mass. Evening News* in commenting upon the changed attitude of the public toward Christian Science, and also on the fact that "not nearly so many bitter things appear in the newspapers as formerly," said: "One reason for this changed attitude is the natural attendant of that enlarged knowledge which the public has obtained. Again, the striking advance made by the new organization in its membership and the visible evidences of its material prosperity cannot be without their influence in tempering either a flippant or a big-it sentiment. We presume this is being true in the part of many that were really at one time hostile to Science, is not entirely disconnected with contemplation of the walks of life from which the church has received its accessions. If the Scientists 'point with pride' to this particular feature of membership, it is not without legitimate justification."

While it is true, as the *News* points out, that the character and standing of those who have become Christian Scientists has had weight in convincing the public that Christian Science is not a mere fad, as so many believed a few years ago, the real reason for the respectful consideration which Christian Science is now receiving lies in the "enlarged knowledge which the public has obtained." This enlarged knowledge has, of course, been brought about in various ways,—through the church services, the lectures, the work of the practitioners, and the work of the readers of our literature, but through no one of these agencies has there been so impressive a dissemination of knowledge of what Christian Science really is, as through the healing of the sick which is being done in its name in emulation of our Master and his mighty works. This healing work has reached to every quarter of the globe, and today, in the United States especially, it is the exception to find a person in the ordinary walks of life who has not in some way been brought into contact with some one who has benefited by Christian Science. The testimonies of healing through this Christ-teaching which are published in the SENTINEL, HERALD, and LAY HEALER cover a wide territory, and evidence that practically every form of disease and sin has been healed.

The apostle Peter, writing to those early disciples of the Christ those who had "tasted that the Lord is gracious," thus admonished them: "Ye also, as lively stones, are built up a spiritual house, . . . that ye should show forth the praises of him who hath called you out of darkness into his marvelous light." So, too, it is because of these cases of healing,—these "lively stones" that witness to the ever presence and power of Christ Truth,—that Christian Science is growing so rapidly in public confidence as an exemplification of the Christianity preached and practised by Christ Jesus. The Scriptures say, "The prayer of faith shall save the sick," and this promise is being fulfilled in Christian Science. There is another saying of the Master, "By their fruits ye shall know them," which should at all times be a watchword for Christian Scientists, that they may be worthy to be called followers of Christ in word and deed. Nevertheless, although it is largely through its works of healing that Christian Science has won deserved recognition from the public at large, those signs are, as Mrs. Eddy points out on page 150 of Science and Health, "only to demonstrate its divine origin,—to assert the reality of the higher mission of the Comforter to take away the sins of the world."

ARCHIBALD MCLELLAN.

"THE ENGRAFTED WORD."

Every thoughtful husbandman lives with the years, past and present, in wise forethought, and in all his dealings with nature he is never more impressively reminded of his high calling than when, with sharp and gleaming tools in hand, he opens new channels for the burgeoning life of the stronger-armed trees. It is a creative task, for he introduces a new element of resources, accomplished by virtue of the big simple discovered fact that the shaping secret of the tree or the enhancement of its individuality, is found not in the roots, the trunk, or the branches, but in the bud. This is the seat of sovereignty, and all things are subject thereto. Here the kind and quality of the fruit is determined, even as we have come to see anew in Christian Science that the outcome of one's life-activities is predetermined by his dominant idea.

Men having the same environment, environment, opportunity, and capacity, often dismiss the most surprisingly varied results, because of the differences of their habitual thought; and St. James surely had this rule of the bud and of the right idea in mind when he wrote of "the engrafted word" which is able to save human sense. Every individual life is the history of a conquering concept, the expression and embodiment of a prejudice or a distinction. If our sense of things is false, we are enslaved; and barren; if true, we are made free and fruitful. This is the epitome of the Master's message. He said, "If . . . thine eye be single thy whole body shall be full of light, but if thine eye be evil, thy whole body shall be full of darkness." The figure is dramatic, the teaching is one, namely, that character and conduct are shaped by the right or wrong idea we entertain. All our works are cast in a mental mold.

The fruitful tree of the pasture may be well rooted and of strong, vigorous growth, but its growth is wholly profitless until it becomes subject to the gentle but efficient sway of an engrafted bud. Then there is a great transformation; capacity is now devoted to a worthy purpose, and there results a blessing and a delight. How often one meets with correspondingly splendid resources among men, which are hopelessly barren only because they have not been brought into contact with some holy standard and a timeless thought. Not a few of great energy and vigor of application and intensity of culture and imagination, of enthusiasm and good purpose, of real values, make no headway in leaving permanent marks to the betterment of mankind, the width of dominion, the greatness of common surroundings, the noise of the general good, because they are subject to an error in sense, are not fruitful.

The supremely important thing in every undertaking or life is to have the right idea and end in view, and to use the one right way of its attainment. It is the dominant idea or capacity which is determinative. This explains the failure or success, the joy or pain of our daily work and the most regrettable and pathetic factors of human history and of present-day living is its waste, its ignoble and pitiful expenditure of energy, skill, imagination, and strength of genius. When the circles of the surging streams of the cities that turn the wheels and integrate the vast systems of the world's activities are traced to their source, they are found to be originally and ultimately in which have given to the universal government of means, the enjoyments of opportunity, the gossip lines of grinding which have given or taught all for the lack of the true concept, the Christ-idea,—when he is reminded of the crab tree in the pasture, strong and capable, but barren because engrafted, it is true that realizes the significance of the Christ-science, that regenerated word which will make true, beautiful and good all the struggle of human living.

How much of good there is in every man, if but his interests and activities are rightly directed! What we most are what you and I might be, were all our purposes, objectives, and activities subject to the rule of that spiritual concept of man and his beneficent rights which has been declared to us in Christian Science!

JOHN B. WILLIS.

TRUTH AND BEAUTY.

A PROFOUND utterance by our revered Leader may be read on page 247 of Science and Health where she says, "Beauty, as well as truth, is eternal;" but she adds that "the beauty of material things passes away, fading and fleeting as mortal belief." Here it is well to remember that everything which stands for materiality passes away, even knowledge of that sort "shall vanish away," so says St. Paul. In view of this fact students of Christian Science sometimes feel that in order to be consistent they must declare promptly for the nothingness of every outward manifestation, no matter how beautiful it may appear, but it were better to ponder deeply this whole question as it is presented in the Scriptures and also in our Leader's writings, and wait for spiritual growth to unfold truth and beauty, expressed in symmetry of character, and then they can more wisely tell how to gather eternal lessons from the loveliness which whispers of God from sky and ocean, tree and flower.

There is little need to argue that the mortal sense of the beautiful is not the true, as many wrecked lives sadly tell, but this does not change the forever fact that the love of the beautiful is no less a quality of man's nature than is the desire for truth itself. In the Old Testament we read of many men and women famous for their beauty, notable among whom was Absalom, David's son, but in every instance this was but a mask which hid from view the divine idea whose beauty is that of Soul, not sense, and which exalts alike possessor and beholder. Yet all the while there stands that matchless declaration of the psalmist: "Out of Zion, the perfection of beauty, God hath shined"! With this divine revealing there comes an uncovering of all the unlovely things in mortal mind, the falsity, the impurity, and the empty arrogance which would make the beautiful less than true, to which aggressive falsity God says, "What hast thou to do to declare my statutes?" Here as everywhere the Master's test, "By their fruits ye shall know them," must be the standard for all things,—for beauty, for art, for character more than all. Men talk easily of a creative faculty, as if beauty were a product of the human mind, when it is rather a quality of the divine Mind and can be truly expressed only as character is fashioned after the glorious pattern shown in the mount.

If any one is in doubt as to what constitutes real beauty, he cannot do better than to study Mrs. Eddy's words in "Miscellaneous Writings" (pp. 86, 87), especially these in reference to all outward things. "I love your promise," she writes, "and shall know, some time, the spiritual reality and substance of form, light, and color, of what I now through you discern dimly; and knowing this, I shall be satisfied." Then, too, we may remember that exquisite passage from Isaiah, which Jesus quoted when reading in the synagogue, and which begins, "The Spirit of the Lord God is upon me; . . . he hath sent me to bind up the broken-hearted, to proclaim liberty to the captives;" and which goes on, "To appoint unto them that mourn in Zion, to give unto them beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness."

Need we wonder that the eyes of all in the synagogue rested upon Jesus, as with gracious words he told them that this Scripture was then to be fulfilled in their ears. And the same is true today! Yes, beauty for the ashes of dead vanity, pride, and earthly hope, and for today, all the days, all the years, the unfoldment of an ever fuller, richer sense of truth and beauty, which not only promises, but which satisfies the hungry heart, as each day the call comes more loudly, "Shake thyself from the dust." Then comes this call to the once desolate, "Awake; put on thy strength, O Zion; put on thy beautiful garments;" and as we heed the call, we see that this means enduring health and holiness, the redeemed girt about with the truth and beauty of Spirit and its perfect idea.

ANNIE M. KNOTT.

TWO LECTURES FOR THE MOTHER CHURCH.

The First Church of Christ, Scientist, in Boston, Mass., announces two free public lectures on Christian Science, by Bicknell Young, C.S.B., a member of the Christian Science board of lectureship: in Tremont Temple, Tremont street, near Park street subway station, Monday evening, May 19, at 8 o'clock; and in the church edifice, Falmouth, Norway, and St. Paul streets, Back Bay, Boston, Tuesday evening, May 20, at 8 o'clock.

AMONG THE CHURCHES.

CURRENT NOTES.

PORTLAND, ORE.—A new Christian Science church building has been started by Third Church of Christ, Scientist, which since its organization has been worshiping in Eilers recital hall. The new building is intended to serve as a temporary church home for the rapidly growing congregation. It will be located on the northeast corner of East Twelfth and Salmon streets, within easy walking distance of all the main car lines in that section of the city. The bungalow type of architecture has been chosen, with a light color scheme predominating in the interior. The main auditorium will seat five hundred people, in addition to which the plans provide for a spacious Sunday school room which will be used during the week as a reading-room. The new building will be ready for occupancy by the middle of April.

Portland Journal.

MAINE.—During the year twenty-two copies of "Science and Health with Key to the Scriptures" by Mrs. Eddy, three copies of "Miscellaneous Writings," four copies of "Unity of Good," one "Christian Science Hymnal," twelve copies of the "Life of Mary Baker Eddy" by Sibyl Wilbur, about twenty-five yearly, six half-yearly, and one hundred one-month subscriptions to *The Christian Science Monitor,* seventeen to the *Christian Science Sentinel,* and twelve to *The Christian Science Journal* have been placed in various public places and institutions. A total of about thirty-two thousand pieces of our literature, including *Monitors, Sentinels, Journals,* Christian Science lectures, magazines, pamphlets, etc., have been given out by the several distribution committees and coworkers, of which number about nine thousand pieces were sent out from this office.

Committee on Publication.

BROOKLINE, MASS.—Perhaps the people of no church in the community have more perfectly exemplified "the beauty of holiness" than have those of the Christian Science church. This applies with equal force, whether we judge them by the clean and wholesome lives they lead, or by the houses they worship in, or by the reading-rooms they establish here and there on the public streets. Wherever we see any institution established by this church it seems to say to all the world, "We have come to stay, and we want to be clean and beautiful." All this and more applies to the beautiful Christian Science reading-room recently established by The Mother Church in the new Coolidge Corner block on Beacon street, opposite the transfer station. One enters the room from the street floor, with commercial enterprises on either side of it, and is welcomed by an atmosphere of sweet restfulness. Here is a place where the tired worker may come for rest and meditation, or where the inquirer may come to learn the message of Christian Science perhaps for the first time.

The furnishings are models of simple elegance, and on inquiry one learns that all, including the heavy dark oak tables, chairs, writing-desks, coat-racks, picture-frames, etc., were manufactured especially for this room. On the tables and in the racks are scattered in rich profusion the books

Digitized by Google

and magazines of the Christian Science faith. First and foremost, one notices several copies of the Christian Science text-book, "Science and Health with Key to the Scriptures," as well as a German translation of it. There were many, indeed we believe all, of Mrs. Eddy's published works, besides files of *The Christian Science Journal*, the *Sentinel*, and the *Monitor*.

Sitting there in that quiet retreat, amid a busy and harassing world, the writer mused something in this wise: "What admirable enterprise! Here is a people who without argument, urging, or controversy, have given all the world an opportunity to learn what they believe and the motives by which they have been moved. A publication system without a single missing link—besides their standard books, a monthly, a weekly, and a daily publication, all very ably edited. And as if to show their altruistic purpose, the latter perhaps the very ablest and most perfect family daily in all the world, without a single line of controversial sectarian literature in it. What others have dreamed of and talked of they have accomplished in the quietest possible way and at a tremendous cost, namely, they have given the world a clean, able, unpurchasable daily newspaper! Whether one agrees with them or not, they are like Jesus, appealing to men on their works or on the merit of what they have to give." But not being Christian Scientists, we did not set out to give our own musings, but simply to tell a little story of what we saw in this quiet, beautiful, restful reading-room. What we saw was so very satisfying and interesting that we wish to suggest that it will be well worth while for others to see it for themselves.

The Brookline Townsman.

ZURICH, SWITZERLAND.—The Christian Science Society of Zurich held the first service in their own building on March 30. The property was bought last autumn at a cost of 170,000 francs ($34,000), and about 40,000 francs ($8,000) were spent in rebuilding the hall to suit our needs. Our old quarters, a rented hall, into which we moved in April, 1902, with about thirty-five or forty people (who at first appeared somewhat lost in the place, as there was room for about four hundred), had proved too small for the attendance during the last eighteen months, and with each month the necessity for a larger hall became more pressing. Several months prior to the recent purchase a committee had been actively engaged in trying to solve the problem, but nothing presented itself to meet the need. Last September, however, the difficulty was met in a manner which made the whole demonstration comparatively easy. The seating capacity of the new hall is about eight hundred.

For our last Sunday service in the old place we had the golden text, "Except the Lord build the house, they labor in vain that build it," and for our opening service the golden text held forth the promise: "I will cure them, and will reveal unto them the abundance of peace and truth."

Correspondence.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 30, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 14, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 1, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

THE LECTURES.

HARROGATE, ENGLAND.

Bliss Knapp delivered a lecture on Christian Science in the Kursaal. There was a large attendance. The chairman, Col. W. E. Fell, J.P., said if they would permit him for a moment, he would like to tell them of his experience when he first heard of Christian Science twelve years ago. He was standing one day in October on the platform of a station in the Highlands, and a friend walked up to him and addressed him. He discovered that they were both bound for the same house. This friend, when he last met him, was in a very bad state of health; in fact, it was plain he was fading away. But he was on that station platform looking strong, and in first-rate condition, and on going up to the house, the speaker found that this friend was a Christian Scientist. A few days later, when sitting at dinner next to a lady, the latter, who was looking across to his friend, turned toward him (the speaker) and said: "What a beautiful countenance your friend has, and how good he is! What a pity he is a Christian Scientist!" In reply to this remark, he turned to the lady and said: "Why, my dear lady, you call a man good and beautiful, and the thing which has made him so has the qualities you call pitiful." The chairman said he had heard similar remarks since then. In continuing his story, he said, when Sunday came along, he went for a walk with his friend, and the conversation naturally turned upon religious subjects. His friend said: "Do you know I am a Christian Scientist?" and he replied in the affirmative, but said he did not know in the least what it was. His friend began to tell him, and he pulled up and said: "Of course, we must believe in faith-healing, for to deny it we must deny that Christ Jesus healed the sick, and that his disciples healed sickness after his crucifixion."

But, the chairman said, he did not want that audience to go away with the idea that Christian Science was simply faith-healing. Faith certainly was required, but it was not faith-healing. After that conversation with his friend, he was in a great mental turmoil, but his heart was filled with hope in that, the darkest hour of his life, when everything seemed to slip away from him, and with the desire that his hopes would not be dashed to the ground. He said: "I believe you have the truth." His friend replied: "Yes; we accept the whole gospel, and we know that every one of the words spoken by our Lord was an example for us, not only then, but through all time."

Harrogate and Claro Times.

HOUSTON, TEXAS.

That sooner or later every person will adopt Christian Science as the system of religious teaching which brings the largest measure of help, hope, and consolation, was in substance a part of the message brought to Houston by Virgil O. Strickler, who spoke to a large audience at the Beach auditorium. He was presented to the Houston public by George H. Freuhling, member of the local church, who spoke as follows:—

There are those among you who have already tasted of the fruits of this great movement, who have been brought from sickness and inharmony to a state of health and happiness, and as earnest students of Christian Science are here this evening to learn more of this truth that has made them free. There are others who are searching for something by which they too may be freed from some discordant condition, they are in search of an agency through which they may solve the perplexing problems of daily life, and they are here tonight to investigate Christian Science in the hope that it may prove to be that sovereign panacea.

Christian Science is distinctively a religion of doing, a religion which proves its teachings by its works. It is bring-

Digitized by Google

ing into the lives of its adherents physical, mental, and moral regeneration, creating a higher standard of thinking, elevating character, and producing better citizens; and yet, it is perhaps the least understood by the general public of all the Christian faiths.—*Houston Post.*

ST. LOUIS, MO.

William D. McCrackan, M.A., delivered a lecture on Christian Science in First Church of Christ, Scientist, in St. Louis, to an audience which filled the church to overflowing. He was introduced by Judge Albert D. Nortoni, of the St. Louis court of appeals, whose introductory remarks were as follows:—

Christian Science is too often criticized by those who are wholly uninformed on the subject, and this is highly unjust. It would seem that the spirit of tolerance for the religious opinions of others alone suggests that the shafts of condemnation be not leveled against any creed until the critic has first looked into the matter and candidly investigated the truth of the proposition to be controverted. Some of us, though not members of the Christian Science church, who have diligently studied its doctrine and thoughtfully considered the fundamental Principle of this faith, are persuaded that the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, not only reveals a most beautiful religion, which in its scope is elevating beyond measure; but furthermore, that it advances an argument for the truth which is wonderfully convincing and which illuminates the Scripture with a flood of spiritual light.

No intelligent student of the gospel will gainsay or deny that the blessed Saviour taught a religion which served as well to heal the sick as it did to overcome sin. Jesus treated sin and sickness as identical in origin, as upon a common plane, and applied to both the identical remedy of truth evolved through righteous or religious thought. To this extent it is believed all Christians agree, but beyond it confusion arises, for many believe that the element of healing which inhered in the religion of the early days of the Christian era, has either been lost or no longer obtains; while on the other hand Christian Scientists insist that their great Leader discovered its Principle anew and that they both teach and successfully practise it in so far as it is possible considering our human limitations and attendant environments.

It is certain that a million or more of highly intelligent God-fearing persons subscribe to the view of the Christian Scientists, and themselves form a vast army of conscientious witnesses in support of the power of the truth as they see it to prevail over all manner of error. Moreover, we see in our very midst many persons whom we know to have been healed and otherwise benefited in both body and mind, as the result of their embrace of this faith and the cultivation of the simple but beautiful and wholesome thought it teaches. These facts alone challenge the attention and invite the impartial consideration of all candid persons everywhere. However all of this may be, many of us, though sincere seekers of the truth and ever ready to receive it, do not understand the Principle of Christian healing as we hope to, and it is because of this that the board of lectureship of The Mother Church furnishes instruction to all by means of such lectures as this one to which we are invited this evening.—*Correspondence.*

CITY OF MEXICO.

The Hon. Clarence A. Buskirk lectured on Christian Science in the church auditorium, Cinco de Mayo. The introductory remarks of S. W. Rider were in part as follows:—

During the ages men have sought the answer to Pilate's question, "What is truth?" and men and nations have often tried by coercion to force upon others their own view of truth. The saddest pages of human history are those that tell the story of cruel religious wars. Through all the struggle and searching, truth has never changed, but man's perception of it has been steadily unfolding. The great unseen power, which in Anglo-Saxon is called God, we are coming to understand means all that is good. We are learning that there is a spiritual science, and that it embraces all that is real, because all that is real God made, and all that He made is good. We are learning that the promises of the Bible are for us, right here and now, in all the problems of daily life, and that heaven is where Jesus located it, within us, in our own thought. My acceptance of Christian Science came only after a long period of reading and observation of its works. Although still on the threshold of a full understanding, what I have gained is to me beyond estimate of value.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Alton, Ill.—Temple theater, 3 p.m., May 18.
Arcata, Cal.—Pastime theater, 8 p.m., May 20.
Arkansas City, Kan.—Odd Fellows hall, May 23.
Batavia, N. Y.—Opera house, 8:15 p.m., May 22.
Billings, Mont.—Babcock theater, 3 p.m., May 18.
Boston, Mass. (The Mother Church).—Tremont Temple, Tremont street, near Park street subway station, 8 p.m., May 19; church edifice, Falmouth, Norway, and St. Paul streets, Back Bay, 8 p.m., May 20.
Butte, Mont.—Auditorium, 8 p.m., May 17.
Champaign, Ill. (Society).—Elks auditorium, 8 p.m., May 23.
Chickasha, Okla.—Convention hall, 8:15 p.m., May 15.
Cranford, N. J.—Church edifice, 8:15 p.m., May 20.
Delavan, Wis.—Delavan opera house, 8 p.m., May 20.
Dubuque, Iowa.—Church edifice, corner Ninth and Bluff streets, 8 p.m., May 18.
Eau Claire, Wis.—Church edifice, 8 p.m., May 20.
El Reno, Okla.—El Reno opera house, 8 p.m., May 20.
Eureka, Cal.—Ingomar theater, 8 p.m., May 18.
Fortuna, Cal.—8 p.m., May 19.
Glens Falls, N. Y.—Church edifice, corner Lincoln avenue and Davis street, 8 p.m., May 20.
Highland Park, Ill.—Church edifice, 125 Hazel avenue, 8 p.m., May 23.
Hobart, Okla.—Opera house, 8:15 p.m., May 19.
Hoopeston, Ill.—Church edifice, 8 p.m., May 22.
Kenosha, Wis.—Carpenter's hall, May 17.
Lawton, Okla.—High school auditorium, May 18.
Logansport, Ind.—High school auditorium, 8 p.m., May 19.
Manhattan, Kan.—Court house, 8 p.m., May 22.
Marshall, Mo.—Dixie theater (formerly Marshall opera house), W. North street, 8 p.m., May 19.
Minneapolis, Minn. (First Church).—Auditorium, 8 p.m., May 22.
Monmouth, Ill.—Pattee opera house, 8 p.m., May 19.
Morris, Ill.—Fraternity hall, 8 p.m., May 13.
Morrison, Ill.—The Auditorium, 8 p.m., May 19.
Natick, Mass. (auspices Wellesley).—Concert hall, 3 p.m., May 18.
Pocatello, Idaho.—Auditorium, 3:30 p.m., May 18.
Punxsutawney, Pa.—Jefferson theater, 8:15 p.m., May 23.
Rich Hill, Mo.—Church edifice, 8 p.m., May 20.
Richmond Hill, N. Y.—Columbia hall, 8:15 p.m., May 19.
Ridgefield Park, N. J.—Assembly hall, Municipal building, Hackensack road, 8:15 p.m., May 19.
St. Joseph, Mo. (First Church).—Church edifice, corner 12th and Felix streets, 3 p.m., May 18.
South Haven, Mich.—Selkirk's opera house, 8 p.m., May 23.

TESTIMONIES OF HEALING.

There are thousands of people today who rejoice in having found Christian Science, who have been healed through knowing the truth; and I am happy to be counted among them. Not a day passes in which I do not see the power of divine Love. A beautiful Lesson-Sermon on "God, the preserver of man," gave me an inspiration to write this testimony, which I hope will help some struggling sufferer to find the truth.

During a period of eight years I had been a victim of asthma, and in 1907 my mother and husband decided that I should have a change of surroundings; so I sailed for Sweden in August of that year. My mental condition at that time corresponded to that described by the psalmist: "They wandered in the wilderness in a solitary way; they found no city to dwell in. Hungry and thirsty, their soul fainted in them. Then they cried unto the Lord in their trouble, and he delivered them out of their distresses." I was so sensitive to sound that I could not even bear to hear anybody talk aloud. Stockholm was my destination, and there I was kindly received by my sister, though some time afterward she told me that she was surprised to see me so changed in five years.

Days and weeks rolled on without bringing me any health. Before I left New York, my husband insisted that I should consult a doctor, but I refused. Now in Stockholm, I thought the change of surroundings and air would bring me some measure of health, but all in vain! It seemed as if my pain, worry, and mental suffering grew worse and worse. At last I caught a heavy cold, which ended with a very severe attack of asthma, and drugs had entirely lost their power over me. In my old childish way I prayed to God for help, but at the same time I almost thought He could do nothing for me, that my lot was to suffer; and I kept thinking in this way day and night.

My sister could not bear to see me in this state any longer, and as a flash of light it came to her, "Why not try Christian Science?" So she asked me gently, one Sunday morning, if I would like to go to the Christian Science church. We went, and after the service my sister and I walked home, conversing about the Lesson-Sermon we had just heard. I was in a very obstinate state of mind, and said that God did not care for me. Then my sister burst out abruptly, "Do you not believe in God? What do you really believe in?" This waked me up, and I knew that I did believe in God. I had always worshiped Him in the way in which I had been brought up, and in spite of my suffering I saw at this very moment that God is the great protector.

Two weeks later I was taken ill with another severe attack of asthma, which lasted much longer than before; but now I knew where to go to find help, so on Wednesday evening I went to the testimony meeting, although I could hardly breathe. At the close of the meeting I went to one of the practitioners and stated that I wished to get help in Christian Science, and she appointed an hour for me the next day. In the morning I felt worse than ever, and told my sister that it was impossible for me to go anywhere; but she knew I had to make an effort, so there was no escape. It took me a long time to cross the street, as I had to stop for breath at each step, and the practitioner worked continuously with me that whole day; but at seven in the evening she told me I could go home and rest. I did so, and when I awoke the next morning, I had almost forgotten about the suffering, I felt so happy and well and strong. Then came that old fear of the disease; but we battled with it until at last it faded away. It is now years since I was healed, and I have not had any return of the asthma.

I cannot find words to express my thankfulness to God for Christian Science, also my gratitude to our beloved Leader, Mrs. Eddy, who through inspiration gave us a "Key to the Scriptures" which enables us to find the healing power in studying the Bible, and also helps us to understand the spiritual meaning of the Bible from cover to cover. From studying this text-book I now find in the Bible the living truth at all times, that living water of which we are free to drink at any moment. I therefore rejoice, and say with the psalmist, "O give thanks unto the Lord; for he is good: for his mercy endureth forever."

MRS. ELZA LÖTHNER-RAHMN, Brooklyn, N.Y.

After having studied the Bible for some time, and compared its ideals and requirements with the lives of professed followers of Christ Jesus, which with few exceptions did not seem to me to come into line with it, I became quite dissatisfied with the church as it exists, and on this account could not connect myself with any particular branch of it, but went in search of an ideal one, going the whole round, staying some time in each, but receiving very little satisfaction. I continued to go about with a hungry heart until Christian Science was brought to my notice. I had found in the Bible a great storehouse of glorious promises, but I could not get any direct results which I could attribute to answers to my prayers. Now I do get direct results, and sometimes immediately. I had been told that I must take God at His word, but when a hungry man is chained to a post, even if within sight of a well-spread table, it is not enough to tell him to take and eat; the thing to do is to show him how to break his fetters. Christian Science is doing this for me! Spiritually hungry, I had seen the table spread, but could not find my way to it; now I have not only found an approach, but I find many new and precious things prepared for our need. Belief and blind faith are being lost in the understanding of God, and man is appearing as created in the divine image and likeness, and thus I am finding my resurrection into newness of life.

Spiritual thought is the grandest restorative of the body that I have ever met, and the troubles of the flesh are fading out. I had been plagued for a number of years with indigestion, and the ailment had become so acute that I was compelled to keep some drug with me wherever I went. Life had begun to seem a burden, but all the time I felt certain that God could not create nor find pleasure in the suffering of men. When observing animals, I noticed how comparatively free they were from the troubles that upset mankind, and yet man is supposed to be superior to them. I felt that there was some mistake, and that there must be a way out of it. Thanks be to God, I have found the way; spiritual hunger is being satisfied, and bodily troubles are met and overcome. As we read in Isaiah: "An highway shall be there, and a way, and it shall be called The way of holiness; the unclean shall not pass over it; but it shall be for those: the wayfaring men, though fools, shall not err therein . . . and the ransomed of the Lord shall return, and come to Zion with songs and everlasting joy upon their heads: they shall obtain joy and gladness, and sorrow and sighing shall flee away."

God has in these days, through a faithful servant, Mrs. Eddy, revealed anew this way. Christian Science is demonstrated Christianity, as all may taste and see. I have proved Christian Science for over seven years, and have found for myself that it is true Christianity and true Science. It points the way that Jesus led, and it is Science because it is based on Principle, on God. All these years we have used no material remedies in our home, all discords being overcome through the Christ Science, Christ with us.

J. P. NELSON, Glenferrie, Melbourne, Australia.

My first introduction to Christian Science was when a friend, the wife of a physician, showed me the definition of God in the text-book "Science and Health with Key to the Scriptures" by Mrs. Eddy. At that time I was suffering with chronic appendicitis as diagnosed by physicians, also

Digitized by Google

inflammation of the bladder, bronchial trouble, and other ills too numerous to mention. I was given the *Christian Science Sentinel* and *Journal* to read, and in the perusal I detected that wrong thinking about God and man brought sickness and all discordant conditions, so I began to correct my thinking by substituting some of the ideas contained in the articles and in the references from the Bible. I do not know when the diseases disappeared; suffice it to say, I was healed.

I procured a copy of Science and Health at the public library, but considered it too deep for me, so returned it rather discouraged; yet I seemed so restless without it that I got it again. With the next reading the truth began to dawn upon my thought, and I thereupon purchased a copy. The following month I attended my first Christian Science lecture, and at that lecture I was healed of sorrow over the loss of my parents, who had been taken within a year and a half, and of unloving thoughts about God. My minister had tried to console me with the thought that God knew best, and that we must suffer for our sins and become reconciled to His will; but that made me more rebellious than ever. At the lecture, however, I learned that God is Love, that I was His child, and that Love never takes any good from us. Through this truth the sense of grief and bitterness was destroyed.

Another healing, over the fear of electric storms, from which I had suffered from infancy, took place in the Christian Science reading-room. Only those who have known this fear can realize what it means; but it was all destroyed during a severe storm, when a Scientist so clearly led me from sense to Soul that I was not even conscious of the storm. My first attendance at the Wednesday evening service rather disturbed me, as the words "Christian Science" antagonized me, and when people expressed their thanks for what Christian Science had done for them, I felt they were robbing God of His rights; but when I reasoned that Christian Science is the Christ knowledge, and that it was for this that they were grateful, the sense of antagonism soon disappeared. I have always been grateful for class instruction, which directed my thought to Principle and enabled me to separate the spiritual from the material. I always receive a clearer understanding of the spiritual through the study of our Lesson-Sermons, and I feel that, as we read in Proverbs, "understanding is a wellspring of life unto him that hath it." The pure thought expressed by our daily newspaper, *The Christian Science Monitor*, shows me how careful we should be in giving our testimonies at the Wednesday evening meetings, that we should avoid lengthy details of discordant conditions, in order that all who listen may go away uplifted and not depressed.

While it is pleasant to read of the healing of others, some may feel discouraged that their own healing seems slow, but let me say that every good case of healing has meant work, watch, and pray. Our Leader's article in "Miscellaneous Writings" on Obedience has, however, always encouraged me, this thought especially, "Be of good cheer; the warfare with one's self is grand" (p. 118). I am indeed grateful to God for The Mother Church, for the many channels provided that all may receive healing as I have done, and I am thankful that Christian Science is my religion.—MRS. ARABELLA STORER, Columbus, Ohio.

It is with a heart full of gratitude for the numerous blessings which have come into my life since I first gained a knowledge of Christian Science, that I send this testimony. It is over three years ago that I first heard of this truth, when I was so impressed by the results from absent treatment in the case of a friend, that I became curious to know what this unseen power was, and upon making inquiries I was handed a copy of the *Sentinel*, and later shown a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, which I read in part. I had no thought of receiving any physical help, but I was looking into Christian Science with an unprejudiced mind, and the truth indeed did make me free.

I had for years suffered continually with pains in my back, and had tried all kinds of material remedies, but with no result, so that I had resigned myself to my fate, as I thought I was doomed to suffer always; and I often used to wonder if it was possible for any one to feel really well and be entirely free from pain. I was, however, entirely cured while investigating Christian Science, without taking any treatment from a practitioner. The pain disappeared, and I did not know when or how, but the fact remains that it went, and has never returned. I was also cured of the tobacco and drink habit of many years' standing, and the use of profanity. I was indeed lifted up out of the depths of sin and my feet were planted on the rock Christ Jesus.

At that time my only desire was to spread the glad tidings. I wanted to tell everybody what had happened, and felt a little disappointed when people would look at me with incredulity; but I have since seen the needlessness of this, and have learned that there is a time to speak and a time to keep silent, and that the best way to show our gratitude is by daily striving to follow in our Master's footsteps, for, as our Leader says, "action expresses more gratitude than speech" (Science and Health, p. 3). Since that time I have been able to overcome, with my own limited understanding of Truth, every discordant condition, whether mental or physical. I have been healed of rheumatism, besides several minor physical ailments, and I have been able to help others to some extent. A discordant condition which at one time I never even dared to hope could be removed, has gradually melted away, until what once seemed to me a "mountain," proved to be a very little hill indeed. Now even that has disappeared; and perfect harmony reigns where once all was discord.

I have often been surprised, when reading the testimonies in the *Sentinel*, to find so few from Canada, where there are so many recipients of the healing power of Truth as taught in Christian Science; then the thought occurred to me that I had not sent my own. I can truthfully say that the past year has been one of greater peace, and that everything has run more smoothly than ever before. For all this I am truly thankful to God, and grateful indeed to Mrs. Eddy for showing us how to come to Him to obtain these blessings.

J. HOCKNEY, Stratford, Ontario, Canada.

I wish to testify how deeply grateful I am for Christian Science, for the great help it has been to me. I used to suffer very much from severe headaches, which were so bad that I often spent two days a week in a darkened room, unable to do anything; but ever since my first treatment in Christian Science, headaches have entirely disappeared. I also had a dread of colds, as they lasted a long while. I have proved, however, that what Mrs. Eddy says in Science and Health is true, namely, that "God never punishes man for doing right, for honest labor, or for deeds of kindness, though they expose him to fatigue, cold, heat, contagion" (p. 384). Though exposed to cold and damp on two occasions when I was endeavoring to be of use to others, I was able to overcome my fear and experienced no bad results. What I am most grateful for is the knowledge that the more I manifest Love, the more I shall be made free from all discordant conditions.—MRS. MARY INMAN, London, England.

It is about ten years since I was wonderfully healed in Christian Science, when all else had failed and I was without hope or God in this world. I had taken medicine for more than fifteen years, had suffered from many diseases which made life seem a burden, and been given up by the doctors of different schools, when Christian Science came to my rescue. Then in a short time I was healed, not only

Digitized by Google

from disease of the body, but also of the mind, such as discouragement, peevishness, and self-pity, as well as every form of selfishness. There are still some of those errors to be met, but each day I am striving to realize more of God's allness, and I have been able with the understanding I have gained to help many others.

I feel that I am being born again, and for this awakening I am most grateful to our dear Leader, Mrs. Eddy. While health has been restored and I feel better and stronger than I was without Christian Science, this gain seems small compared to the moral and spiritual quickening I have experienced. I also wish to thank The Christian Science Publishing Society for our splendid literature. The *Monitor* is finding its way into many homes and is enjoyed for its wholesome reading.

MRS. A. W. EMBLEY, Cheboygan, Mich.

I long to express my gratitude for the great blessings received in Christian Science, both physically and spiritually. A year ago I was afflicted with the ailment diagnosed by the doctors as locomotor ataxia. I tried physicians and specialists of all kinds, but grew steadily worse, until I could not move a foot. A friend then asked me to try Christian Science, but I had no faith in it; in fact, I was afraid to give up the medicine. Finally, however, I was persuaded to call in a practitioner. Prior to taking Science treatment, I was in pain night and day, but one week after I had called the practitioner all pain left me. I then began to move my feet, and in a short time I was able to get out of bed, and step by step I have improved. I am a musician and work in a theater, and I walk nine blocks from my room to the theater twice a day. I had worn glasses for a number of years, and at the opening of the theater this season, it being a new house to me, I did not know the exits very well, so the first night I fell down the back stairs and broke my glasses. I did not hurt myself, though, and I found that my eyes were healed. Whereas before I could not read the music on the staff at all, I now have no trouble, although we have some manuscript which is very hard to read. I also read the Bible in the finest print.

In October, 1911, I made a trip to the Rockies with a party of friends, and walked up and down the mountains just as much as they did all day. In addition to all this physical healing, I can say in behalf of myself and family that we have found a beautiful religion. I never read the Bible before, but now I never miss a day, and I also read the Lesson-Sermon every day. My gratitude is beyond words.—LE ROY THOMAS, Duluth, Minn.

Christian Science has made a wonderful change in our home. Where before was discord and unhappiness, now is peace and harmony. We have had many proofs of the healing power of divine Truth, and I would like to tell of one which seemed very wonderful to me, in the hope that it may help some one else. I had been doing some washing and had put a large bucket of boiling clothes on the floor, and while I was preparing to empty it into the tubs, my little girl, a year and a half old, who was playing near by, in some way sat down in the boiling water. I took off her clothes and found that she was scalded from above the waist to her knees. I took her up-stairs, and called up a Christian Science practitioner to treat her, and in a short time she fell asleep. We wrapped her in cotton and took good care of her, but in a couple of days after this she was taken with an eruptive fever and seemed very ill. I was so filled with fear that it seemed best to have a nurse to care for her, so we got a Christian Science nurse. She began to get better, and the burn to heal, leaving a new, clean skin underneath. One small place showed proud flesh, but that was quickly overcome.

This was a very wonderful case of healing and taught me a much-needed lesson,—to be more constant in my study and to stick closer to Truth. We are grateful indeed to our beloved Leader, Mrs. Eddy, who through her purity of thought was able to interpret God's word aright to this age.

MRS. WALTER C. MAURITSON, Berkeley, Cal.

When our baby was healed of severe burns in a comparatively short time, it was proven to me that Christian Science heals all discord. I have been helped a great deal in my business affairs, and am more contented in my surroundings, where before I was often discouraged, while the desire for smoking and drinking left me two years ago. A short time ago, while running to catch a train, I turned my ankle. The pain was severe during the day, and by night was so bad that I asked my wife to help me. The ankle was badly swollen and discolored, but in the morning I was able to walk with a cane, and by that night was free from all pain. I am very grateful for the help I have received through Christian Science.

WALTER C. MAURITSON, Berkeley, Cal.

It is with a heart full of gratitude that I give my testimony of healing in Christian Science. More than six years ago, after my little son was born, I constantly felt weak, and could not very well perform my household duties. This went along until about four years ago, when my little boy was two and a half years old; then I took to bed and had hemorrhages. As my little boy had been benefited by Christian Science, my husband asked me if he should call a practiioner, which he did, and before she came the pain ceased and I had relief otherwise. Without this there would have been an operation needed, which I could not have endured, for I was very weak at that time; but with Christian Science I gained strength for about three weeks. Then one day, when I was alone with my sister, I had another hemorrhage, and she became so frightened that before I could stop her she called in the nearest doctor. Just then my husband came in, and the doctor said he must perform an operation within the next twenty-four hours; but when the doctor had gone my husband telephoned for the practitioner, who was absent at that time. She soon came, however, and asked my husband if he wished me to go through the operation, to which he said no. Then the practitioner said that we had our help right here with us. There was such strength and firmness in those words that it dispelled all the fear which had seemed to creep in at that moment. I received one more treatment, and from that time on I improved so quickly that in another three weeks I was perfectly healed.

My sister wants me to tell of the great blessing she received through Christian Science by the healing of her child. A little over two years ago her little girl, four years old, was badly scalded on the limbs and lower portion of the body. They tried to put on material remedies to relieve her pain, but the child began to suffer so severely that the next day they sent for a practitioner, and after the first treatment, all manifestations of pain and fever disappeared. This was on a Monday, and by Friday morning the burned tissue fell off like a sheet from her body and limbs and there was a perfectly natural skin under it. One more treatment overcame the sense of weakness in her limbs, on which she had been unable to stand. The following Monday they took her out walking, and in two weeks there was not a trace of the injury to be seen.

Seven months after this the child met with another accident. While playing outdoors, she fell and badly injured her arm. Christian Science was again called upon, and treatment began. The child fell asleep in spite of the sense of pain, but the practitioner advised the parents to call a doctor, which they did. When the doctor came, he awoke the child and placed the arm in a bandage. The practitioner, who had remained in an adjoining room, told them

Digitized by Google

to put the child to bed, and ten minutes later she was sound asleep, and slept all night until next morning. When the doctor called later, he found her at the dinner table. When he asked if she had cried much, if she had fever, etc., the only answer they could give him was "No." The result was that the next night the child laid her arm under her body and slept and rested well, used her hand with perfect ease the next day, went out to play with the rest of the children, and during all the time never manifested any sense of pain or discomfort. The doctor was asked to take off the bandage, which he refused to do, but did so in two weeks. This was the last of the trouble. I myself, and my husband, feel grateful, and so do my sister and her husband. All our blessings we owe to Christian Science.

ELLEN GUETZLAFF, Milwaukee, Wis.

[Translated from the German.]

I desire to give thanks for all the blessings and benefits received through Christian Science. Since the age of fifteen I had been subject to spasms, said to be of an epileptic nature, which recurred at intervals of from three to five weeks, the trouble having started quite suddenly after I broke through the ice while skating. These attacks brought on severe nervous trouble at times, so that I completely broke down in mind and body. Medical aid proved altogether ineffective, and when relatives called my attention to Christian Science last year, I applied for treatment. My condition gradually improved, and now I may say that I have been healed through the power of divine Love and the understanding of the truth. I feel that through Christian Science I have become a very different man. I am profoundly grateful for the wonderful healing which I have experienced through God's grace, and think reverently of our faithful Leader, Mrs. Eddy, who pointed out the way leading to the discernment of Truth.

WALTER DIELITZSCH, Frankfurt a. M., Germany.

I gladly verify the above testimony of my husband and join him in expressing my joy and gratitude to God, infinite good, for having led us to find healing in Christian Science. I was afflicted for many years with an abdominal complaint, for which medical aid occasionally afforded relief but no cure. I often suffered great pain, and my general condition was poor. To this was added during the last three years a stomach trouble which for weeks and months at a time permitted me to take only light food. Every time I partook of heavier food, I did so with a sense of fear as to the possible distress following. Christian Science freed me of all my troubles, the patient efforts of a kind practitioner resulting in the healing for which I had longed. Whenever error begins to assert itself, it is soon overcome through the understanding of the truth that only good can come from God, almighty Love.

Christian Science has not only brought us health; it also means a great help to us in things pertaining to daily life. It brings us happiness and harmony, so that we have every reason to say with the psalmist: "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases."

CLARA DIELITZSCH, Frankfurt a. M., Germany.

I wish to tell what Christian Science has done for me. Two years ago I was taken ill with rheumatism, and in six weeks one limb was so drawn up it seemed to be fully three inches shorter than the other. Christian Science was then recommended, and after two weeks' treatment I was able to walk with only a slight limp, which soon disappeared. More than this physical healing, however, was the mental uplift, as I had a sense of fear and depression; but now I have found that sin has no dominion, for we are under grace.—MRS. H. V. LAMME, Los Angeles, Cal.

FROM OUR EXCHANGES.

[*The Congregationalist and Christian World.*]

It is worth while to labor a bit along a weary way to learn the finest comradeship in the world, the comradeship of patient men who have not been disobedient to the heavenly vision and who follow the gleam, though for the time the light is lost and only patient courage holds them to the task. The sense of real accomplishment presently deepens our joy. If we hold fast long enough, press on laboriously enough, something really gets done; distances are covered, walls grow, fields are plowed, harvests are gathered in, the most sodden lump gets leavened, heart-breaking inertia gives a bit. Somewhere, along the whole bitterly contested front, the foe begins to yield. Life has few rarer joys than the joy of feeling the dead weight against which we have been flinging ourselves, start at last, and the long-sought goal, which seemed indeed to retreat as we sought it, begin at last to approach us.

Such experiences as these alter the whole structure of our lives. New resources are created, new powers developed; in steadfastness we have won our souls. While we have been forgetting ourselves in our tasks, the God who does not permit any fidelity to pass unnoted has done His perfect work with us. Life is reconstituted, circumstances begin to shape themselves for and not against us, the road grows better and lifts from height to height, the gray horizons roll back, the light breaks through the clouds, the sense of cumulative accomplishment heartens us, and as if some burden had been lifted, we gain the top of the hill.

[*Christian Work and Evangelist.*]

A Protestant church cannot be an ethical orphan asylum; it must be a home in which souls are born into newness of life. We want efficiency in organization and in activity. We want our ministers to be alive to the needs of the hour in politics and in industrial reform, quick to come to the championship of overworked women in factories and the rescue of little children who are giving up their lives that the cost of production may be kept low. We want the message from the pulpit to be heartily in sympathy with our modern thinking. But most of all does American Protestantism need a spiritual passion, a contagious faith in the supremacy of God's spiritual order, and an alarm at the misery that waits on sin. From many a community there is already rising a cry for elemental religion. With all their scientific and business success, American laymen are asserting that they want to be assured of God and immortality and the worth of righteousness. They want companionship in spiritual loneliness, comfort in hours of pain, courage in moments of moral wavering. Their souls are athirst for the unknown, and they will be satisfied with nothing save the water that comes from "the river of God." If the awakening of Protestantism were to mean simply a renascence of ethics or a sort of bescriptured positivism, American society would be defrauded. When it asks for the bread of life, it will not be satisfied with treatises on eugenics.

[The Rev. H. H. Bard as reported in *San Diego* (Cal.) *Union.*]

One of the great changes that is to be noted as characteristic of our age is the different emphasis as to what is the great reality in the universe. The nineteenth century was saturated with its doctrine of materialism. The emphasis was upon material things. This is not to be wondered at when one considers the great material advancement of that century, an advancement which was greater than that in all the centuries that had gone before.

It is but natural that in this great transition from an emphasis upon the material to that of a spiritual basis for the universe and for human life, there should be a deeper study of the powers and properties of the human mind.

Digitized by Google

The liberal church looks upon all attempts to direct the effect of the mental upon the physical conditions as an endeavor to bring out and develop the true man. We believe that the real man is spiritual; that the creative forces of man are in the spiritual realm; that could we develop the real man, the spiritual man, to its fulness, we would be conquerors over all things.

[*The Advance.*]

When human nature, appalled at the calamities that afflict the world, cries out that God is cruel and life is a misfortune, something within us revolts at our own logic. If we, puny as we are, dare to demand of God that He shall be just and kind, then kindness and justice must lie very close to the heart of things. Justice must be very dear to the Maker of the universe, since He made us capable of such insistence. Our very doubt is an appeal to a goodness higher than nature alone reveals; it is a cry to the God that veils a smiling goodness behind the calamities of life. We walk by faith, not by sight. When human wisdom has done its best and has strained itself in its attempt to fathom profound mysteries, we return and learn anew our lesson of trust. We must believe in goodness somewhere. Still within the shadow standeth God, and He careth for His children.

[*The Universalist Leader.*]

It is the unfortunate conviction of many in our age, as of many in other ages, that we have entered upon the "last phases" of democracy here in America. These must shudder when the curtain rises upon a new epoch; but for the rest of us there is nothing to fear. If the history of tomorrow is like that of yesterday, the growth of liberty will be accompanied by increasing harmony and peace. It would not be difficult to formulate quite accurately a social law that as the ratio of liberty increases, the ratio of mobocracy decreases. We understand that this is not according to the opinion of those who distrust the self-control of men; but that it is according to the facts of history is quite another matter.

[Prin. W. B. Selbie, M.A., D.D., in *The British Congregationalist.*]

We must recover the positive tone in our preaching. Doubt and criticism may be useful tools for the study, but they are poor weapons for the field of battle. There are places and occasions where the minister may become a teacher and help on the work of reconstruction; but the pulpit is the place for his message, and the more positive it is the better. It is one thing to preach Christ and another to preach about him. We can never get back the note of assurance into our preaching till we have ourselves tasted and seen.

[Rev. R. J. Campbell in *The Christian Commonwealth.*]

One of the most notable things in connection with human experience is the way in which the spiritual is continually reasserting itself in our concerns, despite the power exerted over us by our daily preoccupation with the visible and tangible. When one comes to think about it, it is a marvelous thing that all over the world, wherever one may go, one finds evidences of the fact that men cannot live "by bread alone, but by every word that proceedeth out of the mouth of God."

[*The Watchman.*]

The growing neglect of a proper recognition of the Holy Spirit in the churches is a cause for alarm, and calls for attention and reformation. Until the Spirit came there was no Pentecost; and there will be no glorious advance in the kingdom of God in the present or in the future until the Holy Spirit is ardently sought to be poured out in pentecostal fire upon all the people.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

The lecture entitled "Christian Science: The New Birth," by Bicknell Young, C.S.B., has been printed in regular pamphlet form and is now ready for distribution. Thirty-two pages and cover.

The English pamphlet "Christian Science: Its Principle and Method," by Mr. Young, will be retired as soon as the present edition is sold out, but the Society will continue the publication of the French, German, and Swedish translations until further notice.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The annual per capita tax, of not less than one dollar, is due June 1, the beginning of the fiscal year of The Mother Church, and is reckoned from that date, whether the admission was in June or November. All remittances in excess of the amount due in accordance with the by-law, will be credited for the current year, unless otherwise specified by the sender.

Please do not send paper money through the mail, except by registered letter; a postal money order, made payable at the Boston post-office, an express order, or a bank draft, is preferable.

To facilitate the work of the Treasurer, please advise him promptly of any change of name or address. No charge is made for this service.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE. Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Entered at Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Coal land to the amount of thirty-four hundred acres and valued at approximately one million dollars has been surrendered to the United States government by the Colorado Fuel & Iron Company in consideration of the dismissal of a suit involving fifty-eight hundred acres owned by the company. The land is located in southern Colorado. The future entry on the land will be permitted under the regulations and prices recently fixed. The land, which is in Las Animas county, was originally taken up as agricultural land, and was filed on under the law that permits owners of forest land to return it to the government and receive in return agricultural land. Subsequently the lard was turned over to the fuel company. The government's complaint against the company was that the entrants to the land knew they were getting valuable coal property. For four years the Colorado Fuel & Iron Company had fought the case through the interior department, where it obtained a favorable decision. Subsequently suit was started by the government in the federal court, resisting the company's contention that the ruling of the secretary of the interior was final. New evidence was introduced, and the recent settlement resulted from negotiations that have been in progress for several months.

"Expenditure of three billion dollars by the government and the several states for highway improvement is at first thought a startling proposition, even though the expenditure be distributed over a period of fifty years, but when we consider the magnitude of the interests affected, it will be seen to be a wise investment," said Jonathan Bourne, Jr., in discussing a plan for road improvement which he has submitted to the joint committee on federal aid in the construction of post roads. "If the expenditure for construction increased the value of the farms only 3 per cent, the owners would get back immediately in property values more than the amount of the investment. If the amount expended annually for road maintenance reduced the cost of hauling 30 per cent, the saving would cover the cost of maintenance. In my opinion, the adoption of my plan would double the total value of farms and reduce the cost of road hauling 75 per cent."

There is an expectation that President Wilson will in a short time request the attorney-general of the United States to institute proceedings in the Supreme Court to set aside the act of Congress of 1846, receding to Virginia that portion of the original District of Columbia lying on the west bank of the Potomac river. That receded area comprises almost one half of the original federal district, and it was turned back to Virginia on the ground that there seemed no likelihood that it would ever be needed as a part of the federal capital.

The Franklin Union of Boston, established on the Benjamin Franklin foundation, has consistently maintained its original policy,—the further education of men already employed. That this policy is sound has been evidenced by the almost phenomenal success of the school, for it is doing a work which is probably not duplicated in the United States. The number of students enrolled has increased from 533 in 1908 to 1,549 in 1913.

According to a ruling made by Judge Loring of the supreme court of Massachusetts, in negotiations between striking employees and employers to adjust their differences, the former have a right legally to insist on their union being recognized, instead of the employers taking the position that they will deal only with individual employees and not with any committee of a union.

Governor Sulzer of New York has signed the bill providing for the maintenance and government of a state nautical school for the purpose of giving instruction in navigation, seamanship, steam and electrical engineering, to pupils of the various counties of the state. An appropriation of one hundred thousand dollars is provided for the expenses of the school for the first year.

Governor Sulzer's state-wide direct primary bill was defeated by the New York Assembly by a vote of 47 to 93. The vote on the measure in the Senate was 8 to 42. The defeat of the bill was a foregone conclusion, and the Governor has announced that he will call an extraordinary session of the Legislature to reconsider the measure.

Currency legislation will be taken up by the House about June 1. This announcement was made by Representative Underwood, the Democratic House leader, after a conference at the White House with President Wilson, who urged that banking reforms be considered at the present session, and laws be enacted if possible.

Attorney-General McReynolds will soon begin a broad investigation of the New England railroad and steamship situation with particular reference to the New Haven system. A special assistant will take immediate charge of the inquiry, which will deal with conditions from the view-point of the Sherman antitrust law.

The Underwood tariff bill, proclaimed by the Democratic party as the answer to its platform pledge to reduce the tariff downward, passed the House by a vote of 281 to 139. It is now being considered by the Senate.

A surplus of $186,508 of postal receipts over postal expenditures for the first half of the current fiscal year, ended Dec. 31, is shown by the quarterly report.

International.

The declaration was made last week in the House of Commons, by the under-secretary of state for India, that the Indian government, recognizing the heroic efforts of China to destroy the use of opium in that country, had determined to put an end to Indian exportation and, at the loss of eleven million pounds revenue per annum, to forego their treaty rights. Opium stocks at present in Shanghai and Hongkong would be released at the rate of two thousand chests a month, which would insure its absorption within a year. With this exception the trade in opium between the two countries might be regarded as dead.

King Alfonso of Spain arrived in Paris on the 7th inst., with Premier Count Alvaro de Romanones, for a two days' official visit. President Poincare, Premier Barthou, and all the members of the French cabinet were present to receive the royal party at the station, and the King and M. Poincare entered a carriage together, conversing cordially as they drove through the avenue du Bois de Boulogne and the Champs-Élysées to the King's temporary residence at the palais d'Orsay.

The centenary of the collapse of the Napoleonic régime in 1813, and of the establishment of a monarchy, will be celebrated throughout Holland this year. Exhibitions will be held in more than twenty cities and towns illustrative of the economic, social, commercial, and other activities of the people. Congresses, plays, and pageants also figure in the program of the rejoicings.

His highness the Nizam of Hyderabad recently laid the foundation-stone of a new dam, which is being built across the river Musi at a point a few miles south of Golconda, British India, and which has for its object the twofold purpose of preventing the flooding of the city of Hyderabad and of providing a reservoir by storing the flood water of the river.

King Nikita of Montenegro has at last undertaken to evacuate Skutari. The announcement of his decision was forwarded direct to Sir Edward Grey as chairman of the ambassadors' conference in London, and was announced by Sir Edward himself in the House of Commons and by Lord Morley in the House of Lords.

The woman suffrage bill was rejected in the House of Commons by 266 votes against 219.

Industrial and Commercial.

Announcement is made of the launching of one of the largest lumbering enterprises on the Pacific coast, in the absorption of the Yosemite Lumber Company by a five million-dollar corporation, which will bear the same name. The original holdings of the Yosemite Lumber Company consisted of seventy-five hundred acres, containing three hundred and seventy-five million feet of lumber. The holdings of the new company contain one billion three hundred million feet of lumber, while adjacent to their holdings are twenty thousand acres of government timber land from which the company can acquire the stumpage, making a total of two billion seven hundred and fifty million feet of lumber. This means a fifty years' cut of seventy million feet per year, or forty-five hundred carloads of lumber each year, fifteen carloads each day.

Electric power, at a cost of one million one hundred and thirty thousand dollars, to water land, which will be worth, when it is irrigated, between seven and eight million dollars, embracing one hundred and twenty-five thousand acres in fertile Weld county, Colorado, is the plan of the Greeley Hydroelectric Company, which has filed condemnation suits in the district court to secure sites for reservoirs in the mountains and on the plains at their bases. The combined capacity of the system will be one billion two hundred and sixty-two million cubic feet, and the cost of building the enormous dams is estimated at one million three hundred thousand dollars. Four reservoirs are planned. Power will be available for approximately fifty thousand people and about twenty towns.

A consolidation of all the natural gas and oil companies in southern Ontario has been consummated by the incorporation of the Southern Ontario Gas Company, Limited, with fifteen million dollars capital.

Banana growing on an extensive scale, it is stated, is shortly to be started by European growers in the Maria creek district, Queensland, Australia.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

OUR OUTLOOK.

ROBERT NALL.

If men were not so inclined to take short views, they would the sooner awake to the wealth of blessings that lie within their reach. A self-imposed limited mental environment is conducive to a hermit condition of existence. Here we are, dwelling in a universe of good, not an iota of which is withheld from God's children when they are ready to receive it; yet all around us there are murmurings of lack, manifested in the evidences of sin and suffering. Men have never ceased to speculate on the causes that operate to produce and maintain this unwholesome condition, but the very speculations themselves are too often based upon false concepts; hence the results have been futile. While mortal man is content to dwell in a microcosm of his own, seeking to do what is an impossibility, that is, to live unto himself, he is blind to all the affluence that a beneficent creator has provided for His children. We may wonder at this, and express surprise that such people are or could be so foolish; but it is well before we pursue that line of thought very far, to ask ourselves whether we are as awake as we might be; whether, in fact, our own short views are not hindering our highest growth and depriving us of Love's richest blessings.

We have but faintly grasped the genius of Christian Science if we have not been led to look from the material to the spiritual for our peace and happiness. In so far as we are doing that now, we are fulfilling life's purpose, and finding that every stage of experience brings with it a clearer perception of spiritual realities and a deeper sense of the obligation that rests upon us to be faithful to a higher order of Science than we have hitherto known. Mrs. Eddy, in many passages in her books, pictures the inspiring and satisfying results that invariably follow a true outlook. She wrote from personal experience. From the time when, in her deepest need, she found the light, and the essential truths of Christian Science were revealed to her, her mental vision was expanded, and her spiritual outlook became brighter and brighter as the years passed by. It was impossible for her after that experience to take a short view of life, for Life to her was God, and God was All. On page 264 of "Science and Health with Key to the Scriptures" she says: "Mortals must look beyond fading, finite forms, if they would gain the true sense of things. Where shall the gaze rest but in the unsearchable realm of Mind?" And to show what this expanded outlook means, she adds: "As mortals gain more correct views of God and man, multitudinous objects of creation, which before were invisible, will become visible." These objects are those spiritual realities which, once apprehended, revolutionize the thought and impart to the human consciousness a new and truer view of God and His relation to man.

The beginner in Science is sometimes apt to think that this attainment is beyond him. More advanced students are familiar with the somewhat pathetic cry, "O that I could demonstrate as much as you do!" Or, "If I only had as much spiritual understanding as you have!" And there are even those who have for years found in Christian Science solace and help beyond their expectations, who lament their seeming failure to apprehend Truth with that clearness which, if they only knew it, is their birthright. The difficulty lies in the short view, which sees nothing that can help. All that comes within its scope is the testimony of the senses, that barren wall of matter, that accumulation of false beliefs which make up the so-called material man. The unreal assumes the appearance of the real; the temporal seems to be eternal. Thought centers upon sin, sickness, and death as necessary in the educative process by which man attains to harmony. Such a view never reaches farther than the pernicious teaching that there is a "soul of goodness in things evil." It is so circumscribed that it personalizes God and materializes man; it but faintly conceives the spiritual, and deceives by giving a quite fictitious appearance of power to the mutable and the mortal.

The fact is, we are sometimes out of focus, and until we can put ourselves right in this respect, we shall never know the spiritual vision which penetrates beyond the seen and the material and reveals the wondrous possibilities awaiting each of us. One of the prophets of old drew a picture of those who, as they looked "unto the earth," beheld "trouble and darkness, dimness of anguish." Of course they did; their gaze was low and finite. If they had looked up and away, they would have found themselves in a different mental realm,—the realm of the true and the good, and where the carnalities of mortal sense would not have blinded them.

The lesson is plain and simple. Spiritual things are spiritually discerned. We need to start from the beginning. Do we understand God aright? What is our conception of God and His creation? How far are we dominated by the thought that the seen is the real? Do we know that divine Love will so illumine the human consciousness that God and the spiritual idea will become to us more real than anything material which we ever saw? Do we grasp the fact that we are spiritual beings, and that all our work, to be of any service, must be mental? In "Miscellaneous Writings" our Leader says that "these wonders" (p. 101), that is, "how the feeble lips are made eloquent, how hearts are inspired, how healing becomes spontaneous, and how the divine Mind is understood and demonstrated" (p. 100), are known alone to him "who is departing from the thraldom of the senses and accepting spiritual truth." There is no justification for the belief that some persons are specially gifted to gain spiritual truth. God is no respecter of persons. He who seeks will find and know Truth. But let us see that we look beneath the surface of things, away from mortal selfhood, with all its attendant false concepts, so that we shall not be defrauded out of the treasures of rest and happiness that await us. It is because we are essentially spiritual beings that we must be nourished spiritually if we would attain to true selfhood.

We talk sometimes about our "failure to demonstrate" this and that. We have been short-sighted. We need to revert to the primary facts of our faith, to the simple truths that form the basis of Christian Science. We shall then discover where we have erred. We may find that we have

Digitized by Google

not been doing our work aright; and instead of looking to Truth and Love to meet our needs, material sense has controlled us and misled our vision. What a call there is for strong trust and firm faith in God as infinite good! Who can doubt that he who constantly turns away from the evidence of material sense, and who instead looks toward spiritual reality, has found the key that unlocks all the treasures of true joy and peace? Here is the balm of Gilead for the sick and weary ones, for those who are in doubt and despair, for those who mourn because they are progressing slowly. On the very spot where we are at this moment there may be revealed to us such a view of the goodness of God that we shall never again mistrust or doubt Him.

Of this we may be sure, that divine omnipresence can never be dissevered from divine omnipotence, and he who looks to and rests upon Principle will find that truth is being constantly unfolded, and that this will be followed by growth in faith and true understanding, until life becomes a reflection of infinite Love.

UNFOLDING.

LOUISE KNIGHT WHEATLEY.

PROBABLY there is no theme which has so touched the fancy of poets of all ages as that of the coming of the spring. Literature sparkles with gems laid at the feet of the dainty maiden whose footsteps carpet the earth with loveliness, whose fingers hang the boughs with bloom, and whose smile wins the migrant birds back to their old trysting-places. But one need not possess the soul of a poet to love the spring; even the prosiest of us finds himself standing still, at times, to watch in rapturous delight the marvel of a sleepy world's awakening. At such a moment the thoughts of the Christian Scientist turn naturally from effect to cause, and he realizes, in gratitude inexpressible, that this ever-recurring incident is but a type and symbol of the Life which is ever present, though the material senses would tell him otherwise. And as he notes the glad response which all things about him make to the beneficent touch of May, he rejoices in the knowledge that sooner or later to each of earth's inhabitants will come, in like manner, the same sweet stir and unrest which always accompany the reaching out toward higher and better things. As naturally as the petals of a flower unfold, so does the heart that feels the invigorating touch of Truth and the warm sunshine of Love arouse itself from its long sleep of materiality to find its life already "hid with Christ in God."

This world of ours is like a garden, where the flowers are all unfolding, each in its own way and after its own fashion. As there are many varieties of flowers, so do there seem to be many varieties of disposition; and perhaps we would do well to remember this in our relations with those for whom we would gladly see the long, cold "winter of [their] discontent made glorious summer." The pussy-willow, for instance, puts out its downy buds before the snow has quite melted from the northern slopes, while the crocuses and violets open their eyes almost at the first touch of the spring sun; but while we love these for their bright responsiveness, we turn from them to the bare little shrub in some remote corner of our garden, and love it none the less because the uneasy stirring of its stiff branches is the only response it seems disposed to make to the gentle touch of the spring breeze.

Why should we grow impatient with our loved ones whose spiritual awakening seems slow to our dull and doubting eyes? We cannot all be pussy-willows and crocuses and violets, though God be thanked that there are already enough of these to make earth beautiful with promise. Let us be wise and loving. Is anything gained by unpleasant comparisons? "We should remember that the world is wide; that there are a thousand million different human wills, opinions, ambitions, tastes, and loves; that each person has a different history, constitution, culture, character, from all the rest; that human life is the work, the play, the ceaseless action and reaction upon each other of these different atoms" (Miscellaneous Writings, p. 224). Because we became interested in Christian Science on, for instance, Monday, that is not in itself sufficient reason, though good as far as it goes, why some one whom we think belongs to us should become interested on Tuesday; nor should we weep and lament in case all of our immediate family are not gathered within its fold by Saturday night. The springtime of Spirit is ever at our door, but we can no more force any one to feel its healing and regenerating touch than we can, through human will or human love or human ingenuity, fling the mantle of pink blossoms upon the peach-tree until the tree is ready to receive it.

"My times are in thy hand," wrote the psalmist; but in our overanxiety we sometimes forget this, and seem to fancy that the times and seasons are in our own hands, and that we can push anybody into the kingdom of heaven if we only keep at him with enough persistence. If so, suppose we learn a lesson from that which is going on all around us today, and see how nature's sweet unfolding takes place simply and naturally, without jar or friction, turmoil or fret. The kingdom of heaven cannot be taken by violence. To enter therein means a mental growth, and not an act of the will; and the very first requisite is really to desire to enter.

As we ponder these things, perhaps we shall come to the conclusion that the very wisest and best and most helpful thing we can possibly do under the present circumstances is just to walk away, for a little while, from the spot where we have been standing so long, wistfully watching the thing we love. There are violets to be gathered. Let us rejoice that there are so many, and let us put them in a bowl on our study table, and be glad and grateful for the promise they hold of a universal summer-time. And if, on raising our eyes from their delicate freshness, we still see through the window the leafless branches of our stiff little shrub, let us not despair. Is not June coming? We have only to look still farther on, beyond the testimony of the material sense, to discern, by means of a faith that sees not through human eyes, the real truth about our loved one, even the perfect spiritual creation, which in God's sight already is, and always has been.

WITNESSES FOR TRUTH.

PHILIP R. KELLAR.

WE are told in the Bible that we are God's witnesses. This statement has long been a puzzle to the human race; it is a puzzle to the individual for a longer or shorter time, but it ceases to be such when viewed in the light of the teachings of Christian Science. Every manifestation of life, of good, of activity, of truth, of love, is a witness to the existence of the Principle of these qualities, and Christian Science shows that this Principle is God.

Man is God's witness when he testifies truthfully concerning the nature and activity of God. The word witness as used by the Old Testament writers has a much broader and higher significance than is commonly given it in its application to human affairs. In this higher, spiritual sense, man always is the witness of God. Being the expression or image of God, man must testify to the nature and activity of God. If for an instant one should cease giving this testimony, he would cease to be man. All there is to man, idea, is this disclosure he brings of the nature of God, Mind. This testimony is the best because it is direct. All that man knows of God he learns from God; it is not possible to gain any knowledge of God from any other source. God is Spirit, Life. The efforts of the human mind to secure knowledge of life from matter have been futile. They

Digitized by Google

always will be futile, for matter knows and can know nothing of Spirit or spiritual things.

The testimony which man gives about God is true. It never has been and never can be other than true, for it is based upon the knowledge that comes from God, Truth, and must necessarily be true. In worthily living, man gives true testimony concerning Life; in his truthfulness, man gives true testimony concerning Truth; in true loving, man testifies truthfully about Love; in his unselfish and harmonious activities, man testifies truthfully of the eternal doer. In these ways is man the witness of God. His testimony is not "hearsay," for he speaks of his own knowledge derived from God, Mind; it is "direct" evidence.

A witness is one who testifies to facts relative to a certain matter. The testimony offered becomes evidence when it directly concerns the subject. It is admitted as evidence when the witness speaks of his own knowledge. The rules of legal practise concerning the weight and reliability and admission of evidence are not mere arbitrary rules laid down by lawyers, judges, and courts; they are the outgrowth of a long-continued effort to sift and weigh human testimony in order to bar out all except that which can be admitted and accepted as reliable and "relevant," as having direct bearing upon the question at issue. Under these rules "hearsay" testimony is not competent, and is not admitted as evidence, because the witness does not testify from his own knowledge, but from what others have said. So, the real man's testimony about God is not "hearsay," because he does not derive his information from another party, but from God Himself.

In "Science and Health with Key to the Scriptures," the text-book of Christian Science, Mrs. Eddy emphasizes the fact that God is the one infinite Mind; that He knows all there is to be known, and that there is no other mind to know or claim to know anything. She further emphasizes the fact that man, in the image and likeness of God, is the infinite idea of this infinite Mind; that man can think and know only as Mind, God, thinks and knows. Man expresses the thoughts of Mind, and it is impossible for man to give any except true testimony about Mind. The rays of light which come from the sun are witnesses to the nature and activity of the sun. If by any possible means they ceased to give such testimony, they would cease to be rays of light. To bear testimony is all there is to the activity of the rays of light. So man not only gives true testimony about the nature and activity of Mind, God; he must give this testimony or become a nonentity. Being God's witness is being one's true self.

In legal practise, negative testimony is of little weight. The testimony of a dozen or a thousand persons that they did not see a man commit a certain deed with which he is charged, does not weigh so much as the testimony of one witness who says he did see the man commit the deed. The first is negative testimony; the second is positive. The material senses testify negatively about man; they insist that man is not the image and likeness of God, because they see nothing godlike in man. In Christian Science this negative testimony is outweighed by the positive testimony of the spiritual senses, which declare that the real man is spiritual, the image of Spirit; that he is perfect, the expression of infinite perfection; the spiritual senses declare they know this to be the truth about man, because they see that it is the truth. The material senses say it is not the truth because they cannot see it.

The practise of Christian Science is the rejection of the negative testimony of the material senses about man, and the acceptance of the true and positive testimony of spiritual sense. The corporeal senses often testify that man is not well. Spiritual sense declares that man is well, because it is his nature to be well, because he cannot be otherwise; and Christian Science accepts this testimony as true, and maintains it. At this point the analogy between divine Science and the rules of its practise, and the ordinary procedure in a court of law, ceases to be so marked.

In that wonderful "trial scene" at the end of the chapter on Christian Science Practise in Science and Health, Mrs. Eddy makes Christian Science the attorney for Mortal Man when the case is appealed from the court of Judge Medicine to the "Supreme Court of Spirit" (p. 437). "Mortal Man" has been convicted, upon the evidence of the corporeal senses, of having committed liver complaint, and is sentenced to death. Christian Science, appealing to the "Supreme Court of Spirit," secures a reversal of the verdict because it was obtained upon false testimony, and the prisoner is freed. In a certain sense Christian Science is both the attorney and the presiding judge. Christian Science accepts the testimony of spiritual sense as true because it knows it is true. Christian Science knows that man can be nothing else than a witness to the "perfection of the infinite Unseen" (Unity of Good, p. 7). It knows that the material senses can give no true testimony about God or man in God's image, because they know nothing of God or man.

As in a human court the positive testimony of one witness far outweighs the negative testimony of many, so in the practise of Christian Science, one positive spiritual fact about man outweighs a thousand negative misconceptions of so-called mortal minds or material laws. Jesus perceived this scientific fact when he said, "Behold, I give unto you power . . . over all the power of the enemy: and nothing shall by any means hurt you." So ten thousand years of sense testimony that man is not well cannot prevail against one moment of spiritual consciousness that man is well, that he is the witness to the eternally perfect health which is in Mind.

The purpose of Christian Science is to bar out from human consciousness the negative testimony of the material senses, so that the positive evidence of the spiritual senses may become apparent. So long as false testimony is accepted as true and valid, it has the effect of true and valid evidence upon those who so accept it. Science and Health explains how this can be done by each of us, how it is to be done, how it must be done. Mrs. Eddy explains this process in a single sentence when she says, "The suppositional warfare between truth and error is only the mental conflict between the evidence of the spiritual senses and the testimony of the material senses, and this warfare between the Spirit and flesh will settle all questions through faith in and the understanding of divine Love" (p. 288).

"AND SHUT THY DOOR."

ADAH M. JANDT.

ONE bright summer morning I sat drinking in a lovely scene. From a lofty site I looked down upon a beautiful lake among the sand-dunes of Michigan. Dark pines bordered it on the left clear to the water's edge; farther on, broad green terraces sloped gently down; while on the right the golden sands were piled high, with here and there a soldier-like poplar boldly outlined against the sky. Overhead the sky was a perfect blue and, as Mrs. Eddy says, "bird and blossom were glad in God's perennial and happy sunshine, golden with Truth" (Science and Health, p. 121). The scene filled me with quiet joy and gratitude, and all was a symbol to me of the beauty and love which had come into my life through Christian Science.

Presently a letter was handed me. I opened it expectantly, knowing from whom it came. But instead of the anticipated friendly message, I found to my astonishment expressions of criticism, misjudgment, envy, and even hatred. I read it through with a feeling of grief and resentment welling up in my thought until I became quite miserable. Then, when I looked up, I was amazed at the apparent change in the scene before me. The sun was still shining, the birds were still singing, the water, the sands, and the trees were all there, but they no longer charmed me. Everything

Digitized by Google

seemed dull and uninteresting, and I wondered what I could have seen in it of beauty. As the sense of discord grew, I suddenly recognized its cause,—I had been admitting the reality of the evil expressed in the letter, had given it room in my consciousness. Instantly I knew what I must do in order to dispel the darkness, namely, welcome the light of Truth and shut the door to the intruding testimony of mortal sense.

I had often found a healing balm in three articles by Mrs. Eddy in her "Miscellaneous Writings," entitled, "Love Your Enemies," "Taking Offense," and "Injustice," and I eagerly sought them now. Gradually, as I read these inspiring thoughts of love and peace, the light began to dawn, divine Love became clearer and nearer, Truth instead of error was seen to be real, and I was able at last to declare the allness of God, good. Then, as I looked out upon the scene which had seemed to change so suddenly, I rejoiced to find that it had regained all its beauty, and I realized anew that "all beauty and goodness are in and of Mind" (Rudimental Divine Science, p. 6).

This experience has always stood out as a vigorous monitor whenever things began to look dark, and I have remembered that my one need is to clarify thought with the truth, then outward manifestations become harmonious. Every day I grow more grateful to the patient, loving woman who labored so long and faithfully to show the world how to escape from the thraldom of darkness and despair into the light of ever-present Love, and I realize more and more that our mission as Christian Scientists is to fulfil the Master's injunction when he said, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

ACTIVITY.

CASSIUS M. LOOMIS.

ONE of the definitions of activity found in Webster's dictionary borders very nearly upon the metaphysical, thus: "Change, development, or interplay not involving physical force; as, thought activity." The sense of efficiency which counts most in the realm of human endeavor, is thought activity, plus the results that such activity brings into manifestation. The student in any science who can think clearly, act promptly, and with intuitive skill perform a chosen work, is put down as master of his calling. He becomes a leader, and we give him positions of trust.

Thought must precede the working model. The world is looking for results, growing out of active thought training. The thinking world very soon outgrows a theoretical promise of deliverance tomorrow, next month, or next year. Activity that deserves the name must yield fruit now, today, our one golden day of accomplishment. Even the world of matter furnishes us with some interesting facts. We sit by our firesides and watch the sportive flames. Why is the firelight so attractive to our gaze? Because a flame of fire is never still, its outlines are ever changing, constantly outpicturing new possibilities, and we lose ourselves in pleasant reveries which grow momentarily more fascinating. Moreover, what we see in the ruddy flame typifies the undying activity of divine Love, which never grows less. The eye loves an active mental image, and the heart admires an active hand that accomplishes its meed of good in the Father's vineyard.

Now, the truest test of harmonious action is the good it effects, the peace it brings. In Science and Health we read, "The highest and sweetest rest, even from a human standpoint, is in holy work" (p. 519). Spiritual activity nurtures and directs every worthy demonstration of truth. Apathetic indulgence never gave us a pearl of great price; but activity, our obedient recognition of Truth, heals, comforts, and builds anew all virtue and all godliness.

The Scriptures are filled with evidences that the true gospel is the active gospel. In the book of James we read: "Be ye doers of the word, and not hearers only." Nowhere can we find it recorded that the sense of inaction ever fought a battle, or that the slothful shall inherit God's kingdom. "It is the spirit that quickeneth," said the great Teacher; and so true is this, that without a godlike sense of real living in all we do, our day's work falls far short of the mark of our "high calling of God in Christ Jesus."

A GARDEN OF LOVE.

LENA HULME.

ERROR tries to discourage many workers on the literature distribution committees by belittling the work, by saying it is nothing to hand a paper to some one; but a member of one such committee has been greatly helped, and taught a lesson in patience, by watching the development of a waste piece of ground into a fine garden. This ground is surrounded by houses, and the soil had become so hard and unyielding that to make a garden and grow beautiful flowers seemed impossible. It needed much attention, but the soil was turned over many times to get rid of the stone and brick, and a quantity of new earth was added to make the lot more kindly. The service, however, has been well repaid, and the garden is a great source of pleasure and beauty.

So, too, the ground on which our literature distributors are working is the whole mental realm, and the literature distributed is doing its work of turning and overturning, breaking up the hard crust of prejudice and antagonism, bringing to the surface and casting away opposition, malice, and innumerable wrong ways of thinking, and putting in their place the new soil of hope and understanding. This ground also, as in the garden above mentioned, needs much loving care before it is ready for the "seed of Truth," which "springs up and bears much fruit" (Science and Health, p. 271).

It is an inestimable privilege to take part in this work, even if it is only to distribute one *Monitor* weekly, or to pass along a *Sentinel* or *Journal* when occasion offers; they will do their work of purifying and uplifting some weary wanderer, hemmed in by material beliefs to the seeming exclusion of the sunlight of divine Love. We know that "the fruit of the Spirit is love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance;" such fruit is surpassingly beautiful, and to help in its development, be it in ever so small a way, will bring a great sense of gratitude and rejoicing.

[Written for the *Sentinel.*]

REFLECTIONS.

LAURA GERAHTY.

FRAIL little butterfly,
Flitting from bud to flower,
Gracing most mightily
Each sunlit hour;

Little white angel-thought,
Reaching some weary one
Unseen, a stray beam caught
From Love's great sun;

Light laugh of childhood's voice,
Mirth without taint of guile,
Bidding us all rejoice
In Love's great smile;

Lightest of silvern notes
From songster on the wing,
Opening our silent throats
Life's psalm to sing.

Digitized by Google

SELECTED ARTICLES.

[Frederick Dixon in *Loughborough* (England) *Herald.*]

In a lecture reported in a recent issue of your paper, a clergyman takes exception to the term Christian Science on the ground that the theology of that movement repudiates the orthodox teaching of the incarnation. May I say, first of all, that I am not quite sure what the orthodox teaching concerning the incarnation is. What I am quite sure of is, that the various orthodox churches have persecuted one another for centuries on the very ground that their respective dogmas were antichristian. There is, however, a test of Christianity contained in all the gospels to which I am sure the critic will be willing to subscribe. In the second gospel it is summed up in this way: "These signs shall follow them that believe," and among the signs is this: "They shall lay hands on the sick, and they shall recover." Here is a test which reduces a man's words to demonstration, and is a good deal more definite than a mere verbal acceptance of some dogma of the incarnation.

Christian Scientists, however, do accept the gospel teaching of the incarnation. In the exact proportion in which a man gains the Mind of Christ is he able to heal the sick, and to that extent is divine Mind manifested in the flesh. Jesus said, "Ye shall know the truth, and the truth shall make you free;" make you free, that is, from the flesh, for "the flesh profiteth nothing." The incarnation is the knowledge of the truth which comes to the human being, and as this knowledge becomes complete, the victory is obtained over the flesh, which "cannot please God." This was the victory obtained by Enoch, by Moses, and by Elijah; the victory so perfectly won and demonstrated by Jesus of Nazareth, which he called on all his followers to participate in by repeating his works, while they were in the flesh, so that they might become "perfect, even as your Father which is in heaven is perfect." This is the gospel teaching of the incarnation which makes men brethren.

[David Anderson in *Melbourne* (Australia) *Reporter.*]

The *Australasian Church Quarterly Review* for December contains a letter from Mr. Dixon, district manager of the Christian Science publication committees in Great Britain, with reference to previous communications in the review on the subject of Christian Science, followed by an editorial comment of twelve pages on Mr. Dixon's letter, a reply to which the reviewer bars, so far as his journal is concerned. It is not my function or desire to initiate or continue press discussion on Christian Science, and Mr. Dixon will no doubt give the lengthy editorial all requisite attention in its essentials as reply to his letter; but the reviewer's comment contains inaccuracies of statement which call for prompt correction, and this I trust you will allow through your "Open Column."

The reviewer states that he "cannot forget the many cases where the neglect of medical aid has cost the lives of patients under Christian Science treatment." This is a paraphrase, so curiously similar as to be almost a copy of the words of some other critics who have been told that particulars of the cases referred to should be furnished for the purpose of verification, but in no instance that the present writer knows of has this been done. Will the reviewer kindly specify a few of the many cases which he "cannot forget"? He also speaks of the difficulty of getting precise and complete evidence of cases of Christian Science healing. *The Christian Science Journal* (monthly) and the *Christian Science Sentinel* (weekly) publish in every number several pages of letters in testimony of healing effected through Christian Science. If the reviewer will earmark any one or any number of these, I will undertake promptly to supply the postal addresses necessary for him to communicate directly with the writers. He speaks of cases which he has known of healing outside of Christian Science, and by means which he indicates, the main factor of which, he states, was "that faith which consists in absolute dependence and reliance upon God." Christian Scientists do not claim a monopoly of Christian virtues, but they are daily demonstrating all over the world the healing of the sick through an understanding reliance upon God as the only factor; and if the Christian Scientist be honest and consistent in obedience to all that is therein involved, in other words if he conforms to God's requirements, he cannot fail to demonstrate that divine Mind heals.

The Christian Science views of matter are not those ascribed to it by this critic, but they cannot be ascertained by a perfunctory perusal of the text-book, "Science and Health with Key to the Scriptures." These views are being approximated to, in constantly narrowing divergence, by eminent authorities on physical science who are not followers of Mrs. Eddy. The reviewer states as "fact" that Christian Scientists are required to push the sales of Science and Health as a religious duty, failure in discharge of which will render them liable to loss of church-membership. This "fact" is an absolute falsity; and it would be interesting to know whence the critic derives his supporting quotation. He belittles the enormous sales of Science and Health on the ground that there have been several hundreds of editions printed, and that some purchasers have been known to provide themselves with more than one copy. The cogency of the argument is not apparent. People have been known to purchase more than one copy of the Bible; and books with a sale running into millions are usually published in editions. It would seem that the desire of a purchaser afterward to repeat the process is fairly good evidence that he was not dissatisfied with his first venture.

The critic points to a statement—and again its cogency as argument is not clear—that the book could be produced for two shillings, while it is sold at not less than twelve shillings sixpence. Is it a general rule in the book world that the cost of publishing governs the selling price? If not, why apply it here? And, purely by way of hypothetical illustration, if the reviewer had, say, the technical knowledge and literary ability to produce a theological work, a Bible commentary, for instance, which could be published at a cost of two shillings and which sold freely, and without extraneous advertisement, for not less than twelve shillings sixpence, would he admit the force of an argument intimating that he should sell his work for two shillings and a penny? If the purchaser of Science and Health is willing to pay its price, who else need grumble?

The critic further states that Mrs. Eddy's writings contain "clear reminiscences of the language and ideas of Dr. Quimby," and here again the words have a familiar ring; but Mr. Quimby wrote no books. He left some manuscripts in the possession of his son which have been withheld from publicity. An investigator who made careful personal inquiry into the matter writes: "Veritable Quimby manuscripts are absolutely hypothetical." Whence comes the reviewer's familiarity with the language and ideas of Quimby? *The Christian Science Journal* never "claimed to prove Mrs. Eddy's equality with Jesus," and she herself never claimed equality with or "superiority to him in knowledge." In the Preface to Science and Health Mrs. Eddy speaks of herself as "a willing disciple at the heavenly gate, waiting for the Mind of Christ" (p. ix).

Does the reviewer believe that God is personal in any anthropomorphic sense? He quotes, "Man cannot possibly sin," but fails, like very many of his fellow critics, to discriminate between what is predicated in the text-book of the spiritual, perfect man, made in God's image and likeness, and what is affirmed of human corporeality or mankind. Christian Science does not, to use the critic's words, "set the healing of the body before that of the soul." Christian Science recognizes that the body reflects what governs

Digitized by Google

it, and that to cure sickness it is necessary first to cure, cast out or destroy, the sinful belief or erroneous thought of which sickness is the physical manifestation. The attitude of Christian Science on "such subjects as the incarnation, the resurrection, the reality of sin, and the use of the holy sacraments," may not be altogether in accord with the differing dogmas of some of its theological critics; but inquirers who wish to know exactly what Christian Science teaching on these subjects is, will not accept as basis for judgment a few garbled sentences or portions of sentences taken from Science and Health. They will themselves go to the text-book for accurate information as to what Mrs. Eddy has written, and they will be willing to give to her representations the careful, unbiased consideration which their inquiry demands.

Finally, in confirmation of what he seems to regard as the greatest danger of Christian Science, the reviewer quotes "a leader in medical skill," who is also "a devout layman," thus: "What concerns us is the parody of the Christian faith by Christian Science. It is not a question of orthodoxy, it is a question of decency," and fails to discern that in so doing he has withdrawn his outposts, spiked his guns, and surrendered the whole position. The theological reviewer admits the healing of Christian Science, and turns all his batteries on its perilous unorthodoxy; but his medical ally, who scents danger in another direction, rides up and calls out, "Never mind the orthodoxy; don't you see that the claim to heal the sick as Jesus did is positive indecency?"

[George Shaw Cook in *Beacon-News*, Aurora, Ill.]

In a paragraph published in a recent issue the writer thereof shows very little appreciation of the real nature of Christian Science when he says, "Christian Science when combined with medical science might be made to do wonders," etc. It would be entirely inconsistent with the Principle of Christian Science to attempt to combine its practise with medicine. To the extent that material means were employed by the metaphysician, and to the extent that he compromised with matter and placed his dependence thereon, to that extent would he stultify his faith in the power of Mind as the healer of disease. By such methods the practitioner would become like the "kingdom divided against itself" which Christ Jesus said "cannot stand." The Master consistently declared, "If therefore thine eye be single, thy whole body shall be full of light," and again, "It is the spirit that quickeneth; the flesh profiteth nothing."

Although the practise of medicine was in vogue two thousand years before the advent of Jesus, it is not recorded that he cooperated with medical doctors in his healing work or that he even called upon them for diagnoses. On the contrary, there is every reason to infer from the gospel record that he healed functional and organic, acute and chronic diseases, without failure and without the use of drugs or material remedies. Christ Jesus said to the man whom he healed of the palsy, "Be of good cheer; thy sins be forgiven thee," indicating that the forgiveness or destruction of sin was what released him from the bondage of disease.

Christian Scientists believe that the so-called miracles which were performed by Jesus and his followers, and to some extent by the ancient prophets, were miracles only in the sense that they were wonderful or marvelous. They do not believe that these works were special interpositions of God without regard to law, but that they were natural manifestations of the power of God according to His law. They believe that Christ Jesus understood this law and that his works were done in accordance with it. They believe that the same law is operative today, and that it is discovered to the world by Mrs. Eddy in her book "Science and Health with Key to the Scriptures." They have learned through study of this book that the same Mind "which was also in Christ Jesus" is present with men today, that it is abundantly able to heal sickness, and may be relied upon with absolute confidence. Their experience has taught them that sole reliance upon the divine Mind, in time of trouble, is better than reliance upon non-intelligent matter, and far better than to attempt to rely upon both.

[Editorial in *Manchester* (N. H.) *Union*.]

It is a sound principle of public policy that legislation should be made in language to express the intent as definitely as it is possible to express it. Even then, as conditions change or unanticipated points of view are presented, the courts are overburdened with the task of interpretation of the meaning. For that reason criticism of House bill No. 303, relative to the practise of medicine, now in the hands of the committee on public health, seems to be well founded.

The present law on the subject clearly exempts from registration, and other provisions of the act, Christian Science or any other method of healing, if no drugs are employed or surgical operations are performed. This bill strikes out such provision, but substitutes: "Nor shall this act be construed so as to interfere in any way with the practise of religion." Such a provision is so indefinite as seemingly to invite contention and litigation. If the purpose is to outlaw Christian Science, which sets forth that its practise of healing is inseparably connected with its practise of religion, the issue should be equally drawn that the legislators may understandingly declare their verdict. In such case, no exception of any kind, however indefinite, should appear.

If it is allowed that the definite policy of the state for the past fifteen years, under which no flagrant abuses have been reported, in such a matter is desired to be continued, then that should be equally plain, as plain and definite as it is in the present law. No other than one of these two courses is defensible, and either can be taken without interfering with the other proposed changes in the present law. Too great care cannot be taken in legislating upon any subject to make the meaning of the language clear and definite, removing all possibility of disputes that can be foreseen.

[Albert E. Miller in *Deadwood* (S. Dak.) *Pioneer-Times*.]

An editorial in your issue of Feb. 11 takes the position that Christian Scientists should pay a license fee for the privilege of practising their religion. The recognition that the Christian Scientist offers prayer for the recovery of the sick in accordance with the spiritual requirement, and that this prayer "availeth much," puts the question on a somewhat broader basis than that which is taken in your editorial. The Christian Scientist offers neighborly aid to those desiring his help; he offers a prayer of understanding which recognizes fundamentally that God is not the author of sickness or of sin, and that a right apprehension of His nature and purpose brings relief from the bondage of sin and disease to those who place themselves in God's care. To take the position that all who pray for the recovery of the sick and sinning should pay a license to the state for the privilege of offering this prayer, is hardly putting this matter in a broad light. If such were to prevail, would not the application of this rule tend to discourage religious growth and development in all communities wherein such a law should obtain? Those who apply to a Christian Scientist for aid do so voluntarily, and they are usually led to make their choice of Christian Science after having attempted to regain their health through other means, which obviously must have proved unsuccessful. Let me assure you that whatever return the Christian Scientist may receive for his service is usually so small that it would make the imposition of a tax decidedly burdensome, even if it were conceded that such taxation were right and proper.

The teaching of Christian Science enables each one to

Digitized by Google

administer to his own needs after he has gained a certain degree of understanding. In cases too numerous to mention it has saved the family purse from what would otherwise have proved a continual drain upon it for medicine and medical attendance. One can readily see that better health and morals inevitably follow the application of a teaching which releases from the bondage of disease, and in a large measure from that of sin, the individual who has, perchance, been groping about in the effort to find relief, and it is an open question whether such relief can readily be acknowledged in monetary terms. Looking at the matter in its broadest sense, purely from the standpoint of public weal, it is hardly justifiable to contend that the Christian Scientist, or any other good Christian for that matter, should be taxed for putting into practise the Bible admonition that we should pray for the recovery of the sick and in our distress turn to God, who, as the psalmist declares, "healeth all thy diseases."

[Royal D. Stearns in *Nemaha County* (Neb.) *Republican.*]

The Christian Scientist has adopted the ideal of Jesus, an ideal which includes all the possibilities of good and excludes all the elements of the flesh and of evil. He finds the practical application and demonstration of this ideal in affirming the constant healing, guiding, sustaining presence of divine Love, and in denying any power or reality in evil. This declaration of good and denial of evil brings beneficial results just to the degree of the fulness of the understanding and the faithfulness of the application of the ideal in proving God's love and power to be sufficient for every need. Jesus' works and teachings furnish us an idealism which excludes all evil and includes all good. The Christian Scientist frankly and fully adopts his teachings, and he meets every manifestation of evil, whether of sickness, sin, poverty, sorrow, disaster, with a positive denial of its power or reality, and an affirmation of the allness and goodness of God; and just in the degree that he understands the proper application of the spiritual law involved, does he meet with beneficent results.

Your critic states that Christian Science is "nothing but the old philosophies of Hinduism which were practised five thousand years ago." There is no resemblance between Hinduism and Christian Science. One is a mystic philosophy, the other a practical religion; one demands the acceptance of doctrinal theories, the other asks for recognition and acceptance only to the extent that it is capable of individual demonstration. One is grossly idolatrous, the other is founded upon the first commandment. The test in Christian Science is the one laid down by the Founder of Christianity: "He that believeth on me, the works that I do shall he do also." Those "works," as is abundantly shown in the gospels, consisted in both healing the sick and the sorrowful and in destroying sin. Christian Science is the restoration of primitive Christianity, a Christianity "with signs following," demonstrating its power in spiritual and physical regeneration of the afflicted of earth.

Christian Science accepts the Bible declaration that "God is a Spirit," and that He must be worshiped "in spirit and in truth," and also takes the position that all God creates is spiritual, perfect, and eternal, as expressed in the first chapter of Genesis, in which God said, "Let us make man in our image, after our likeness: and let them have dominion over . . . all." "And God saw every thing that he had made, and, behold, it was very good." Christian Scientists do not admit or believe that after God finished His spiritual, perfect, and eternal creation, He then made an imperfect man and universe, subject to sickness and full of evil and decay. We are told in the Bible that God is "of purer eyes than to behold evil."

Christian Scientists accept the Bible teaching that the last enemy to be destroyed is death, when "there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away." Jesus would surely not have healed the sick and raised the dead if sin and death had been part of the Father's plan, for he came to do the will of the Father.

Christian Science holds that there is no different law for the sick man than for the sinner. There is but one law, and obedience to this law is required of both the sick and the sinful. Whatever the human need, obedience to the law of God will supply that need, for God is infinite good, and "no good thing will he withhold from them that walk uprightly," —are obedient to divine law. The eternal reward of obedience is life and harmony. Paul declared, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death."

[W. E. Fell in *Bradford* (England) *Argus.*]

I am sure your readers will require something more in the nature of evidence from Mr. Craven against Christian Science before accepting his *obiter dictum* as to this Science being "absolute nonsense and delusion." Our friend makes a considerable talk about the healing of cancer. Christ Jesus drew no line of demarcation in the healing of disease two thousand years ago. Why should any of his followers do so today? Christian Scientists do not claim to heal any one by their own volition, but they do claim that the power of God and His Christ is as active a healing agent today as during Jesus' ministry.

There is no delusion in Christian Science. It grows, and it will continue to grow so long as it makes people healthy, happy, and prosperous, and so long as it teaches its followers to love God supremely and their neighbor as themselves, and to live, look for, and find the good in other people. So long as it destroys fear and gives mankind a larger sense of life and its responsibilities, and a peace of mind surpassing anything they ever deemed possible in this phase of existence, so long will it grow and prosper; and its critics will save themselves a world of trouble and heartburning if they will make up their minds to accept accomplished facts.

[B. R. Bowman in *Los Angeles* (Cal.) *Tribune.*]

Some time ago I read Dr. Charles Edward Locke's book, "Eddyism," and it produced in me a violent prejudice against Christian Science, amounting to hatred, more like murderous resentment; but since I had always thought myself an open thinker, a sense of injustice dwelt with me, so I decided to investigate the teaching of Christian Science fairly. I obtained the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and other authorized books bearing upon the subject, and can say that investigation has proved that the prejudice created by the book referred to was wholly unwarranted, and that it has now given place to a love for the pure and elevating Christianity presented in the teachings of Christian Science. The lessons I have learned during this investigation have made it impossible for me to bear such murderous prejudice as was engendered in me before I began.

It seems indeed a shame that professing Christians should continue such vicious attacks upon others. What is Christianity? Surely not that which creates hatred and encourages other violent propensities.

All things are God's already: we can give Him no right by consecrating any, that He had not before; only we set it apart to His service. Just as when a gardiner brings his lord and master a basket of apricocks, and presents them, his lord thanks him, perhaps gives him something for his pains; and yet the apricocks were as much his lord's before as now.—JOHN SELDEN, 17th century.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

FANCY AND FACT.

ALMOST immediately after news came of the recent floods in Ohio and Indiana, and of the needs of those who were passing through the ordeals of wreck and famine, there appeared in many newspapers throughout the country editorials which were based upon prepared editorials sent out in bulletin form from the headquarters of the American Medical Association, as a part of the campaign of that organization to secure the establishment of a federal department of health, with a representative of the American Medical Association as a member of the President's cabinet. One of these editorials was as follows:—

In the piping times of peace a large number of the public turn from the educated physician to the fads, isms, faith, sun, magnetic and other healers. The latter are conspicuous by their absence when pestilence stalks abroad over the land, when cyclones, floods, earthquakes, and like catastrophes demand urgent, scientific, skilful action. We are reminded of this singular but obvious fact by a recent able editorial of the *Journal of the American Medical Association*. When the call goes forth for medical men to minister to the sick, the wounded and the dying, the plodding doctor leaves his own work and rushes into the fray, he toils day and night without receiving or expecting compensation, in behalf of suffering humanity. Has there ever occurred a calamity in which this fact has not been demonstrated?

At such times, says the *Journal*, what becomes of the cults that are constantly trying to usurp the place of the scientific medical men and undermine the confidence of the public? They sink into obscurity. When the emergency arises what have they to offer? There has appeared no despatch announcing that "a special train containing a hundred osteopaths is on the way to Dayton. All the sufferers will receive spinal adjustments." Nor did any announcement appear after the western cyclone that "Senator Works has arranged for a special train containing a hundred Christian Science healers to be sent to Omaha, where all persons injured in the cyclone and blizzard will receive mental treatment." Such items would be greeted with laughter. When lives are in danger, when death rides in the wind and on the waters, the people want the men of scientific training and experience, cool judgment and steady nerves, who can carry to them all the aid that the human intellect in the centuries of struggle has discovered. The faddists are like the "summer soldier and sunshine patriot" of Thomas Paine. Their conquests are wrought in gorgeous office or marble temple over maladies that result from peace and plenty: "nervous prosperity" is the prolific source of their emoluments. The gentle ministers to the mind diseased have their proper place in the scheme of life; they are useful in certain spheres, not, however, amid scenes of danger and distress, in fire, flood, or battle. This fact must "give us pause."

Now, what are the facts? While these editorials were being published, the news columns of the papers in which they appeared were showing that Christian Scientists, through their churches, aside from what was given individually, were contributing large sums of money to the funds of the Red Cross Society for the relief of the stricken people. An inspection of the published lists of contributors to these funds will show that the amounts thus given by Christian Scientists were most liberal and must have reached in the aggregate fully one hundred thousand dollars. Such prompt and generous action on the part of the Christian Science churches should be sufficient proof that they are not in the "summer soldier and sunshine patriot" class; and the following correspondence will show that not even this was the extent of their benefactions, for in addition to contributing, as above stated, to the Red Cross fund for the benefit of all who were in need, the Christian Scientists rendered further assistance to this fund by taking care of their own people.

Christian Science Flood Relief Committee, 910 Hayden Building,
Columbus, Ohio, May 7, 1913.

To His Excellency Hon. James M. Cox, Governor of Ohio:

Sir:—Assuming you would welcome information pertaining thereto, the Christian Science flood relief committee wishes to report briefly its activities in collecting and distributing funds for relief in Ohio and Indiana.

This committee was organized April 7, and a letter sent to every Christian Science church in the United States. Response was prompt and generous. During the month over fifty thousand dollars has been received. Conditions in many places have been personally investigated by the committee, and funds are being distributed through local representatives, to whom the following amounts have been sent thus far: Dayton, Ohio, $10,000; Indiana points, $7,500; Hamilton, Ohio, $5,500; Columbus, Ohio, $4,000; Marietta, Ohio, $1,600; other points, $1,700; a total of $30,300. The rest of the funds will be distributed shortly. The cost of administering this fund is less than one half of one per cent, and is placing those assisted in a position to reestablish themselves without further aid from other relief organizations.

Many of our churches had sent large contributions through other channels before this committee was organized, hence such letters as the accompanying copy, which is typical of many received.

Assuring you of our best wishes, we are, yours respectfully,
The Christian Science Flood Relief Committee,
By W. H. HOWARD, *Secretary.*

State of Ohio, Executive Department, Columbus, May 8, 1913.

My dear Mr. Howard:—I have your communication of May 7, relative to the Christian Science relief fund which your committee has raised and disbursed. This work upon the part of your committee, and the fund received by it, should be a source of pride to Christian Science everywhere.

Permit me, in the name of the people of the state, to extend to you, and through you to the Christian Scientists, the sincerest thanks for this generous aid in the time of distress. Very truly yours,
(Signed) JAMES M. COX.

Mr. W. H. Howard, Secretary Christian Science Flood Relief Committee, 910 Hayden Building, Columbus, Ohio.

It is not the custom of Christian Scientists to parade their benevolences, and nothing would have been said in this instance had it not seemed necessary to state the facts in order to correct whatever misapprehension may have arisen from the newspaper editorials referred to, as to their attitude in other than "the piping times of peace," though it would seem that previous responses to appeals for help both at home and abroad should have removed any doubt on this point once and for all.

ARCHIBALD MCLELLAN.

RESPONSIVENESS TO TRUTH.

THROUGHOUT the Scriptures we find repeated statements as to the calls of God to humanity, and it is somewhat startling to read in the fiftieth psalm these words respecting those who are called to listen to the divine voice: "Hear, O my people, and I will speak; O Israel, and I will testify against thee: I am God, even thy God." Then follows the rebuke of Truth to those who are called saints, and the declaration that God does not ask them for material sacrifices, that the gold and the silver are already His, and "the cattle upon a thousand hills." This raises the question as to what is the offense concerning which God testifies against His people, what the sins of commission or omission which would separate them from God. The answer, clear and definite, is given in the command, "Offer unto God thanksgiving; . . . and call upon me in the day of trouble: I will deliver thee, and thou shalt glorify me." But this is not all, there follows the grave charge of being in league with thieves and adulterers, and then this: "Thou givest thy mouth to evil . . . Thou sittest and speakest against thy brother . . . These things hast thou done."

From the Christian Science standpoint it is a very serious thing not to call upon God, divine Truth and Love, in every time of trouble, and what is more, to seek His omnipotent aid "first," as Christ Jesus said we should. Any failure to do this shows that we have forgotten the first commandment: "Thou shalt have no other gods before me;" and when we either heedlessly or wilfully disobey this divine ordinance, we are very likely to violate the moral obligations which relate to our fellow beings, and thus we are led to think ill of them, speak ill, and perhaps do ill, when our covenant with God binds us to love God and our neighbor, and to sacrifice upon the consuming fire of divine Love all the evil beliefs which would make man mortal and material.

To a large extent mankind have regarded the Almighty somewhat as an earthly ruler who should not be troubled with the personal affairs of his subjects, and so they were

Digitized by Google

wont to approach Deity in a sort of apologetic attitude, when they ventured to come to Him at all. Why should God be approached in the case of some bodily ailment, unless it became so serious that the last enemy were feared? and yet Jesus taught that not even a sparrow could fall to the ground without God's infinitely loving care, and he added, "Even the very hairs of your head are all numbered. Fear not therefore: ye are of more value than many sparrows." Our revered Leader speaks of God as "the all-hearing and all-knowing Mind, to whom each need of man is always known and by whom it will be supplied" (Science and Health, p. 7). We can never come to God too often, if we are really willing to draw nigh with clean hands and a pure heart, and an earnest desire for spiritual blessings, for if we gain these, all our needs will be supplied, and this of course includes the healing of mind and body.

Christian Science is awakening the world to hear the Father's voice; more than this, to understand His call, and to respond to it with loving obedience. In the twelfth chapter of John's gospel we read that on one occasion even the Master was troubled and called upon the Father to save him. We are then told that "a voice from heaven" was heard, the full import of which was understood by Christ Jesus, but those about him, regarding all things from the standpoint of material sense, said that it thundered. There was therefore no response on their part, and they continued to walk in darkness, as so many do today; yet all the while Truth is calling, calling, offering life and health and peace. In one of our Leader's hymns (Poems, p. 14) are these beautiful words:—

I will listen for Thy voice,
Lest my footsteps stray;
I will follow and rejoice
All the rugged way.

Should not we, too, with renewed purpose, hold ourselves in readiness to respond willingly and gladly to the voice of Truth?

ANNIE M. KNOTT

GAINING BY GIVING UP.

THE story of Naaman, as told in the fifth chapter of II Kings, is of absorbing interest from any point of view, so full is it of movement, of events, of well-drawn characters, and of local color. We are made acquainted with a man of prominence and of parts, the favorite of a princely ruler, who had been honored as a great general, and whose ears were accustomed to the acclaim of the multitude. Commanding the emoluments of high office, he was surrounded, no doubt, by those who esteemed it a privilege to minister not only to his wants but to his whims.

In view of these things, he had naturally acquired great self-respect and pride of distinction, and yet his life seemed a tragedy, a hopeless defeat, for he was a leper. As such, he was fated in human belief to become an object of loathing and a social outcast, but in the hour of his approaching despair, word reached him of a prophet in Israel, whom by the counsel and with the royal gifts of the king he searched out. It is evident, however, that his thought of the man of God was distinctly patronizing, and the question of his healing a matter of barter, when with his horses and chariot he stood at the door of the prophet's humble lodging, evidently expecting him to be duly impressed with the opportunity offered him to exercise his healing power on some one who was worth while, and who could suitably reward him for his time and attention. But Naaman met with a severe and altogether exasperating rebuke, when Elisha refused even to see him, and ignoring both his distinctions and his gifts, sent him word that if he would be healed he must be clean, prescribing as a test of the sincerity and worthiness of his desire, that he go to the Jordan and wash seven times.

Naaman's anger and resentment, his final consent to try the experiment and the purification which followed his obedience, as they are told in the story, mark a very human experience and procedure. Naaman is by no means unique in his big feeling and folly, but rather our every-day familiar. The prophet had named a demand of Truth which is universal and uncompromising, and which is just as offensive to mortal sense today as it was when Jesus said, "How hardly shall they that have riches [the prized accretions of material sense] enter into the kingdom of God!"

The average man is very willing to be saved at some future time, and more than willing to be freed from pain right now, if this can be accomplished with due consideration for his pet beliefs; but to make himself clean by the washings of self-effacement and the renewing of the mind, to give up not only his unideal habits, but his pride, to disregard the honored Abanas and Pharpars of his educated and altogether respectable views,—this is as serious a task to most people now as it was to Naaman. Human sense is forever trying to enter heaven with its earthly baggage, it wants to be saved without parting from its prejudices, and it is not until one has learned that all his highly prized jewels are paste, that he acquires the willingness "to leave the old for the new" which "renders thought receptive of the advanced idea" (Science and Health, p. 324).

Christian Science makes imperative demand that we give humble consent to the sacrifice of our past ways of thinking, living, and doing, to the giving up of the worship of the *Penates* of our fathers or of "our church;" this is the cross that we are to take up. We cannot enter the heaven of true health and happiness unless we are willing to be washed and made clean, willing to give up our devotion to material concepts, creeds, and conventionalities, until we have become teachable, and learned to love the truth for its own sake. Naaman arrived, but as in the instance of St. Paul, it was not until he was willing to recognize the worthlessness of that on which he had prided himself; and this it is well for us all to learn, whether we be patients or practitioners.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

STOCKHOLM, SWEDEN.—The application made by the Christian Science Society [of Stockholm] to be allowed to form a separate religious community, acknowledged by the state, has been granted by his Majesty the King.

All the larger Swedish dailies of April 15, 1913, contained the above notice.

Aftonbladet (The Evening News) of Stockholm, dated April 15, said:—

For some time, as we know, those in authority in this society have wished to be a religious community acknowledged by the state, due application having been made in the proper quarter for this purpose. The Consistory, however, considered this application should not be granted, and therefore advised against it. It was then deemed wise to appeal to his Majesty the King, who has graciously granted the application made. From what Count Cronstedt, who is chairman of the Christian Science society here, informs us, this permit will not make any difference in the society for the present. The sole undertaking contemplated is a Sunday school that may possibly be started. No decision as regards the building of a place of meeting has as yet been arrived at.

"We simply wished to obtain a legal right to practise our religion," declared Count Cronstedt, "but that does not imply that any great changes will be made. On the contrary, everything will continue as it was before."

"And the number of your adherents?" he was asked.

"Growing daily to a considerable degree, both in Sweden and in other countries." But the exact number of the members of the society was not vouchsafed by the chairman.

Peace hath her victories
No less renowned than war.

THE LECTURES.

RIDGEWOOD, N. J.

A lecture on Christian Science was delivered at First Church edifice by William R. Rathvon. He was introduced by Harry S. Marx, who said in part,—

We are living in an age of educational and scientific progress, and as a people we give much attention to the study and investigation of the sciences of chemistry, engineering, medicine, surgery, economics, political science, and many others. We contemplate with pride the achievements and advancement made in these sciences by those who spend their time and labor upon them, but there is one subject with which we individually are so deeply concerned that there always seems to be room for much more attention to it than we generally give as individuals. I refer to the thorough knowledge and understanding of the basic teachings of Christ Jesus, with the purpose of improving our individual attitude toward ourselves and toward our fellow men, and our individual efforts to relieve the world of sin, disease, poverty, and death, a study which should make each one of us happier and which will help each one of us to do something to make the world brighter and better and bring into a present reality the teaching of Jesus that the kingdom of heaven is within us.

Jesus saved sinners, healed disease, overcame poverty, and raised the dead; but these acts were called miracles and are referred to as being supernatural. Jesus, however, taught that he who believed on him (and I think "believe" here means "to understand") should do the works that he did; and he said, "Greater works than these shall he do." Now Christian Scientists believe that the works of Jesus were the result of the definite application of divine Principle; that Jesus thoroughly understood, lived, and applied the laws of this Principle; that instead of being supernatural, the works of Jesus, in the words of one who spent a lifetime in studying the subject, were "supremely natural" (Science and Health, Pref., p. xi); and that the laws of God which he utilized through obedience are just as effective today as they were when he was on earth; they are practical laws which we can apply in our daily life as we go about our affairs, whatever they may be.—*Correspondence.*

SPRINGFIELD, MO.

A deeply interested audience filled Stone chapel on Drury campus to hear the lecture on Christian Science by Judge Clifford P. Smith. E. D. Levy, assistant general manager of the Frisco lines, introduced the lecturer, and said in part,—

In this world there is nothing so destructive as misunderstanding. In my opinion, the great religious tolerance that this country is enjoying is due to the fact that people are more intelligent and have a better understanding of the religious belief of those who entertain a different belief from their own, and it is well that we have a full and complete understanding of the truth regarding all religious faiths and beliefs. This alone justifies us in welcoming to our midst the gentleman who will tell us the truth about Christian Science and Christian Scientists. When he has finished his remarks I am sure that those of you who are not Scientists will have a higher regard for those who are. I am not a Christian Scientist, but am deeply interested in Science—have had practical demonstrations of the benefits of Science—know personally of wonderful cures made in my own immediate family and among my personal friends.

Whatever his religious faith may be, I do not believe there is a well-informed person in these United States who does not admire the genius of Mary Baker Eddy, who does not admire the woman for what she was and for what she did; and likewise I do not believe there is a well-informed man or woman in these United States who does not admire the Christian Science church—the quiet dignity in which its members proceed with their own faith and the total absence of proselyting of any character; and there can be no doubt but that, even if one should not become a Christian Scientist, the reading of Mrs. Eddy's work, "Science and Health with Key to the Scriptures," and the attendance of lectures of this kind, will make a better man or woman.—*Springfield Leader.*

OKLAHOMA CITY, OKLA.

The remarks of William H. McNeal introductory to the lecture on Christian Science by William D. McCrackan, M.A., in Overholser opera house, were in part as follows:—

The object of Christian Science, as defined by our Leader, Mrs. Eddy, is: "To organize a church designed to commemorate the word and works of our Master, which should reinstate primitive Christianity and its lost element of healing" (Church Manual, p. 17). People are loath to give up the ideas that have been their guide for centuries and embrace an old truth made new, that heaven and happiness is here and now, all about us, instead of in the indefinite hereafter. It took generations to convince the thinking world that the earth is round and that it revolves around the sun; but the fact has been scientifically proven to our satisfaction, and just as surely is Christian Science convincing the world that there is something in store for us other than sin, sickness, grief, sorrow, and strife.

I know that this long-lost element of healing has been found. I know that Christian Science heals; I know that Christian Science destroys sin, and when I say that Christian Science does these things, I do not mean that sin is destroyed and sickness is healed by the operation of a dogmatic creed or by a code of signs in some mystic way, but I mean that by and through a knowledge and understanding of the divine Principle of Life, Truth, and Love, and a knowledge of the Science that Christ knew, the sick are healed and the hungry fed.—*Correspondence.*

PHILADELPHIA, PA.

At the lecture delivered at the Garrick theater by Willis F. Gross, the speaker was introduced by Col. Louis A. Watres, former lieutenant-governer of the state, who spoke in part as follows:—

No one can read history without recognizing that it has been and is the desire with all great religious leaders, in all ages and eras, to get away from the low and unspiritual phase of the average religious life,—a craving to rise above its formalism and conventionalities into a better understanding and union with God, understood and communicated. Thus it was that the Leader of the Christian Science movement sought and found a union with God, based on a scientific recognition of God as immanent in His world, as distinct from a world's emanation from God. Communicating this to mankind, it has been found applicable in every walk in life, bringing not only a better understanding of Soul, but a knowledge which means salvation from disease as well as from sin. It may be thought by some that the purpose of these lectures is to build up this church by a mere adding to its membership; but such is not at all the end in view. Rather are these lectures an expression of the earnest desire of those who have been helped and healed through the truth which Christian Science teaches, to give wide circulation to this truth. They have found that for them it has illumined life, brought help as well as hope, while through the added light thrown upon the Holy Scriptures by the Christian Science text-book, "Science and Health with Key to the Scriptures," they have become clear and impressive. Christian Scientists have proved for themselves, and so would have all others know, that this teaching evidences the presence among men, now and always, of a power that uplifts, heals, and saves.—*Correspondence.*

ALLIANCE, OHIO.

Frank H. Leonard delivered a lecture on Christian Science in the Columbia opera house to an attentive audience. The speaker was introduced by Postmaster Edwin Morgan, who said in part,—

We are admonished by the apostle Paul in the Scriptures to work out our own salvation with fear and trembling. This has been a difficult thing to do in the past, and is so now unless we can know the truth. If you want the Scriptures illuminated so that you may know of the plans of the divine architect and creator of the universe, you will take up the study of "Science and Health with Key to the Scriptures," the text-book of Christian Science, which was written by Mrs. Eddy. During my two years as a student of this book I have found that Christian Science is practical and logical; that it has nothing to do with suggestion, hypnotism, mesmerism, or spiritualism. It is just the Christianity which Jesus taught and demonstrated nineteen hundred years ago. My experience has forced me to the conclusion that wherever Christian Science is honestly and conscientiously lived and practised, it is silently doing a great work of regeneration, not only in the individual, but in the whole body politic. It also stands for all that is the highest and noblest in life.

Correspondence.

JACKSON, MISS.

Mayor A. C. Crowder, in introducing Virgil O. Strickler, who lectured on Christian Science, said:—

Not in a long while have I responded so willingly as on this occasion, for it affords me personal gratification and pleasure to express my appreciation of the splendid citizenship universally prevailing among those of the Christian Science faith in this community. A man is judged by the company he keeps; so it is with all religions. By this measure we may justly conclude that the Christian Scientist merits our highest esteem as a good citizen. From personal observation, and as a public official, I am prepared to say that the Scientist, more than any other religionist, literally practises what he preaches. On the assessment rolls of our city, the names of many Scientists appear as property owners, and it is a fact frequently commented upon by the board of equalization that the property owner of this faith can always be counted on to give in his property at its real value. This fact alone speaks volumes. I am free to say that, so far as my personal experience goes, I have yet to meet a real bad man who is a Christian Scientist. Invariably the Scientist is one who speaks well of his neighbor. It is, therefore, with much satisfaction and pleasure that I present the speaker of the evening.—*Correspondence.*

LIVERPOOL, ENGLAND.

An interested and very attentive audience assembled in Picton hall, William Brown street, to hear a lecture by Bliss Knapp on Christian Science, under the auspices of First Church of Christ, Scientist, Liverpool. In introducing the lecturer, Charles W. J. Tennant of Edinburgh said:—

When I first heard of Christian Science, some thirteen years ago, I was a physical and mental wreck. I had been operated on twelve times for a tubercular affection of the bones, and was in a state of despair and hopelessness because the physicians had said they could do no more for me. I first came in touch with Christian Science through a lady who I had been told did not believe in disease. I asked this lady what she thought I was suffering from. She looked at me and said, "I believe that God made nothing save good, and that Jesus healed all manner of diseases instantaneously through that knowledge." These two statements made me think as I had never thought before. Then she left me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, the text-book of Christian Science. I took up the study of that book, and from that time I gained such an understanding of the truth, as revealed in it and in the Bible, that I was completely healed.—*Correspondence.*

POUGHKEEPSIE, N. Y.

In introducing Prof. Hermann S. Hering, who lectured on Christian Science at the Collingwood opera house, Attorney Frank B. Lown said:—

I am sure that I can bespeak for the lecturer of the afternoon, your careful and thoughtful attention. There are undoubtedly in this audience those who believe in Christian Science, those who disbelieve in it, and those who have no belief at all. I think I can safely say that all of us welcome any doctrine which tends to make life easier and more cheerful, to lighten humanity's load, and to alleviate the appalling aggregate of pain and trouble in the life of the world. So I feel, in introducing him who comes to us as an accredited member of the board of lectureship of The First Church of Christ, Scientist, of Boston, Mass., that you will give him the attention which the subject deserves.

Correspondence.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Albion, Mich.—W. C. T. U. hall, 8 p.m., May 26.
Bath, Maine.—Universalist church, 8 p.m., May 29.
Cambridge Springs, Pa.—Avenue theater, 8 p.m., May 27.
Charlotte, Mich.—Church edifice, 8 p.m., May 26.
Chicago, Ill. (Tenth Church).—Rosalie hall, corner 57th street and Rosalie court, 8 p.m., May 24, and 3 p.m., May 25.
Clinton, Ill.—Universalist church, East Main street, 8 p.m., May 20.
Columbus, Ind.—Crump's theater, 8 p.m., May 27.
Dover and Foxcroft, Maine.—Chapel, Lincoln street, 8 p.m., May 30.
Exeter, N. H.—Town hall, 8 p.m., May 29.
Gloucester, Mass. (Second Church).—City hall, 8 p.m., May 26.
Greenville, Mich.—Phelps' opera house, 8 p.m., May 26.
Huntington, W. Va.—Carnegie auditorium, 8:15 p.m., May 27.
Lawrence, Mass.—City hall, 2:30 p.m., May 25.
Louisville, Ky.—Shubert Masonic theater, 8 p.m., May 25.
Luverne, Minn.—Opera house, 8:15 p.m., May 27.
Malden, Mass.—Malden auditorium, 8 p.m., May 25.
Mansfield, Ohio.—Memorial opera house, 2:30 p.m., May 25.
Monroe, Wis.—Turner opera house, 8:15 p.m., May 29.
Muskegon, Mich.—Women's Club house, 8 p.m., May 27.
New York, N. Y. (First Church).—Church auditorium, 1 West 96th street, 8 p.m., May 27, and 3:30 p.m., May 28.
Norway, Maine.—Opera house, 8 p.m., May 27.
Nyack, N. Y.—Church edifice, Broadway and Cedar Hill avenue, 8 p.m., May 26.
Oil City, Pa.—Carnegie library, Central avenue, 8:20 p.m., May 26.
Paterson, N. J.—Y. M. C. A. hall, 8:15 p.m., May 26.
Peoria, Ill.—Mohammed temple, 207 N. Monroe street, 8 p.m., May 22.
Pittsburgh, Pa. (First Church).—Carnegie music hall, Forbes street, 8 p.m., May 27.
Plainfield, N. J.—Plainfield theater, 3:30 p.m., May 25.
San Rafael, Cal.—Redmen's hall, 803 Fourth street, 3:15 p.m., May 25.
Terre Haute, Ind.—Zorah temple, 639 Mulberry street, 8 p.m., May 23.
Warsaw, Ind.—Circuit Court room, Court house, 8 p.m., May 30.
Wellington, Kan.—Isis theater, 3 p.m., May 25.

TESTIMONIES OF HEALING.

I think there are very few people who have more reason to be grateful for Christian Science than I have. Before I came to it I never remember being able to say that I was quite well. I had been under doctors and had taken every drug that could possibly be thought of, as well as having gone through every description of illness for twenty-three years. Every night for over thirteen years I had taken drugs to induce sleep; indeed I thought it as necessary to take a sleeping draft and a stimulant at night as it was to take food; but when these things began to lose their effect, I suffered from an intense fear of the night, and at last prayed to die, thinking I would then get rest and peace.

Besides the other ailments, I suffered from an internal weakness, and could only walk short distances, being obliged to lie down a great deal; and although I had several operations I was no better. I got into an absolutely hopeless condition, and when treatment in a nursing home in Manchester two years ago proved a complete failure, I turned to Christian Science, determined to give it a fair trial. It was a little while before I was able entirely to give up the sleeping draft and stimulant at night, but the practitioner who helped me, encouraged me, and told me to press on, and these things would all go, for my general health had almost immediately begun to improve after taking treatment. I worked and studied very earnestly in Christian Science, never leaving it alone, and after a few months I was able with great joy to give up all dependence upon material remedies, and now for eighteen months I have been perfectly well. I can eat anything, whereas before I came into Christian Science I was greatly limited in this respect. I now sleep well, can walk long distances, and play golf. Nor is this all, for my whole life is changed. In knowing God through the understanding of Christian Science, I know what it is to have the only real peace, that which brings rest, and true happiness, and I no longer wish to die, as I know God to be the Life of man.

My thankfulness to God is very great, but difficult to express in words. I am indeed grateful to our beloved Leader, Mrs. Eddy, for giving to us this beautiful religion, and to the kind friends who were so patient in helping me when I was in such terrible bondage. I feel I can say, like the psalmist, "It is good for me that I have been afflicted," for "before I was afflicted I went astray: but now have I kept thy word." My most earnest prayer is that all those who are dear to me may be brought to the knowledge of this healing truth, Christian Science, that I may daily grow in its understanding, and that my faith may be proven by my works.

NORAH GREVILLE WOODS, Hale, Cheshire, England.

Although I have been extremely slow in acknowledging the benefits I have received through Christian Science, the necessity for unloading a heart filled with gratitude for blessings already received has fully dawned upon me now. About six years ago, with the thought of criticism uppermost in my mind, I began to read the Christian Science textbook, "Science and Health with Key to the Scriptures," determined to find the weak spots in Mrs. Eddy's teachings, so that I might be able to disprove to relatives of mine who were already interested members of the Christian Science church, the utter fallacy of the supposed cures made by the followers of this (to me then) "fad" religion.

I had read probably less than fifty pages in the text-book before I was healed of conceit in a large degree, and many wonderful truths which I had never even thought of before were revealed to me. I then started in earnest to gain at once all there was in the subject. The letter came plentifully, but alas, the spiritual uplift very slowly; in fact, I sought for three long years to gain the requisite understanding necessary to comprehend the meaning of the allness of God and the nothingness of matter. I was rewarded almost miraculously during this seeking for Truth, for when I first opened Science and Health I was well-nigh a nervous wreck, very thin, weak, and run down from various excesses. I had been a constant sufferer from a chronic bowel difficulty since childhood, was troubled for years with piles, and had catarrh, one nostril having become so obstructed that it was impossible to breathe through it. I was compelled, therefore, to take drugs very frequently for the relief of some ailment; but every one of these ills was overcome and destroyed through the study of the Christian Science text-book, together with an honest search of the Bible for more of the truth at the same time.

I am now considered a strong, healthy man, though I have not touched drugs of any kind in over five years, and have never even had to call upon a Christian Science practitioner for physical help for myself up to the present time, although my wife and little girl have both had demonstrations of healing made for them by practitioners. Through the understanding I have gained in studying Mrs. Eddy's book, I have been enabled many times to heal the sick in my own family and to aid others outside the family who sought help. I am indeed grateful for the spiritual inspiration which has come to me, and my prayer to our heavenly Father is that I may so order my future life as to be found worthy of the name Christian Scientist.

WILLIAM J. SMITH, Chicago, Ill.

I wish to give my testimony of healing in Christian Science, in thankfulness to God and gratitude to our beloved Leader, Mrs. Eddy. A little over two years ago I took up the study of Christian Science. At that time I had been under a doctor's care for eight months, my ailment being diagnosed as heart trouble, with hardening of the arteries. I had had two strokes and was told if I recovered my health it would not be for several years; but after reading Science and Health for about a week, I laid aside my medicine, and have not taken any material remedy since. Besides those ills mentioned, headaches have been overcome, also a catarrhal condition of the left ear, and many other ills. At the same time my daughter was healed in six weeks of a stomach trouble for which four doctors had treated her in the course of five years. This does not tell half of the good we have received in Christian Science.

ANNA M. RYAN, Washington, D. C.

I wish to express my gratitude for the great blessing I have received through Christian Science. In November, 1909, I injured my ankle very badly, so that I suffered intensely, and although every remedy that we could hear of was tried, nothing seemed to alleviate the pain. As time went by I did not improve, but was gradually getting worse, and the doctors were unable to help me. After nineteen months of worry and suffering I was a helpless invalid, for my other ankle became diseased, and I could not stand on either foot; indeed, this disease seemed to be affecting all my joints, and my general health was failing fast. The doctors did not understand my case, so I lost all hope of ever being cured through *materia medica;* but I felt that there was something that would help me, if I could only find what it was, and that God would have me cured, so that all my life would not be so sad and dreary.

I was continually seeking to find this new way which I felt would cure me, when a friend told me of Christian Science, and I knew then that I had at last found what I had long been searching for. I wrote to a friend at Muskogee, Okla., for the address of a practitioner, and a dear lady answered my letter, telling me that I could be cured through absent treatment. This letter brought me much happiness and encouragement, for it was full of love and cheerfulness, and I

Digitized by Google

knew the moment I read it that I would get well. Treatment was begun and improvement followed. The first few days I had to be lifted, and could not stand alone, but when the first week was over I could walk with crutches, and the second week I could walk in the house without them. The third week I put the crutches out of sight and was able to visit my friends and to attend Sunday school, and when the month was over I was well and strong. I have not used medicine in any form since my recovery, and I have enjoyed perfect health. My life is a happy one, since I am again in school and sharing the good times with my friends.

The world has been greatly blessed through the teachings which set forth Mrs. Eddy's discovery. Words cannot express my thankfulness to God for His blessing, which came to me through the works and teachings of Christian Science.

LENA SMITH, Summers, Ark.

[Translated from the German.]

My gratitude for all the good which has accrued to me from the study of Christian Science comes from the depths of my heart. Since the time when as a child I was taken ill with a fever and a throat affection, and later on with typhoid fever, in both of which cases I was given up by the physicians, I remained sickly, unable to attend school, and in every way hindered and handicapped. A severe cough was followed later on by distressing attacks of asthma, which cast a cloud on my own life and that of my dear parents. When to this were added disappointments and mental suffering, my nervous strength failed, and I broke down completely. Relief was vainly sought through consecutive sojourns in sanitariums, in hygiene, rest-cure, and innumerable medicines and tonics. Sleeplessness of long standing induced the physicians to give me opiates, and I lost the faculty of walking almost completely, which was supposed to be caused by an affected kidney. When a physician with the best of intentions compelled me to attempt to walk a little (about five minutes daily), dreadful crying-spells set in, which were of daily occurrence for a year. I was more ill when I returned from the sanitarium than before I left home.

A light then slowly began to illumine my thought. Although religious teaching had formed no part of my education and I was brought up in the atmosphere of natural science, I began to experience a great yearning after God, and my soul reached out for Truth. A sense of peace gradually came over me, and the more severe symptoms of disease disappeared, yet the awful sense of weakness remained, and I continued with the daily use of medicine. Through the decease of relatives I was finally left alone, practically unfit for life, and, according to medical opinion, without hope of ever recovering my health; but "man's extremity is God's opportunity." I turned to God, imploring His help, and help came. I made the acquaintance of a lady who mentioned Christian Science, of which I had never heard until then, even by name. She loaned me a copy of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, as well as Christian Science periodicals, and I began to read the testimonies of healing with incredulous surprise, as they seemed incomprehensible to my critical thought. Then a ray of hope lighted my consciousness—the truth seemed so near and the way thereto so beautiful.

I sought the help of a Christian Science practitioner in Dresden and met with the kindest response. After five weeks' treatment a transformation had taken place with me; all the functions of the body were self-regulated, and happiness and gratitude filled my heart. The year which has elapsed since has been the happiest of my life, and to the astonishment of all my friends I have become a new woman. Yet I did not take one drop of medicine. To be sure, I am still greatly lacking in understanding, but the way of Truth has been pointed out, and I try to walk in it with a sense of deep gratitude to God, and also to Mrs. Eddy, who has again made it plain to us. May this testimony be the means of bringing to a dejected heart new hope, such as I have gained through Christian Science.

DORA SOHNCKE, Kunitz, near Jena, Thuringia, Germany.

I wish to express my gratitude for the benefits that have come to me and my family through the study of "Science and Health with Key to the Scriptures." About two years ago, when I first heard of Christian Science, a kind friend loaned us the text-book, and I had only read about ten pages when I was instantaneously healed of stomach, liver, and kidney trouble, also of paralyzed bowels. I had been a sufferer for twenty-one years. At times I was unable to eat, the lightest food causing me great suffering. I lived on liquids for a month at a time, and if I ate anything outside the special diet prepared for me, I would suffer intense pain. As time went on I became subject to very severe headaches; in fact, neuralgia had settled all through my system. I had many physicians, among them some of the most noted specialists, but none seemed able to give me more than temporary relief.

God has been our only physician since we have made Christian Science a study, and we have had many proofs that the truth heals sin and disease. This wonderful truth has healed me of hate, malice, selfishness, and many other evil traits, and it is becoming more and more practical in my every-day life. As I strive to live in obedience to its perfect Principle, God, I am being freed from fear and other discordant conditions.

The physical healing seems almost unimportant compared to the peace, joy, and spiritual uplift which the study of Christian Science brings into one's life; but as Mrs. Eddy says, "Divine Truth must be known by its effects on the body as well as on the mind, before the Science of being can be demonstrated" (Science and Health, p. 350). I am truly grateful for the slight understanding I have of divine Truth.—GEORGE W. SCHAFFSTALL, Harrisburg, Pa.

It gives me great pleasure to express my gratitude for what Christian Science has done for me, and also for other members of my family. Upon one occasion I was attacked by an eye disease which was very painful, and I called upon a Christian Science practitioner. She treated me, and in a few days I was entirely healed. A sense of failing eyesight was also entirely overcome, and my eyes have been stronger than for years before. Some time later I was stricken by rheumatism, so that my left knee became stiff, and I was scarcely able to move about at times. I was, however, again wonderfully healed by this great truth.

MARY FRANCES ANDERSON, Petaluma, Cal.

Some time ago it was my privilege to hear of a remarkable case of healing through Christian Science, and during the conversation the thought came to me that no one could hear such a testimony without being benefited and feeling thankful that there is, and always has been and always will be, a God who is omnipotent. It reminded me of my own healing; and while I had not forgotten it by any means, and am no less grateful now than when healed, the spiritual insight gained through the study of Christian Science is so much greater than the physical healing that the latter seems small in comparison. Realizing, however, how much good the testimony referred to has done, together with other testimonies, I thought perhaps mine might help some one, and so I send it.

About eight years ago I had a complete breakdown, and from that time until I went to a Christian Science practitioner for help three years ago, I was under a doctor's care most of the time and taking medicine every day. I wore glasses about four years, and double glasses part of that

Digitized by Google

time, and even then was unable to read, sew, or practise an hour at a time without suffering intensely the balance of the day, and it was not an unusual thing for me to suffer several days. I also experienced great fatigue after very little exertion. We consulted two of the best specialists in Buffalo and Chicago, but instead of improving I grew worse, until at the time I went for Christian Science treatment I was in such a condition that I would gladly have died; but now I know that I have been born again, into the new life which is gained through spiritual understanding,—the right conception of God and our relation to Him and to one another,—and through purification from all error, a cleansing which destroys the belief in sin, sickness, and death, thus demonstrating the truth which makes free. All who have been helped or healed through Christian Science realize, to some extent at least, that "now is Christ risen from the dead, and become the firstfruits of them that slept." Before we knew the truth about God and man and the universe, we were asleep in the darkness of despair, discouragement, or sickness.

Every time we overcome an evil condition with the understanding of good, every time we master hate with love, every time we know the truth about any erroneous condition, we are making progress, we are growing, working our way up and out of the mortal into the spiritual self, into the consciousness of all good, the mental harmony which is heaven. Mrs. Eddy says, "Let unselfishness, goodness, mercy, justice, health, holiness, love—the kingdom of heaven—reign within us, and sin, disease, and death will diminish until they finally disappear" (Science and Health, p. 248). My glasses were discarded after the first treatment, and I have never used them since, though I have used my eyes sometimes both day and night, under very trying conditions, without the slightest inconvenience. About two months after my first knowledge of Christian Science I took two weeks' treatment. I was engaged in orchestral work, something I had not so much as dreamed of taking up again; but I did it without any sense of fatigue, thoroughly enjoying it, and doing it with less effort than ever before. Truly, "as thy days, so shall thy strength be." The relief from physical suffering and the relaxation from mental strain, the comfort in sorrow, the peace, contentment, and great love experienced through this truth, have been so great that I can never be thankful enough to God who is Love, and to Mrs. Eddy who has shown us how to rise above materiality into the spiritual understanding which is eternal life to them that gain it.

MRS. EDITH L. CLENDENIN, Gary, Ind.

Words are inadequate to express my gratitude for the abundant blessings, including health, which I have received from treatment and study in Christian Science. Before I had treatment, one of the many doctors who attended me pronounced me an absolute wreck, and said I would not live six months. My healing took place six years ago, since which time I have been strong and healthy, with no sign of weakness of any kind. Only those who have spent a lifetime of illness and suffering can understand what it means to be well. Nothing I could do or say would sufficiently express my feelings of gratitude and thankfulness. I however hope, by the study of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, to gain an understanding which will enable me to help others as I have been helped.

A recent experience in the rapid healing of a very severe attack of throat trouble proved to me the ever-presence of God, good. In former days this was considered a very serious complaint with me, and always meant a week or ten days in bed, attended with great suffering and weakness when I attempted to get up. This time, however, the whole thing was healed in two hours through the understanding of the power of divine Truth, by myself, which seemed very wonderful, as it was the first time I had been where there was no Christian Science practitioner to help me. I at first had some fear as to my ability to treat myself, and it was therefore a great joy to find that I had sufficiently studied the Principle and rules to be able to effect the cure. For these and numerous other blessings I am very grateful, and long to prove my gratitude in helping others as I have been helped. It is quite impossible to express my thankfulness and gratitude to God for revealing the truth to our Leader, who has shown it to mankind.

MARY NORTON, Bangalore, South India.

I have been a student of Christian Science only a *short* time, but in that time my life has been completely changed, for I now believe in a God who is Love. I have been healed of many ailments. As the result of an automobile accident, I was unconscious for several hours, my arm, shoulder, and head being badly injured; but a Christian Science practitioner helped me at once, and in two days, through her loving care, I was able to do my housework. Indeed, I had no pain at all. I have also been helped in many other ways, and words fail to express my gratitude for the benefits I have received through Christian Science.

I was also healed of a very painful attack of what was called black erysipelas. A doctor said I could not live, but I remembered that Mrs. Eddy says in Science and Health, "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea." She also says that "God will heal the sick through man, whenever man is governed by God" (p. 495). It is with love and gratitude that I give my testimony, and I hope that others seeking for the truth may be benefited by it. I feel I cannot be grateful enough to God, and to Christian Science for my understanding of Truth. I am able to overcome many ailments for myself and to help others. My blessings are indeed many.

EVA L. COWELL, Detroit, Mich.

[Translated from the German.]

When through divine Providence I first heard of Christian Science five months ago, at times for thirteen years I had been a sufferer from very severe attacks of headache, and although I had frequently sought to obtain relief through *materia medica*, I never got rid of the trouble. For several years I had also been afflicted with rheumatism, which often made walking very difficult, and I was inconvenienced for quite a while with a bladder trouble.

As the material remedies applied brought but temporary relief in every instance, I soon lost all faith in them, and then I turned to Christian Science. Through a practitioner who upon my request took up treatment, I was lovingly made acquainted with this teaching and led in the way of Truth. I put all my trust and all my hope in the healing power of divine, omnipotent Love, and after a few weeks experienced the benefits derived through this glorious realization of Truth. Today I am free from all disease, feel healthier and happier than I ever did before, and joyfully give thanks to God, whom I long ago recognized to be the true helper at all times and under all circumstances. I am grateful for all the blessings which have come to me through Christian Science, also thankful to our revered Leader for pointing out the way.

FRAU B. DOMNICK, Königsberg, Germany.

I wish to express my gratitude for Christian Science. Four years ago I was healed of a severe attack of rheumatism, and my little daughter was healed of St. Vitus' dance about the same time. These physical healings, however, seem the least of all my blessings when compared to the spiritual awakening which has come to us in knowing God aright. My heart is filled with thanksgiving to God for the life of Mrs. Eddy, who has given us "Science and Health with Key to the Scriptures."

MRS. LEONA ENGELHARDT, Brawley, Cal.

Digitized by Google

In the fall of 1901 I started from Lewiston, Idaho, to go to San Francisco, Cal., to meet some doctors who had been treating me for more than two years, though my health was not being restored, and on the train I made the acquaintance of a man who told me of Christian Science and the work it is doing. I had never heard of it before, so I stopped at Portland, Ore., and was treated by a Christian Science practitioner. I also studied the Bible, along with "Science and Health with Key to the Scriptures" by Mrs. Eddy, and was permanently healed in five weeks.

Prior to this I had been gradually getting weaker each year for more than twenty years, suffering from catarrh, stomach and kidney trouble, and cramps in the muscles. I had worked for years at mining and prospecting, but for the last four years, previous to my healing by Christian Science, I had been unable to work underground on account of my health, which was a hardship to me, since I had to make a living and pay doctor's bills while in that condition. But since my healing I have worked several months at a time in a six hundred-foot tunnel without adequate means for clearing out the gas and smoke, and where there was gas continuously, caused by the dynamite used. This, however, did not prevent me from keeping well by constantly knowing the truth as taught in Christian Science.

I would like to state here that I have located mining property since coming into Science and worked at the development of same, doing all of my own work, everything necessary to establish a new camp, together with the underground work, with no one near me until just lately, when, the property nearing the producing stage, I hired some help. I make this statement to show how permanent is my healing, and how absolutely fearless of sickness and death a person becomes when he understands the Bible as explained by Mrs. Eddy, and at the same time is doing his best to keep God's commandments. Mrs. Eddy says on page 196 of "Miscellaneous Writings," "The sweet, sacred sense and permanence of man's unity with his Maker, in Science, illumines our present existence with the ever-presence and power of God, good." I send this testimony in deepest gratitude, hoping that it may prove a help to some who are in need.—F. M. CUMMINGS, Pittsburg, Idaho.

Many times I have felt that I should acknowledge the help I have received from the study of Christian Science. In 1902 I bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, to investigate whether it contained the truth, and I was so satisfied with the way in which it explained the Bible that I could not return to my old religious beliefs, although I loved my church. Six months later, when I was suffering great pain from an abscess in my ear, I asked for help, and was healed in less than twenty-four hours. I have never since doubted the power of God to heal, and many times through the years following I have been helped. What I am most grateful for, however, is the spiritual uplift and the better understanding of man's relation to God which Christian Science has brought, also for knowing that "Life is real, and death is the illusion" (Science and Health, p. 428). I can never cease to express my love and gratitude to our dear Leader, Mrs. Eddy, who has given us this wonderful book. The Bible, together with Science and Health and Mrs. Eddy's other writings, also our periodicals, are my daily guides.

MRS. KATE H. ELLIOTT, Missoula, Mont.

I look upon common sense to be to the mind what conscience is to the heart,—the faithful and constant monitor of what is right or wrong. And I am convinced that no man commits either a crime or a folly but against the manifest and sensible representations of the one or the other.

LORD CHESTERFIELD.

FROM OUR EXCHANGES.

[*The Universalist Leader.*]

There is a disposition on the part of some to be impatient at the demand that the gospel be preached; they say that the gospel is old-fashioned, and what we want is the message of this present century; the battle cry of the modern conflict! As we look over the existing conditions, it seems that the greatest need of today is for moral heroism, for sensitive consciences, for strong and saintly lives. Given these in abundance, we shall be able to manage the rest of the affairs of the world with considerable ease. Now, looking back along the track of Christian history to learn what it has done, we find from the very beginning that the gospel produced moral heroes, turning those humble fishermen into moral masters, making common men so sensitive to right doing that they would do the right even in the presence of kings, transforming those crude and rude men into spiritual natures of such strength that they stood against the world, and feared not even death itself. Following down through the centuries, the pathway of the gospel is marked by the monuments to the heroes, saints, and martyrs it inspired, and today that is its peculiar power, to produce that type of manhood, that type of Christian, that type of citizen who will transform the whole society in which he lives or go down to a martyr's death. The gospel has not lost its power to do the one thing most needed in the world today; but it must be preached, it must be taught, it must be lived, until it gets out into the world of actual life, when even as of old it transformed the fisherman into the master, so will it transform society from the master into the servant.

[Arthur T. Fowler in *The Standard.*]

There is always the superficial aspect to one's age, with its signs of frivolity, formalism, and weak spiritual professions, which are like sticks, straw, and scum on the surface of a stream. Then there is the deep undercurrent, the interior life, the abiding principles, the ideals, which reveal God guiding our age to ultimate issues. To discern this deeper meaning, to dare to believe in an age which does not believe in itself, to have faith in a time of unfaith, to realize the reality and power of the Unseen in a material world, is the Christian purpose and privilege. This was the spirit and method of Jesus. He saw what the men of his time could not see. We can now look back through the centuries and see how history has proven his discernment.

The verdict of history is the vindication of the vision of Christ. He stood related to the time in which he lived, and to all time, and nothing is more important for a Christian man than to be related to the age in which he lives. To be able to discriminate between the superficial and fundamental aspects of his time, and to believe in the ultimate victory of that mighty power which makes for righteousness, is to be a laborer together with God. To interpret this present world to itself, and to reveal its need of God, is our task, and an undertaking of which angels might be proud!

[Rev. J. Bradley Markward as reported in *The Harrisburg* (Pa.) *Telegraph.*]

What the world needs today is not arguments about Christianity, but genuine Christians; not more books on the religious life, but more living epistles; not more preaching, but more practising. Some people may point the finger of scorn at the disagreements among the followers of the Nazarene, and they may ask with considerable irony what impression we think we are making upon the evil world, the world that is so fertile in resources for wrong-doing; but before a good life all such critics must be silent. A true and sincere Christian is Christianity's best and most powerful apologetic. Such a one is the Bible's impregnable defense. An unbeliever may question the Bible's theory of prayer and relegate communion with God to the limbo of impracticable

Digitized by Google

ideals, but he must put a seal upon his irreverent lips when he sees what value the Son of God placed upon prayer and what power it had in his life. That he lifted world-burdens by the leverage of prayer no one can doubt; and when the doubting world sees how many things the saints of God are accomplishing today by prayer, it is for them to explain these saints without prayer and the whole uplift and inspiration that Christianity lends to good people.

[*The Outlook.*]

Out of our recent skepticism, out of the materialism that has hampered us for so long, we are at last setting ourselves to shape an old, old vision, the brightest thing about which mankind has ever concerned itself,—the enduring, growing vision of the City of God. In other words, having been rationalistic and scientific and worldly-wise, we are now about to become religious once more.

It is curious that such a vitally important thing as religion should ever suffer eclipse. One wonders if it does. One would like to think that an obviously materialistic world was still religious at heart, holding to God by some other name, or serving Him unconsciously; and perhaps fundamentally this is true. The essential relation between God and man cannot be lost without the destruction of the universe. Creation is religion. But, just as the full meaning of friendship implies reciprocity and is defeated by one-sidedness, so the term religion goes crippled unless it betokens a conscious response between creator and creature. Individuals, many of them, have always been religious; but the world at large has not been religious for a great many years. It is a tremendous turning for which we are preparing the way.

So whole-hearted are we in this preparation that sometimes it seems as if we, too, might be called a religious generation. People are deeply concerned about righteousness; they are on fire to help one another, and to reform the evils of civilization. There was never a time when good works bulked larger in the desire and approbation of the world. Is not helpfulness a kind of religion? Surely love is, and self-sacrifice. These are beginning to make our old world a brotherly habitation.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*.]

Christ himself denounced in scathing terms the oppression of the poor and weak, and he gave himself unreservedly and unconditionally to the task of alleviating pain and misery. But the question is, What is the consciousness behind the effort? If it be a spiritual consciousness, well and good; if not, there is not so very much to be hoped from it. There will come a point, and I say it deliberately, beyond which all effort to improve the outside of life is doomed to failure, and as a motive will prove inadequate to human needs. There is nothing more urgently wanted at the present moment than the rekindling of a true spiritual consciousness in human society as a whole as well as in the individual heart and mind. We need once more in all the relations of life the quickening touch of the eternal. God grant that it may soon come.

[*The Living Church.*]

Man's will is continually leading him into error; into the path of that kind of individualism that divides instead of unites. God's will is to make all men one, as it did in the new mind of St. Paul. His mind became that "which was also in Christ Jesus," and his prayer that of Jesus: "Neither pray I for these alone, but for them also which shall believe on me through their word; that they all may be one." Christianity was never rent into factions and sects by the doing of the will of God, but by man's pride and ambition; by man's sense of his own infallibility; in a word, by individualism run mad. And our quarrels and bickerings today are the result of the same causes.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The Society has recently published a set of books, cards, and collection envelopes for the use of the Christian Science Sunday Schools, and they may be obtained at the following prices:—

Class Books—4¼ x 6¾ inches, manila covered, with spaces for one year's record of attendance: 12 copies, 75 cents; 100 copies, $6.00.

Registration Cards—3 x 5 inches, with spaces for name, address, and necessary information, one to be used for each pupil: 12 cards, 10 cents; 100 cards, 25 cents.

Collection Envelopes—4 x 6¼ inches, cloth lined, printed front, with space for class number and name of teacher: 12 envelopes, 50 cents; 100 envelopes, $4.00.

No orders are filled for less than 12 of one kind, and the dozen rate applies on any quantity from 12 to 100.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The annual per capita tax, of not less than one dollar, is due June 1, the beginning of the fiscal year of The Mother Church, and is reckoned from that date, whether the admission was in June or November. All remittances in excess of the amount due in accordance with the by-law, will be credited for the current year, unless otherwise specified by the sender.

Please do not send paper money through the mail, except by registered letter; a postal money order, made payable at the Boston post-office, an express order, or a bank draft, is preferable.

To facilitate the work of the Treasurer, please advise him promptly of any change of name or address. No charge is made for this service.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE. Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy	$ .05	$ .06	$ .07
Twenty-five copies	1.00	1.15	1.30
Fifty copies	1.80	2.05	2.40
One hundred copies	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XIII indicate the year 1913; XIIII, 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

	£	s.	d.	Marks	Francs

Make all remittances payable to The Christian Science Publishing Society.

Entered at Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Convinced that there are thousands of acres of waste land in the commonwealth of Massachusetts which can be employed best in growing timber, the state forester, and other experts, are meditating the question of securing state forests. Statistics show that the amount of tax raised in Massachusetts for state, county, and city or town purposes, including overlayings, amounted in 1912 to $74,552,306. Of this sum it is said that $56,830,166 was contributed by the cities and one town, Brookline. The remainder, or $17,722,140, comes from towns in which one million acres of waste land is found. The income from this area, if actually owned by the towns and covered with forests, would be $1,430,000 annually. It is asserted, if this amount were distributed among the towns in proportion to the amount of tax raised, it would reduce the $17,722,140 by 25 per cent, or the tax rate by a similar amount.

Oil experts of the United States bureau of mines, who have been investigating the natural gas industry, have reported that millions of dollars' worth of this perfect fuel is being wasted each year in the United States. In Oklahoma one hundred million cubic feet of gas is escaping into the air every twenty-four hours. This has a value of $20,000 a day, or $7,300,000 a year. This waste is also equal to one million two hundred and fifty thousand tons of the best bituminous coal. The waste in Louisiana is estimated at seventy-five million cubic feet of gas daily, valued at $15,000 for each day, or $5,475,000 for the year. This waste of gas is equivalent to nearly one million tons of coal. In the southern California fields it is estimated that there is an annual waste amounting to about three or four million dollars.

The international opium conference will reassemble at The Hague next month, the exact date to be announced as soon as responses to the invitation have been received from the governments of Peru, Turkey, Greece, and Switzerland. Working in conjunction with the government of the Netherlands, the state department at Washington has secured assent to the conference, not only from the twelve signatory powers, participants in the original conference, but from a majority of the other thirty-four nations of the world, regarded as essential to a successful covenant finally to abolish the opium traffic in all but medicinal preparations.

Governor Sulzer of New York has issued a proclamation ordering the Legislature to reconvene in extraordinary session June 16. The Governor has announced that in addition to direct primaries he will urge the enactment of certain financial bills. Friends of the Governor declare that in the event of the executive disapproving the workmen's compensation and constitutional convention bills sent to him, he may ask the Legislature to reconsider these subjects.

The bureau of foreign and domestic commerce of the department of commerce has prepared a report on the subject of "Foreign Tariff Systems and Industrial Conditions," which is a striking illustration of the high efficiency of manufacturing establishments in the United States. This report was prepared at the request of the chairman of the ways and means committee and has just been published in pamphlet form by that committee.

Special arbitration treaties between the United States and seven other countries which expire by limitation this year, will be renewed by the state department if the foreign governments are willing. Such special treaties to which the United States is a party, will expire during the year in the following order: Spain, June 2; Great Britain, June 4; Norway, June 24; Sweden, Aug. 18; Japan, Aug. 24; Portugal, Nov. 14, and Switzerland, Dec. 23.

Senator Townsend's resolution asking President Wilson to negotiate with Great Britain and Canada for improving common waterways was reported favorably in the Senate by the foreign relations committee. The purpose of the measure is to make a deep waterway from the Great Lakes to the Atlantic ocean by the St. Lawrence river and Welland canal, to make lake ports accessible to ocean-going ships.

International.

C. J. Stewart, public trustee, delivered a lecture recently at the Polyglot club, London, and gave some remarkable figures proving the growing popularity of his office. The value of the current trusts administered in the fiscal year 1912-1913 was thirty-five million pounds, as against three million five hundred thousand pounds in 1908-1909. The value of the wills which had been lodged with the department but had yet to mature was eighteen million pounds in 1908-1909 and was now fifty-three million pounds. Thus the total value of the business being administered by the department had reached a total of eighty-eight million pounds. New trusts, said Mr. Stewart, were coming into the department at the rate of one million pounds a month in value, and if this expansion continued, as it probably would, the value of the business negotiated would exceed a hundred millions sterling in value by the end of the present year. This meant that in the short space of six years the public trustee would have had entrusted to his care one tenth of the property in trust in the country. There were four reasons, said Mr. Stewart, to account for all this. In the first place, the advocates of the office had evidently been correct in thinking that there was a wide-spread public need to be met. The state guarantee of the office, in the second place, secured the confidence of the public. Thirdly, the office had been organized on a voluntary basis. The fourth reason was that the department was not allowed to make a profit.

A Mexican government loan of twenty-five million dollars for the restoration of the railroads in that country is understood to have been practically arranged in London and Paris. The Mexican agents are endeavoring to secure a total of seventy-five million dollars, the balance of which is to be utilized for governmental purposes. Recognition has now been given to the new government at Mexico city by Austria, France, Spain, and England.

The Argentine government is taking measures to oppose the American beef combine in Argentina. The newspapers comment unfavorably on the so-called beef trust, and the Argentine Rural Society has called a meeting of cattle breeders for the purpose of protesting against an American monopoly. The minister of agriculture has invited the managers of the American refrigerating plants to Buenos Aires to make an explanation of their intentions.

A manifesto signed by Dr. Adolf Richter, president of the committee of the German Peace Society, and Prof. Charles Richer, president of the permanent delegation of the French Peace societies, appealing against the growth of armaments, is being distributed throughout France and Germany. The appeal is addressed to the peoples of the two countries.

The bankers representing the five powers, Great Britain, France, Germany, Russia, and Japan, in connection with the loan of one hundred and twenty-five million dollars to China, have been notified of China's final acceptance of the loan, and the first advance of one million two hundred thousand dollars has been paid.

The Bulgarian government has appointed M. Sarafoff, former minister to Turkey, as special envoy to proceed to Athens to endeavor by direct negotiation to settle all territorial and frontier disputes between Bulgaria and Greece. It is understood that in the event of failure of his mission, recourse will be had to arbitration.

The reply of the allies to the note of the powers in regard to a peace conference in London, says the allies are ready to cease hostilities and to agree on London as the meeting place for a peace conference, to which they will appoint the same plenipotentiaries as represented them on the previous occasion.

The Budget commission of the Russian Douma estimates that the Balkan war has entailed upon Russian trade financial losses amounting to nearly sixty million dollars.

The deficit in the French budget for 1913 will amount to forty million dollars.

Industrial and Commercial.

Large and alleged often excessive profits of the United States Steel Corporation, its domination of the rails and ore industry, its "inside profits" on transportation, and its superior efficiency and coordination, are pictured in a report of the bureau of corporations, the third instalment of the bureau's investigation of the steel industry. The corporation made a profit of 16½ per cent on steel rails in 1910 and 10¾ per cent on steel plates, declares the report, and the profits on its iron ore business are estimated at 29 per cent, while net profits of 23 and 17½ per cent respectively were made on its Minnesota ore railroads.

More than a ton of bamboo poles are being used in extensive tests for concrete reenforcement by a Chinese student in mechanical engineering and naval architecture at the Massachusetts Institute of Technology. In China bamboo is plentiful and cheap, while steel is expensive, and this student believes that there will be an enormous development in the use of reenforced concrete if a practical method of reenforcing with bamboo is devised.

Four hundred thousand pounds of frozen Australian beef and mutton, the first shipment of its kind to the Pacific coast, were landed at San Francisco last week. The meat was sold in Australia with the understanding that only a nominal profit should be made. If the agreement is violated, Australia will ship direct, eliminating the middle man's profit and assuming all the risk.

Enough cement to construct the proposed ocean-to-ocean highway was recently donated by members of an organization of cement manufacturers in session in Chicago. Each member agreed to give 1 per cent of his annual output for three years. The subscription is estimated to be worth two million five hundred thousand dollars.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

CHRISTIAN SCIENCE IN RELATION TO BUSINESS.

SAMUEL GREENWOOD.

CHRISTIAN SCIENCE is sometimes spoken of by its students in such a manner as to give the impression, to those who do not understand its method, that it is capable of being used to further one's business or financial interests. Although nothing is of greater value or imparts more practical good to the man in business than does his understanding of Christian Science, it is evident upon its very face that it cannot be practised for any selfish or mercenary purpose. Christian Science is helpful to the student in working out his problems, whether expressed in lack of means, of health, or of goodness, but it is a misapprehension of the nature and operation of Christian Science to suppose that it can be made a medium to sell stocks, real estate, or merchandise, any more than it can enable the lawyer to win his case or the politician his election without respect to the righteousness of the cause he represents.

The relation of Christian Science to business problems is not different from its relation to physical or moral problems. It heals the belief of a discordant business on the same basis and by the same rule that it heals the belief of a sick body. The function of Christian Science is to right the wrongs of humanity; and the wrongs that oppress a business, or rather the thoughts of those conducting it, are as amenable to correction by right thinking as are wrongs appearing in other ways. Envy, greed, jealousy, selfishness, if allowed to rule, will sooner or later cause a business to suffer as certainly as they cause a person to suffer who indulges them; but the remedy in either case is not an increased sense of material things, but a knowledge of man's real relation to God. The disturbing source of business depression or failure is spoken of as economic, but in fact it is mental and moral; and the obstructive and destructive false view of things must be replaced by the true to restore normal conditions on any permanent basis. Regarding the man whose "delight is in the law of the Lord," the Scriptures teach that "whatsoever he doeth shall prosper;" and this indicates the only foundation or source of business prosperity that is in line with Christian Science.

It is true, of course, that one may transact business and sell merchandise according to the rule of Christian Science, but that is very different from using Christian Science, or attempting to use it, expressly with the object of attracting business or increasing sales. The object of all legitimate business is primarily to benefit mankind, rather than to accumulate a surplus of wealth for one's self; hence, whatever is not calculated to bless all parties concerned, is not a good business, and to that extent does not merit God's favor. It is logically evident that the truth of the all-power of good cannot be utilized to aid a bad business, and that the all-sufficiency of divine Love cannot be relied upon to forward any selfish transaction. One who thinks to sell goods or to negotiate a deal solely for the sake of the profits to himself, irrespective of the soundness of the proposition or of the welfare of the other side, is not moved by the spirit of Christian Science, and cannot from that standpoint honestly or successfully look to it for help. The practise of Christian Science rests upon love for God and man, upon the Master's precepts to seek first "the kingdom of God, and his righteousness," and to love one's neighbor as one's self, and this is the only spirit in which this Science can be understood and demonstrated.

Christian Science is the Science of demonstrable knowledge of Spirit and spiritual law; it does not, therefore, recognize any reality in matter, or bring material things to pass, although Christ Jesus through his understanding of this Science fed the five thousand with bread, and procured his tax money from a fish's mouth. In these instances he proved the power of spiritual truth to meet human need, even though apparent as material lack; but Christian Scientists do not claim that at the present time they can obtain their bread or their money in quite the same manner. As they gain the understanding that God is man's ever-present supply, the belief of lack, that is of God's absence, is rebuked, and the way is opened for the material sense of need to be satisfied. In the same way it is helping men and women in business to realize a larger measure of prosperity by enabling them to overcome those conditions of thought which make for fear and failure, not by producing financial means in some mysterious or occult way. A supreme confidence in good, that is not weakened or counteracted by a contrary belief in evil, makes for lasting and substantial prosperity and success in every line of legitimate human activity, and nothing else can.

That Christian Science "is susceptible of no misuse" is taught in the Christian Science text-book (Science and Health, p. 410). Its only possible action or influence is to heal and bless all whose thought it touches. One who ignorantly or intentionally attempts to use what he thinks he understands of Christian Science for the promotion of selfish ends, is prevented by the very unworthiness of his motive, and consequently by his misapprehension of the divine nature and operation of this Science, from rising above the plane of the so-called mortal mind. Any mental influence exerted from that standpoint is of the nature of mesmerism, or mental suggestion, and is therefore the antithesis of Christian Science. Christian Science is the Science of the golden rule, of impartial, divine loving, and is not operative in any transaction in which one is intended to profit at his neighbor's cost. Unless one is concerned to safeguard his customer's or client's interest equally with his own, he is not conducting his business in accordance with Christ's teachings, and cannot consistently ask the Giver of all good to prosper it.

It is possible for an unscrupulous person so to manipulate figures as to lead to his financial gain and others' loss, but no one would think of calling that mathematics which enables him to consummate his dishonesty, notwithstanding that the figures used were the same as in legitimate work. Likewise, although one may use mental statements and arguments similar to those which are sometimes employed in Christian Science treatment, it does not consequently follow that he is practising Christian Science. In working out a mathematical problem, the figures must be used in the right relation to their basic law and with a view to bringing out the correct result; similarly, the statements

Copyright, 1913, by The Christian Science Publishing Society.

Digitized by Google

or arguments used in mental practise must maintain their proper relation to the divine Principle and rule of Christian Science, and with the sole view to bring out the godlike solution of the problem. The object before the Christian Scientist is to demonstrate the supremacy and government of God; but the manner in which this shall be manifested must be left to divine direction rather than to human desire. Our work is to bring our thoughts into harmony with God, to be obedient and responsive to divine Love, the Principle of all real being; not to practise mentally with the idea of making things come our way.

To be sure, Christian Science helps a man to be successful in his business, if he adheres to the Principle and rules of Christian Science, even as it helps the laborer to dig a ditch, the housewife to sweep her floor, or the teacher to teach his class. The help of Christian Science in financial problems does not come through exerting any influence upon material conditions or circumstances, but through correcting and purifying thought, by enabling the student to understand and to rely upon the infinite resources of the one Mind; and its beneficent influence thus reaches every phase of his experience. It is not a lack of money, but a lack of knowing the truth about God and man, that causes business, health, or human life to fail. To know God aright, as the divine Principle guiding and governing every affair of man and the universe, and to let this knowledge permeate the human consciousness, is the only remedy for human discord, lack, or failure, whether expressed in mental, moral, or material terms. To acknowledge God, good, in all ways, and to be governed by Him, is the only safe and successful rule for human conduct, commercially, socially, or politically.

We should seek Truth, not for any selfish purpose, but for its own sake, and for the sake of being made free from a sense of evil. Even the perfect man, the image of God, is nothing of himself apart from his divine Principle; and when we reach the point where God, or good, means every*thing to us, our life, substance, health, prosperity,* and when we realize that to know God is our only real business in earth or heaven, we shall be ready to take no anxious thought concerning our material affairs, knowing that the Father always careth for His own.

VALUE OF A RIGHT MOTIVE.

MARY STEWART.

THERE is a tendency among mortals to be easily satisfied with their own efforts; satisfied to have tried to do well; contented in a self-complacent fashion with the fact that they meant well, that they had only the best of motives or purposes. The teaching of the Scriptures, as explained in "Science and Health with Key to the Scriptures" by Mrs. Eddy, while frequently commending right motives, and indeed making them a foundational necessity for right action, seems, however, to demand much more than rightness of purpose, and never concedes that the right motive alone is sufficient to insure correct procedure.

For achievement in any line, thought must be put into action, prayer be expressed in work, and knowing be coupled with doing. As the result of his suffering for wrong done and his learning to value good, there sprang up in the heart of the prodigal a sincere purpose to retrace his way and be again in a condition of obedience to his father; but not until he "arose, and came to his father," was he freed from his self-imposed bondage and restored to his own place of usefulness and happiness. A true motive is but the starting-point, and it must be accompanied by faithful, persistent work and prayer in order to maintain the purity of the motive, excluding all selfishness, personal ambition, and worldly desire. These activities bring one to the threshold of the way which divine Mind will open for further advancement.

Merely to have and maintain a right motive, does not authorize us to entertain a sense that we have done our part, or give us grounds for expecting great reward or for using the argument of right motive to excuse mistakes or inactivity. Much remains to be done before the time of harvest. Even the best conditions and qualities of human consciousness need improvement and purification before they actually reflect the divine. So what appears to our human sense to be a right motive may be found to include much that is mere belief, and may need a thorough renovating before it becomes reliable. A sincere desire may be a mistaken one; an earnest purpose may be misled by ignorance, superstition, or selfishness. One who starts with a truly right motive may, if off guard, wander as far from the Christ-way as one who is ignorant of the right or indifferent to it.

"A lack of wisdom betrays Truth into the *hands of evil* men as effectually as a subtle conspirator; the motive is not as wicked but the result is as injurious" (Message to The Mother Church, *Sentinel,* June 8, 1899). It is evident, then, that a motive, however right, although it should be taken into consideration in judging or condemning action, as is done in criminal law, should not be used as a cloak or excuse for error, inasmuch as it neither makes wrong right nor prevents harmful effects. In our desire to be loving and kind in judgment or to excuse ourselves in a fault, we may be tempted to fall back upon the defense of right motive; but this tendency must be carefully guarded against by the understanding that all evil is impersonal and indefensible.

Christian Science teaches us that mortals have to be freed from their own convictions that materiality is real, and to be healed even of a mere belief of health or of good. With very little thought one may readily see what ills have resulted from acts based unquestionably upon a sincere purpose to do good. Drugs are administered by thousands of earnest physicians and nurses with the single purpose of relieving suffering, yet we can all recall instances in which their good motive has not prevented the drug from injuring or perhaps killing the patient. Moreover, it is not even sufficient to insure the giving of the right remedy or treatment. History reveals the fact that most of the so-called religious wars and persecutions have been carried on with the earnest conviction that the participants on each side of the question were fighting for the right and ready to die for it.

We are all frequently inconvenienced or injured, or perhaps even hindered, in our upward growth and progress *by* persons actuated by what they believe to be good *motives;* and we no doubt in turn become stumbling-blocks *to others* because we are so sure as to be satisfied that our *motives* and aims are right, though not wise enough to discern the ultimate effect of advising or acting with no surer guidance than the belief that we are right. So our best motives, purposes, and desires need to be improved, purified, if need be by fire or sore trials, and given back to God for correction before we can entirely trust them; and we must always be willing to relinquish our present sense and wait for a clearer revelation, which will come with our more enlightened understanding: waiting for "the Spirit of adoption, whereby we cry, Abba, Father."

No one in human history, since the Nazarene, has set such an example of humility and meekness as has Mrs. Eddy in regard to the relation between motive and action. With the most exalted and unselfed purpose and motive, she was nevertheless as ready to halt as to advance at the word; to wait, recall, command, or countermand at each step of the way over which she followed and led. Ever waiting for the divine bidding, she well knew that right motive is a necessary but very small part of Christliness, only the first step, as is repentance in relation to reform. She pioneered, and we have the advantage of her years of proof of the exactness of the Science of Christianity which she discovered, and the absolute correctness of the *modus operandi* of this Science as taught and demonstrated by her. "This is the way, walk ye in it."

As he who best knows the basic law of mathematics most

Digitized by Google

exactly obeys its rules, so in Christian Science the most radical reliance upon God and the most scientific demonstration of the truth involves the most unswerving adherence to the way unfolded in Christian Science and demonstrated by our Leader.

THE SERPENT'S GIFT.

WILLIAM C. HENDERSON.

IN the twenty-third chapter of Exodus we are commanded, "Thou shalt take no gift: for the gift blindeth the wise, and perverteth the words of the righteous." A long time ago, as the Bible tells us, there lived a man and a woman who had been created by the Lord God. From all the evidence recorded, they were healthy, peaceful, and happy. At some period not definitely stated, there appeared on the scene, according to this story, a serpent, who was exceedingly desirous of making these two happy people a gift. Now this serpent was very subtle, and with the proffered gift the argument was advanced that by its acceptance the eyes of the man and woman would be opened and they would be "as gods, knowing good and evil;" that is, that they would know life, pleasure, and sensation as existing in matter. We read that they accepted the gift, and that soon there was manifested in them a sense of fear and shame hitherto unknown. Later, a "yoke of bondage," heavy and cruel, was placed about their necks, and from it there seemed no way of escape.

For centuries this same gift has been thought of among the children of men as something to be desired, and has been accepted by them, and all the suffering, sorrow, sin, poverty, shame, and fear that have accompanied it, has not been enough to awaken them to the realization of its falsity. The teachers and prophets of old saw, in part, the meaning of this gift, but having accepted it, they were unable to free themselves or the people from its evil domination. But when Jesus, the gift of Love divine, came, he at once set about his Father's business: to open the eyes of the blind, heal the sick, bind up the broken-hearted, and restore that which was lost, the true sense of life, by removing the yoke, the lie that man lives in matter, the belief which came with the gift of the serpent. He had to demonstrate the truth for himself and also for others, and so he was taken into the wilderness to prove that the gift had no attraction for God's idea; and when those final words were spoken to the serpent: "Get thee hence, Satan: for it is written, Thou shalt worship the Lord thy God, and him only shalt thou serve," then, as the Scripture reads, "the devil leaveth him, and, behold, angels came and ministered unto him." The offer of error was refused by Jesus, but the people failed fully to understand his mission and message. The years rolled on until there came one who did understand both the messenger and the message, one whose consciousness was so in tune with divine Mind that she was able to discover that "there is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468).

Every one of us is offered at some stage of our journey the chief gift of the serpent, a promise of "the kingdoms of the world," with all the pleasures and enchantments that accompany it, and, as in Bible times, the satanic assurance is, "All these things will I give thee, if thou wilt fall down and worship me." How few there are who refuse the gift until, in the words of our Leader, "the sharp experiences of belief in the supposititious life of matter, as well as our disappointments and ceaseless woes, turn us like tired children to the arms of divine Love. Then we begin to learn Life in divine Science" (Science and Health, p. 322).

The writer recalls that happy moment when the truth of being was offered to him and the joy with which he accepted it, the peace and assurance which came to him when he began his journey up the mounts of holiness, at once and with gladness. He had found a way of escape from the "yoke of bondage," the cruel gift of the serpent. For almost fourteen years he has traveled the path which leads upward, and the gratitude for having found this path of Life has been continuous. It has expressed itself in the desire to help his fellow men to know the truth about God and His perfect way, and to glorify Him at all times and under all circumstances. It has been his privilege to see the sunshine of love and healing burst forth in the lives of many who firmly refused the gift of the serpent and with childlike trust accepted the gift of God, which is "eternal life."

In the Sermon on the Mount we find these words: "Agree with thine adversary quickly, whiles thou art in the way with him; lest at any time the adversary deliver thee to the judge, and the judge deliver thee to the officer, and thou be cast into prison. Verily I say unto thee, Thou shalt by no means come out thence, till thou hast paid the uttermost farthing." Let us with all our getting get wisdom and understanding, know the truth about the serpent, and ponder the words of Jesus, "Behold, I give unto you power to tread on serpents and scorpions, and over all the power of the enemy: and nothing shall by any means hurt you."

"WHILE YOU WAIT."

MARTHA SUTTON-THOMPSON.

SOME shop signs give assurance that work may be done for customers while they wait. It may be observed that one man sits impatiently by while the repair is proceeding; another, of more methodical habits, finds contentment in reading or profitable thinking while he waits.

As a result of the imperfections of mortal existence, the human mind, impelled by spiritual perception, is ever looking expectantly forward toward future betterment. Hope and endeavor anticipate enhanced joys, but to those who know nothing of the scientific thinking and practise of good, anticipation is often clouded with much uncertainty. The practical Christian Science worker, however, sees a scientific certainty; the way grows brighter "unto the perfect day." Nevertheless, he does not spoil the present and rob himself of the future by looking and longing for that future so intensely as to fill the present with discontent. This not only prevents the recognition and enjoyment of today's good things, but it unfits one to demonstrate better conditions for tomorrow or to enjoy them should they come to him.

How often it occurs that a boy becomes discontented, in his longing for manhood with its broader liberties and activities, expecting unlimited happiness therein; but after that plane has been reached and tested, he looks back with equal longing for the innocence, trustfulness, love, freedom from care, and opportunities for the manifold joys of boyhood. He would have found greater happiness as a boy had he lived in the things of a boy life while waiting for manhood, and been a better equipped and satisfied man, more capable of enjoying the mature things of life, with a normal contented boyhood in the background.

It is a Christian duty to make the most of today,—yea, a duty and a privilege. At almost any Wednesday evening meeting some one may be heard to testify that Christian Science has brought him untold blessings. What are they? Let him not only count them daily, but enjoy them while he waits for still greater, as the result of working with God and for humanity. If our object and endeavor is daily and hourly to love better the things and the people about us, to cultivate a sense of appreciation for the good, the homelike, the lovely in spirit; if we are learning to love all our fellow beings because we long to do them good; if we strive to do and say the things that cheer and make happy and exalt existence for others, then we shall be eminently fitted to demonstrate and enjoy all the possibilities of the future.

"OUR ETERNAL HOME."

W. PETCH.

MRS. EDDY has said that we must all come to a knowledge of Truth "either by suffering or by Science" (Science and Health, p. 240). Lately it came very clearly to the writer that through Christian Science we do indeed learn, by present spiritual apprehension, that which the so-called outer world must eventually awaken to through prolonged human experience or sudden trial. For instance, we learn in Science that because divine Mind is our Life, our creator, our one and "only real relative on earth and in heaven" (Miscellaneous Writings, p. 151), we cannot, either now or hereafter, be bereft of any of the real love and companionship which forever surrounds us. Jesus said, "Whosoever shall do the will of my Father which is in heaven, the same is my brother, and sister, and mother." Every spiritual idea, be it expressed in love, joy, peace, gentleness, any of the myriad thoughts of God, has its birth and eternal home in heaven, the kingdom of Mind, and the Mind of Christ may be expressed in all we say or do. Again, Jesus said, "Your joy no man taketh from you," emphasizing the permanent nature of all spiritual understanding and manifestation. It is evident, on the other hand, that without such knowledge of the ever-presence of divine Love, mortals do cling to a sense of human reliance and dependence as long as they possibly can, until in some way every earthly tie is severed, and they find themselves alone, with the whole world empty before them. This is the lesson of suffering.

In Christian Science this rude awakening is impossible, in so far as we have already learned to yield up the false sense of dependence in order to grasp or apprehend the infinite reality of spiritual life. When a Christian Scientist prays "Our Father-Mother God" (Science and Health, p. 16), he means that he really knows that which he affirms; that he is true to that which he professes, and that his prayer is an at-one-ment with the good that he declares, even as Jesus gave example. Hence the sweet assurance and certainty which are with every Christian Scientist today who thus understands the unity of the Lord's Prayer. Mrs. Eddy has said that this prayer "covers all human needs" (Science and Health, p. 16). It presents the highest possible human concept of life, and it fulfils all that the human sense has attained in glorified quality. Can we conceive of more than we find in the infinite Mind, our Father, our Friend, our All-in-all? Can we spare too much time in making clear to ourselves, through the prayer of understanding, the glory of Love's fulness? Jesus always reflected the knowledge of Life eternal, always worked from the basis of immanent perfection, and when we too have learned this lesson in Christian Science, that we truly possess nothing underived of God, divine Mind, and find all our treasures renewed to us as we consciously enter into the kingdom of spiritual understanding here and now, then we realize something of the significance of the words in Revelation concerning those upon whom "the second death hath no power," for through divine Love we have taken permanent possession of our own.

As Christian Scientists, should we not strive to improve every moment of our time in realizing our divine inheritance now, without waiting for the chilling blasts of earth to rouse us to this effort? The revelation of Christian Science, or life in Christ, holds out to each and all the glorious opportunity to make a fair, fresh start in the race of life, not in another world, but in this. Forgetting the shadows that are behind, we press toward that mental point where we ourselves must stand transfigured with Christ and all we love in Christ; and is not this elevation and satisfaction to be most speedily reached through our united services in furthering the spiritual activities and demonstration of the church of Christ on earth? Many have come to Christian Science and have thus found all things restored to them in their true substantiality, even as they were to Job. We cannot tell the mental pathway by which each one reaches this consummation, but we can know that when once they have reached this resting-place, they do hear those words of comfort and consolation which become to them henceforth the one great possession, the one lesson of Truth which indeed covers all human needs. There can be no fear of loss to those who hold their treasures as the reflection of unchangeable Mind.

In all her writings, Mrs. Eddy points out, as the apostle puts it, that "to live is Christ, and to die is gain," because in Christian Science we approach God through the knowledge of spiritual life, the life of Christ, never through its suppositional opposite, death. In Science we can learn all things rightly now. The spirit of Truth is abroad today, guiding us into all truth, and for this fact we cannot be too grateful. In Science man is the likeness, the demonstration, or living expression of Mind. This is why Jesus said for all time that the Son can do only those things which he sees the Father do. Is not this understanding our rest? Our church presents the at-one-ment of man with God, and thus manifests the Life to which Christ Jesus bore record. It knows no finite or uncertain sense of existence, but bears ever-increasing witness to deathless Life, Truth, and Love. Hence our perpetual communion, our eternal home and happiness, our joy, our rest, our peace forevermore.

CAUSE AND EFFECT.

ELIZABETH EARL JONES.

IN the marvelous unfoldment of Christian Science we learn that cause and effect are spiritual, not material, and the claim of mortal mind that they pertain to matter, evil, and false mentality, is untrue and therefore already obsolete.

Believing that cause and effect are material, one might say, "I have been sitting in a draft and have taken cold;" or, "I have eaten something which has disagreed with me, and consequently am sick;" or, "I have disobeyed the laws of nature, and must die." Believing that the carnal mind embraces within itself both cause and effect, another might say, "I have been angry and am ill;" "I have been afraid, and 'the thing which I greatly feared is come upon me';" "I am suffering from the thoughts of others," "I am sinning and enjoying it," or "I have sinned and must die." Here Christian Science comes to the rescue, healing them that are in bondage to these false beliefs, and proving true the concept of being which Mrs. Eddy has set forth on page 207 of Science and Health: "There is but one primal cause. Therefore there can be no effect from any other cause, and there can be no reality in aught which does not proceed from this great and only cause."

Every alert Christian Science practitioner is no less watchful in guarding his own thought and the thoughts of his patients against acknowledging and accepting cause and effect in evil and in mortal mind, than he is in destroying the belief of cause and effect in matter. His only remedy for every ill is the truth which Jesus said would make us free. Hence the power and invulnerability of Christian Science and of all which rests upon and proceeds from its purely spiritual and scientific basis.

Let nothing disturb thee,
Nothing affright thee;
All things are passing;
God never changeth;
Patient endurance
Attaineth to all things;
Who God possesseth
In nothing is wanting;
Alone God sufficeth.

LONGFELLOW.

SELECTED ARTICLES.

[Frederick Dixon in *Bedford Daily Circular*, Bedford, England.]

This critic says that the command of Jesus to heal the sick was confined to a certain period, and that it is not necessary today. I am afraid, first of all, that the critic has started out on a war of exegesis in which he will have to dispose of a very large portion of the Church of England and the Nonconformist churches. Every one knows that one of the common admissions which the churches are inclined to make with respect to Christian Science is that it has at least drawn attention to the forgotten commands to heal, while a large section of the churches are themselves today engaged to the utmost of their ability in trying to carry out the command of the Founder of Christianity to heal the sick. Beyond this, the critic is seemingly not aware that the prayer-book for years contained a healing service, so that, apparently the generations of churchmen who accepted this knew no better than Christian Scientists, and no better than the great number of Christians who are today engaged in endeavoring to heal the sick.

As a matter of fact, Jesus' command to heal the sick is not confined to a single gospel, much less to any time or place. His command to the disciples was to "preach the gospel" and to "heal the sick." If it is a fact that Christianity no longer needs the healing of the sick in order to support it, it equally no longer needs the preaching of the gospel, for Jesus drew no distinction between the two. As a matter of fact, in his last recorded words, at the mountain in Galilee, he told his disciples to "teach all nations" and to observe all things whatsoever he had commanded them. I think the critic will hardly contend that the healing of the sick was not one of the things which Jesus had commanded his disciples to do. Again, in the famous words at the end of the gospel of Mark, speaking not of his disciples alone, but of his followers in all ages and in all places, he said, "These signs shall follow them that believe," and then he went on to speak of many things, including the healing of sickness. The strongest, however, of all these sayings is that to which I alluded, recorded in the gospel of John. Here, again speaking of his followers in all ages and in all places, he said, "He that believeth on me, the works that I do shall he do also." It is perfectly certain, therefore, that the believers in Jesus believe exactly in the proportion in which they do his works. Certainly among the most insisted on of those works was the healing of the sick. If, therefore, Christians fail to heal the sick, one of their strongest claims to being believers is necessarily shattered.

There is no possible use in endeavoring to escape from the plain meaning of Jesus' words in the gospels, and that is what the Christian church is gradually coming to perceive and to admit. The only proof, indeed, a man can give that the gospel he is preaching is the gospel of Jesus the Christ is the fact that he is demonstrating his teaching in the way demanded by Jesus. That is what Mrs. Eddy saw, and she accepted the burden of proof for Christian Scientists, and no matter how violently any one may attack Christian Science, it will not affect the question in the least. The world is gradually coming to see that the only way in which Christian Science can be shown to be wrong is by its opponents bettering the example of Christian Scientists. The Christian Science movement has spread itself all over the world simply because Christian Scientists are preaching the gospel and healing the sick; and the only way in which Christian Science can possibly be superseded will be when there shall arise a body of people who, instead of attacking Christian Science with words, give humanity a teaching which will inspire it with a grander hope, a more practical religion. Such teaching would not attack Christian Science for healing the sick, but would heal the sick better than Christian Scientists are able to do. When the critic is able to do this, he will not need to write letters to the paper. When he can do it, he will learn, I think, that he is doing it in the way in which it is done in Christian Science, and that the way to do it better than Christian Scientists are doing it is to learn to live more fully in accordance with the commands of Jesus of Nazareth, and one of these commands was, "Heal the sick."

[Herbert M. Beck in *Fort Smith* (Ark.) *Herald*.]

Christian Science is certainly not a faith-cure, and it is not a fad. A fad, the Century dictionary says, is "a trivial fancy; . . . a matter of no importance, or an important matter imperfectly understood, taken up, and urged with more zeal than sense." A well-known lawyer of the highest order, and who was for a number of years a member of the Fort Smith Bar Association, left my office only a few minutes ago, having told me in detail of the most remarkable and entire healing of his sister of a disease which had resisted the efforts of *materia medica* and surgery for years.

The woman's husband was well-to-do in a business way, and nothing that could be offered in *materia medica* and surgery had been omitted; yet there was nothing left for the good woman save a life of invalidism, to be lived with such patience as she might find possible. She recovered under Christian Science treatment, and has continued for several years to be a hearty and happy Christian woman, which was impossible until Christian Science came into her life. She does not think Christian Science a "trivial fancy" or "a matter of no importance." As some one had to understand this scientific Christianity well enough to heal her, and as she is now able to heal others by the same spiritual method, no one who has done less can rationally insist that it is "urged with more zeal than sense," or that it is "an important matter imperfectly understood." Christian Scientists are sincere and very much in earnest; they are not faddists.

As to its being a faith-cure, I am wondering how much the critic knows about faith, and if he really knows that there is such a thing as faith-cure. To those who understand faith, it should be told that Christian Science involves the condition of thought which grows out of faith demonstrated. It is faith shown by works. Christian Science is not a mere belief, even to a superlative degree, but is knowledge based upon understanding; it is an understanding of one indestructible and irresistible cause and its immutable relation to effect; an understanding of universally operating Principle, which does not appeal alone to the sentiments, but commands recognition willy-nilly by an appeal to intelligence. It is not faith by which a man knows that two twos are four; it should not be mere faith by which a man knows that God is good; or that, being good, He is omnipotent and omnipresent Spirit. This is not "swinging over" to anything or from anything; it is not swinging at all; it is just the plain statement of a radical truth. Mortals may like it or they may not like it; they can only learn to think and act and live in harmony and accord with it.

"You may know when first Truth leads by the fewness and faithfulness of its followers," says Mrs. Eddy on page 225 of "Science and Health with Key to the Scriptures," which is the Christian Science text-book; and on the next page she says: "Human codes, scholastic theology, material medicine and hygiene, fetter faith and spiritual understanding. Divine Science rends asunder these fetters, and man's birthright of sole allegiance to his Maker asserts itself." Christian Science does not "ignore the physical," but knows it to be not elemental and not substance. It demands recognition of the rights of others, obedience to the laws regulating quarantine, etc.; yet Christian Scientists do not give the honor seat to matter, but to Spirit. With Paul, they "look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal." There is no "physical element." Nothing is elemental but that

Digitized by Google

metaphysical Principle which we see reflected in the indestructibility and permanence of cause and effect. Over and above all life and being is the divine Principle, which is the only substance and reality, God.

Things are not real by virtue of specific gravity, dimension, or physical force, whether they be flowers or forest kings, or men or methods, but are real by that in which they reflect in some degree qualities that are indestructible. The counterfeit mortal phases of things,—not things, but the mortal and material phases of them,—like all counterfeits, are subject to every manner of vanity, disorder, and disease. There is, therefore, no evil that is not subject to correction by an appeal to the infinite and divine Principle, nothing less than which can exemplify the will of God which is to heal the sick and redeem the sinner. Christian Science asserts this practical presence of God, and illustrates it by preaching the kingdom of God and healing the sick.

[Marie Hartman in *De Nieuwe Courant*, The Hague, Holland. (Translation.)]

The writer in your paper thinks it incredible that sickness should be healed "by the continual repetition of words such as wisdom, eternal Love and Truth." I do not consider it less improbable than does he, that the desired result could be obtained in this way, and I am convinced that all Christian Scientists agree with my point of view. Christian Science treatment is quite a different thing, and consists of prayer in the highest sense of that word, and not of a repetition of words or the use of formulas. Prayer in Christian Science is listening to God; it is learning to understand what God does, He who continually holds perfect His creation, His expression, which is as spiritual as Himself. Christian Science teaches that the office of prayer is not to change God, the All-wise, or to extort a blessing which He would otherwise withhold, but that the only object of prayer is to change men, and to make them more conscious of God and of the spiritual man in God's image and likeness.

[Algernon Hervey Bathurst in *Falmouth Packet*, Cornwall, England.]

I have read a letter that appeared in a recent issue, in which a reference of a decidedly wild nature, if I may be permitted to say so, is made to Christian Science, and all this on the report that a place of worship is to be let to some Christian Scientists. Your correspondent goes on to say that he can "scarcely believe that such can be the case." Those who have read the letter to which I refer will doubtless agree with the critic, if they believe Christian Science to conform to his description of it. The critic gives also what he is pleased to term "the fundamental tenets" of Christian Science. Now, those who really want to know what the tenets of Christian Science are, have merely to turn to page 497 of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. The first of these tenets is as follows: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." All of them differ very considerably from any of the "tenets" given by the critic.

With regard to the healing of Christian Science he has also made a great mistake. Christian Science has nothing whatever to do with the power of "mind over matter," nor is the healing through Christian Science treatment confined to "hysteria and neurosis," although the world would surely have good cause for gratitude even if Christian Science healed only cases which come under this heading. The healing in Christian Science is the result, not of treating disease as something which has control over man, but of gaining some understanding of God and His perfect creation, including man. On page 476 of Science and Health Mrs. Eddy writes: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick." It is just this spiritual or scientific understanding of man which Christian Scientists are striving to gain. The proof that this correct view of man is being attained is afforded in the innumerable cases of healing throughout the world, not only of hysteria and neurosis, but of diseases of every kind, both functional and organic. There was a time when some people endeavored to prove that Christian Science did not heal, but that day is past. It is now well known that Christian Science is healing men and women all over the world, and it is gradually being better understood that this healing is in no way connected with the control or manipulation of the human mind, but is accomplished solely to the extent that Christian Scientists are able to let that Mind be in them which was also in Christ Jesus.

In view of this, it is surely hardly possible for any one to imply that Christian Science is either unchristian or unscientific. Indeed, it would be difficult to find a body of people who are striving more faithfully to fulfil the direct commands of Christ Jesus, to prove their faith by their works, for, as he said, "He that believeth on me, the works that I do shall he do also."

[Frank Bell in *Simpson's Leader*, Kittanning, Pa.]

Those only are confused respecting the teaching of Christian Science as to death who choose to ignore the explicit distinction made between spiritual manhood and the man of material sense. The phenomenon of the physical body's resolution back into its native elements of earth is no more denied in Christian Science than is any other phase of material existence. Most intelligent systems of thought agree that what is laid in the grave is not the man. All Christian denominations, and nearly all other religions and philosophies, hold the real man to be endowed with eternal life. When would-be critics see that this is the man referred to by Christian Science as not subject to death, there will be less frequent displays of gross ignorance among those who undertake to discuss Christian Science publicly. Mrs. Eddy has a perfect right to say that the spiritual qualities of real manhood never have died and never will die, and no one can truthfully say she has attempted to teach anything inconsistent with that statement.

The platform of an emotional revival is a strange place from which to venture an assertion that the happiness of Christian Scientists is of the nature of an intoxication. Happiness in Christian Science is the result of growth in knowledge of the facts of being, a knowledge born not of ephemeral ecstasy, but of the sober, conscientious, painstaking application of laws and rules which no trifler may apprehend but which any earnest seeker may acquire and use. Christian Science makes religion practical and provable here and now. It appeals to right-minded persons because it offers release from superstition as well as from sickness and sin. It is today the most effective means through which the material law of the supremacy of good over evil is being made increasingly operative in the affairs of men. It is gently and quietly, but none the less surely, revolutionizing the world, and those who are conscious of having part in this great work have abundant and substantial reason to be happy.

[Lloyd B. Coate in *Dayton* (Ohio) *Herald*.]

According to history, the practise of medicine antedated the Christian era, but neither before nor since have material methods of healing equaled the method of Jesus of Nazareth nineteen hundred years ago. Jesus the Christ did not heal through mental suggestion or hypnotism; he healed through the power of God, through an understanding of God's law. He was accused of healing through Beelzebub. "The Pharisees said, He casteth out devils through the prince of the devils." In reply to such accusations Jesus said, "But if I with the finger of God cast out devils, no doubt

Digitized by Google

the kingdom of God is come upon you." To prove that his teachings were the opposite of suggestion and hypnotism Jesus said: "The Son can do nothing of himself, but what he seeth the Father do: for what things soever he doeth, these also doeth the Son likewise." "I can of mine own self do nothing." "The words that I speak unto you I speak not of myself: but the Father that dwelleth in me, he doeth the works."

Prof. Hermann S. Hering, in a public lecture on Christian Science, said: "The difference between the method of healing through mental suggestion, or hypnotism, and that of the divine Mind, the Christ-healing, must be clearly seen. When the effort is made to heal by suggestion, the operator endeavors by means of mental manipulation to make the patient believe that he is not sick. He attempts to change the belief regarding the disease, but the cause of the disease remains, and in time manifests itself even in worse forms. The patient is no better off, he has not risen in the scale of being, he has no more manhood or moral courage, and does not know any more about God and His Christ than before. The true Christian Scientist reflects the divine Mind, stands on the basis of God, man, and the universe as Spirit and spiritual, as Love and its manifestation, as Mind and its ideas—perfect and harmonious. Hence he understands the unreality of matter and evil, and knows that man, the likeness and image of God, or His divine reflection, is not sick, but that the patient is simply suffering from a false mesmeric belief. From that standpoint he proceeds to correct the errors of belief with the truth of being, and thus establishes harmony on a spiritual, scientific basis."

Regarding the matter of "sympathy," the critic is reported as saying: "Sympathy to be expressed to one who is ill does not necessarily have to be genuine. It is not a question of its moral value; it only has to exist in order that the patient may secure the belief that sympathy for him exists. A physician may be filled with real sympathy, and not understanding the mode of expression, will be less successful." The sympathy of the greatest physician this world has ever known, Jesus of Nazareth, was genuine; it was no sham; it was of great moral value. The Christ saith: "Come unto me, all ye that labor and are heavy laden, and I will give you rest. Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls. For my yoke is easy, and my burden is light."

Christian Science teaches faith in God rather than in mesmerism and hypnotism. There is a by-law in the Manual of The First Church of Christ, Scientist, Boston, Mass., governing all Christian Scientists, which forbids its members learning hypnotism. The hundreds of thousands of people who have been healed in Christian Science after material means have failed, is proof that Jesus' promise is true. They were heavily laden and found rest. Christian Science more clearly enabled them to discern the great Christ-truth, and they found rest from suffering. Many have been lifted out of sin and are now living a better life; they are taking Christ's yoke upon them, and are learning of him.

[E. C. Pearman in *Royal Gazette*, Hamilton, Bermuda.]

Noticing in the *Colonist* the letter by "A Truth Seeker," which refers to statements that occurred in a recent lecture on Christian Science, with your permission I will reply.

Throughout the lecture there are many statements which are absolute science and should be separated from any relative connection. As is often the case, individuals are not in agreement mainly because they are not at one regarding premises, therefore conclusions are at variance. When the lecturer stated, "We can only know truth, never error," he was making a declaration which must be examined carefully in the light of what "to know" means. "To know" is defined in a modern dictionary, quoting from Porter on "Human Intellect," as "to be certain that something is." In the first paragraph of the letter to which I refer the writer questions the statement, "We can only know truth, never error." Let us assume that we can know error and see where it will lead. To know is to be certain that something is. To know error would be to give it place, to establish it in the realm of the real or true, and thus error would become true. To know error we must establish it as truth, that is, by the process of knowing, error becomes its opposite, truth, which is impossible. In the allegorical account of creation given in the second chapter of Genesis, which is the material theory of man and the universe as created from matter, in direct opposition to the account in the first chapter of Genesis, we are told of the fruit of "the tree of the knowledge of good and evil," of truth and error, and we well know the tale of the downfall of man in his attempt to compass the impossible, the knowledge of both truth and error. We may be induced to "believe" error, that is, to accept it as truth, but belief can never change truth, which enables us to distinguish between the true or the real and spiritual and the false or unreal and material.

In another paragraph of the letter the statement made by the lecturer, "Therefore evil is not mind, and evil thinking is not true mind action, and all that is material, limited, discordant, and mortal in human thought, is not intelligence, not mind, but a counterfeit of it," is said to be startling. In the first paragraph of the letter the dictum, "Thinking is the exercise of intelligence or mind, therefore real thinking is the activity of real Mind," is accepted by "A Truth Seeker." Since real thinking is the activity of real Mind, unreal thinking is not the activity of this Mind. True Mind can never be active with untrue thinking, for it would then be thinking of unreality, untruth. The conclusion is plain, that evil thinking is not real Mind action, but the claim of that which asserts itself to be intelligence, which is in fact without intelligence or power, because all intelligence is from the one source, true Mind, and partakes of the nature of this source, is real and true. When the truth is seen and acknowledged, there follows that glorious liberty which is man's royal heritage; he knows the truth and is free.

Christian Science does not deny that to the consciousness of one who is entertaining thoughts of sin and sickness these experiences are, to such consciousness, real, but affirms that this can never alter the great truth that "real consciousness is cognizant only of the things of God" (Science and Health, p. 276), and that these unreal and discordant experiences have no place in the activity of divine Mind. This is the state of sense existence as opposed to Soul, or spiritual existence. Man lives and moves and has his being in God, in Spirit, and notwithstanding the plausible and insistent claims of matter for life and intelligence, nothing can ever change the eternal fact that man exists, is, because God is, and every impulse of his being partakes of the nature of this great and only cause—Spirit.

Christian Science rests its position on the Master's affirmation that "God is a Spirit," and denies the truth or reality of aught which does not partake of the nature of this source. It accepts without reservation and strives to apply practically the first commandment, "Thou shalt have no other gods before me," obedience to which Jesus enjoined upon his students and followers so emphatically. In so doing it makes the correlative denial of the claims of other gods to intelligence, power, or presence. If Christian Science were being advanced as a mere theory, then we might have misgivings. Fortunately, Christian Science is demonstrating the truth of its position. Thousands of cases of healings which have resulted through its ministrations have earned for it the title "Applied Christianity." It has uplifted faith to understanding, and recognizes, as expressed by our Leader, that "Christ hath rolled away the stone from the door of human hope and faith, and through the revelation and demonstration of life in God, hath elevated them to possible at-one-ment with the spiritual idea of man and his divine Principle, Love" (Science and Health, p. 45).

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"WHICH LOVE THY LAW."

"GREAT peace have they which love thy law," sang the psalmist, "and nothing shall offend them." The prophet Isaiah voiced an even higher sense of possible attainment in his assertion, "Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee." Why, then, when for ages the weary and heavy laden, the troubled and anxious, have longed for peace and rest, have they failed to avail themselves of the comfort and security which might so easily be theirs were they but willing to comply with the requirements thereto. Is it not that like wayward children they prefer to indulge their wilfulness, even to the suffering of its attendant penalties, rather than to yield that loving obedience to divine law which ensures safety and peace.

Yet a longing for peace is truly "the heart's far cry,"—peace of mind and body, surcease from the discord of sense which would still hold mankind in bondage, though he who came heralded by the angelic chorus of peace and good will declared to his followers, "Peace I leave with you, my peace I give unto you;" and bade them be neither troubled nor afraid. This is the peace for which the followers of the Master have striven, and in large measure have gained, so far as salvation from sin is concerned; but it remained for the Discoverer and Founder of Christian Science, Mrs. Eddy, to sound the triumphant note of a full salvation, to open blinded eyes to the present-day possibility of the Christ-healing that bade the sick and the afflicted be whole, the demonstration of a sound mind in a sound body, the restoration which makes "every whit whole."

"Glory be to God, and peace to the struggling hearts!" Mrs. Eddy writes in Science and Health (p. 45), for "Christ hath rolled away the stone from the door of human hope and faith, and through the revelation and demonstration of life in God, hath elevated them to possible at-one-ment with the spiritual idea of man and his divine Principle, Love." This is the secret of that air of peace and serenity which has come to be recognized as the hall-mark of the Christian Scientist, the reflection of that all-embracing Love which wills good, and only good, to its every creature. Obedience to the law of God, the keeping of His commandments, the fulfilling of that which Jesus characterized as the greatest of the commandments, to love God with all one's heart, mind, and strength, and his neighbor as himself, has demonstrated again and again the coming of the kingdom of God in the hearts of men, the dawn of a world-wide peace which shall signalize the overcoming of all that is unlike good, the destruction of all error.

Everywhere there are multitudes who are longing for the healing truth, and it is the mission of Christian Scientists to point them to the ever-open fount, to demonstrate in their own daily living the "fruits of the Spirit" which are the outcome of obedience to divine law, the natural results of an unfailing trust in God, and thus woo them from their following after strange gods to the way that is righteousness and peace, for they are but as sheep that have strayed from the sheltering fold. "Love is the fulfilling of the law," and it is our high privilege to "labor to dissolve with the universal solvent of Love the adamant of error,—self-will, self-justification, and self-love,—which wars against spirituality and is the law of sin and death" (Science and Health, p. 242); and so laboring win the guerdon of the faithful, even "perfect peace."

ARCHIBALD MCLELLAN.

ONE WAY.

THE fact that Christian Science hews to the line is nowhere more clearly expressed than in Mrs. Eddy's well-known statement, "There is but one way to heaven, harmony, and Christ in divine Science shows us this way" (Science and Health, p. 242). The oneness of the way of life and health and peace, was the Master's ever recurring theme, and it is the insistence of Christian Science that the one specific for all ills is the knowledge of Christ, Truth, which subjects it to much criticism.

Impelled by the belief that there exists in the material economy, could it but be found, a cure for every sickness, physicians, with a devotion which merits a nobler quest, are ever seeking to find a serum or other somewhat which will stay the advance of disease; but while all compassionate people rejoice in any change of belief which brings relief to the despairing, many of those who have been taught to think of the material order as beneficent on the whole, and that God has provided a discoverable specific for the removal of its every incidental ill, can but wonder why an infinitely loving heavenly Father should have so effectively hidden these specifics that centuries of honest seeking have not succeeded in bringing them to light. Some may even dare to question the ideal nature of a power that could subject the creatures it has made to the rule of a law by which physical weakness is transmitted from one generation to another, thus ensuring the suffering and life-defeat of millions who in their entire innocence merit the inheritance not of fore-ordained evil, but of Love-ordained good. They will wonder, too, that he who came, as he said, that all men might have more abundant life, and who displayed such a profound knowledge of hidden things, should have given no hint of the nature and location of the material things which, as so many good people think, God has provided from the foundation of the world for our relief from undeserved affliction, but devoted all his time and thought to the explication and demonstration of an entirely different concept of the nature of disease and the means of its cure.

The teaching of Christian Science, though it has seemed mysterious to many Christian people, but reiterates the unequivocal statement of the Master, that sin, false belief, is the source of sickness, and that freedom therefrom is to be attained by a knowledge of Truth. This is, and must continue to be, the offense of Christian Science in the eyes of those who accept the material order as real and legitimate. The common sense of Christian people is, however, beginning to assert itself in significant ways; men are growing more positive in their conviction that wrong cannot be attributed to right, that evil does not emanate from good, and hence that God cannot be a party to that which is instantly condemned by the highest moral sense. They are questioning, too, whether the temporary relief, secured through belief in the curative power of matter, may not be purchased at too great a price. The failure of a new specific to effect the promised cure is sure to bring to some that increased discouragement which lessens the power of resistance to the ravages of disease. On the other hand, the seeming success of a new remedy always serves to intensify the reliance upon matter which practically interdicts that faith in and dependence upon Spirit which, as Christ Jesus so clearly taught, is vital to human redemption. His saying that "no man can serve two masters" was made saddeningly manifest in the loss of that spiritual power which distinguished the early Christians but which passed when their successors became absorbed in material achievement and rule.

Christian Science is again calling to the sons of men, Seek ye first the kingdom of Spirit! and in proof of the practical profit of this Christ-way, it offers the testimony of tens of thousands who have escaped from every namable plague as they have learned to trust wholly in Christ, Truth, to save.

JOHN B. WILLIS.

FEAR OVERCOME.

It is somewhat surprising that after two thousand years of Christianity the admission should be made by professed Christians that fear practically dominates the human race. One thoughtful man says: "We are born cowards. Our mothers feared for us before we were born. . . . All who had anything to do with us feared something evil would happen to us. . . . We feared our parents, our teachers, the minister, the dark, the devil, and even feared God, who St. John says is Love." This is truly a dark picture of mortal existence, yet the Bible tells us that "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind." Whence then this arch enemy of mankind?

None who have looked into Christian Science without prejudice can deny that it has done more to overcome fear than has anything since the time of Christ Jesus. There are none who like to be charged with cowardice, yet until humanity comes to know the infinite power of divine Love and Truth to protect from all evil, a nameless terror seems to haunt the steps of mortals, and worst of all, until the advent of Christian Science a good deal of the religious teaching tended to foster instead of dispel this mental condition. In a story of New England people by Mrs. Stowe, the author makes one of the characters repeat to a timid little girl these lines from a hymn,—

> Dangers stand thick through all the ground
> To push us to the tomb.

Was it any wonder that with such teaching, and in spite of the brave spirit of those good people, fear increased and with it diseases of every type, until there was a new rallying to the Master's standard on which is emblazoned the inspiring words "Fear not," words with which he sought to rouse the spiritual energies of his early followers, in perils by land and on sea, even in the dread presence of "the last enemy." This awakening came through another New England woman of deep piety, who herself had suffered since childhood from fear and its effects, until deliverance came through her discovery of the Science of Christianity which reveals the great fact that there is never any cause for fear when the truth of being is understood. Mrs. Eddy then urged all to acquaint themselves with the truth taught and demonstrated by Christ Jesus, which she says will "destroy the great fear that besets mortal existence" (Science and Health, p. 426).

Here it is well to note that sin and fear are both to be overcome, indeed fear is sin because it is distrust of God. This is brought out in Revelation, where we read that "the fearful, and unbelieving," as well as murderers, sorcerers, "and all liars," shall suffer the same fiery destruction of evil. It is therefore wrong to predict or look for a recurrence of evil which has encountered the power of Truth, whether in our own experience or that of others. No one who understands Christian Science could do this, nor would he be foolish enough to identify disease with himself by calling it "my disease." It certainly does not belong to God, and it cannot belong to His child, and should be disowned as having no place in the kingdom of God, which is an everlasting kingdom.

It should never be thought, however, that any mere determination to be fearless can lead to the overcoming which the Bible inculcates. No, because this calls for the perpetual recognition of God's ever-presence and all-power. It also calls for "clean hands, and a pure heart," and it points forever to that "perfect love" which forgets self in Christ-like devotion to God and humanity, and the heroic spirit is never born of a less exalted ideal than this. A famous writer says that fear "is the attraction of mortals to earthiest earth." Heroism must then result from the attraction of humanity to the spiritual, the pure, and the true, for these are the victors in every struggle, and they whisper evermore "Fear not."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

SEA CLIFF, N. Y.—Services were held for the first time in the new Christian Science chapel of Sea Cliff, Long Island, on Sunday, April 13. This being the first church structure owned by any Christian Science organization on Long Island outside the limits of Greater New York, it was regarded as an interesting indication of the progress of the cause in this region.

The property was purchased in November, 1912, and comprised a plot 60 x 80 feet at the corner of 15th avenue and Central Park place, overlooking Central park, with a pretty glimpse of the bay a quarter of a mile farther west. On the property was a six-room cottage, which has been converted into a cozy chapel by making the entire interior into an audience room sufficient for the present needs of the society. The building is so located on the rear of the plot that future church extensions can be readily made in front, leaving the present chapel available for reading-room and Sunday school uses.

The society was organized in 1908, and for a while held services in Central hall, from which they moved into a hall in the Camp building, where they remained more than a year. From this they went to the larger hall in the Bank building, corner Sea Cliff and Central avenues. Pending the preparation of their own premises during the past winter, services have been conducted in the music room of a private residence. The entire property has cost over two thousand dollars, of which eight hundred dollars is still to be paid on a mortgage in friendly hands.—*Correspondence.*

WHITE PLAINS, N. Y.—The following is a short extract of an appreciative letter recently received from the superintendent of the New York State Reformatory for Women: "Yours of April 30 received. We have often received copies of a Christian Science paper and have found them both well written and entirely good literature for our girls. We should be glad to have you put us on your mailing list for a copy of the *Monitor*. We have Sunday school services in the morning and preaching services every Sunday in the afternoon," etc. It is needless to say that the committee immediately took the responsibility of sending a subscription for the *Monitor* to Boston. Plans are also being considered for applying for the holding of Christian Science services in this institution.

From report of Literature Committee.

ST. GEORGE, STATEN ISLAND, N. Y.—At a recent corporate meeting of First Church of Christ, Scientist, authority was given the board of trustees to purchase land for a church building. A plot of land 75 x 100 feet has been purchased on Richmond terrace, and steps have already been taken toward the erection of a church building, which it is understood will be started in the near future.

The Staten Islander.

GLENDALE, CAL.—First Church of Christ, Scientist, of Glendale and Tropico, has purchased a building site at the corner of Second and Maryland streets. The consideration was twenty-five hundred dollars. This church took up a collection on a recent Wednesday evening amounting to $90.30, and forwarded same to the flood sufferers in the East.—*Tropico Sentinel.*

VINELAND, N. J.—The Christian Science Society has purchased a lot 50 x 150 feet near the center of the town and close by the large auditorium, railroad station, and trolley line. A church building will be erected in the near future.—*Correspondence.*

THE LECTURES.

CHARLESTON, W. VA.

An attentive and appreciative audience listened to a lecture delivered by Virgil O. Strickler at the Stephenson auditorium. The lecturer was introduced by J. H. Nash, attorney at law, who said in part,—

Although not a member of the Christian Science church, I am glad to introduce the speaker of the evening. Many reformers and leaders in religious thought have arisen who have given their versions of the Scriptures to the world and who have molded their views into religious doctrines and established their churches, and may it not be that this wonderful woman, Mrs. Eddy, who gave her life and energies to the study and practise of the Christian life, has brought a blessing to the world by her teachings of Christian Science? We understand that Christian Science teaches no new doctrine, no new religion, but precepts and truths found only in the Holy Scriptures and as lived and demonstrated by Christ Jesus; that it seeks to restore and put into practise for the spiritual good of men, certain truths and teachings of the Scriptures heretofore neglected or misunderstood; or rather, it seeks to make active dormant portions and truths of the Christian code. People generally and naturally believe in Christianity and seek its benefits, and when these are demonstrated and presented to them in a forceful and practical way they accept it. This Christian Science claims to do; it claims to bring into daily life its truths and teachings, making them a part thereof, so that the life a man lives will be his true religion and not the particular creed which he professes.

In recent years there has been much activity in the spiritual world, and in this uplift movement Christian Science has been conspicuous, showing that to fulfil its mission Christianity also must be progressive. The spread of Christian Science in the last forty years has been remarkable, including among its following many leaders in the state and in educational and professional life, a notable fact being that it is strong in educational communities. The advocates of Christian Science bring forth a mass of cumulative testimony in support of their teachings, which testimony is not discredited; and if the tree be judged by its fruit, they may consistently claim that their case is made.—*Correspondence.*

BLACKPOOL, ENGLAND.

A large audience assembled in the Grand theater to hear the lecture on Christian Science by Bliss Knapp. The Rev. C. M. Shaw, formerly of Blackpool, presided.

The chairman said Blackpool was his birthplace, in a Christian Science sense, because it was here that its truths came to him as a new revelation. He was attracted to the subject before coming to Blackpool, as a result of his interest in the psychological aspect of religion—a phase of religious thought which has attracted much attention during recent years; but he never regarded Christian Science as more than a curious phase of religious thought and activity which was not greatly different from the one usually accepted. Soon after coming to Blackpool, however, he came into contact with a manifestation of one of the leading features of Christian Science, namely, its healing power. A lady—a member of one of the churches of which he had charge—had been very quickly healed of chronic invalidism, from which she had suffered for about twenty years, and she had remained well. He was greatly impressed by that experience. Do what he might, he could not explain it away. Had not their great Exemplar gone about healing the sick as well as preaching the gospel?

The little he had heard led him to believe that Christian Science could possibly give some help in that direction. He commenced to read and study the subject with greater interest, and an opportunity came in his own household to test the power of Christian Science. One of his children—a girl—was affected with a severe form of eczema, so severe that she could not wear her clothes and had to go to bed. They discussed whether they should have medical help or Christian Science, and with fear and trembling they appealed to the latter for help. The child seemed so much worse at first that he greatly regretted the step, and wrote to a medical practitioner at Manchester; but twelve hours afterward the disease began to subside, in a few days the child was perfectly healed, and there had not been the least recurrence of the trouble from that day to this. He could not describe the joy which that experience gave to him, because it convinced him that underlying those wonderful stories of gospel healing there was some great spiritual influence which was just as valuable and efficacious in these days as in the days of our Lord, if we could only lay hold of the Principle. He redoubled his interest and study of the subject because he wanted the truth of God, the truth that would help his fellow men, and he was carried along by the religious truths contained in Christian Science.

The day came when he felt it would be dishonest on his part to continue to occupy the position he held, and he severed his connection with the community in which he was born. It was no easy task, neither was it easy to adjust himself to new ideas and methods; but his experience thereafter only went to confirm the step he took, and his gratitude daily increased. Christian Science had not robbed him of anything vital to the great evangelical doctrines in which he was brought up; but it certainly had given him a greater comprehension of and love for the Bible—such a comprehension and love as made him absolutely indifferent to that scholastic criticism which troubled him in the days of old. It had reinterpreted the old doctrine of Christianity and the Bible, and had made it more vital, more intelligible, and more practicable.

In conclusion, the chairman said he was perfectly sure it was only misconception and prejudice which hid the value of Christian Science today; and it was with the idea of trying to remove this misconception and prejudice that these lectures were organized.—*Blackpool Times.*

HORTON, KAN.

Judge Clifford P. Smith, who spoke at the Colonial theater on the subject of Christian Science, was introduced by Miss Sadie Evans, first reader, as follows:—

The law of progress is ever onward. Whatever is for the betterment of mankind becomes a stepping-stone for advancement. Suppositional theories must give place to practical beneficence. The religion that holds out a helping hand finds a welcome in the great heart of humanity; and in this spirit of helpfulness Christian Science comes, full of compassion and mercy, bringing the tidings of good to all mankind.—*Horton News.*

ANDERSON, IND.

The Christian Science lecture by Frank H. Leonard at the Grand opera house was well attended. Henry Drach, first reader of the local church, in presenting the lecturer, said:—

About twelve years ago a friend told me of a little girl who had been severely burned in the face; he said she was in a pitiful condition, and that her parents would not call in a physician to do something for her, depending on Christian Science for her recovery. At that time I knew nothing about Christian Science, and thought as did he, that the little girl was being neglected, and said it was a shame that parents should neglect a child in that manner, and I severely criticized and condemned them. Soon after this I learned that the girl was completely healed by Christian Science,

Digitized by Google

and that there was not a mark of any kind left on her face to disfigure it.

There are some people now who are doing as I did, criticizing, condemning, and ridiculing something which they know nothing about, but I am glad that I know better now. I know that Christian Scientists everywhere are doing what the Master said we all should do, when he said: "Ye shall know the truth, and the truth shall make you free." The sick are being healed, and the sinner is being reformed, because the truth is again being demonstrated.

Daily Bulletin.

KEARNEY, NEB.

Always of interest to those not of the Christian Scientist belief yet admirers of the work done by that church, is a Christian Science lecture. A fairly well filled auditorium at the Kearney opera house was present to hear William D. McCrackan, M.A., lecture. E. J. Woolworth introduced the speaker, and said in part,—

It is universally admitted that God is all powerful, but it was left for Christian Science to discover how this power is available in the lives of men. Christian Science is simply an advancing footstep, the new-old truth which has vitalized the Christianity of our ancestors. There has been progress in the Christian religion from the start, and why should we be surprised to see more progress? Christianity itself has not only made progress, but it is a fair conclusion to draw from the history of the world that it is the cause of all other advance which has been made. We arrive at this conclusion because Christian nations alone have made progress, and they have made the greatest advance when there has been the greatest religious liberty. When attempts have been made to strangle Christianity, the world has lapsed into barbarism. After twenty-three years of study and observation, I can say for a certainty that Christian Science has come to humanity freighted with benefits; that it simply means more progress, advancement in every way, —betterment for individuals, communities, and for nations. There is good enough in it for all, and we want to share it with our neighbors.—*Kearney Hub.*

PORTLAND, ORE.

The edifice of First Church of Christ, Scientist, was filled to overflowing by those wishing to hear the lecture on Christian Science delivered by Francis J. Fluno, M.D., who was introduced by Paul S. Seeley as follows:—

The world of today is seeking for an accurate, constructive, and scientific religion. It desires to find the true God, to learn of His man and His universe, and to discover the laws by which He governs. Apologies for the inconsistencies of our past beliefs in a God who brings sickness and discord are rapidly giving way before the insistent demand for a religion that is scientific, practical, and demonstrable. Christian Science has been successful as a religious movement because it is practical. It places life on a scientific basis and gives a clear, reasonable, and logical explanation of God, man, and the universe. No superstition clouds its teachings; no cruel Deity intimidates its followers. Its God is a God of love; its message is one of hope.—*Telegram.*

NEW YORK, N. Y.

In introducing William R. Rathvon, who lectured in Third Church on Christian Science, William W. Porter said in part,—

The essential, practical, and reasonable definition of religion may be said to be that condition or quality of thought which by its expression or works fulfils the inspired prophecy of preceding religious periods in the history of the world. Two thousand years ago there appeared in the cities and villages of Galilee Jesus of Nazareth, who preached the doctrine of man's oneness with the Father and the healing power of Truth and Love. Many there were whose sorrows he assuaged, whose sickness he healed, whose eyes he opened, whose ears he unstopped, and to these he directed the critics of his time as concrete evidence of the correctness of his doctrines and works. Thus confounded, these critics could only raise the general cry that his teachings and doctrines were contrary to public good, were opposed to public health, and were against public policy; yet through all the intervening ages stands the majestic figure of the Master of the world, announcing the standard of all religion, the standard of all healing, in these words: "By their fruits ye shall know them." He also said, "Greater works than these shall he do;" and today throughout the world the healing and saving power of Christian Science is known and demonstrated, thus emphasizing by fulfilment these prophetic words of our Master.—*Correspondence.*

GALVESTON, TEXAS.

The auditorium of Hotel Galvez was filled with fully three hundred people who came to hear the Rev. William P. McKenzie deliver his lecture on Christian Science. The speaker was introduced by DeWitt McMurray of the *Dallas News,* who said:—

Those who have come to Christian Science for relief from physical afflictions, after testing without success all known material remedies, have seen demonstrated in their own experience the truth of the statement by the apostle James that "the prayer of faith shall save the sick." This calls to mind the first sentence of the first chapter of the Christian Science text-book, "Science and Health with Key to the Scriptures," which reads, "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love." These former sufferers from disease have found that they should not follow after "other gods," but should go to the Giver of life for the gift of life. Jesus said, "I am come that they might have life, and that they might have it more abundantly."—*Galveston News.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Bay City, Mich.—Washington theater, 8:15 p.m., May 23.
Bradford, Fa.—Universalist church, 8 p.m., May 29.
Creston, Iowa.—Temple grand theater, afternoon, May 25.
Gloversville, N. Y.—First Congregational church, 8 p.m., May 29.
Herkimer, N. Y.—Grand opera house, 4 p.m., June 1.
Lexington, Mass.—Town hall, 3:30 p.m., June 1.
Marion, Ohio.—Court house, Court room, 3 p.m., June 1.
New London, Conn.—Lyceum theater, 3 p.m., June 1.
New Rochelle, N. Y.—Loew's theater, Main street, 3:30 p.m., May 25.
Oswego, N.Y.—Church edifice, 175 W. 2d street, 8 p.m., June 6.
Parkersburg, W. Va.—Odd Fellows building, corner Ninth and Market streets, 8:15 p.m., May 29.
Portland, Maine, City hall, 7:30 p.m., June 1.
Ridgewood, N. J.—Church edifice, 8:30 p.m., June 6.
Roxbury, Mass.—Whiton hall, Center street, Dorchester, 8 p.m., June 3; Fauntleroy hall, Wenonah street, Roxbury, 8 p.m., June 5.
Salamanca, N. Y.—Congregational church, 8 p.m., May 30.
Syracuse, N. Y.—Wieting opera house, 4 p.m., May 25.
Upper-Sandusky, Ohio.—Auditorium, 8:15 p.m., May 30.
Wakefield, Mass. (auspices Reading).—Town hall, Main street, 4 p.m., June 1.
Williamsport, Pa.—Y. M. C. A. hall, 8 p.m, May 29.

TESTIMONIES OF HEALING.

I am so grateful for the help received through reading the testimonies in the *Sentinel* that I am impelled to send my own, with the loving hope that seekers for the truth may be helped thereby. Although I had many opportunities to look into Christian Science during a period of twelve years, yet I refused to listen to its claims until the summer of 1910. I was termed a broad-minded man by my acquaintances, but I now look back over those years and see how very narrow I was. Having once become interested, however, I made an earnest effort to hold my thought receptive to the truth, with the result that to a large degree I gradually overcame many weaknesses, and particularly that awful sense of fear which enslaves so many mortals.

The greatest test I have had of the mastery of fear was given the night of Sept. 14, 1911. Living in an isolated mining-camp in New Mexico, where my home was located in a deep and narrow canyon, a sudden cloudburst of unusual severity quickly flooded the gorge. I had left my home to assist a neighbor whose house was in danger, and was returning with him to my house, when I was swept from my feet and thrown into a torrent of blackness, muddy water, rock, and timbers, and was carried at racing speed down the canyon, and to all human or material sense certain destruction awaited me. My first thought, as I was swept forward, was that God is All-in-all, and as I was carried hither and thither I held tenaciously to this thought, when finally, grasping the stump of a tree, I audibly declared "the scientific statement of being," given on page 468 of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. My thought was perfectly clear, and there was an entire absence of fear. While holding to the stump I was struck on the shoulder by a huge log, around which I threw my arm, and almost at the same instant something crashed against the stump, seriously injuring my hand and compelling me to let go, so that I was again seemingly at the mercy of that fearful torrent. I was carried several hundred feet and dashed into a barbed wire fence, to which I clung until I recovered sufficient strength to lift myself to my feet, when by the aid of the fence and the flashes of lightning to guide me, I got my freedom and hastened to my house. When I drew near my home I saw, in a flash of lightning, that it had been destroyed, and upon entering a vacant house next to mine I found my wife, who had been rescued by neighbors at great risk to themselves. Neither of us knew that the other had been caught. My wife, who had a better knowledge of Science than I, had also applied it, and had a seemingly miraculous escape. Our friend and neighbor, however, was carried down the canyon a distance of two and one half miles, where his body was found the following morning.

Although dreadfully cut and bruised and exposed to the wet and cold, neither my wife nor I suffered any harmful effects. My wounds were all healed without the aid of *materia medica*, and although our material loss was considerable, I was really grateful to have been able to demonstrate so clearly the mastery of Truth over error. Words are inadequate to express my gratitude to God for my rescue, also to Mrs. Eddy and all those who are engaged in spreading this gospel of Truth and Love, and my earnest prayer and desire is that I may so live as to attest the fruits of Christian Science, which has come into the world to help us in every time of need.—THOMAS J. CURRAN, Los Angeles, Cal.

To the above testimony I desire to add an acknowledgment of my appreciation of the efficacy of divine Truth as I have learned of it through the study of Christian Science. On the night referred to in my husband's testimony, the intensity of the darkness made futile any effort for escape in a material way; but I was fortified by the verities of being as explained in "Science and Health with Key to the Scriptures," and was possessed of no other consciousness than that of God's infinite goodness. Without conscious resistance I was carried along with the raging flood, down into a rut close to a barn, verging on the most perilous sweep of the waters. At that point rocks quickly accumulated and stayed me, until human assistance enabled me to reach a place of safety, after having been in the water not less than three quarters of an hour. Upon finding my husband I was made truly happy in learning that he too had applied the understanding of divine Principle as taught in Christian Science.

I realize more and more that through daily watchfulness, and the endeavor to see as God sees and to speak as God would have us speak, through the understanding of man's oneness with divine Mind, the fruits are humility, tenderness, and an all-absorbing desire to manifest ever-increasing love toward our neighbor. This is my expression of gratitude for my deliverance in Truth.

BELLE M. CURRAN, Los Angeles, Cal.

I desire to express my gratitude for what God has done for me through the truth revealed to us in Christian Science. Six years ago, while following the profession of a trained nurse in San Diego, Cal., I met with an accident to my hip, causing the bone to be injured, so much so that I was paralyzed on one side. Up to this time I had read a few *Sentinels*, also pamphlets on Christian Science which a kind friend loaned me. The reading of these convinced me that the writers had a much clearer and more practical understanding of God than any I had heretofore known, and in my distress I prayed that God might show me the way. In the morning, after a sleepless night, a lady came to see me who was also slightly interested in Christian Science. I begged her to go for a practitioner, and one soon came, bringing with her the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I shall never forget how I enjoyed the study of its pages, although for five days and nights the pain continued; yet I knew that "God is no respecter of persons" and that He could and would heal me.

The practitioner came twice a day, but it was not until I saw that Christian Science was not the exercise of any human will, but rather the letting of the divine will work in me, that I experienced the healing power. This conviction came to me through the almost continuous study of the text-book and the kind help of the practitioner. On the sixth day I rested quietly, and about the tenth day was out of bed, but in walking I was not yet entirely free from pain. With a few more treatments, however, the pain also was overcome. About two weeks later I visited the Grand Canyon of Arizona, and on account of many tourists being there at that time, I was unable to secure an animal to ride through the canyon, so together with another lady I walked down the steep trail and back again the same day. The depth is considered over seven thousand feet. I mention this to show how completely I was healed, for I never felt conscious of my hip-joint on this trip, nor have I since.

Before this I had been subject to sudden attacks of heart trouble and had been told by the physicians not to take violent exercise of any kind, as this might prove fatal. On many occasions I was utterly helpless when these spells would come on and sometimes had to remain in bed for weeks; but all fear of this trouble had been removed through my new understanding of God as ever-present Love, and while crossing the range of mountains in Mexico I felt no fear, and no ill effects such as I had experienced on similar occasions. While staying in the city of Mexico much fear was expressed, however, by others about the altitude, and once more the availability of the all-power of divine Love was proven to me. I had been in the city two weeks when, after retiring at ten, I awoke an hour later with the old sensation. Fear possessed me, and I rushed out to the balcony for air, when instantly the thought came to me, Whom are

Digitized by Google

you serving, God or error? I then felt ashamed of having listened to this wild fear. I felt divine Love's presence, and realized that the higher I was in the altitude of thought the nearer I was to God; that the everlasting arms were around, about, and underneath; that I lived and moved and had my being in Him. I felt secure, and the attack vanished, never to reappear.

This is now six years ago, and I have been in even higher altitudes since, have taken other violent exercise, but have realized complete freedom. For this and many other experiences of healing I am truly thankful to God, and also grateful to our revered Leader, Mrs. Eddy, who has made it possible for us to find the way; but I am far more grateful for the peace of mind, joy, and love which Christian Science has brought to my consciousness.

MRS. DOROTHEA M. PERTZ, Portland, Ore.

With hearts overflowing with gratitude for the many blessings we have received as a family since coming into Christian Science, now over three years ago, we feel that we should no longer withhold an expression of gratitude which might encourage some other poor sufferer who is searching for health and happiness as we were.

I shall never forget the day that a dear lady first brought Christian Science to our notice. We did not then know anything about it, but it seemed from the very first that it was just what we had long been searching for, and we accepted its teachings and threw away all our medicine, though my husband and self had been taking remedies every two hours at that time, as he had been almost an invalid for two years with kidney trouble and unable to work, while I was sick a great deal of the time, my friends and relatives believing I had tuberculosis. As we began to study "Science and Health with Key to the Scriptures" by Mrs. Eddy, however, our condition improved, and soon all our ills disappeared. My husband also got a good position, which overcame the financial difficulty, and to us all these were beautiful and convincing proofs of the power of Truth over error.

What seemed to me the most wonderful proof of Truth's power was the healing of our oldest son last summer of a fever. He had all the symptoms accompanying that disease, and was according to mortal mind very near death; but we clung steadfastly to Truth and Love, used no material remedies whatever, and through the faithful work of a practitioner he was healed. Although his recovery seemed slow, it was almost painless after the first few days. Is it any wonder that our hearts are filled with gratitude for Christian Science? Whenever I think of this great proof of the protecting power of divine Love, I feel like exclaiming with the psalmist of old, "Bless the Lord, O my soul: and all that is within me, bless his holy name."

These are only a few of the many blessings we have received since taking up the study of Christian Science. For the physical healings we are truly grateful, but yet more so for the spiritual awakening gained from the study of Science and Health. While we feel that we are only beginners, and the way sometimes seems dark, we are striving daily to go up higher, and know that we shall gain our perfect freedom if we faint not nor become slothful. This testimony would be incomplete without an expression from us of appreciation for the unselfish and inspired work of dear Mrs. Eddy in bringing to light this blessed truth which heals the sick and reforms the sinner.

MRS. A. H. ROGERS, Sherrill, Ark.

Six years ago this healing truth was brought to me by a dear lady whose life in Christian Science had been like a beautiful song to me. I was ill, so ill that I had not walked for four weeks, and though *materia medica* did all it could, it made many undesirable laws for me should I get well. One Wednesday, however, this friend told me of the truth, that God is Life and Love, that in Him is man's strength, and on Friday I went down-town. The old trouble did not return.

Since then we have had many proofs of this great truth with our two children, and Truth is indeed an ever-present help. I now realize a greater sense of gratitude than ever before, and my chief need is a fuller understanding of Truth and Love. I am truly grateful to God for Christian Science, and also to Mrs. Eddy.

MRS. MINNIE GOIN, Sedalia, Mo.

[Translated from the German.]

I want to tell of the wonderful way in which I experienced God's help. Since earliest childhood I had been sickly, and my condition grew worse each year. No physician seemed able to determine the nature of the trouble, and all prescribed remedies failed to bring relief. Then an operation was advised, to which I consented, hoping that a cure would result. The operation was performed, and a few weeks later I returned home, after having suffered much pain because of complications which had arisen. My condition seemingly improved, and I was again able to work. A few years later I had a return of the former complaint, to which was added a severe nervous trouble, accompanied by such weakness that I would often have to lie down the greater part of the day. I was advised to go to a sanitarium, which I did, but returned home no better, and greatly weighed down mentally, having lost all hope of recovery and not knowing what to expect.

At this juncture I heard of Christian Science, and read some literature on the subject, which impressed me to such an extent that I immediately made up my mind to seek help in that direction; and when a few weeks later it became possible for me to go to St. Petersburg, I applied for treatment to a Christian Science practitioner. I shall never forget the sense of happiness and the feeling of hope which I experienced after seeing her. She took up treatment in the most loving and patient way, and my condition slowly improved. To be sure, there were hours of discouragement, when a turn for the worse would seem to take place, but Truth was victorious in the end, and the words, "They that wait upon the Lord shall renew their strength," became true in my case, for God gave me strength to overcome the disease.

A sense of health has returned to me, and I am able to work, for which I am deeply grateful; moreover, I wish to voice my gratitude for having been led to find work, where I thought it to be out of the question, and also to express my thanks to Mrs. Eddy for teaching us to recognize God as Love.

MATHILDE STAVENHAGEN, Schlüsselburg, near St. Petersburg, Russia.

I desire publicly to express my gratitude to God, also to our dear Leader for the many blessings received through Christian Science. I came to this truth through the healing of my mother, and since then I have had many beautiful demonstrations in my own home, but will only speak of two.

About the middle of August, on a Saturday afternoon, an attack of illness came on, and I at once began to treat myself as best I could. On Sunday morning I seemed no better, as I was quite hoarse and there was a very painful condition of the throat. That afternoon I thought best to call on a practitioner to help me, and she took up my case at once. On Monday morning I felt much better, and went across the street to see a neighbor on a little business. While talking to her I fainted, but I soon regained consciousness enough to declare the truth, and in a few minutes I was able to go home alone. In the afternoon I was able to go to the practitioner's home, and after a few treatments I was well.

My little boy, six years old, awakened one morning quite sick with a fever. I began to declare the truth at once, but

Digitized by Google

feeling that I needed help I telephoned to a practitioner. She began treatment, but for three nights the child seemed very ill. He did not sleep five minutes at a time, and the second night he could not swallow even water. On Saturday afternoon he was able to be taken home, for I was at my mother's when he became ill. On Monday he was able to go with me to the practitioner's home, and in less than two weeks he was perfectly well. I never thought of calling in a doctor, but I did not allow any other children to go into the room. I am truly grateful to Mrs. Eddy for this healing truth.—MRS. BEULAH GAFFORD, Crowell, Texas.

Recently, upon reading some particularly interesting testimonies of healing, I recalled these words from our textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy: "Are we really grateful for the good already received? Then we shall avail ourselves of the blessings we have, and thus be fitted to receive more" (p. 3). It is in response to this admonition that the following testimony is gratefully given.

All my life I had suffered from disorders of the stomach and digestive organs,—a condition shared more or less by every member of the family and accepted as an inheritance,—and as years went by these conditions were so aggravated that my diet had been reduced almost to the vanishing point. The most powerful drugs, as well as other means, were resorted to in the hope of restoring normal action, but with no result. The physical suffering was intense, the mental even greater, an increasing despondency having reached a state of indescribable torment, and it was generally expected that my lease of life had but a short time to run. I also had a skin disease, affecting the scalp, which had already caused quite a large bald spot to appear, with further loss of hair occurring daily. I had long worn glasses for defective vision, and was addicted to the use of tobacco and intoxicants, both habits of many years' standing and having a firm hold upon me, particularly the latter.

To describe the various means tried for relief would require a volume, and include the treatments by many physicians of different schools, besides well-nigh every "cure" that I might have heard or read about, and the crisis above mentioned found me without a single straw to grasp in the way of material help. It was then, when every hope had seemingly gone, that Christian Science (which had several times been mentioned to me by loving friends, only to be rejected with the arrogance of mortal wisdom, as a fad) came to the rescue. One day, in relating my experiences to the nurse attending me regarding my search for relief, Christian Science was mentioned, when he told me about a case where he had been in attendance and a Christian Science practitioner had been called in with some wonderful results. After asking him a few questions a sudden inspiration seized me, and I cried: "I am going to try it! Go at once for a practitioner, and at the same time call upon the doctor, tell him what I have concluded to do, and say that I shall not need him any more."

This was done, and the practitioner called that afternoon, when I was given my first treatment, and that evening I ate a hearty dinner, the first one in a long time. Since then, a period of over ten years, I have eaten regularly anything served at meals without discomfort. The desire for tobacco and stimulants also went with this first treatment, and has never returned. A few more treatments found me with glasses discarded for good, and the eruption disappeared, my hair regaining its former thickness, which it has retained to this day. After the practitioner's first visit a clean sweep was made of everything pertaining to former methods of treatment, and not a single grain of medicine, or anything else in the old lines, has been used since.

A far greater cause for rejoicing was the peace of mind and the spiritual desire which came with the acceptance of Christian Science. From a miserably despondent and unhappy individual I was transformed to one cheerful and happy, and from one indulging freely in the various forms of worldly dissipation, with scarcely a thought about spiritual things, I became an advocate of right living and a student of the Scriptures. Gratitude to God, also to the one who has made His wonderful works clear to us, is not to be fully expressed in words, and, as I feel, can best be shown in constant striving for a further understanding of Truth in the way our Leader has pointed out.

W. E. HAWS, New York, N. Y.

I feel it a duty, as one who is trying to follow the teachings of Christian Science, to give this testimony, to express my appreciation and thankfulness for the great good *which* my family and myself are getting from this wonderful *truth* which makes us free. Since taking up the study of Christian Science, some three years ago, we have had many wonderful demonstrations of the healing power of divine Love.

About a year ago we were living in Mitchell, S. Dak. Our little son showed signs of a fever one Sunday evening, the reality of which was denied, both by my wife and myself; but by others who were present at the time, mortal fear was manifested and spoken of. The little fellow was put to bed and he passed a very restless night, for his body seemed to be almost burning up. We treated him to the best of our understanding of Christian Science, but there seemed to be little gain. The following night, when I came home from my business, I found the child apparently much worse. He did not notice anything, not even when I called his name, and when I took him up in my arms he seemed like one that was dead. It was then very evident that we should have help, so I stepped to the telephone and called up one of the practitioners in the city. I stated the condition and asked for help, and in a very short time after the treatment began a change could be seen in the boy. He was put to bed, and before long he seemed to be resting comfortably. He had a good night's sleep, and was much better in the morning. During the day he manifested a desire to be up and around the house, and he was allowed to do as he wished. He steadily improved, and in a very few days was himself again.

At the time of this sickness and cure, the city was full of an eruptive fever, and the symptoms as laid down by mortal mind were all manifested in this case. Although we know from the teachings of our beloved Leader, Mrs. Eddy, that this healing was truly natural, we cannot but feel *that* it was wonderful. Besides this, I have lost all *desire for* tobacco since taking up the study of Christian *Science*, although I had been using it since childhood, until it seemed as though it was a part of me. About the same time I was able to leave off my glasses, which I had worn steadily for fifteen years. Christian Science has helped me morally, physically, spiritually, and financially, and I am more grateful for this wonderful truth than words can express. To know that everything which comes from God is good, and that every good desire is a prayer, goes a long way toward making this life one long day of rejoicing.

M. R. TOURNIER, Waukegan, Ill.

I wish publicly to express my gratitude for my healing through Christian Science. In July, 1905, I was practically helpless, as a result of severe nervous trouble, which doctors and medicines had failed to relieve, even temporarily. For months I had no desire to eat, and I was afraid to sleep on account of weak heart action, which caused me to have spells wherein I would lose control of my body and lie perfectly helpless. Life for me seemed a miserable apology for existence, as I could not read, sew, or do anything but sit in my chair from morning until night, and with no hope of ever being well.

At this time a brother urged me to have Christian Science treatment, and I gave my consent, but had no idea of the nature of such treatment. I however felt the effect of my first treatment, and this gave me such hope that I immedi-

Digitized by Google

ately disposed of all material remedies, of which I had an abundant supply, and felt sure that if anything could help me Christian Science would. My healing was slow, but for this I am now truly grateful, as it compelled me to continue in the study of our text-book "Science and Health with Key to the Scriptures" by Mrs. Eddy, and also to learn the much-needed lesson of patience. Since my healing I have had the best of health, and have proved many times that God is my strength, and that I can always do whatever is necessary for me to do. Since my first treatment in Christian Science the truth has been my only remedy for all inharmony of mind or body. In passing through deep waters, of sorrow and loneliness, divine Truth has been my comforter, and I have always looked forward with eagerness to the Sunday and mid-week services, which have been such a help to me; the *Sentinel* has also been a messenger of hope and cheer.

I am indeed grateful for the many blessings coming to me daily through the teachings of Christian Science. Words fail to express the love and gratitude which I feel for the pure and noble life of our Leader, Mrs. Eddy, and my sincere desire is to be ever found faithful to the cause of Christian Science.

MRS. MYRTLE ROHRER, South Bend, Ind.

It is with a grateful heart that I relate what Christian Science has done for me. So far as my mother knows, I was born with a lameness all down my left side and never had the proper use of my left hand. Moreover, my left leg was a little shorter than the other. At one time I went to a specialist in such cases, and in the first instance I was much benefited, though the operation was a very painful one, but the second time I went no benefit was realized, and we made no further effort, as the proper use of my hand had not been gained.

About two years ago we heard of Christian Science, and with a little over two weeks' treatment from a practitioner I was told that I could wear an ordinary boot, which I did for the first time in my life. I can thankfully say that Christian Science is guiding me into the truth that sets us free. My foot is now perfectly normal, and my arm is gaining strength daily. I know that in a short time it will be quite as useful as the other. It is with love and gratitude that I give this testimony, hoping that it may encourage some dear one to learn from Christian Science that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). I cannot express what I owe to God for giving us such a Leader as Mrs. Eddy. Words are too weak to tell all that my heart feels.

MARY AIRD, Glasgow, Scotland.

[Translated from the German.]

It is with a sense of deep-felt gratitude that I wish to testify to the blessings which I have experienced through God's grace. Six years ago, in June, my son was taken very ill with measles and a fever. As we had attended Christian Science meetings several times before, we wrote to a practitioner at once, asking her for treatment. The result was that within a few days my son was able to get up and take a walk. In August he ran a long splinter into his foot. We bathed it, but the splinter could not be seen. As the boy could not step on his foot, we again secured the service of the practitioner, and a couple of days later the splinter appeared, so that I could get hold of it and pull it out, whereupon the boy was able to walk. For these benefits we thank God and are deeply grateful to our revered Leader.—JULIUS ZIHM, Berlin, Germany.

I am glad to testify that I was healed of a severe attack of rheumatism, about a year and a half ago, through Christian Science treatment. I am deeply thankful to God for His care over me.—CHARLES ACKROYD, Petaluma, Cal.

FROM OUR EXCHANGES.

[*The Universalist Leader.*]

The looking and the longing of souls in every age for the coming of Christ can find satisfaction if the eyes are open. But mostly we see and do not perceive; we hear and do not understand. Throughout the ages, those who have looked for the coming of his physical presence have looked in vain, and yet there has been no year in which he has not come, and never more fully than today, when through a thousand channels he is coming into the life of the hour. There are those who get impatient with the continual sounding of his name, because so many have made the calling of "Lord, Lord!" the burden and body of their religion. But who can look into the better life of the living and not see how more and more the Christ is coming into it? Those who in ignorance or independence omit him from their message, even those who in antagonism denounce him, but who give themselves in loyal service to the uplift of humanity, are opening the door through which he comes and manifests himself in the new relations among men. The writers of the gospels were simply translators of the life of Jesus to the people of their time, and the preachers and teachers and doers of good in all succeeding ages have been the translators of his spirit and character into the life of their own time. And one has but to read Christian history to become prophetic and see the time when "every knee shall bow," and "every tongue shall confess" that Jesus is Lord, to the glory of the Father.

[*The Christian Intelligencer.*]

Not for a long time, possibly for a century past, has there been such a radical change in the expression of religious and ethical thought as has been going on for twenty or twenty-five years past. Men have been thinking old truths along new lines and have been stating and restating even accepted facts in such a fashion as to awaken apprehension in the minds of many to whom the unfamiliar phrasing does not convey the same thought as the former expressions. Applications of spiritual truth to practical life, especially those phases of life which call for physical or intellectual help and uplift, have taken forms wholly unfamiliar to those of older days. Thus the active religious thought of today, whether in its form of expression or application, is in sharp contrast with that of the past generation; and looking back upon the fervor and earnestness of those days many Christians brought up under the older régime are sorely troubled, and view these changes with as great dismay as the patriarch must have felt when from the window of the ark he beheld the fountains of the great deep broken up and all familiar nature vanish amid the angry billows of the flood. To such the words of Paul should bring consolation and renewed courage,—"The letter killeth, but the spirit giveth life."

[*The Watchman.*]

The Christian spirit in the heart of man and in the social sentiment is both a palliative and a cure of evil conditions and of envy. It makes a man content with his lot, and frees him from base envy of those who are in superior conditions to himself; it saves him from senseless revolt and dark and sinister deeds; it guards him from violence and crime; it also works in the community spirit to promote more even distribution of the advantages, opportunities, and privileges of life so that all may have an even chance. This process is going on today with increasing democracy and enlargement of rights. Envy should have less and less ground for manifestation. Until this process is completed every one needs the grace of Christ to keep him from envy and to purify his ambition, that it may covet the best things in the best spirit and not seek merely to pull down those who have

Digitized by Google

gained advancement through inheritance or superior qualities. It works from above to extend privileges, and from below to obtain them, all in Christian love. The cure of both pride and envy is love.

[*The British Congregationalist.*]

Few things in this life are more startling than the way in which it is possible to drift half consciously from the vital things while retaining the accidental and non-vital things. It is quite possible to have a decorous, well-ordered church life in which there is no thought of immediate reference of its doings to the mind and will of Christ. We do things because we were taught to do them, and it never occurs to us that all the original meaning may have gone out of them. It is surely, then, a hopeful sign that there is growing up a "divine discontent" with this state of things within the church itself. Earnest men are asking more and more persistently whether the church, as at present ordered, is able to give true expression to the life that should be in her.

[*Zion's Herald.*]

Moral and spiritual progress are purchased in the same way. He who knows the truth and is set free by it, must earn it by discipline, and sacrifice of temporary pleasures for permanent joy. The truth seems so clear and winsome when we see it in the terms of the earthly life of Jesus. When we attempt to repeat the motives of Jesus in our daily conduct, we discover the difference between possessing the truth in terms of an intellectual conviction or a fine emotion, and mastering the truth through devotion to its imperial demands. In order to make it effective we must earn it. Subjection and exercise are the price that must be paid for real ownership. We never know the full joy of being possessed by the truth until we have earned it.

[*The Christian Work and Evangelist.*]

There is no reason in the world why churches holding orthodox and liberal theologies, liturgical and free forms of worship, episcopal and congregational forms of government, should not unite in saving little children from the hands of the despoilers, men and women from the grip of saloon and tyrant, the weak from the unscrupulous strong, government from the corrupt politicians, business from the unscrupulous men of greed, nations from reversal to paganism—no reason why they should not cooperate in rearing in America the beautiful city of God. Let us rejoice that at last they are doing this, and we are witnessing Christian unity at work.

[*The Standard.*]

No one rejoices more than we in the strong and fearless ethical emphasis of the modern pulpit, but we sometimes wonder if these denunciations in cold type do not of necessity leave out the very thing that makes such utterances have the prophetic note. What is their effect, not simply upon those involved in the sin denounced, but upon that vast mass of people who are neither guilty of the sin nor particularly interested in the church? Does it attract or repel? Is there danger that the public may look upon the modern preacher as "a common scold"?

[*The Advance.*]

There is no known process by which the soul can reach its spiritual heritage by passivity. We may not sit idly and await our transformation into the divine image by processes external to ourselves. If we are saved into our spiritual heritage it will be, first, because God has appointed us heirs of salvation, and ordained the means for our evolution into the liberty of the glory of the children of God; and secondly, because we respond to the act of God by a mighty effort of faith, by which we know and appropriate our divine heritage.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

Two new translations into German have been made and are now on sale. "Die Christliche Wissenschaft: Das Evangelium von dem Reich" ("Christian Science: The Gospel of the Kingdom"), a lecture by Judge Clifford P. Smith. "Im Dienste des Vaters" ("The Father's Business"), containing five articles.

These pamphlets are all for sale at the prices as shown on the opposite page under the list of Pamphlets and Reprints.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, *Scientist*, with space for the names of the churches and their *by-laws*, can be had at seventy-five cents a hundred. *Orders will* not be taken for less than one hundred, and *postage* stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The annual per capita tax, of not less than one dollar, is due June 1, the beginning of the fiscal year of The Mother Church, and is reckoned from that date, whether the admission was in June or November. All remittances in excess of the amount due in accordance with the by-law, will be credited for the current year, unless otherwise specified by the sender.

Please do not send paper money through the mail, except by registered letter; a postal money order, made payable at the Boston post-office, an express order, or a bank draft, is preferable.

To facilitate the work of the Treasurer, please advise him promptly of any change of name or address. No charge is made for this service.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book); single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of *Divine* Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE. June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. ***Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.***

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy . . .	$ .05	$ .06	$ .07
Twenty-five copies . .	1.00	1.15	1.30
Fifty copies . . .	1.80	2.05	2.40
One hundred copies .	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XIII indicate the year 1913; XIIII, 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

The waters of the Pacific ocean were let into the Panama canal on May 18, when a giant blast, composed of thirty-two thousand seven hundred and fifty pounds of dynamite, demolished the dike to the south of the Miraflores locks and allowed the water to flow into an extensive section in which excavations have practically been completed. The dike had dammed the waters of Ancon harbor in the Gulf of Panama on the Pacific until the United States engineers practically finished excavating a long stretch of the canal near Miraflores. The time set for its destruction was made public, and thousands of American visitors, Zone residents, and other sightseers swarmed the hillsides to see this important step toward the completion of the big waterway. All the charges had been set at sunset the night before, and throughout the night the immense quantity of dynamite was under heavy guard, no one except the engineers and their assistants being permitted to pass the sentry lines.

President Wilson has issued an executive order by which all fourth-class postmasters, except those receiving less than one hundred and eighty dollars a year, are required to take a civil service examination to demonstrate their fitness for office. The effect of the order is to throw all appointments to fourth-class offices open to competition. During his administration, President Taft, by an executive order, put these offices in the classified service, keeping in office the incumbents who had never been required to take a civil service examination. The new order affects 49,682 postmasters. President Wilson takes the ground that his predecessor's order failed to apply the merit system to the service.

The Coaster Brake Company, with headquarters at Buffalo, will be dissolved without a contest in the courts, to meet the demands of Attorney-General McReynolds, and it is expected that the pending criminal case against the combination and its officers will be settled in the near future. This suit involves six corporations and eighteen individuals, all indicted at Bufialo Jan. 8, 1912, on charges of unlawful combination and conspiracy to monopolize the entire coaster brake business and to fix and maintain prices.

Mt. Vernon, the home of George Washington, will remain closed to visitors on Sundays as heretofore, as the result of resolutions adopted by the council of regents of the Mt. Vernon Ladies Association, at its annual session. This action was in response to a recent formal request from the Chamber of Commerce of Washington, pointing out that if open Sundays, Mt. Vernon would be visited annually by thousands who are unable to do so week-days.

Work is to be started at once on two buildings for the recently organized women's college at New London, Conn., one to be known as Plant Hall, the gift of the family of Morton F. Plant, and the other as Blackstone Hall, the gift of Mrs. Blackstone of Chicago. It is expected that the college will open in September, 1914.

The New York Yacht Club on May 20 called to the Royal Ulster Yacht Club, definitely accepting Sir Thomas Lipton's challenge for the America's cup. The races will take place in September, 1914, under the New York Yacht Club's present rules as to measurements, time allowance, and racing.

Governor Earl Brewer announced that the Mississippi Legislature would be convened in extraordinary session on June 10, to consider issuing bonds of one million dollars or more, the funds to be devoted to levee constructions along the Mississippi river.

President Wilson has by executive order set apart a large tract of land in Arkansas for use by the department of agriculture as a resort and breeding-ground for native birds. The tract is to be known as Walter Lake Reservation.

Under the terms of a bill approved by Governor Tener, ten verses of the Bible must be read daily, without comment, in the public schools of Pennsylvania. Teachers who violate the law are subject to dismissal.

A "blue sky" law, drawn on the lines of the Kansas and Wisconsin acts, is to be presented in the Massachusetts General Court and is intended to protect investors in stocks, bonds, and securities from fraud.

The supreme court of Missouri has granted the Standard Oil Company a rehearing in the Missouri ouster case.

International.

An important scheme, the details of which were given by the postmaster-general some time ago, for the construction of a special tube railway for the conveyance of letters and parcels in London, has again been brought into notice. In addition to the general post-office, there is a chain of post-offices, each forming the center of districts scattered all over London and situated miles apart. The growth of traffic, especially that of motor traffic in main thoroughfares, interferes with the punctual running of the mail motor van service, which is worked on a rigid time schedule between the central offices, and has led to a scheme for the conveyance of the mails in a subway which would link the central offices together without interruption of any kind. The ultimate intention is to connect all the London central offices.

The Bernese Alps railway, forty-eight miles in length and involving many engineering difficulties, has been constructed during the past six years at a cost of twenty million dollars. Not only was it necessary to drive a nine-mile tunnel, but the line on either side of it had to be carried through wild, precipitous country, where the laying of a railway track was accompanied by many difficulties and dangers. Material had to be conveyed into remote valleys, where the only means of progress was a mule-path, and thousands of workmen had to be accommodated in a country hitherto almost uninhabited. The advantages of the new line are many, and from certain places a saving of three or even four hours will be effected on the journey to Italy.

President Saenz Pena's message, read at the opening of the Parliament of Argentina, made reference to the excellent relations which the republic has maintained with foreign countries, the peaceful conditions throughout Argentina, and the flourishing state of commerce. Immigration during 1912 surpassed the records of other years, reaching a total of nearly three hundred and twenty-five thousand. The revenues for 1912 amounted to 405,237,000 paper dollars; expenditures, 402,838,000 paper dollars. Exportations were valued at $480,391,000 gold; importations, $384,853,000 gold.

The Liberal government of Alberta, Canada, headed by former Chief Justice Arthur Sifton as premier, was returned to power by a large majority on its record of legislation passed in the interest of farmers. The government's record in passing an act providing for a co-operative system of elevators, as asked by the farmers, and passing the machinery act, a measure which prevents implement men from securing a lien on a farmer's property in payment for machinery, was very popular in the election.

Industrial and Commercial.

In the course of the investigations of the fertilizer resources of the United States, made by the bureau of soils, the possible utilization of the waste products from various industrial processes is receiving serious attention. One of the most important of these by-products is the slag produced in the manufacture of iron and steel. In Germany, where the iron ores used are high in phosphorus and the basic Bessemer process for the manufacture of steel is largely used, the slag produced is rich in phosphoric acid, and therefore finds a ready market as a fertilizer. The iron ores used in this country, however, with the exception of some mined in Alabama, are very low in phosphorus, and consequently give slags containing, as a rule, considerably less than 1 per cent of phosphoric acid.

The government, which has been making an investigation of the composition of sole-leathers, finds that no less than 60 per cent of American sole-leather is "weighted" with Epsom salts or glucose or both, and that practically all of it contains more uncombined tanning materials than it should, to give the purchaser his money's worth of genuine leather. The results obtained indicate that not less than twelve million pounds of glucose and Epsom salts are sold annually in sole-leather to the American people.

The threatened strike of miners employed in the New River coal field of West Virginia became an actuality last week, and in consequence one thousand miners, many with their families, are living in tents. The strike is due, it is alleged, to the coal operators having dismissed a large number of men owing to their affiliation with the United Mine Workers of America. There are fifteen thousand miners in the New River coal field, which tract embraces a part of Raleigh, Fayette, and Wyoming counties.

More than a million dollars collected in corporation taxes must be surrendered by the treasury as a result of the decision of the United States Supreme Court that a corporation leasing its property and deriving its only income from that lease is not "doing business" within the meaning of the law and is not taxable.

The Fore River Ship-building Company at Quincy, Mass., has been bought by the Bethlehem Steel Company. The price involved is said to be about one million two hundred and fifty thousand dollars.

There is a prospect that the wheat crop of Kansas will reach a total yield of one hundred and twenty million bushels this year, or one third greater yield than that of last year.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE LAW OF LIFE.

IRVING C. TOMLINSON, M.A.

ONE of the most inspiring lessons of the springtime is the teaching that the law of Life is the only law. If one who had always lived where flowers bloom the entire year had found himself in New England a few weeks ago, he might almost have said that so far as nature was concerned death was the only law. The trees were bare, the earth gave no sign of life, the brooklets were held in an icy embrace, and the birds were silent or far away. All this is changed, and everything about us voices the glad message that Life is everywhere manifest. This eternal fact that there is no other law than the law of God, the law of Life, Truth, and Love, is the teaching of Scripture and of Christian Science.

Christ Jesus knew that God manifests Himself only in the law of Life, and so when all the friends of Lazarus were proclaiming the supposed law of death, he asserted the mandate of Life, and Lazarus "came forth." When Jesus' enemies nailed him to a cross, and his form was laid away in the rocky tomb, he did not give way to any false testimony of the senses; he was at work, as our Leader has said, demonstrating that the law of Life is the only law. His resurrection and ascension was God's proclamation to us that we are to know no other law of being save the law of Life. The ever-living Spirit must work the works of Life alone—it has nothing to do with and knows nothing of death.

We are taught in Science and Health, the text-book of Christian Science, that neither sin, sickness, nor death is a manifestation of law; and we learn how to realize under all circumstances that the law of Life, God, is the only law governing us. This inspired book makes plain that through spiritual understanding we may prove eternal Life to be the Principle and law of our being, thereby realizing and manifesting "the power of an endless life." We ask sometimes why we do not now realize the full fruits of this law. "Being haunted by an ideal life," because, as Phillips Brooks writes, "we have within us the beginning and possibility of it," we often wonder why we fall so far short of it. The answer is, that we do not put ourselves into touch with the truth of being. One might have an electric lamp in his house and yet have no light, because there was no wire connecting the lamp with the source of light. Faith and understanding make it possible for us to utilize the law of Life.

An illustration of the working of this eternal fact of being is found in the law of gravity, which acts upon all material things; they feel its effect and give way to its influence, unless there is something which opposes. A ball held in one's hand immediately drops to the floor when released. Should the floor be removed, it falls lower still, and so on, as each obstruction is overcome, until it finds the center of gravity. Likewise this law of Life is ever present and ever active. Fear, ignorance, and sin are the opposing forces which seem to prevent the full influence of this beneficent law upon our being. When through Christian Science we destroy fear, overcome sin, banish ignorance, then this law of Life blesses us with its healing influence, and peace and prosperity, health and harmony are ours.

Only because of mortal beliefs do we fail to obtain the full benefits of this loving law of Life. It is the work of scientific Christianity to overcome the evidence of false material sense and enthrone spiritual sense; to destroy any barrier that would stand between us and the life-giving power which surrounds and sustains. This work is going on in our experience day by day. As we trust God more and rely confidently upon divine Love, the law of Life becomes our heritage, and we grasp the meaning of those words of the Master: "I am come that they might have life, and that they might have it more abundantly."

Mrs. Eddy's article, "Voices of Spring" (Miscellaneous Writings, p. 329), is well worth reading with each recurring vernal season. On page 331 we read: "Abiding in Truth, the warmth and sunlight of prayer and praise and understanding will ripen the fruits of Spirit, and goodness will have its springtime of freedom and greatness." These words indicate the helpful results which follow from learning the lesson of the springtime, that the law of Life is the only law.

FALLACY OF PHYSICAL DIAGNOSIS.

ALMUS PRATT EVANS, M.D.

A DISCUSSION of the subject of physical diagnosis from a Christian Science standpoint would seem to be entirely unnecessary, as metaphysics is so at variance with physics; but the belief of materiality is so firmly fixed in the human mind that it is eradicated with difficulty. This is due to the fact that physical man has long been supposed to be the true man. Basing their deductions on the assumption that man is physical, that mind is contained in the human body, mortals have striven in a material way to establish a more harmonious condition. While this has been attained in a degree, it is far from being satisfactory; and not until Mrs. Eddy, through her book, "Science and Health with Key to the Scriptures," more clearly elucidated the teaching of the Bible, has humanity found a reasonable solution to this problem.

For ages materiality has dominated the world. It is therefore not "passing strange" that material medicine had its birth in material sense and has been conducted along physical lines for centuries. *Materia medica* regards man as only a physical being, and even though mental conditions may be recognized, material treatment alone is applied. The Scripture, as well as natural science, teaches that matter, or the flesh, is subject to destruction and annihilation. The molecule and the atom of yesterday have given way to the ion of today. It is therefore very evident that a system which is based on materiality is without foundation, and consequently is fallacious.

Medicine is usually spoken of as being a science, but it falls far short of being scientific, according to the definition of science given by the Standard dictionary, "knowledge gained and verified by exact observation and correct think-

Copyright, 1913, by The Christian Science Publishing Society.

Digitized by Google

ing;" "possession of exact knowledge." Science is based upon facts, and facts never change. There is no way in which one can gain exact knowledge by the study of the testimony of the physical senses.

Each successive period in the history of *materia medica* has been hailed as the era of modern scientific medicine; yet as the years have gone by, the theories and methods have continually changed. A system which seems rational this year is found irrational the next. This in no way shows progress, but rather lack of a solid foundation, a house built "upon the sand," "a reed shaken with the wind." This, however, is not the fault of those who are engaged in the noble effort to relieve the sick and the distressed by physical means, but rather is it due to the empirical nature of the system itself. The individual members of the medical profession have been untiring in their efforts to obtain and give to the world a more perfect knowledge of the cause, action, and rational healing of disease; and there are none who have felt the bitterness of failure more than they.

One of the most eminent surgeons of America stated very recently that medicine is eighty-five per cent art and fifteen per cent science. Another medical man of unusual note as a diagnostician, in an article read before a large number of physicians, stated that in one thousand cases which he had examined and diagnosed, subsequent autopsies had revealed that he had been mistaken in nearly fifty per cent of them. He further said: "Judging by the average of this whole study, I consider anything over sixty-six per cent of a verified diagnosis as a 'high' percentage of success, though I admit that our best is far from brilliant."

Materia medica deals entirely with morbid anatomy and physiology. It has no knowledge of the true, spiritual man, but rather takes the Adam concept of man as the real man, and studies humanity from that point of view. On the other hand, Christian metaphysics takes no cognizance of physical anatomy, but recognizes only the perfect man, he who is made in the image and likeness of God. It can admit of no material condition as being real, for Truth cannot be gained by admitting a falsehood or a lie. Christ Jesus said, "Ye cannot serve God and mammon."

Taking into consideration the above, Christian Science practitioners can see how unreliable is *materia medica*. Even though a diagnosis should be accurate from a material standpoint, of what aid could it possibly be to metaphysics, which deals entirely with spiritual causation? The phenomenon of disease or error emanates entirely from mortal mind, and partakes of the physical in belief only. Medical diagnosis has no place in metaphysics. There can be no compromise with materiality in Christian Science healing. "The Christian Scientist," Mrs. Eddy points out, "through understanding mental anatomy, discerns and deals with the real cause of disease. The material physician gropes among phenomena, which fluctuate every instant under influences not embraced in his diagnosis, and so he may stumble and fall in the darkness" (Science and Health, p. 462).

In the eighth chapter of his letter to the Romans, Paul said, "They that are after the flesh do mind the things of the flesh; but they that are after the Spirit the things of the Spirit." Again he says, "Because the carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be." The apostle here depicts very clearly how unreliable is mortal or carnal mind; moreover, he does not stop here, but tells the early Christians very plainly how they can overcome their belief in the fleshly or carnal mind when he says, "But ye are not in the flesh, but in the Spirit, if so be that the Spirit of God dwell in you." Could words be plainer? Is it necessary to have stronger language to convey the thought of the uselessness of trying to gain a greater knowledge of the physical life, so called?

What difference should it make if the case in hand is one which has been named typhoid fever or pneumonia, whether it be named tuberculosis or tumor? Would the healing prayer be in any way changed? Is not the actual cause of all disease and discord the same? The less the Christian Scientist thinks about physical causation, the more surely will he be enabled to overcome the error, and realize the true spiritual healing power of God. Jesus said, "Labor not for the meat which perisheth, but for that meat which endureth unto everlasting life."

Why should Christian Scientists, who have a system which is based upon spiritual truth, the history of which extends throughout all time, which changes not, but is "the same yesterday, and today, and forever," seek aid from a theory which is based entirely on speculation? To do this would be turning from the real to the unreal, from light to darkness. What would be gained by such a procedure? Can truth be gained from error? There is but one way to arrive at a correct cause of disease, and that is through a more perfect understanding of metaphysics, which teaches of the Science of being. The Standard dictionary defines metaphysics as "the branch of philosophy that deals with the conceptions or principles at the basis of all phenomena, including being, reality, substance, time, space, . . . the science of real as distinguished from phenomenal being."

This system of spiritual healing, which has been very clearly elucidated by Mrs. Eddy in her text-book, "Science and Health with Key to the Scriptures," which together with the Bible gives one an ever advancing spiritual apprehension of God, is built upon the rock Christ Jesus, and is immutable and unchanging. If success is not always attained, the fault does not rest with the system, but rather with those who lack spiritual understanding or knowledge of the true Science of being.

There is but one way to eternal truth, and he who tries to climb up any other way is, as the Master said, "a thief and a robber." When the disciples failed to heal the sick, he told them very plainly the cause of their failure; hence the rebuke, "O ye of little faith." In other words, he told them to look within for the cause of failure.

Materiality is not in accord with metaphysics, and any recognition of material conditions only gives the Christian Scientist that much more to overcome. What Christian Science practitioner would call a physician to diagnose a case of sin? Yet the actual cause of both sickness and sin is the same, and both are healed by the same method. Our Leader has pointed out very conclusively in her writings how incomprehensible and unreliable is mortal *mind*, yet there is no vocation in which it plays a more important part than in the practise of medicine. The Master *did not* refer to the physical condition of those who asked *him* for help; he did not speculate as to the probable diagnosis or classification of disease, but recognized all disease as evil. His success was so universal that no one can controvert the correctness of his method. Basing our deduction on the success which followed the work of Jesus and his immediate followers, it is very evident that the only correct method of diagnosis is metaphysical.

If the Christian Scientist believes that there is really a condition to diagnose; if he accepts the statement that there is a physical or structural change, then there is little difference between his concept of the condition to be overcome and that of the matter physician. This belief would dispossess him of man's God-given dominion, and would render him helpless. Jesus came to show us the way, and should we not follow in his footsteps? Can the Christian Scientist in any way improve upon what he taught us through his words and works? He said, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also."

Divine Science is absolute and changeless; it stands firmly for Truth, and in no way compromises with error, but rests steadily upon the Science of being. Paul asks, "What communion hath light with darkness? and what accord hath Christ with Belial?" If the Christian Scientist would make

Digitized by Google

a correct diagnosis and heal the sick, he must forsake all materiality and follow the Christ-ideal. In Science and Health (p. 535) Mrs. Eddy says, "When will man pass through the open gate of Christian Science into the heaven of Soul, into the heritage of the first born among men? Truth is indeed 'the way.'"

SYMPATHY.

EDITH DOYLE.

IN an old English newspaper, dated Nov. 25, 1658, there is a notice of a book with this peculiar characterization: "Sir Kenelm Digby's Discourse, touching the cure of wounds by the powder of sympathy." It would doubtless be interesting to read this old book, to know whether the wounds and the powder were merely material, or whether the author had a glimmer of something higher than dust, namely, the power of Mind. In this century, however, a book has been published which shows how all wounds, physical and mental, may be cured by the power of true sympathy. This book is "Science and Health with Key to the Scriptures" by Mrs. Eddy, and every page tells of the power of the Love that is God, and how an understanding of this power will cure disease of every kind. People will readily admit that love can cure a mental wound, but they cannot always see that a physical wound can be reached in the same way. Perhaps this can be illustrated by the following case:

A man was said to be wasting away with an organic disease. All that medicine and surgery could do had been done; but physician, specialist, and surgeon pronounced the case hopeless, and said that death might come any day. The wife gave up sleep and rest to nurse her husband night and day; and when for sheer weariness he longed to die, she would with gentle words bring him back to hope and life. Many prayers were offered, and his daughter prayed for him daily, with a childlike trust that God was too good to take him away. Slowly but surely the man recovered, and returned to a normal, active life. The doctors said it was a miracle, that by all the laws of medicine he had no right to be alive. They attributed his recovery to the good nursing. As a matter of fact, it was simply the love and trust which would not let him go.

If such a miracle can be wrought by the power of human love, is it too much to claim that the power of divine Love can heal any disease, and that, too, without material remedies? This is what Christian Science claims, and what it is proving daily. But it must be remembered that this claim is based on no assertion of the human will, but on a knowledge of the will of a God who is Love. Divine Love alone really heals, and this Love must be reflected and expressed humanly in sympathy for our fellow men. The human heart is very sensitive. As a flower shrivels up and dies in a cold wind, but opens out in the warm sunshine, so the human heart will shrivel up and lose vitality in the coldness of criticism and condemnation, but will open out in the warmth of sympathy and understanding. Like Solomon, we should pray for "an understanding heart." Jesus had this gift without measure, and it is called compassion in the gospels. In nearly all the accounts of his healing works, it is said that "he had compassion" on the people. This was not condolence with wrong, but a perception of the facts respecting those who came to him with their troubles.

When the leper knelt before him with that piteous cry: "If thou wilt, thou canst make me clean," "Jesus, moved with compassion, put forth his hand, and touched him." And that simple act, which came from the consciousness of infinite Love, must have brought the healing. The leper was accustomed to be shunned by his fellows. He had to call out, "Unclean, unclean," lest any should come near him. When, therefore, the divinely good and pure Jesus gave no sign of shrinking or of loathing, but a sign of friendship and brotherhood, the burden of misery and isolation must have been lifted. The man, realizing the priceless birthright of self-respect, went away clean, whole, and strong.

A direct appeal was not always necessary to call forth this divine compassion, for Christ Jesus saw the need at once, as is shown in the raising to life of the young man. In direct and graphic language we are told that he was "the only son of his mother, and she was a widow." Jesus knew what that meant, knew the utter loneliness of the woman's heart, and with a word, restored her all, filled the "seeming vacuum . . . with divine Love" (Science and Health, p. 266), and then went quietly on his way, while the amazed crowd "glorified God."

We who call ourselves Christian Scientists should pray daily for this compassion. Some one may come to us asking treatment for a physical trouble, but suffering more from some grief or heartache. If we can perceive this need, if we can give the comfort and love which they really need, then they gain "the peace of God, which passeth all understanding," and the physical trouble vanishes away. This should be our one aim, for as we give out this true sympathy, all wounds will be cured, and we shall rejoice in "a new heaven and a new earth," where there shall be no more pain, and all tears shall be wiped away.

EFFECT OF RIGHTEOUSNESS.

JOHN L. RENDALL.

THE prophet Isaiah states that "the work of righteousness shall be peace; and the effect of righteousness quietness and assurance forever." It is a matter of comment among people brought in contact with Christian Scientists, and perhaps especially so among those who attend Christian Science services for the first time, that those whom they meet seem to have gained much by way of happiness, which has found its expression in their countenances.

The question naturally occurs, What is the secret of this happiness, and how may it be found? It may be said of many Christian Scientists, "These are they which have come out of great tribulation." As a class, they have had much the same experiences which come to humanity as a whole. In one respect, however, they differ, in that they are to some extent learning through the teachings of Christian Science how to overcome rather than submit to evil, and how to distinguish and separate between the real and the unreal; how to "abhor that which is evil," and "cleave to that which is good." They are learning too that God is infinitely good, and that His creation is perfect and eternal. They are also learning to know "the things that are freely given to us of God."

Happiness is an effect, the cause of which is right thinking. Righteousness is necessarily rightness with God, and rightness with God means rightness with all of God's ideas. This right attitude of thought, like charity, "begins at home," with one's own self. Its primary step is the sifting out of consciousness those conditions which would bind and limit, which would obscure the realities and retard progress. This process in thought is necessarily individual. No one can do this for another, neither can any one prevent another's doing it for himself. In proportion as this is recognized, mortals begin to see that they have unnecessarily submitted to arbitrary, cruel, and unjust suppositions of law, which have by reason of this submission brought discord, unhappiness, and despair into their lives.

Getting right with God means also getting right with one's self. A right concept of God and man is "right wiseness," or righteousness. In "Science and Health with Key to the Scriptures" by Mrs. Eddy we read: "For true happiness, man must harmonize with his Principle, divine Love; the Son must be in accord with the Father, in conformity with Christ. According to divine Science, man is in a degree as perfect as the Mind that forms him. The truth of being

Digitized by Google

makes man harmonious and immortal, while error is mortal and discordant" (p. 337).

"Quietness and assurance forever" is not a mere figure of speech, but an actuality in the daily experience of those who through confidence in God are proving the verity of the psalmist's statement, "Great peace have they which love thy law: and nothing shall offend them." Love for God and man is the key-note to true happiness; the love that "vaunteth not itself, is not puffed up." Peace, quietness, and assurance are promotive of health and harmony. It is certainly good to know that nothing can "separate us from the love of God," and that the understanding of Truth eliminates fear, displaces doubt and despair, and produces confidence and trust in God. It is good to know that the real man already has that Mind "which was also in Christ Jesus," and because of this he is intelligently directed and wisely led. This enables us to overcome the mortal tendency to mistakes in thought and action which are the prolific and only source of discord, and in this respect the teachings in Christian Science are of inestimable benefit to mankind.

Because of the practical results for good which inevitably follow the consistent practise of Christian Science, the standard of health, morality, and Christianity among its followers is fast reaching its proper level, and it is found that each one possesses within himself, as an individual idea of God, the right and ability to control every circumstance through the understanding of Truth, and thus bring out happiness and peace.

"NOW IS THE DAY OF SALVATION."

LAURA S. DOW.

THE Christian Scientist who is a parent may well be thankful to have a child grow up under the influence of the *spiritual understanding of the teachings of Jesus* as set before us in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. The writer makes this statement from the standpoint of one who spent a most unhappy childhood in puzzling over questions regarding God, and wondering how she ever could become good enough to go to heaven when the time came to leave this world. These thoughts were kept entirely within herself, her only comfort being that if she really tried to be just as good as she could every day of her life, perhaps God would forgive the wrong things she might do.

When I was about thirteen years old, my hopes were shattered by one of my playmates telling me that because I had not been baptized I could never go to heaven. She was a clergyman's daughter, and believing that she would know if any one did, I felt myself doomed, the result being a constant increase in the sense of unhappiness which had already darkened my mentality. Several years later, another school friend, who had also been brought up in a home where the study of the Bible was carefully supervised, told me that to reach heaven one had only to be baptized and believe that Jesus died to save us from sin. By this time I had begun to question the truth of such assertions, so that soon afterward, when some one at home suggested that it would be well for me to be baptized in order to become a member of the church at the next confirmation, I replied that I did not know any reason for so doing.

When this state of unhappiness had reached an almost desperate stage, it was indeed proved that "man's extremity is God's opportunity." Christian Science came to the rescue, awakening my thought to the true understanding of God as the divine Principle governing all reality, and to the fact that the real man as God's image and likeness is governed by this Principle, and can reflect no other than god-like qualities. Inexpressible relief came with the further knowledge that the true baptism is spiritual, "is a purification from all error" (Science and Health, p. 35), which continues in proportion to our relinquishment of sinful beliefs. The purification began with the awakening, which brought many sinful tendencies to the surface, where their false claims of reality were exposed and destroyed by the all-powerful light of Truth.

I learned that Jesus' ministry on this plane was for the purpose of revealing the truth and saving us from sin, sickness, and death by proving their nothingness. *His teachings*, as explained in Christian Science, show us how to destroy these evils, thus making it possible for us to experience the joys of heaven, harmony, right here and now. As this beautiful and inspiring view of Truth appeared to my consciousness, the fears of future punishment gave way to the positive assurance found in the declaration of the apostle Paul, "Behold, now is the day of salvation."

ABSENT TREATMENT.

LEWIS HENRY BEESLEY.

ON page 78 of "Science and Health with Key to the Scriptures" Mrs. Eddy says, "If Spirit pervades all space, it needs no material method for the transmission of messages," and in that wonderful chapter on Physiology she also says, "Science can heal the sick, who are absent from their healers, as well as those present, since space is no obstacle to Mind" (p. 179). In thus doing away with the necessity for any personal presence and in establishing the possibility of a healing method which requires no material aid, Mrs. Eddy has enabled mankind to be conscious of a God at hand, and one who is "a very present help in trouble." Perhaps this has been one of the greatest factors in the spread of Christian Science, because it has taught its students that they can get help in whatever place they are; for they ever so far from other Christian Scientists, the need can always be met.

Christ Jesus exhibited this power in many instances, thus demonstrating for all mankind the ubiquity of the all-knowing, all-loving Mind. In spite of the distance which the nobleman had traveled to get to Jesus, when he returned he found his son healed, as Jesus said he would; and the same result followed in the case of the centurion's servant. We have learned anew through Christian Science that God is ever present and never absent, and since it is *God alone* who does the healing work, there is, in an important sense, no such thing as absent treatment, because the power behind the treatment is ever present. Christian Scientists who are beginners in this study, and who are desirous of taking treatment, would do well to remember that, though they may be absent from the practitioner, who is merely the channel for the healing, they may be assured that wherever they are, God, divine Truth and Love, is, never failing, never absent, and it does not matter how far they are from the practitioner.

All treatment may be thought of as present treatment, since the result is brought about by the presence of God, and this knowledge drives away from consciousness all thought of the personality of the practitioner, of his or her power to do anything, or of any state of absence. In some instances practitioners have found that better work can be done when the patient is not seen at all, and we frequently read in the testimonies in our periodicals of wonderful cases of healing without practitioner and patient having ever met. This is undoubtedly due to the fact that the practitioner's knowledge of an all-powerful, ever-present God is uncontaminated by any mental picture of the patient's physical condition, and he is thereby enabled straightway to realize man's sonship with God. In the twenty-third chapter of Jeremiah we read, "Am I a God at hand, saith the Lord, and not a God afar off?" and with the psalmist we can reply, "Thou understandest my thought afar off . . . and art acquainted with all my ways."

SELECTED ARTICLES.

[Frederick Dixon in *The Evening Star*, Ipswich, England.]

For something approaching half a century, Christian Science has been spreading round the globe, and it may safely be said that it has completed the circumvallation. It has done this because its teachings, as set forth in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, have appealed to all nationalities and to all types of mind. The writer of a recent article intimates that, if accepted by poor people, its effects would be dangerous. As a matter of fact, there are some Christian Science churches composed very largely of poor people, and it is equally certain that the standard of health, intelligence, and morality among these people has become much higher in consequence of their acceptance of its teachings.

It seems to be forgotten that when a person passes away under Christian Science treatment it is impossible that a certificate should be given, and an inquest therefore follows. The very fact, however, that there are so few of these inquests is perhaps one of the strongest proofs of the efficiency of Christian Science treatment. It must be remembered that practically every person who dies does so because a doctor has failed to heal him, and if one may be permitted to say so, doctors not infrequently declare that they could have saved cases which had not been saved by their neighbors. There must be very few of us who have not heard such statements. The fact is that such statements are extremely dangerous to make. Every day the medical profession itself admits more and more the enormous power of thought as a factor in disease. Supposing, therefore, that medical treatment has been ignored, is it even possible to say that the stimulus which the patient has received mentally through some understanding of divine Principle has not more than counterbalanced the absence of medical treatment?

That Christian Science has spread so rapidly and so far as it has, is due to the fact of the marvelous healing of all sorts of diseases which is being effected by it. Its ranks have very largely been recruited from those who have themselves been healed, or who have seen those dear to them, or known to them, healed, frequently after they had been given up as incurable by doctors. It is no part of the business of Christian Science to attack the medical profession, and this is never done; but it is legitimate to point out that, if criticism were let loose, it would be perfectly easy to gather from the inquests on people who have died under medical treatment, facts which would very much more than counterbalance anything which could ever be stated about the failure of Christian Science.

Christian Science is no mere question of faith-healing. It is an actual scientific process, by which the belief of disease is obliterated in a patient's mind, with the consequence that the material manifestations, which are the result of mental belief, vanish with the causes. It must be remembered that though the idealism of Christian Science is fundamentally different from the idealism of natural science, both regard matter as a subjective condition of what is sometimes called mind and sometimes energy. If this is true, and numbers of the greatest thinkers in the world, in all ages, have maintained that it is true, then the Christian Scientist, destroying disease through the destruction of mental causes, is infinitely more scientific than the doctor, attempting to destroy disease by the destruction of effects. As to the question of broken bones, it is simply a question for the patient to decide. Numbers of broken bones have been mended in Christian Science, but unless the patient really has confidence in the power of Christian Science to heal in this way, it is desirable rather that he should go to a doctor than that he should cast on the Christian Scientist the double process of his physical healing simultaneously with the task of overcoming his fear and unbelief.

[From *Lewiston* (Maine) *Journal*.]

It might interest you, some Wednesday evening, to attend a Christian Science service in Odd Fellows' hall on Pleasant street in Auburn. It is somewhat different from the services as conducted in the other churches, but to even the casual listener possesses much of profound human interest. This mid-week evening service is intended primarily for testimonials of healing, but possesses the familiar features of the ordinary church service in the reading of the Scripture and the singing of hymns. But the hymns include only those which are akin in spirit with Christian Science teaching, reverent, but always cheerful and full of assurance. The reading of the Scripture is supplemented by selections from Mrs. Eddy's text-book, "Science and Health with Key to the Scriptures." There is no preaching, no exhortation. Prayer is silent, in conformity with the teaching of this church, to the effect that the desire of the heart is in itself the most efficacious prayer, needing no voicing to strengthen it. Only the Lord's Prayer is repeated aloud, and that in unison, at the close of the period of silent prayer. After this preliminary service came the testimonies, given without affectation or oratory, just simple, direct statements of healing, usually a part of the experience of the speaker. The distinctive feature of these was the use of the past tense. Not one was hoping or looking to the future for the fulfilment of divine Love. To each the truth had been demonstrated through healing, which had brought them out of sin or disease into harmony with God. The message was that of a conqueror, supplemented by a sincerely thankful spirit and the cheerful assurance that this understanding of the Scriptures, as interpreted by Mrs. Eddy and demonstrated by so many remarkable cases of healing, was the perfect safeguard against evil and error.

Incidentally, among half a hundred people assembled in this attractive hall, the evening passed without evidence that a single person was other than perfectly well, wholly at peace, and supremely happy. Hardly in any other assemblage of as many people, at this season, could it be said that none coughed, none were sick and suffering, none were bowed down in despair, none broken with grief. Here the spirit that was in Christ Jesus seemed to have triumphed. If any came in with a lack of harmony, here was offered, throughout the service, not consolation or pity, but that sympathy which is expressed by the affirmation of the immediate and all-potential healing power of Truth and Love. The readings, the hymns, the testimonies were charged with this spiritual optimism. At the close of the service a frankly cordial spirit was manifest. Nobody wore a long-favored countenance or with unction inquired after his neighbor's health. These were cheerful humans with a warm handgrasp, a sunny welcome, simply and unceremoniously extended.

[Paul Stark Sceley in *Oregonian*, Portland, Ore.]

A correspondent whose letter appeared in the *Oregonian* concludes his discussion upon the cost of living with the statement that people may be happy "if they will but will it so and put in practise the teachings of Christian Science." The gentleman quoted has proposed the impossible, for no person can at the same time make use of the human will and practise the teachings of Christian Science any more than darkness and light can be present together. May I be permitted briefly to point out the clear-cut distinction between these two systems of thought, which are not infrequently confused?

Those who have actually put into practise the teachings of Christian Science know that happiness has come to them as the natural and normal result of their realization that God is the only Life there is; that He is loving, perfect, and good; that man and the universe created by Him and expressing Him cannot manifest in reality any condition that is not happy, peaceful, and contented. It must be evident

Digitized by Google

that the happiness so attained is not secured simply by willing to be happy, regardless of the basic law of existence. Many people regard the human will as a buffer to resist the forces of evil, despair, sickness, or other earthly woes. Closer analysis, however, shows it to be capricious and uncertain. No immutable Principle directs its action, no fixed law is known to govern it. Its whims are more varied and devious than the persons employing it. The happiness one would will to possess, another would curse and despise. Its nature is to be double-faced, now good and again evil. Unity and brotherhood it does not know, but only selfishness and separation.

According to the teachings of Christian Science happiness must rather be secured by finding man's life in agreement or unity with divine Mind, the one Principle of being. Dependence upon the human will must give way to a recognition of man's unity with God and the working out of this relationship in life practise, thereby proving happiness to be man's inalienable right, divinely natural, indestructible, and eternal.

[Henry Deutsch in *Duluth* (Minn.) *News Tribune*.]

In an article in your paper by a clergyman I am glad to note his insistence upon the religious attitude of life in its application to relief and salvation from disease as well as from sin. His article, however, contains certain statements which indicate on their face the same misapprehension of the teachings of Christian Science which has led people to believe that Christian Scientists are not working in harmony with the laws to prevent the spread of contagious or communicable diseases. That there may be no question in the minds of your readers on this subject, I beg to quote herewith a statement from the pen of Mrs. Eddy which appeared in *The Boston Herald* of Feb. 17, 1901:

On the subject of reporting contagion I have this to say: I have always believed that Christian Scientists should be law-abiding; and, actuated by this conviction, I authorized the following statement, which appeared in *The Boston Herald* about one year ago:—

"Rather than quarrel over vaccination, I recommend that if the law demand an individual to submit to this process, he obey the law; and then appeal to the gospel to save him from any bad results. Whatever changes belong to this century, or any epoch, we may safely submit to the providence of God, to common justice, individual rights, and governmental usages."

This statement should be so interpreted as to apply, on the basis of Christian Science, to the reporting of contagion to the proper authorities when the law so requires. When Jesus was questioned about obeying the human law, he declared: "Render unto Cæsar the things that are Cæsar's," even while you "render unto God the things that are God's."

From this statement by Mrs. Eddy it should be apparent to any one of your readers that Christian Scientists must exert every effort to comply with the law, and to indicate that they cooperate in every direction in those measures which tend for better health and sanitary conditions.

[Willis D. McKinstry in *Topeka* (Kan.) *State Journal*.]

Your editorial says: "What the late Mrs. Eddy called 'Christian Science' has been renamed by some medical specialists as the 'New Hypnotism,' the scientific use of mind influence for curative purposes." It is true that through a misapprehension of the distinction which Christian Science makes between the so-called human mind and the divine Mind, a certain class of medical specialists would have the uninstructed public believe that Christian Science and hypnotism are one and the same thing. Christian Science and hypnotism bear no relationship whatever to each other. Hypnotism is the operation of the belief of sentient life and intelligence in matter, or one human mind influencing another; it is mental suggestion, or thought transference, and if used by one class of thinkers for good, another class may use it for evil purposes. To believe that thought can be transmitted from one person to another, subjects the believer to the evil conditions of such operation as well as its seeming good.

Christian Science has come to the rescue, and it emancipates mankind from this superstition and the wrongs perpetuated through the belief of its power. Christian Science teaches that God, good, is infinite and omnipotent; that God is Mind, hence the only Mind; that this Mind was manifested through Christ Jesus, giving him dominion over all physical, mental, and moral conditions of material existence. The master Physician gave mankind the rule of salvation when he said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." It is to be understood that all human discord, of whatever nature, is the result of mortal ignorance of God and the Christ. The teachings of Christian Science give to mortals the spiritual understanding of scientific being; it is this knowing, or knowledge of God, that destroys human ignorance of His law, and the perfect man made in His image and likeness appears.

Christian Science maintains that God is present and all power, that He is the source of all activity, all life; and that knowledge of this spiritual fact destroys evil's claim to presence, power, activity, and life; hence it is the activity of right thought about God and man which destroys the wrong thought or misconception. Health is a quality of divine Mind; it is the activity of the law of God, which is continuously operative and is everywhere. This knowledge of spiritual truth applied to human consciousness, not only destroys the belief of sickness and disease, but meets humanity's needs, spiritually, mentally, morally, physically, and financially. Mrs. Eddy says in her text-book, "Science and Health with Key to the Scriptures," page 116: "A correct view of Christian Science and of its adaptation to healing includes vastly more than is at first seen. Works on metaphysics leave the grand point untouched. They never crown the power of Mind as the Messiah, nor do they carry the day against physical enemies,—even to the extinction of all belief in matter, evil, disease, and death,—nor insist upon the fact that God is all, therefore that matter is nothing beyond an image in mortal mind."

[Thomas F. Watson in *Fresno* (Cal.) *Republican*]

The teachings of the Bible are practical when understood, and the commands of the Master were not for his immediate disciples only, but for all the world to follow and obey, for he said, "What I say unto you I say unto all, Watch." Christian Science, as stated in "Science and Health with Key to the Scriptures" by Mrs. Eddy, teaches us to understand the sayings of Jesus and how they can be obeyed, and thousands are daily testifying to the fact that they are fulfilled today, in our midst, in the healing of every form of sin, sorrow, and sickness. Therefore, just why the secretary of the State Christian Endeavor Society would place Christian Science in the fourth or lowest class, as stated in the *Republican* a few days ago, would be difficult to understand. This reminds one of Jesus' words, "Many good works have I showed you from my Father; for which of those works do ye stone me?"

Jesus the Christ evidently only recognized two classes, for he said, "He that is not with me is against me; and he that gathereth not with me scattereth abroad." Christian Scientists do not go around "asking what Jesus would do," as the gentleman stated, for they know what he did, and that he said, "Follow me;" also, "He that believeth on me, the works that I do shall he do also."

The thousands of joyful Christian Scientists who attend our services are daily testifying both publicly and privately

Digitized by Google

to the spiritual illumination of the Scriptures, and the consequent physical healing which Christian Science has brought to them, teaching them obedience to the commandment to "love the Lord thy God with all thy heart, and . . . thy neighbor as thyself." Therefore in this day, when proofs of the good that Christian Science is doing are so abundant and easily obtained, any ignorance of this important subject is entirely without excuse.

The Rev. Leon G. Miles, pastor of the Baptist church in Peabody, Mass., in reply to a criticism of his position with regard to Christian Science, stated: "There is so much good in the teachings of Christian Science that much might well be adopted by other religions. The works of Christian healing are as clearly a part of the commission of Christianity as is the preaching. . . . I am seeking the truth, and I will not spurn it because it happens not to come through my own church. Some of the finest and most helpful phases of truth are set forth only in Christian Science literature, therefore I read that literature."

[Editorial in *The Evening Citizen*, Ottawa, Canada.]

At the congress on legislation and education of the American (Allopathic) Medical Association in session in Chicago recently, Dr. Victor C. Vaughan, dean of the medical school of the University of Michigan, declared that "the coming physician would pay less attention to medicine and the recondite learning of the profession, and more to simple human needs. Instead of a prescriber of drugs he would be a digger of ditches, an engineer expert in the ways and means of sanitation." He further said that present-day physicians "were at fault in not correcting their attitude, and unless action was taken, a new profession to succeed that of medicine would be established along lines of sanitation." This admission is both courageous and encouraging. It is also pathetic in its implication. If the medical profession would also come to see that the present-day medical doctor is not qualified by education or practise adequately to handle the conservation of public health, the agitation for a federal department of health would cease.

[George Shaw Cook in *Peoria* (Ill.) *Star*.]

In the editorial in a recent issue, referring to an editorial in the *Journal* of the American Medical Association, considerable argument is devoted to the exploitations of the service and value of the medical profession to suffering humanity, especially in times of public disaster, and incidentally an effort is made to show the utter uselessness of all other healing methods. Christian Science comes in for its share of attention, and from the view-point of the writer it would appear that all physicians are unselfish humanitarians, working for the good of mankind without thought of personal gain or advancement, and that Christian Scientists are self-absorbed egotists, with visionary ideals which are of little or no practical value in time of need. Christian Scientists are always ready to accord the better class of physicians the credit that is justly due them, recognizing the honest efforts of such physicians to alleviate suffering and to better human conditions, even though these efforts are along lines differing radically from their own. It would seem that physicians should be as willing to acknowledge the good which Christian Science is doing, and it is but fair to say that many of them do recognize and freely admit this.

It is perhaps not strange that those whose thought has been trained along materialistic lines should find it difficult to understand the Christian Scientist's point of view or his method of relieving distress and ministering to the needs of mankind, but to assume that Christian Scientists are doing nothing, through lack either of ability or willingness, in times of public calamity, indicates an ignorance on the subject which seems hardly justifiable in view of the amount of information at all times available in regard to their work. In the recent instances Christian Scientists have not been idle or indifferent to the call for help. There are many Christian Scientists near the scenes of these disasters who have been assisted by friends in other parts of the country in their endeavor to help those in need. Money, food, and clothing have been supplied; comfort, encouragement, healing, have been freely given. Collections have been taken in many Christian Science churches for the benefit of the different relief funds, and many private contributions have been made by individual Christian Scientists. It may not be out of place to mention here that The Mother Church contributed twenty-five hundred dollars to the Red Cross fund for those in need in the middle West.

Christian Scientists are working in what they believe to be the best way for the amelioration of human ills, and they are grateful that they are able, through the understanding of God which has been given to the world by Mrs. Eddy in Christian Science, not only to heal disease in its many phases, including those called incurable, but to reclaim the sinner and bring comfort to the sorrowing. Christian Scientists believe these results are in the highest degree practical, and that Christian Science, in the period of nearly half a century it has been before the public, has demonstrated its right to the respect and consideration of all fair-minded people.

[W. E. Fell in *Scarboro* (England) *Weekly Post*.]

Had your correspondent, Mr. Johnson, continued the syllogism he propounds, he would have answered himself as to the origin of mortal mind, in that God being infinite Mind, or omnipresence, there is no place for any other mind. The greatest metaphysician the world has ever known, Jesus the Christ, has most accurately described this mind when he declared it to be a lie, and that it abode not in the truth. A lie can have no origin in Truth, and therefore it cannot be said to have an origin. Paul is equally explicit when he declares this mind to be "enmity against God: for it is not subject to the law of God, neither indeed can be," and yet God governs all things. There is all the difference in the world between seeming and being, between the merely relative and the absolute. To itself this carnal or mortal mind seems real enough, but both it and its phenomena must give way before the facts of being. Evil is just as real as we make it, neither more nor less. This has been conclusively proved by those who are striving to have that Mind "which was also in Christ Jesus," the one Mind which is God, all the power there is, all the presence, and all the science or knowledge there is.

Our critic has managed utterly to misrepresent Christian Science treatment; he has quite ingeniously reversed the process, if he will excuse my saying so. Christian Science is not suggestion, which does not in any way whatever come into operation. Christian Science strives to turn one's thought to God, who is all the power there is, who is good and good only, not good and evil; a God who, as John declares, is Love. The patient then begins to realize that he is under this power, that it is good only, and that therefore there can be no influence over him but good. As the fear of evil, as a power over him, is destroyed through a recognition of the facts of being, he sees he has been deceived by what is merely a suppositional power; he ceases to fear it, and his recovery commences. Nothing whatever is suggested to the patient; he is told "the truth," and the truth it is that makes him free. "Ye shall know the truth, and the truth shall make you free," said the greatest practitioner of scientific healing.

Christian Science is not "lopsided," "because it ignores all physical methods." To employ physical methods would weaken the plea with Truth; a divided trust is no trust. We do not propose, in our work for the sick and the sinner, to use any other method than that used by Christ Jesus, who employed no physical methods. He was completely successful, and the more closely we follow him, "the way" and the Wayshower, the more successful we shall be. Let our critic try for himself. I promise him he will not be disappointed with the result.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

BURDEN BEARING.

"COME unto me, all ye that labor and are heavy laden," said the gentle Master, "and I will give you rest." This loving invitation, so truly sympathetic in its appreciation of the need of humanity to be relieved of its self-imposed burdens of sickness, sorrow, and sin, of discord of every kind, confirms David's confident assurance, "Cast thy burden upon the Lord, and he shall sustain thee," and refutes once and for all any thought that these burdens are to be submitted to in either bitter reviling against or dumb resignation to the supposed will of God.

If Christian Science had done nothing else than to clear away this misapprehension that an all-loving Father could in a spirit of anger or revenge impose upon His children these burdens so grievous to bear, it would have amply justified its coming to the children of men, bringing a new and clearer sense of our elder brother's declaration that it is not the will of the Father that any of His little ones should perish. But it has done more than this in that it has demonstrated, in some measure at least, that brotherhood of man for which the ages have clamored and yet have done so little to develop,—the regard of the strong for the weak. In Christian Science, as Mrs. Eddy expresses it in Science and Health (p. 518), "the rich in spirit help the poor in one grand brotherhood, all having the same Principle, or Father; and blessed is that man who seeth his brother's need and supplieth it, seeking his own in another's good."

Such is the true spirit of Christian Science, the continuance of that loving ministry of the Master to the sick and afflicted, to those laboring with a sense of sorrow or sin, and finding one's own burden lightened in lifting the weight from another bending beneath his weary load. It was the prayer of the beloved Leader of Christian Science, as she tells us in one of her hymns (Poems, p. 131),—

> some daily good to do
> To Thine, for Thee.

and she found the fulfilment of her prayer in a labor of love for her fellow men such as it has been given to no other of the world's benefactors to accomplish, an example of self-sacrificing love that her every follower may well strive to emulate.

It is not to be assumed, however, that in becoming a Christian Scientist one is forever rid of the possibility of burden bearing. Rather is it the assumption of responsibility that is rightly ours for the welfare of humanity, the fitting to our shoulders of the yoke that is easy because it makes us coworkers with the Master in the service of Love. Even though we sometimes find those who are unwilling to carry their end of the load and try to shirk their rightful responsibility, there is no getting away from the infinite justice of our Father, and either here or hereafter the obligation must be canceled. The task to which we have set our hand must be wrought to the finish, else we are unfaithful to our trust. Error is ever on the alert to divert us from the true path and wrest from us the palm of victory, but, as Mrs. Eddy has pointed out (Science and Health, p. 254), "This is the cross. Take it up and bear it, for through it you win and wear the crown." "Bear ye one another's burdens," said the apostle Paul, "and so fulfil the law of Christ;" and as Christian Scientists it is our high privilege graciously and lovingly to perform this ministry daily.

ARCHIBALD MCLELLAN.

REGENERATION.

ALL earnest students of Christian Science are aware of an ever-deepening sense of gratitude to Mrs. Eddy for her wonderful work in opening up to them the spiritual meaning of the Bible, and showing them how to avail themselves of these divine provisions for man's health, holiness, and happiness. Many of those who come to Christian Science have had in their earlier years a religious training and have some more and others less, of the essentials of Christianity as these are popularly believed in. Prominent among these doctrines is that of regeneration, or the new birth on which Christ Jesus laid such emphasis in his memorable interview with Nicodemus. This man, who evidently had a sincere desire to know the truth, began by speaking about Jesus' "miracles," to which the Master responded by saying in substance that no one could understand these demonstrations except he were "born again," and this, according to the great Teacher, involved the understanding which calls for a complete separation between the flesh and Spirit and spiritual things.

At this point it may be well for each to ask himself just what regeneration means to him, not as a religious dogma, but as a spiritual process and influence in his daily living, for this is the only criterion by which we can test ourselves, including our religious views. In the first chapter of John's gospel we read that those who are born again "become the sons of God," and we may well pause before the high significance of this statement, especially when we are told that such are born, "not of blood, nor of the will of the flesh, nor of the will of man, but of God." St. Paul dwells much upon this topic, and reminds us that it calls for the putting off of the old man with all his fleshly desires, and he goes on to say, "Put ye on the Lord Jesus Christ"—a high demand, surely!

All who have become in any degree conscious of what regeneration means, cannot fail to find wonderful help and enlightenment in the study of the article entitled "The New Birth," in Mrs. Eddy's "Miscellaneous Writings." It may be truly said that all who honestly seek moral and physical healing in Christian Science, prove for themselves in some degree the absolute correctness of the teaching found therein, for the proofs follow each other in mental uplifting, in moral purification, and in the healing which Paul characterizes as "the redemption of our body." The article is indeed a divinely inspired message to this age, and it has aroused thousands who were in doubt and darkness because they were seeking regeneration by a partial and half-hearted acceptance of the Saviour's teachings; in other words, by refusing to give up the fleshly concept of man and to accept the spiritual as the eternal fact which alone expresses God and His likeness. Our Leader here tells us that "the new birth is not the work of a moment. It begins with moments, and goes on with years: moments of surrender to God, of childlike trust and joyful adoption of good; moments of self-abnegation, self-consecration, heaven-born hope, and spiritual love" (p. 15). On the same page we find an earnest plea for "the spiritualization—yea, the highest Christianization—of thought and desire;" and this is never lost sight of by those who are grasping the great realities of being in Christian Science.

No one can deny that regeneration demands the transformation of human consciousness, that it requires the complete overcoming of hatred, malice, impurity, doubt, and fear; the surrender of everything which is not of God, and the acceptance of the Christ-mind. All this results from the scientific understanding of man as God's likeness, as a spiritual being, and the process of regeneration includes the healing practised and taught by Christ Jesus and required by him as a proof of true discipleship. Can we do better than to heed the counsel given on page 24 of Science and Health, namely, that we "rise into newness of life with regeneration"?

MANHOOD'S CALL.

THE greatest word of prophecy was not the forecast of future events, not the commendation or condemnation of conduct, but the disclosure of the nature and ministry of man as God's image and representative. Thus in the sixtieth and sixty-first chapters of Isaiah, so wondrous in their wording, the inspired seer, speaking to receptive human sense, says, "Arise, shine; for thy light is come, and the glory of the Lord is risen upon thee."

This is the prophetically framed call of privilege and opportunity; more, it is the mandate of Love; and it comes to rebuke every sense of incapacity, inadequacy, and infirmity, every indulgence of self-depreciation and excuse. It is the call of Christian Science, and it forbids us to know man otherwise than as commissioned and empowered to fulfil the requirements and the expectations of Truth. It is the call, moreover, of human need. It voices the longing of those enslaved by ignorance and prejudice, by sickness and sin. It speaks in behalf of the vast unnumbered who long for sympathy, for happiness, and for peace. "Arise, shine; for thy light is come"—not will come, but "is come"! How this smites our every disposition to delay endeavor, to question fitness,—the impulse to postpone the achievement of right doing, and rest in seductive inactivity till tomorrow.

There are no withheld completions in the divine purpose or plans, no hope deferred, no heaven reserved, save to human sense. At the bar of Truth, asserted weakness and inability are denied all hearing, they are not permitted to enter their plea, and this for the reason that the divine requirements never outmeasure our capacity. Above the tumult of earth's greatest tragedy there was—aye, there is yet—heard the glorious answer of the Christ-man, "The Spirit of the Lord God is upon me; because the Lord hath anointed me to preach good tidings unto the meek; he hath sent me to bind up the brokenhearted, to proclaim liberty to the captives, and the opening of the prison to them that are bound; . . . to appoint unto them that mourn in Zion, to give unto them beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness.".

This is the call of Christian Science, and this the spiritual realization and response of its every true exponent. It was in this exaltation of sense that the Master said in his every word and deed, "Lo, I come to do thy will." It was in this spirit that St. Paul declared to the Philippians, "I can do all things through Christ which strengtheneth me." Quickened and uplifted by this consciousness, Savonarola yielded neither to prince nor pope, and Latimer and Ridley faced the fires at Oxford. This is the victory of faith today, as it has been the daring of the saints of all ages, the assurance that loyalty to Truth makes no demands which we cannot meet if we have gained the inspiration of a true sense of "the man of God."

The sincere student of Christian Science speedily understands that "the Spirit of the Lord," which is upon every man in Christ, is the spirit of perception, the recognition of demonstrable truth, and of its eternal separation from error; that it institutes the discrimination between the real and the unreal which bases all right judgment, all spiritual advance. He learns, moreover, that this "Spirit of the Lord" is the spirit of obedience to divine law, of scientific self-effacement and joyous surrender to the guidance of the pillar of cloud by day and of fire by night; and, above all, that it is the spirit of Love, the expression of that saving compassion in which alone one can love his neighbor as himself.

The call of Truth, as reaffirmed in Christian Science and as honored by our Leader, is constant and universal, though to human sense it seems particular and personal. Its significance to us and through us is determined by our vision of the Christ-man and of our privilege and power as the ambassadors of God, and he who in "the Spirit of the Lord" rises to the situation and stands joyously and unflinchingly for the Christ-ideal, will become a knight indeed, honored of the King, and beloved of men. What may not we, the "called of God," do, as we attain to this prophetic sense of the dignity of our life-work?

JOHN B. WILLIS.

ATTENTION.

WILL our readers kindly bear in mind that the work at headquarters is necessarily divided into departments, and that correspondence properly addressed will avoid delay.

Orders for the Christian Science text-book, "Science and Health with Key to the Scriptures," and the other works by Mrs. Eddy, should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass., and checks, drafts, etc., should be made payable to him.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY publishes and sells *The Christian Science Monitor*, the *Christian Science Sentinel, The Christian Science Journal, Der Herold der Christian Science, The Christian Science Quarterly*, besides Bibles, pamphlets, reprints, also other miscellaneous publications fully listed in our advertising pages. Remittances for these, and all correspondence, *except that relating to articles and testimonies for publication*, should be addressed to THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, Falmouth and St. Paul Streets, Boston, Mass., and checks, drafts, etc., should be made payable to the Society.

THE EDITORIAL DEPARTMENT has nothing to do with the business affairs of the Society, nor with practitioners' cards and church notices in the *Journal*, and *no remittances should be made to the Editor*. Testimonies and articles for publication should be addressed to the EDITOR, as should all correspondence relating to them.

Correspondence relative to membership with THE MOTHER CHURCH should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass., but *per capita* taxes should be sent to the Treasurer.

Per capita taxes and contributions to THE MOTHER CHURCH, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please write all names plainly and in full; a married woman should use her own name and not her husband's in making remittances. Notice should be given promptly of any change of name or address.

AMONG THE CHURCHES.

CURRENT NOTES.

MEMPHIS, TENN.—On Sunday, May 4, the congregation of First Church of Christ, Scientist, opened the doors of their newly completed auditorium. The final completion of this church structure is the culmination of years of faithful endeavor. The building, which is an unusually striking piece of architecture, fashioned along classic Greek lines, is situated at Dunlap street and Monroe avenue, overlooking Forrest park. The seating capacity is about seven hundred and fifty, and the total property, including the furnishings, represents a value approaching one hundred thousand dollars. The lower story, which has been occupied for about four years, will be used for the Sunday school. The congregation has grown rapidly, and the members expect to see such an increase as will necessitate in the near future the erection of another structure in some location where the overflow can be accommodated.—*The News Scimitar.*

AURORA, MO.—The Christian Science Society of Aurora appears to be in a flourishing condition; they have leased quarters in the Tooker building, 206-A Madison avenue, where services will be held regularly every Sunday forenoon at eleven o'clock, and Sunday school at ten o'clock.

THE LECTURES.

BOSTON, MASS.

Bicknell Young, a member of the Christian Science board of lectureship, delivered a lecture Tuesday evening [May 20] on Christian Science, under the auspices of The Mother Church, The First Church of Christ, Scientist, Boston, Mass., in the church edifice at Falmouth, Norway, and St. Paul streets. Mr. Young was introduced by John C. Lathrop, the first reader of The Mother Church, who said:—

The Mother Church welcomes this large audience of earnest people who have accepted its invitation to attend this lecture, and especially those who are more or less unfamiliar with the true meaning of Christian Science and its great value to the human race. It is well known that humble desire and a receptive state of mind always have been, and always will be, the "good ground" which receives the Truth and bears good fruit, and we believe that the lecture which we shall hear this evening will stimulate in all an awakened desire, a renewed hope, and an inspired trust in spiritual things or ideas which will result in a measure of spiritual understanding, and in many more healed, regenerated, and happy lives. I take much pleasure in presenting to you one who is highly qualified to elucidate Christian Science.—*The Christian Science Monitor.*

MANCHESTER, ENGLAND.

There was a large gathering of Christian Scientists in the Free Trade hall, Manchester, to hear a lecture on Christian Science, which was given by Miss Knapp of Boston. Dr. Gilbert Fowler, who presided, said that three years ago, when he attended a Christian Science lecture in Manchester, he thought little of what he heard, but tonight he was proud to preside at the meeting. The second time Christian Science was brought to his notice he commenced to study it in the way in which, as a natural scientist, he would study any new problem,—experimented with it,—and on going to a practitioner with a painful physical trouble, was quickly healed. He continued to experiment, and later had many proofs of the application of the Principle as taught in Christian Science. He had witnessed the bettering of business conditions, and had seen the Principle successfully applied to large as well as small matters of daily happenings, until the time came when he no longer experimented with Christian Science, but accepted it as he accepted the sunrise.

Manchester Courier.

CAREY, OHIO.

Frank H. Leonard delivered a lecture on Christian Science at Snyder's opera house to an attentive and appreciative audience. Mr. Leonard was introduced by ex-Mayor H. G. Chambers, who said in part,—

He's a most interested observer of the trend of religious affairs who has failed to note the remarkable rapidity with which the adherents of this teaching have increased. Less than half a century ago its Founder first announced her discovery and application of those truths that had been debated and known for centuries, and in that brief period Christian Science societies have been organized in so many communities that the influences of this truth are manifest in the lives of its students in every country and quarter of the globe, and we are informed that today there are more than [illegible] added accessions to its tenets.

[illegible] of the movement in the period of [illegible] surpasses the strongest evidence [illegible] success [illegible] evening but a necessity [illegible] we see the reason of [illegible] such a short time, so many have been healed and blessed together in common interest, we shall [illegible] the blessed experiences of those who have tested [illegible] as the results of the teachings of the Science. Many are here tonight who have come with glad and open hearts, eager to hear again some phases of this story which has brought light and happiness into their lives, while others of us who are only witnesses to the devotion of our neighbors and friends to the cause of Christian Science, are interested to know what this faith is by which their lives are actuated.—*Carey Times.*

ROCK ISLAND, ILL.

A large audience listened to an address on Christian Science at the Illinois theater by William R. Rathvon. He was introduced by Attorney John K. Scott, who said in part,—

The subject of religion never grows old to mankind. All down the ages men have peered into the darkness of material mind belief around them, seeking to find God, seeking to know the truth. The message of Jesus the Christ came to the generations of men like a ray of sunshine piercing gross darkness, and his teachings will stand for all time as "the pillar of the cloud by day" and "the pillar of fire by night" until all men awake to the full realization that God is indeed Love, that God is indeed All. A little over a half century ago, up among the green hills of New England, a woman's voice proclaimed a new gospel; yet not a new gospel, but a new version of an old, old gospel, restating to a doubting world that the truths which Jesus taught and demonstrated are ours here, and today, and for all time, if we would but know God aright and rely absolutely upon Him.

Correspondence.

WHEELING, W. VA.

Virgil O. Strickler, who lectured on Christian Science at the Elks Club auditorium, was introduced by Attorney W. E. Krupp, who spoke in part as follows:—

In the conflict that has come down through the ages there are upon the one side those who believe that individual man is the unit; that he has the right, God-given and inherent, to think and speak and act and worship God according to the dictates of his own conscience, and that the only limitation is the principle of personal and individual responsibility; while upon the other side are those who by might and power and craftiness have gained dominion over the minds of men and dictate what they shall think and speak and do. The one declares that the greatest good to humanity can come only when the individual is permitted to work out his own salvation, while the other asserts that the greatest good can come only when he submits limitations upon the exercise of those rights and a body of men, presumably the wisest, have laid down for his guidance. The one insists upon the independence of man that he shall think and speak and act for himself, while the other insists that he shall accept without question the conclusions of others and that it is his duty to do so. The one labors for the advancement and development of the individual and for the progress of the world, while the other would hold him in bondage and retard all progress and development.

These basic principles, which have [illegible] the earliest ages,—liberty of thought, of speech and of action, and the right to worship God according to the dictates of our own conscience,—lie at the very foundation of our government. It is the application of these fundamentals that has made it the peer of all governments of the past or of the present, and that have placed this nation in the very vanguard of civilization. It is my [illegible] which has brought me here, for I am not a member of the Church of Christ, Scientist, but exercising my [illegible] rights, I am here as a humble seeker after truth, [illegible] here to gain that clearer understanding of truth [illegible] which will bring me nearer to God, and give me [illegible] nature at least of His [illegible] nature and of the [illegible] He creates and controls the universe.—[illegible]

Digitized by Google

NEW YORK, N. Y.

Prof. Hermann S. Hering lectured on Christian Science for Sixth Church at Lexington assembly hall. He was introduced by Richard P. Verrall, who said:—

To those who are not familiar with the subject of Christian Science it may be of interest to say that Mrs. Eddy does not claim in any sense to have originated Christian Science, but rather to have discovered its divine Principle and to have founded the organization now broadly known as the Christian Science movement. Mrs. Eddy writes in her autobiography in the chapter on The Great Discovery, that "Jesus of Nazareth was a natural and divine Scientist." She says that "to one 'born of the flesh,' however, divine Science must be a discovery. . . . It must be begotten of spirituality, since none but the pure in heart can see God, —the Principle of all things pure" (Retrospection and Introspection, p. 26).

While Christian Science has been before the public only about forty years, and in this city about a quarter of a century, still there are today so many seekers for a better knowledge of the truth that a board of some fourteen lecturers, appointed by The Mother Church in Boston, is kept constantly active in carrying the message of Christian Science to all parts of the world.—*Correspondence.*

ST. LOUIS, MO.

The auditorium of Fourth Church of Christ, Scientist, in St. Louis, seating seven or eight hundred, was filled with a very appreciative audience to hear the lecture of Judge Clifford P. Smith upon "Christian Science: The Gospel of the Kingdom." He was introduced by Dr. Samuel Frederick Swantees, who said:—

The Bible gives us the assurance that "the earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea." It also tells us that this understanding of God is a knowledge that heals, yes, heals both sickness and sin. That the world is sadly in need of healing is admitted by all. It matters not how we come in contact with the thought of today, whether it be manifested in business or in social life, or in the physical ills of mankind, the need for sufficient intelligence to heal all of these conditions is very apparent. Having spent eleven years in the active practise of medicine, and having earnestly studied Christian Science, I can unqualifiedly endorse the latter as a healing agency which is not so far removed from the basic thought of the medical profession as might be supposed at first glance.

One of the interesting things in history is the similarity of discoveries in widely separated fields of research. Within a few years of each other came the discoveries that gave the world a new watchword. That word was cleanliness. At about the time when Mrs. Eddy discovered Christian Science and the wonderfully healing effect of a clean, pure thought, Lord Lister of England, and later Pasteur of France, was announcing cleanliness as the basis of all medical and surgical success. Therefore, with only the best interests of all at heart, I am free to say that if as much attention were given to clean thoughts as is now given to clean bodies, the art of healing in the domain of medicine would be much advanced; neither would there be any room for criticizing Christian Science. It is with a deep sense of gratitude that many of us can say that we have arrived at that point in our experience which leads us to affirm that nothing will give us the clean, healing thought so readily as an understanding of God through the aid of Christian Science.

A mother was sorrowing over the illness of her boy, who had been under the care of physicians nearly all of the four years of his life and was given up to die. A student of Christian Science was asked for aid, and the days of sorrow gave way to days of rejoicing, for the boy speedily became well. Then the mother asked the question: "What was it that healed my boy?" and the answer was, "Truth did the healing: it was God understood." We have met this evening to hear more about Christian Science by one authorized to speak upon that subject, so that we may gain an understanding of God—the God "who forgiveth all thine iniquities; who healeth all thy diseases."—*Correspondence.*

ELGIN, ILL.

The remarks made by Albert L. Hall in introducing Clarence C. Eaton, who lectured on Christian Science at the Star theater, were in part as follows:—

We have met to listen to a lecture on Christian Science. A Christian Science lecture is an institution peculiar to itself, for so far as I know, no other religious organization has anything of a similar nature. Contrary to the opinions of many who are not here, and possibly contrary to the opinions of some who are attending a lecture of this kind for the first time this evening, a Christian Science lecture is not a defense of Christian Science, and is not intended as such. Truth needs no defense. The lecturer comes to us as a teacher, not as a defender of Christian Science, and his words are entitled to the most thoughtful attention, which I bespeak for him from this audience.—*Correspondence.*

ALHAMBRA, CAL.

A large and representative audience of Alhambrans gathered at the high school auditorium to listen to an address delivered by William D. McCrackan, M.A. He was introduced by William S. Deyo, first reader, who said:—

First Church of Christ, Scientist, welcomes you this evening to hear a lecture on a subject that is engaging the attention of a vast multitude of thinking people,—Christian Science. Anything that is bringing so much health, happiness, and prosperity into the lives of those who understand it, as Christian Science is doing, certainly merits our unprejudiced investigation. These lectures supply a demand for information as to what Christian Scientists really believe and what Christian Science really is.—*Alhambra News.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Akron, Ohio.—Auditorium, Music hall, 8 p.m., June 8.
Barre, Vt.—Howland hall, 8 p.m., June 10.
Brooklyn, N. Y. (Second Church).—Prospect hall, Prospect avenue and 17th street near 5th avenue, 3:30 p.m., June 8.
Calais, Maine.—St. Croix opera house, 3 p.m., June 8.
Chester, Pa.—Washburn theater, 3:30 p.m., June 8.
Chicago, Ill. (Fourth Church).—Church edifice, Harvard avenue and West 67th street, 8 p.m., June 12 and 13.
Cleveland, Ohio (First, Second, and Third churches, and First of Lakewood).—The Hippodrome, 3 p.m., June 8.
East Aurora, N. Y.—Universalist church, Main street, 8:15 p.m., June 13.
Greensburg, Pa.—St. Clair theater, 8:15 p.m., June 9.
La Grange, Ill.—Church edifice, 8 p.m., June 10.
Manistee, Mich.—Unity Church building, 8 p.m., June 10.
Mt. Gilead, Ohio.—Universalist church, 8 p.m., June 9.

TESTIMONIES OF HEALING.

Thirteen years ago I was healed of a complication of diseases which no method of *materia medica* could reach or even relieve, through reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. Midnight darkness seemed to enclose me on all sides, but out of this awful hopeless gloom came the "still small voice" of Truth in its almighty power and presence as revealed through Christian Science. I read the text-book almost constantly for a year, and at the end of that time was healed, without any other help, although I have had help through a practitioner many times since. The theology in this book is the truth of which Jesus spoke when he said, "Ye shall know the truth, and the truth shall make you free." That it may encourage any who are doubting and halting because they think they cannot understand the book, let me say to such that they should go on, keep on reading, and healing will be realized. I could understand very little when I began the book, but as I continued to read the light kept coming. If one is persistent and faithful, reading on without prejudice, he will be healed, whether he fully understands the teaching or not.

I thank God for His gift of Christian Science which has come to us through our faithful Leader, Mrs. Eddy. This gift is available for all to read, understand, and be helped. Divine Love is no respecter of persons, but blesses and heals all who will accept the truth.

MRS. SUSIEBELL KIRKHAM, Buffalo, N. Y.

Considerably more than seven years ago I was healed by Christian Science of the liquor habit, which had assumed such proportions as to cause me to lose my home, my family, my position, my friends,—everything, even my self-esteem, and not until then was I ready for Christian Science. My condition may be aptly illustrated by that of a boat upon the sea without a rudder or a pair of oars with which to propel it. It is easy to see how utterly helpless one in such a boat would be in a storm; and such was my condition as I was coming to Christian Science, notwithstanding I had good physical health and was apparently in possession of all my faculties. I was, however, not only healed of the liquor habit, but my home, my family, my position, and my friends were all restored to me.

My purpose in giving this testimony is to show how Christian Science handles a case like mine, and I will cite the Bible and the Christian Science text-book as authority for any statements which I may make. When the reformers of Jesus' time brought to him a sinful woman, and wanted him to order her stoned, in accordance with the Mosaic law, he said to those men, "He that is without sin among you, let him first cast a stone at her." The story continues that they all stole away one by one, leaving this woman alone with Jesus, who then asked her, "Where are those thine accusers? hath no man condemned thee?" to which she replied: "No man, Lord," and Jesus then said unto her, "Neither do I condemn thee: go, and sin no more."

This attitude of Jesus with the adulterous woman is exactly the attitude which a Christian Science practitioner takes with a drunkard, the same compassionate love is shown him which was shown this woman. In other words, "The same 'Mind . . . which was also in Christ Jesus,' must always accompany the letter of Science in order to confirm and repeat the ancient demonstrations of prophets and apostles" (Science and Health, p. 243). What this woman most needed was to have her vision cleared so that she could understand God's spiritual creation, and man as the likeness of God. When a discordant condition is destroyed in the consciousness of any individual, it is destroyed in the consciousness of all concerned. Is it any wonder that one is happy in trying to be a Christian Scientist?

The apostle Paul said: "The law made nothing perfect, but the bringing in of a better hope did." Christian Science brings in that hope, and it does more than this, for it makes hope develop into a realization of the knowledge that God is "a very present help in trouble." It makes no difference how bad one may have been, for the Bible says: "Though your sins be as scarlet, they shall be as white as snow; though they be red like crimson, they shall be as wool." The Saviour is still at work, and with Job the awakened one can say, "I know that my redeemer liveth," and the Master has said, "Lo, I am with you alway." I am truly grateful for what I have been privileged to learn of God through Christian Science, and my highest endeavor is so to live as to prove myself worthy of the name I bear.

My latest demonstration was in the case of a broken bone. Not long ago I had an accident in my work; a rope broke, allowing a ladder to fall, which caught my hand in such a way that I was unable to get it out until after the bone between the wrist and the thumb was broken. I had a big glove on, and refused to look at the hand, at the same time declaring the truth for myself. I refused to believe I was hurt and went right along with my work, not, however, without some sense of discomfort. The next morning my wrist and hand were very badly swollen and stiff, and I had to ask my wife to assist me in dressing, but I went to work, and did all that was necessary for me to do, and the next morning, which was Sunday, I was able to dress without help, and also to shake hands with people. This was a great surprise to my family, the injured member being my right hand. By the third day my hand and arm were very much discolored, but this disappeared in a very short time, probably less than twenty-four hours, and my hand has continued to improve ever since.

I am very grateful for this demonstration, for I was able to do all my own work in Science and my business has not been interfered with in the least. It is another experience that I have made my own which I know will prove to be a valuable lesson.—CHARLES RIHL KENNEDY, Chicago, Ill.

I feel that I can no longer wait to tell of my instantaneous healing about a year ago, at which time I was teaching in New Jersey. I had always been proud of my health and had never taken any drugs, relying on health laws, and especially on fresh air. In my new environment many of what I considered essential conditions for comfort and health had to be dispensed with, with the result that I became sick.

I had owned a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy for four years, and was sufficiently convinced of the truth of its teachings to declare many times that if I were ever sick, I should have a practitioner instead of a medical doctor, but alas! I had left my book at home. The attack was sudden, and I was in the school hospital under the care of three nurses and two doctors before I had time to think. I recovered quickly, but before the week was out I was down again, and this time the doctors said it was a more serious matter.

I was examined by a specialist from Philadelphia to confirm their fears, and I had a very high fever. Then it was that fear took possession of me, as I was beginning to have the symptoms they had asked about, with the prospect of being taken to the hospital on the morrow for an operation, and perhaps being deaf for life, as a dear member of my family had been. Then it was that I turned from material means which had failed, and under which I was getting worse, and asked my nurse to write to a friend in Boston to send me Christian Science help. It was late at night, but she wrote the letter and gave it to the night watchman to post, and then in the darkness I applied what truth I knew. I can never tell what peace I felt when I had taken this step. I knew that I was going to be healed; and let me say, for the benefit of those looking for healing, that mental

Digitized by Google

harmony must come before the material senses agree to the spiritual evidence.

I awoke in the morning well! The doctor standing at the bedside looked much perplexed, and said that the disease from which I had been suffering did not clear up this way. In two days I shocked the household by suddenly appearing at dinner in high spirits. I resumed my teaching the following day, and walked five miles, the next morning starting for Atlantic City with a party for a gay holiday. There was no fatigue or convalescing; I was absolutely well. Since then I have passed through deep waters, but I have been wonderfully sustained by this great truth; and my prayer is that my understanding may be equal to the problems which come up, both for myself and for others, and to this end I daily study the Bible and the text-book, Science and Health, both of which I have found inspiring and helpful.

GRACE M. METCALF, Wrentham, Mass.

I wish to tell what Christian Science has done for me, as I suffered for many years with rheumatism and a disease of the bowels, also female and heart troubles. I have been studying Christian Science for about seven years, and although my healing has been slow, I am thankful for it, as I have gained more in the way of spiritual quickening. I had to study in order to gain the healing, and I have had the pleasure of helping others. I have also had the opportunity of taking class instruction, for which I am very thankful. The fear and nervousness have been overcome, and the ninety-first and fifty-first psalms have been a great help to me.

I was treated by a good many physicians, and was told by them that I might pass away at any time; but through the understanding of the Bible and Science and Health I have been able to overcome all of these ills. I hope this testimony may help some one else as I have been helped, through reading the Bible and Science and Health. I wish to express my deepest gratitude to God for His love and care, and also to our dear Leader, who has taught us this truth that makes us free. I desire that my life may attest my sincerity.

MRS. HANNAH E. EMBURY, Estherville, Iowa.

I know of no better way to express my gratitude for what Christian Science has done for me than to send in my testimony to the *Sentinel*. I was a semiinvalid for twelve years. I tried all material means, was under the care of fourteen different doctors, and went to lower altitudes five times during the twelve years, without receiving any relief. I became so bad in May, 1911, that I went to a sanitarium, but I grew worse all the time I was there, and the doctor told me they could do nothing for me, as my spine, heart, and stomach were in such a bad condition; that I had the worst form of spinal disease, and that the only thing for me to do was to go to a lower altitude. I had fainting spells from one to six times a day at this period.

I came home discouraged, thinking I had to die, as I had tried all material means, but I then heard of Christian Science. I went to see a practitioner and told him I came to see if he could cure me; he said, "No, I cannot, but God can." He then said he would treat me, and I went home and slept well that night, and got up in the morning without fainting. something I had not done for months. I procured a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy and began to study it at once. My physical ailments have all disappeared, and I am now a well and happy woman.

I am not only thankful to God for the physical healing, but am more grateful for the spiritual understanding I have received. I am also grateful to our Leader for the truth she has taught.—MRS. SARAH HINDS, Fruita, Col.

Six years ago, when physically and mentally very ill, I turned in my extremity to Christian Science for healing and peace. For over eighteen years I had been more of a slave to drugs and stimulants than even my husband and son knew, deeply as they deplored what they did know of my bondage. Five prominent physicians, in the different parts of California where we lived, had faithfully and honestly given me of their best, with only occasional, temporary relief, a mere patching up of a condition which was constantly growing worse.

I was loyal to *materia medica,* and tried various forms of hygiene, diet, massage, as well as a sojourn in a first-class hospital, and had many minor and two major operations. These were events along the way, accompanied by the tortures of chronic sleeplessness. I wore glasses for defective vision, suffered from various forms of catarrh, and was said to have developments of tubercular disease following a belief of that inheritance from both father's family and mother's. I was rarely free from stomach trouble, every winter I was afflicted with virulent throat trouble, and in many ways I was under the law of heredity. At childbirth I suffered from a severe nervous shock, sustained just previously. Various forms of rheumatism and neuralgia attacked me frequently, and I also had violent headaches, affecting the spine.

Besides all these ills there were others, so that I was finally never free from pain save when under drugs. I constantly took narcotics to give me sleep, and stimulants to brace me up, and gradually all doses of whatever kind were doubled, then trebled. I was truly ashamed of such bondage, and tried to conceal it in every possible way, even after fainting spells, and convulsions that one physician called a form of epilepsy, showed my weakened condition. My last physician, a specialist, told us that there was not a sound organ in my body, and that he could do no more for me.

I was well-nigh desperate when I turned to Christian Science, and the result was a most happy one. Of several of my troubles I was instantaneously healed; others went only by prayer and fasting, as understood in Christian Science. I had the privilege of class instruction, and am deeply grateful for all the blessings that have come to me and mine. I am very thankful to our Father-Mother God for the light of Truth that has given me a better and happier life; also to our beloved Leader, Mrs. Eddy, for the healing truth which is reaching humanity through the many channels provided by Truth and Love.

MRS. MAUDE M. PEASLEE, Portland, Ore.

I feel it my duty, as one greatly benefited by Christian Science, to tell of my experience, and I hope these few words will bring cheer and help to some one who may be suffering with the same complaint. For at least twenty years I was a sufferer from a stomach disorder, and during the past five years it had taken a serious turn. I was losing flesh, was nervous, and almost on the verge of prostration. My case was pronounced an aggravated one, and *materia medica* seemed baffled. I had tried almost all kinds of medicine, but to no avail. I was finally advised to take a six-months rest, but I did not feel that I could leave my business that long. Christian Science treatment was recommended to me about this time, and I decided to try it. Although I had not the least confidence in this method of healing, I was ready, like a drowning man, to grasp at anything, and in three weeks' treatment I was healed of what *materia medica* had failed to remedy in twenty years' trial, and am now well.

While I sought Christian Science for physical healing, I received more than I expected, for at the same time I was healed spiritually. As I am a business man, I never seemed to have time for anything pertaining to the spiritual; but now it is different. Whereas I was blind, spiritually, now I see. I am indeed happy over my understanding of Chris-

tian Science, and my heart is full of gratitude to God for all my blessings. I feel that I cannot do too much in return for all the benefits I have received through the study of our literature, and I am grateful beyond expression to Mrs. Eddy for all the truth that came to her through her faithfulness.—LEOPOLD C. STIEFEL, Angola, Ind.

I had suffered from nervous exhaustion for more than two years, during which time I was almost constantly under the care of physicians. I had consulted doctors at home and in other places, with but little relief. Besides the prostration and weariness, I had stomach trouble, requiring a strict diet. I suffered a great deal with my eyes, being unable to read at all, and even driving was impossible, as at times I could not raise my eyes to look about. Besides all these ills, neuralgia often manifested itself.

Realizing that drugs gave me no relief, I destroyed all I had, and in April, 1909, began Christian Science treatment. Living in a town in which there was no practitioner, I was obliged to go forty miles for treatment, which I did once a week, receiving absent treatment during the intervals. After a week the extreme nervous condition began to abate slowly, and I was able to read without pain in the eyes, something unknown for at least two years. On the eleventh day, I drove for an hour in bright sunlight, without experiencing any pain in the eyes and head. While I had received some slight relief from the stomach trouble by dieting, I was able through Christian Science to give up this restriction and to eat without fear. As the only prospect the doctors had held out to me was chronic invalidism, I am truly grateful to God, also to Mrs. Eddy, for the help I have received.—MRS. EDITH K. STIEFEL, Angola, Ind.

I wish to express my gratitude to God for Christian Science and what it has done for me. I have been completely healed of asthmatic trouble of over twenty-five years' standing. I had treatment from several doctors and specialists for this and a severe form of hay-fever, but no cure resulted until I read "Science and Health with Key to the Scriptures" by Mrs. Eddy. Besides my healing from these ills a great sense of worry has left me, and I now enjoy perfect health.

I am truly thankful for all the benefits I have received. I have been a close student of the Bible all my life and a strict member of an orthodox church, but I never understood the Bible until I studied it with Science and Health. The greatest of my blessings is the spiritual quickening that has come to me through the teachings of Christian Science, for which I am truly thankful, and also for the loving help that has enabled me to understand the truth better.—MRS. MARGARET GORDON, Cheyenne, Wyo.

In grateful recognition of what Christian Science has done for me I desire to tell others of the many blessings I have received. Over two years ago I had a nervous breakdown accompanied by sleeplessness and melancholy of the worst kind. The doctors told me that it would be months and perhaps a year before I would be myself again. I took electrical treatment for months, and after that failed to bring any relief they began to give me a great deal of medicine, but I continued to grow worse.

I told my husband that I was going to stop taking medical treatment, as it was of no use. I was ready to give up in despair, when he asked me to try Christian Science, and about a week later I decided to do so. I went to a practitioner and took a treatment, but when I left I told her I would not be back. That night, however, I slept all night without waking, which was my first night's sleep for weeks. I began to feel very different and was glad for even one night's sleep, so I went back to the practitioner, and in two weeks I was a well woman. My healing was beautiful, and with it came a sweet peace. To say I am thankful does not express my feelings. I am grateful for the inspiring sense of Truth it brings us, the knowledge that God is "a very present help in trouble." The Bible and the text-book are now my daily companions. Truth has brought so much joy into my life that no words can express my gratitude to God, also to our beloved Leader, who so faithfully and lovingly has given the world this message of Truth.

MRS. MINNIE EMMELL, Los Angeles, *Cal.*

I desire to testify to what Christian Science has done for me and mine. I was from childhood subject to attacks of illness of a rheumatic and neuralgic nature, as the doctors pronounced it, and as I grew older and had the care of my own home I became worse, the attacks being more frequent and more severe. I tried every known remedy, and had no less than a dozen different physicians, but continued to get worse, until I was confined to my room and most of the time to my bed. My suffering was intense at times, although I had the best of care and the attending physician did all that could be done for me. I was taken ill in September, and in February the physician told me he could do nothing more.

At this time a dear friend sent me some reading matter, and among the papers were some *Sentinels*. I had heard of Christian Science only once before, and then in a sneering manner, but I looked at these *Sentinels* and read some of them, though I soon laid them down and remarked that I thought Scientists worshiped Mrs. Eddy instead of God. I had been raised very strictly, as my father was a minister in an orthodox church, and he had taught us to reverence God above all others. I could not, however, let the *Sentinels* alone, for something drew me to them, and I began to be interested in them; then as I read and reread them I had a strong desire for "Science and Health with Key to the Scriptures" by Mrs. Eddy. I began to feel that there was the light for which I had so long yearned, as I had never been satisfied. I could not understand the Scriptures, although I had always loved the Bible and had tried to live a Christian life.

A dear friend got a copy of Science and Health, and I had read only part of the chapter on Prayer when I found that Christian Science was the long wished-for truth, and I could not read fast enough, it was so sweet to me. I felt as if I could not lay the book down. The practical result was, that I have had no need for medicine since, and I am able to help myself and others. In four weeks I was able to do my own work, and have had many demonstrations since my own healing.

I would like to tell of one of these demonstrations, which was in the case of my married daughter, living in Utica, Ohio. She had been ailing since April, 1911, had had different physicians, and had sent to a distant city for a specialist, but all agreed that her trouble was due to abnormal growths. She suffered intensely at times, and for three months they tried to get her to go to the hospital to be operated on; but she refused to go. About this time she thought she would try Christian Science, and as there was no practitioner in her home town, she wrote to one in another city and asked help from her. The Scientist replied kindly, encouraged her to trust in God, and said all would be well. My daughter had for ten days been troubled with severe hemorrhages, and on the 6th of December she had another attack, which her husband thought would end her life, as the doctor had said it would; but now she said she was not afraid, for she knew from whence her help was coming. Her husband telephoned for their attending physician, but found he was out of the city, so he called another one in, and in less than half an hour she gave birth to a child without a single pain. The physician asked her if she felt weak, and she replied, "No, not at all." The physician was astonished, as all the doctors had agreed that this was not her trouble. The physician said such a case might not occur once in a thousand years. She knew that her help was in

Digitized by Google

God, and she asked me, when I started for home, to tell all the folks there that Christian Science had saved her life.

Is it any wonder that we are thankful to God for the Christ-healing, and to our dear Leader for giving us an understanding of the truth that will meet our every need? I could tell much more of what I have seen of Truth's healing power, but enough, God be praised!

MRS. MARY E. NORMAN, Muncie, Ind.

I wish to tell of an experience I passed through in November, 1911, in the form of a severe cold and blood-poisoning, which affected one of my limbs. To all appearance it was one of the most serious sicknesses I had ever had, but it was overcome in a short time by Christian Science treatments, for which I am very grateful. At the same time it gave me an opportunity to gain further insight into the truth of Christian Science, and to understand better the divine Principle that heals. Although I had been reading Science and Health and the other literature for quite a while, I did not get the spiritual understanding and enlightenment which came to me with this healing. I am still trying to learn more of the truth as expressed in Christian Science, and pray ever, "Lead Thou me on."

MRS. E. M. SMITH, St. Paul, Minn.

A year ago I became very ill, and an operation, which would have been critical and costly, was advised by the physician. Being unwilling to submit to it, I waited for another week, when my condition became so much worse that my husband decided to call in another doctor, and at the same time asked a Christian Scientist whom we knew to be with me at the examination. The practitioner came at once, and asked if instead of calling in another doctor we would not try Christian Science treatment until the end of the week, pointing out the many advantages in so doing. As we dreaded the thought of the hospital, it was agreed that I should try Christian Science, so treatment was begun on Tuesday; but my physical condition changed very little until Sunday, when I seemed to become much worse. I knew that the practitioner was reading at the church on Sunday evening, so I was loath to trouble her; but directly after the service my husband went for her, and she spent the night with me. From the time she arrived my husband and I lost all fear, and before she had been an hour in the house all that had seemed to make an operation necessary had passed away. After that I grew gradually stronger, and was soon doing my work as usual.

I am grateful to God for my restoration to health, and to Mrs. Eddy for her great gift to the world, "Science and Health with Key to the Scriptures," from which the understanding was gained that accomplished my healing.

MAY DIXON, Christchurch, New Zealand.

Having received so much benefit from the study of Christian Science, I feel it my loving duty to offer my testimony for publication. I tried many prominent doctors, and had an operation for bladder trouble and extreme nervousness, but had no relief until I turned to God. Christian Science has been a great help to me in my life generally, and I cannot express in words the happiness I have derived from the spiritual interpretation of the Bible. I am striving to take up the cross and follow Christ in my daily life.

My heart goes out in deep and grateful love to Christ Jesus, and also to our dear Leader, Mrs. Eddy, who has shown us the way.—MRS. ALMA CARDEN, Coffeyville, Kan.

Hope, like the gleaming taper's light,
Adorns and cheers our way;
And still, as darker grows the night,
Emits a brighter ray.

GOLDSMITH.

FROM OUR EXCHANGES.

[*The Universalist Leader.*]

Recently we proposed to solve the church unity problem in a word, by changing the word "denomination" to "department," thus recognizing what we all admit when we come face to face, that all churches are but branches of the same body. There is one Christian church, and each separate organization is but a department of that one church; we are all working for the same thing in our own way, and with our own equipment, in our own place, with our own people. Under the name "denomination" we have established our "department," and through the years or centuries it has grown dear to the hearts of our people, and no one wants to give it up, yet all see the utter folly of preserving these distinctions in such a way as to frustrate every effort at real federation. We have but to affirm openly what we all secretly believe, to make the Christian church one as our United States government is one with its departments, through which it becomes strong and efficient.

And now another word comes into line as illustrative of the same thing: there is nothing that carries so much bitterness and that stands so in the way of church unity as "sectarianism." That word stands for division; it has stood for mental and physical persecution. "The sects" is a term of reproach to our work at home and to our missions abroad; and yet but a slight recasting of the word and it becomes the expression of unity: instead of the "sect," which includes and excludes, which sets itself apart and independent of all others, why not the "section," which means a part of the greater whole? Not the Congregationalist sect, but the Congregationalist section of the Christian church; not the Universalist sect, which shuts itself out and is in turn shut out, but the Universalist section of the Christian church, which, with its own faith, with the inspiration of its own history, is to do its part in its own way as its contribution to the mighty Christian church of which it is a living part.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth.*]

Man is a spiritual being, and never is this shown more clearly than when his heart protests against the imperfection of life. A good deal of the pessimism of today is spirituality seeking an outlet and an objective, for it springs from sorrow and pity for the woes of mankind and an unquenchable longing to heal them. Moreover, strange as it may seem at first sight, much of the unfaith of today—or, as I prefer to say, lack of certitude in religious experience—is due to the perceived lack of correspondence between our own finer attributes and the hardness, conflict, and sterility in idealism of a world in which we are as spirits in prison. Goodness and mercy and love in man often have to tread the way of the cross before they find their home in God.

What a relief, then, to turn to the sacred humanity of Christ! There, at least, the correspondence is perfect and complete. The invisible has become visible; the eternal has invaded the temporal; God has been made flesh. We have the "light of the knowledge of the glory of God in the face of Jesus Christ." But mark what Paul says about it. He declares that we have not been left without evidence in ourselves of the existence and the righteousness of God. He says that that which may be known of God is manifest in us; there is a correspondence between our own nature and the eternal, and hence there is that in us which enables us to recognize and lay hold of God as revealed in Christ. We can apprehend God in Christ just because of this correspondence, this likeness in nature between him and ourselves. . . . And hence it is that he has become, as Henry Drummond finely said, our symbol for God; in him the infinite, the eternal, the unchangeably perfect has broken forth upon our darkened world. More and more I am coming to see what an inexpressibly overwhelming thing

Digitized by Google

the advent of Jesus was in our earthly experience; it was a sudden anticipation of the goal of the race, a breaking in of the timeless, the ageless, the perfect life into our poor, lost, sunken condition.

[*The Christian Advocate.*]

A universal reign of peace is as yet an unrealized dream of the world; but he who now casts the horoscope of civilization will assure himself that the thing is coming true. It cannot be achieved through artificial means; congresses and parliaments are incapable of producing it. Mechanical federations based on class interests only retard it. The current effort to amalgamate all the manual workers of the world into a single organization set antagonistically over against the rest of society, ignores the deeper principle of human brotherhood which must embrace all orders and qualities of men. Again, it is to Jesus Christ that one must look for the broad harmonization of all mankind into a fellowship built upon love to God and love to man. That the dream of a world thoroughly redeemed from social injustices and political iniquities will one day be fulfilled, no one can doubt who reads the prophecies of ancient time with clear eyes or who interprets the program of Jesus Christ with intellectual and spiritual acumen. Meanwhile the passing events of the world multiply evidences that the unifying work of the Christian gospel is rapidly being accomplished.

[*The Christian Register.*]

It is in vain to attempt to substitute for spirituality economic, social, or political questions. People soon tire of hearing from the pulpit essays they can read in journals and magazines. It does not rest or refresh them like the gospel of peace and love and the restorative power of worship. It seems almost certain that people, having tried all things in the circle of worldly experience, will come back to this safe anchorage at last. We need courage to proclaim our faith in the Christian essentials, and our determination to keep it pure and spotless. If the church has been much undervalued in the last two or three decades, while the people have wandered off after strange gods, it now has its great opportunity to minister to the unrest and disillusionment of the world by its offer, not of a new religion, for none is likely to emerge purer and better than the religion of Jesus, but of a nobler presentation of the faith, an opportunity for more entire consecration to its demands.

[*The Christian Intelligencer.*]

The conviction grows upon us more and more that the most effective way to win men for Christ and to keep them in the love of God is the way which Christ himself exemplified. Our own lives must be spiritually genuine, and our hearts must be full of Christlike love. In dealing with doubt, it is not so much evidences of Christianity which are effective, but the living Christ in the heart of the believer. Faith creates an atmosphere in which doubt is dispelled. Fellowship with Christ creates a blessedness which will do more to reclaim the intellectually erring than a host of arguments. The best witness for Christ is a real Christian. If his life is in us, it will stream forth to heal others.

[*The Watchman.*]

It is well recognized as a Christian principle that those who have received the blessings of life and the fulness of the gifts of God should have consideration of those who are less favored, and should impart to them of their knowledge, their substance, and their service, in order that such may have a portion in the divine benefits. In every Christian heart through which the divine Love has been poured there is a deep sense of this obligation toward fellow men, and all the fruits of Christian effort to convert, educate, elevate, equalize, and enrich men of every class and color, are the product of this broad, noble, consecrated spirit of service.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been *translated* into the German language and printed as a *special edition* with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

Two new translations into German have been made and are now on sale. "Die Christliche Wissenschaft: Das Evangelium von dem Reich" ("Christian Science: The Gospel of the Kingdom"), a lecture by Judge Clifford P. Smith. "Im Dienste des Vaters" ("The Father's Business"), containing five articles.

These pamphlets are all for sale at the prices as shown on the opposite page under the list of Pamphlets and Reprints.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The annual per capita tax, of not less than one dollar, is due June 1, the beginning of the fiscal year of The Mother Church, and is reckoned from that date, whether the admission was in June or November. All remittances in excess of the amount due in accordance with the by-law, will be credited for the current year, unless otherwise specified by the sender.

Please do not send paper money through the mail, except by registered letter; a postal money order, made payable at the Boston post-office, an express order, or a bank draft, is preferable.

To facilitate the work of the Treasurer, please advise him promptly of any change of name or address. No charge is made for this service.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE, Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

ITEMS OF INTEREST.

National.

Patented articles sold under price restrictions by manufacturers, may be resold by retailers at cut rates. The Supreme Court so holds. Safety razors, talking machines, and thousands of other patented articles are affected by the decision, which was five to four. Justice Day announced the majority decision, which held that while the patent law gave the owner exclusive right to "vend" articles, that was not the same as a right to "keep up the price." That, the court held, was not granted by the patent law. Many manufacturers had joined the manufacturer in this case in his fight to sustain the contention that his patent gave him the right to sell or use his patented article under any conditions as to resale price he might see fit to impose. All decisions in the lower courts, with the exception of one, have been in favor of the manufacturers. Justice Day, in his decision, "distinguished" the famous "mimeograph case" of more than a year ago from the present case, but many lawyers who heard the decision regarded the term as a judicial phrase for practically reversing that case. Officials of the department of justice regard the decision as of great importance, putting an end to existing wide-spread extensions of patent monopolies.

Fines aggregating eighty-one thousand five hundred dollars have been imposed in the United States district court by Judge John R. Hazel of Buffalo in the cases of six corporations and eleven individual defendants in the government's action against the so-called "coaster brake" trust for violation of the Sherman law. Six corporations and eight individuals pleaded guilty to two counts of the indictment, conspiring to restrain trade and attempting to monopolize domestic and foreign trade. Four individuals pleaded *nolo contendere*. Three of the four were among the eleven defendants fined. Six additional cases were discontinued by *nolle prosequi*.

Paving the way for further Sherman law prosecutions, the federal district court at Philadelphia has entered a decree in strict accordance with the recent Supreme Court decision, enjoining perpetually the anthracite coal-carrying railroads and mining companies from monopolizing trade under the so-called "65 per cent contracts." Under the contracts the railroads agreed to buy all coal produced by the allied mines, paying 65 per cent of the market price on the Atlantic seaboard. The railroads assumed the freight costs. These contracts were held by the Supreme Court to be a violation of the Sherman law.

Attorney-General McReynolds has decided to contend that the Southern Pacific must give up the Central Pacific, in the pending dissolution of the Union Pacific merger, and will bring a suit under the Sherman law to accomplish that end if the dissolution plans fail to include it. His position coincides with that of former Attorney-General Wickersham, who threatened an anti-trust suit unless the Southern Pacific disposed of its subsidiary.

Federal, state, and city officials participated in the ceremonies coincident with the opening of the first state-built modern pier, as the nucleus of the nine million-dollar development of Boston harbor, and the arrival of the steamship Cincinnati of the Hamburg-American line on the initial trip of the direct service between this port and continental Europe last week.

At the Culebra cut, on Saturday, May 24, one steam shovel working from the east met another working from the west and completed the first cut at grade from ocean to ocean. There is excavating still to be done in broadening the canal, but less than eight million cubic yards of earth remain to be removed to bring it to the necessary width.

More than ten thousand farmers on reclamation projects of the West will be affected by the Supreme Court's decision that they must pay to the government the cost of maintaining and operating the various reclamation projects, pending their completion.

An unlimited investigation by the government, embracing all phases of the New England transportation situation, will be begun at once.

Attorney-General McReynolds announces that a number of new suits will be filed by the government against the "anthracite coal trust."

By a vote of 26 to 5 the Connecticut Senate adopted the five million-dollar Lord bill for a proposed trunk line highway.

International.

The German Imperial Supreme Court declared void and against public policy the contract apportioning Germany between the Standard Oil Company's German subsidiary company and its chief competitor, the German Petroleum Sales Company, which allotted to the latter only one fifth of the business in Germany. The Germans declared that they signed the contract after a long, losing fight. They denounced it a year ago, finding the situation under its provisions worse than it was in the days before the contract went into operation. The costs of the suit in the three courts through which it has passed were imposed on the Standard Oil Company's German subsidiary.

The general assembly of the Agricultural Institute in Rome opened recently. Signor Orlando, in accepting the presidency, said that the institution aimed at a high ideal of solidarity, and that when individuals belonging to different nations worked for one another's benefit, it was the sign of the dawning of a bright future. After the reading of the report, the assembly proceeded to appoint four committees, the first to deal with the questions of administration and finance, the second with statistics, the third with technical matters, the fourth with social and economic questions relating to agriculture.

Yuan Shih Kai, provisional President of China, has agreed to the appointment of a parliamentary committee to control the expenditure of the five-power loan. It is considered that this attitude of Yuan Shih Kai is entirely due to the appeal published by Sun Yat Sen, though those supplying the money are, it is explained, the ones who have insisted on Yuan Shih Kai yielding, realizing the danger of providing the money against the wishes of Parliament.

An educational conference has been sitting at Peking, deliberating upon the question of the unification of the Chinese language. The conference, which was held under the direction of the board of education, has now decided on a new alphabet to express Chinese sounds. It consists of parts of Chinese characters which represent fixed sounds, there being twenty-four initials and fifteen finals, making an alphabet of thirty-nine letters.

The lower house of Germany has unanimously adopted a resolution strongly condemning the efforts of the imperial government to apply exceptional measures of legislation to Alsace-Lorraine, whereby the peaceful development of the annexed provinces might be seriously disturbed.

Four sons of high Tibetan officials, and some boys from Darjiling, are proceeding to England to be educated for ten years at the government's expense. The boys will study the language, handicrafts, and laws, and will then return to their own country.

The Mexican Senate approved the measure from the Chamber of Deputies authorizing a loan of one hundred million dollars. According to a statement from the National Palace, the money will be available immediately.

The draft of a bill authorizing the French government to borrow approximately two hundred million dollars for twenty years in order to meet military expenses, has been submitted to the French cabinet.

Industrial and Commercial.

That the recent shipments of meat from Australia to San Francisco, Cal., will generally reduce meat prices in that city, is the prediction of dealers who are handling the foreign product. They declare that the public will buy the meat in preference to the home product, especially as its price averages more than twenty per cent lower. The steamer Sonoma will bring one hundred and ninety-two thousand pounds more of the Australian meat, and local dealers have ordered twice that amount.

Steady progress is being made with the organization of the scheme to provide the West Indies with a system of wireless telegraphy. The Tobago station, which is to have a more powerful plant, has already held communication with ships at distances varying from one thousand to fifteen hundred miles, and with the wireless stations of New York and Lima in Peru.

A bill to establish by law the standard size of a barrel for the measurement of dry fruits and vegetables is to be introduced in the House of Representatives. The bill provides that the standard barrel shall be 26 inches between the heads, 17⅛ inches in diameter of heads, and 64 inches in circumference at the bulge, with staves four tenths of an inch thick.

Indications are that the potato-growers of Aroostook county, Maine, will plant about the same number of acres of potatoes this spring as in 1912. Farmers in Aroostook county have shipped over fourteen million bushels of potatoes this year, and it is estimated that there remain unshipped about seven hundred thousand bushels.

The cotton acreage figures for the current year are placed at 106.9 per cent of last year's acreage, making a total of 3,036,320 acres.

The commercial movement of apples from producing regions in 1912 was 30,643,814 bushels.

The port of Genoa is to be enlarged and improved at a cost of nearly seven million dollars.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE ANNUAL MEETING.

WE take from *The Christian Science Monitor* the following brief summary of the annual meeting of The First Church of Christ, Scientist, The Mother Church, of Boston, which was held Monday, June 2, at two o'clock, in the church edifice, Norway, St. Paul, and Falmouth streets, with a large attendance of members of the church from many parts of the world. In our next issue we shall be able to give our readers a more extended notice of the meeting, including the address of the new president and the report of the clerk of the church.

The meeting was opened by the singing of Mrs. Eddy's hymn, "Shepherd, show me how to go" (196 of the Christian Science Hymnal), after which President Bliss Knapp, C.S.B., read selections from the Bible and "Science and Health with Key to the Scriptures" by Mary Baker Eddy. Then came silent prayer, followed by the audible repetition of the Lord's Prayer. The congregation then sang hymn 240, "Ein' Feste Burg." The retiring president, Bliss Knapp, C.S.B., then read the names of the officers for the ensuing year, as follows:—

Frederick Dixon, C.S.B., of London, president; John V. Dittemore, C.S.B., of Brookline, clerk, and Adam H. Dickey, C.S.D., Brookline, treasurer.

Frederick Dixon was then introduced as the new president by Mr. Knapp. As the first item of business Mr. Dixon called for the report of the treasurer. This report showed the church in flourishing condition financially. The report of the clerk was then read. Among other data furnished was the fact that the gain in membership in the past year exceeded all other years in the history of the Christian Science denomination. There were one hundred and two new churches organized during the year just closed, including five in England and organizations in Germany, Switzerland, Australia, New Zealand, and Porto Rico.

Three-minute talks were then called for, and during the next half hour, interesting facts from all over the field were listened to. Several written reports from the field were read by Clarence C. Eaton, C.S.B., of Tacoma. Bliss Knapp, C.S.B., who is a member of the board of lectureship, spoke for ten minutes on his recent lecture trip around the world. Bicknell Young, C.S.B., also a member of the board of lectureship, related the events of his visit to Sweden, with special reference to the royal grant permitting the organization of the Stockholm church. Col. William E. Fell of Leeds, England, spoke of the situation in northern England; Prof. Hermann S. Hering, C.S.B., of Concord, N. H., of his recent trip abroad to lecture for the German churches in their own language; John Sidney Braithwaite of London, England, spoke of the work in London and its vicinity, and William P. McKenzie, C.S.B., of Cambridge, Mass., of the progress of the cause as noted in his recent lecture trip through Texas and the South and to the provinces of Alberta, British Columbia, and Manitoba.

The Communion Doxology was sung at the conclusion of the meeting.

WEDNESDAY EVENING MEETINGS.

WILLIAM D. MC CRACKAN, M.A.

MANY helpful points of view concerning the testimony or Wednesday evening meetings have been given Christian Scientists from time to time in our periodicals, and the writer feels greatly indebted to the editors and contributors who have thus offered the field the benefit of their experience in this most important branch of the work; but he would like to call attention to one aspect of this occasion which has impressed itself upon him with special force.

Turning to the Manual of The Mother Church, we find that the Wednesday evening meeting is specifically denoted a meeting, whereas the Sunday gatherings are denoted services. We may therefore justly conclude that in making this distinction, Mrs. Eddy had some special purpose in view. Although the writer will not venture to interpret the Manual, nevertheless he feels justified in pointing out that a meeting is not so formal or set in its character as a service. A service is necessarily prearranged and carried through exclusively by persons appointed for the purpose; in the case of a Christian Science service, by two persons denominated the readers. A meeting, on the other hand, while it generally follows a regular order of procedure, also makes provision for that which is not intended to be prearranged, but is left to the inspiration of the moment. In other words, a meeting always opens the way for the element of spontaneity. In Christian Science the Wednesday evening meeting makes room for this element during the time set apart for testimonies.

The advantage of recognizing the informal and spontaneous character of the Wednesday evening meeting is manifold. It relieves the reader who has the immediate charge of any false sense of responsibility. Others are going to take part, are going to bring their share of encouragement and inspiration, are going to give the proofs they have experienced of the truth of Christian Science, and so will cooperate with him in carrying forward the meeting to a successful issue. Again, the members of the congregation, recognizing that they are attending a gathering which is less formal and more spontaneous in its character than that of the Sabbath service, feel more at ease, more ready to take their share in the proceedings, and to express that spontaneity which is the vital spark of spiritual joy, which blesses and heals.

In her "Miscellaneous Writings" (p. 149) Mrs. Eddy, writing to The Mother Church concerning the Friday evening meeting, which was the precursor of that now held on Wednesday, attaches to it a significant designation. She writes, "Invite all cordially and freely to this banquet of Christian Science, this feast and flow of Soul. Ask them to bring what they possess of love and light to help leaven your loaf and replenish your scanty store." Thus individual participation in this "banquet" is solicited, and if the Wednesday gatherings are approached with this understanding, those who are tongue-tied by fear and pride will find freedom, and the self-distrust which would prevent a joyous testimony will be broken.

"AS ONE WHOM HIS MOTHER COMFORTETH."

HENRIETTA A. FIELD.

SHE was a woman no longer young, as we count time, and the soft dark hair had long since been touched with gray. Children and grandchildren had rested within those sheltering arms, and had known her wise and loving care; but now life seemed to her as full of hopeless tangles, petty disappointments, and bitter heartache as ever it had been in the childhood days. There were no great troubles or emergencies, but just the accumulation of common daily worries,—financial problems, uncongenial surroundings, disappointment over cherished plans, a sharp word spoken in the morning that had left a pain all day,—little things, as trifling in themselves as the child's broken playthings and ghostly fears, but all very real just now to the heavy-hearted woman.

There is a knock at the door, and the form of a much-loved friend slips in. The first greetings over, the two drop easily into a free interchange of thought and experience. The sorrows of the day are voiced, and between smiles and tears the story ends with the half-apologetic confession, "I believe I am a regular baby today in spite of my gray hairs!" A pair of loving arms are thrown around her, and a sympathetic voice says tenderly, "Oh, dear heart, you need mothering; that is what is troubling you!"

Then they talk long and earnestly of that tender, infinite Love which broods and comforts its own, clothing the lilies, marking even the sparrow's fall, crowning all the days with loving-kindness and tender mercies, saying constantly, "Fear not," for "underneath are the everlasting arms," and "even to your old age . . . even to hoar hairs will I carry you: . . . and will deliver you." Gently the healing words fell on the troubled thought, until at length the face of the listener grew sweet and restful in the hush of the deepening twilight. A great comfort had come to her, a new sense of the motherhood of God, and like a sweet refrain the words sang themselves over and over in her thought, "As one whom his mother comforteth."

Through all time the world has acknowledged the blessing of the mother-love for children of tender age, but long has it waited for the discovery of that ministering love which would meet the needs of the hungry-hearted "children of a larger growth;" waited, indeed, until in Christian Science there was given "the Comforter," the full revelation of the mother-heart of God; the clear understanding of the love, supremely wise and tender, that enters into every detail of the simplest or most complex problems of the daily life of both young and old, the love that esteems no need too trivial for its wondrous care, knows no demand beyond its ability to supply. Tenderly it feeds and clothes and shelters even the outward, until spiritual growth shall remove the necessity for all these things. Patiently it corrects and chastens, uncovering and destroying the offending errors as rapidly as human pride and ignorance will permit, ever holding before the half-awakened thought the increasingly beautiful ideals of a more perfect manhood and womanhood, the divine ideal expressed as God's likeness.

If the stubborn thought would fain refuse these corrections with their resulting development, still Truth wisely compels the acceptance of that which will produce the highest good, until with chastened hearts we reap the "peaceable fruit of righteousness." Is the darkened sense of human life filled with ghosts of fear and dread, with ugly specters of one's own creation? "Let there be light" is the divine command in Christian Science, and with the dawning of the day, the coming of Truth, we find the troubled visions of the night have fled. When human loves have failed us, and the heart seems breaking with its burden of sorrow and disappointment, always there waits the blessed privilege of proving that divine Love is ready to supply every need with the mother-love that never faileth. Others "may forget, yet will I not forget thee. Behold, I have graven thee upon the palms of my hands."

Mother, home, and heaven are words that make all men akin, because they stand for the highest human ideals of life, happiness, and hope. Christian Science, through its revelation of God's motherhood, has lighted the way to both home and heaven, for it teaches that the true home is heaven, and heaven is "the perfect and infinite Mind enthroned" (Science and Health, p. 266) in human consciousness, a heaven here and now and everywhere. One by one, from out the enshrouding gloom of human doubts and fears, the weary, homesick wanderers from the Father's house are coming home, turning "like tired children to the arms of divine Love" (p. 322) to be comforted.

CHURCH BUILDING.

LUCRETIA I. MOULTON.

As last summer's vacation approached, a Christian Scientist who is not a practitioner, determined that wherever her vacation might be spent, the dominant motive for the summer should be to grow in the realization of the truth of being, that she might be better able to help her fellow men as well as herself to rise above false, material concepts, the tares of unreality, toward the consciousness of the one infinite Mind which is "cognizant only of the things of God" (Science and Health, p. 276). Associated with this purpose was a desire to attain a more spiritual sense of the duties of those who were assisting to build a church edifice. She felt that to contribute money for the erection of a material structure, without any effort to help establish the truths of the Science of Christ, would avail as little as does the building of reformatories in freeing men from sinful proclivities, so long as those who are working for the betterment of mankind hold to the reality of evil and of mortal mind laws (so called) of inheritance after the flesh.
